One of the basic features of the Sugar Act is the provision for making conditional payments to growers who comply with certain conditions. Appropriation requirements for these payments are more than offset by excise tax collections authorized by a provision in the Internal Revenue Code with respect to sugar processed or imported for direct consumption in the United States. This tax is equivalent to five-tenths cent per pound, raw value, or 0.535 cent per pound, refined value. Revenues from this tax amounted to approximately $71,247,000 in fiscal year 1948, and it is anticipated that they will approximate $72,800,000 in 1949.

The rates of payment under the Sugar Act are established in section 304 of the act and vary from 80 cents per 100 pounds of raw sugar produced for the smallest growers, to 30 cents per 100 pounds for the largest growers. Payments have averaged around $60,000,000 per year in recent years and are expected to be around $65,000,000 annually when production is equivalent to the quota in each of the domestic areas.

One of the conditions growers must comply with in order to obtain Sugar Act payments is the payment of wages not less than those determined by the Secretary of Agriculture to be fair and reasonable. The Secretary is required to consider differences in conditions among the various producing areas, and the standards established by him under the Agricultural Adjustment Act in making these determinations. Among the conditions considered in the establishment of minimum wage rates are the price of sugar and net returns to growers, as well as the cost of living. The degree of mechanization and the productivity per man-hour varies greatly for the different areas. To illustrate, Hawaii, with an annual production of close to 1,000,000 tons of sugar, employs only 25,000 workers to operate its plantations and raw-sugar mills, whereas Puerto Rico, with only a slightly larger production, employs 135,000 workers. A part of this difference can be explained by the fact that the Hawaiian harvesting and grinding season runs throughout most of the year, whereas the Puerto Rican harvesting and grinding season is much shorter. Nevertheless, the difference in degree of mechanization is primarily responsible for the difference in the labor requirement per ton of sugar between the two areas.

The small sugar-growing enterprise in the Virgin Islands should be considered more in the nature of a work-relief project than a commercial undertaking. Prior to the establishment of the Virgin Islands Company, private mills in that area had all closed and the population on the island of St. Croix was left without a major means of livelihood. Although both the yield per acre of cane and the sugar content per ton of cane are very low, the reestablishment of the sugar industry has afforded employment to a large number of workers on the island. Efforts are also being made to develop more remunerative enterprises.

In Louisiana and Puerto Rico the wage determinations provide escalator clauses requiring that wages paid farm labor in the production of sugar be increased with increases in the price of sugar. In the case of Hawaii, the wage rates are actually determined by the terms of the contracts between the various plantations and the labor union. Since such wage rates are high enough to meet the standards provided under the Sugar Act, the determination amounts to little more than the requirement that persons employed on the farms be paid in full for all such work as required in section 301 (c) (1) of the act.

The 1949 basic hourly rates for the several areas are as follows:

	Nonharvest	Harvest
	Cents	*Cents*
Sugar beets	60	65
Louisiana	32	39
Florida	45	45
Hawaii	78.5	78.5
Puerto Rico	29	29
Virgin Islands	25	25

It should be pointed out that the basic hourly rates shown above are for the lowest rate worker. Higher rates are provided for skilled or semiskilled workers in all areas except for the Virgin Islands.

In addition to the above cash payments, farmers in all of the domestic areas, except Hawaii, are required to provide laborers without charge the customary perquisites. These usually consist of housing, garden plots, and in some cases vegetables, meat, milk, and medical services. In Hawaii, the labor unions demanded and received in wages the cash equivalent of perquisites. In most of the areas piecework rates are used to a large extent. Payments to laborers per hour under piecework average about 50 percent higher than minimum rates established for work on a time basis.

You also asked for information on the restriction of imports of refined sugar and the way that such restrictions tie into the Sugar Act as a whole.

As a means of providing a supply of sugar that will be consumed at prices which will not be excessive to consumers and which will fairly and equitably maintain and protect the welfare of the domestic sugar industry, Congress provided in section 201 of the act that the Secretary of Agriculture determine for each year the amount of sugar needed to meet the requirements of consumers in the continental United States. In section 202 of the act Congress then established the maximum quantities of sugar that may be supplied by each of the domestic areas and the Republic of the Philippines. The remaining quantities required must, accordingly, come from Cuba and other foreign countries.

Although the Sugar Act is designed largely to maintain and protect the domestic sugar growing industry, it also provides for the maintenance of our mainland refining industry. Accordingly, Congress established quotas on the importation or shipment into the mainland of direct-consumption sugar (primarily refined sugar) as follows:

	Short tons
Puerto Rico	126,033
Hawaii	29,616
Philippines	56,000
Cuba	375,000

For a similar reason, quotas were established for the importation of liquid sugar in terms of wine gallons of 72 percent total sugar content as follows:

	Gallons
Cuba	7,970,558
Dominican Republic	639,894
Other foreign countries	0

Essentially the quotas on importation and shipments to the mainland of direct-consumption sugar were established at the levels such imports or shipments had attained prior to the enactment of the Jones-Costigan Sugar Act. Major attention was given to this feature of the legislation in the enactment of the Sugar Act of 1937. Without undertaking to review the matter in detail, it appears that Congress concluded that such imports and shipments reflected conditions prior to the enactment of special sugar legislation and that, since the major objective of the Sugar Act was to protect and maintain a limited domestic producing industry, it would be inconsistent to permit the market improvement anticipated from such legislation to result in an expansion of foreign and offshore refining industries at the expense of the established mainland refining industry.

You also ask for our comments on the degree of industry cooperation we have received in the administration of the Sugar Act. The Sugar Act is recognized to be of vital importance to the domestic sugar industry and we have received a very high degree of industry cooperation in its administration.

Sincerely yours,

RALPH S. TRIGG,
Administrator.

NEW ORLEANS, May 3.—A deeply shocked priest charged today that 150 displaced persons resettled on Louisiana sugarcane plantations are so ill-paid that their babies "are crying for food and milk."

But the priest, the Reverend Carl Schutten, said the DP's are no worse off than native-born Americans who plant, cultivate, and harvest sugarcane in Louisiana. A total of 25,000 to 30,000 persons is officially estimated to be working in the cane fields now.

PAID $2.90 A DAY

Men—American and foreign—are paid $2.90 each for a 9-hour day. Women are paid $2.80 each for an 8-hour day. Father Schutten said that when they can't work because of rain, they aren't paid. He estimated that cane-field workers average about four full days a week—a wage of less than $12.

Father Schutten and the Reverend J. Stanley Ormsby, of the national Catholic bishops' resettlement program, inspected the homes of DP's on four plantations last Saturday. Father Ormsby has returned to New York.

"Officials of the national Catholic bishops' resettlement program will probably take some action after receiving his report," Father Schutten said.

"I'm interested in the plight of them all—American or DP, white or black," he said. "My going to see the DP's merely opened my eyes to what exists."

Father Schutten said homes furnished for the DP's and other sugarcane workers are "not bad." But they have to furnish their homes, pay their electric and gas bills, and buy their food and clothes, he said.

CALLS IT SEMISERVITUDE

"The plantation commissary is the only place where the DP can cash his check. As a result, he has to do all his dealings there, where prices are considerably higher than they are in New Orleans," he said.

"When he gets into debt for $100 or $200 he finds that he can never leave the plantation because he will never have enough money to pay his debts."

Father Schutten said it amounted to semiservitude.

He said most sugarcane workers can't afford to wear shoes during the week; if they had shoes they have to save them for Sunday. He said he suspected that during rainy spells some women went without food so their children could eat.

"I was shocked beyond words," he said.

Mr. Speaker, while we hear much about slave labor, you will note that the newspaper article quotes Father Schutten as having used a more elegant term, "semiservitude."

Jesus Christ, the Prince of Peace, Who Towers Above All Others Who Ever Lived on This Earth—the Christian Religion, Whose Transforming Power Is the Miracle of History and the Spirit of Christmas

---

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I made over radio station WROL in Knoxville, Tenn., on Christmas Eve, December 24, 1949:

Good evening, ladies and gentleman, this is Congressman JOHN JENNINGS, Jr., speaking to you from radio station WROL in Knoxville, on this Christmas Eve.

For the past 3 years it has been my privilege and pleasure to discuss with my hearers current news items of local and national interest and also world-shaking events which have affected this country, Europe, Asia, Japan, Australia, New Zealand, the Hawaiian Islands, the Philippines, and other island peoples.

Let us now turn to the distant past. The three nations of ancient times that most profoundly influenced the course of human history are Rome and Greece in Europe and Israel in Asia. Rome was a colonizing power and the ancient Romans were preeminent as lawmakers and law administrators. It was justly said of ancient Rome that the arts, civilization, law and order followed where Rome's eagle flew. As a result, the law books of this country are filled with maxims and principles that are the product of Roman thought and the lofty Roman conceptions of law, equity, and the administration of justice.

The Greeks were primarily a nation of thinkers. They evolved and gave to the world the laws of the human mind—logic, philosophy, literature, architecture, the drama, poetry, and the eloquence of Demosthenes. Socrates, Plato, Aristotle, are immortal in the realm of thought and lofty living.

Hence we speak of the grandeur that was Rome and the glory that was Greece. The Greeks loved human liberty and more than once saved Europe from Asiatic despotism.

It is the peculiar glory of the Jewish race that through them, the people of the earth have the revealed religion of one God, the author and maker of mankind.

In 1860, the French Government sent to the Middle East a great French scholar, Ernest Renan, on an archeological mission. When Renan entered upon his study, he did not believe in the divinity of Jesus Christ and took but little stock in the word of God. As a result of his studies and what he saw and learned of the history of the Jewish race and of the life of the Saviour, he became a devout believer in the Christian religion.

As a result of his investigations of the facts surrounding the birth, the life, the ministry, the death, the resurrection of Jesus, Renan wrote one of the world's most informative, entrancing lives of the Saviour In his opening chapter of this book, he states that the great event of the history of the world is the revolution by which the noblest portions of humanity have passed from the pagan religions of ancient times to the religion founded on the conception of one God and the incarnation of the Son of God.

It has taken almost 2,000 years to accomplish this conversion.

The greatest life in human history is the life of Jesus. By His superior personality, His bold originality, by the love which He was able to inspire, around His life is built the faith of humanity in God and a future life. The Saviour was well versed in the Mosaic law and He emphasized that He did not come to destroy the law but to fulfill it.

He revealed God not as a tyrannical master who kills us, damns us or saves us according to his pleasure. The God of Jesus is our father. The God of Jesus is not the partial despot who chose Israel alone for His people; He is the God of humanity. Jesus boldly raised Himself above the prejudices of His nation and established the universal fatherhood of God and the brotherhood of man.

The true kingdom of heaven, which He came into the world to establish, is in the hearts of men.

In all literature there is no more touching, captivating account of the birth of a little child than the story of the birth of the Saviour by St. Luke. Referring to the mother of the Saviour and His birth, Luke wrote:

"7. And she brought forth her first-born son, and wrapped Him in swaddling clothes, and laid Him in a manger because there was no room for Him in the inn.

"8. And there were in the same country shepherds abiding in the field, keeping watch over their flocks by night.

"9. And lo, the angel of the Lord came upon them, and the glory of the Lord shone around them, and they were sore afraid.

"10. And the angel said unto them, Fear not: for behold I bring you good tidings of great joy, which shall be to all people.

"11. For unto you is born this day, in the city of David, a Saviour, which is Christ the Lord.

"12. And this shall be a sign unto you: Ye shall find the babe wrapped in swaddling clothes, lying in a manger.

"13. And suddenly there was with the angel a multitude of the heavenly host praising God and saying,

"14. Glory to God in the highest, and on earth, peace, good will toward men.

"15. And it came to pass, as the angels were gone away from them into heaven, the shepherds said one to another, Let us now go even unto Bethlehem and see this thing which is come to pass, which the Lord has made known unto us.

"16. And they came with haste, and found Mary, and Joseph, and the babe lying in a manger.

"17. And when they had seen it, they made known abroad the saying which was told them concerning the child.

"18. And all they that heard it wondered at those things which were told them by the shepherds.

"19. But Mary kept all these things and pondered them in her heart."

But little is known of the childhood of the Saviour except that "He increased in stature and wisdom and in favor with God and man." At the age of twelve, He confounded the wise and the aged with His knowledge and His wisdom. At the carpenter's bench, in the synagogue, in the study of the Scriptures, in the mastery of human nature, for 30 years. He prepared for His ministry, and in the 3 years of that ministry in His daily, intimate life with His apostles spent in the open air, He laid the enduring foundations of a kingdom that shall never pass away. He performed miracles. He healed the sick, restored the sight of the blind, cleansed the leper, raised the dead, burst asunder the confines of the tomb, triumphed over death; the miracle of history is the transforming power of the Christian religion. It has been said that immortality is the glorious discovery of Christianity, that it is the twin sister of eternity. The Christ transcends all others who ever lived on earth, because He most profoundly influenced the thoughts and lives of mankind.

From the Old Testament, its history, its laws which underlie many of the enlightened institutions of civilized men, its prophesies, the poetry of the psalms, the wisdom of the proverbs, in natural sequence arises the New Testament. With the history of a great race as His background, at a time when the world was bankrupt morally, intellectually and spiritually, when there was not a hospital, a children's home, Jesus began His ministry. At thirty, He entered into His life's work, without social standing, with no influential friends, no property.

He spake as never man spake; He taught as never man taught, weeping with those who mourned, rejoicing with those who rejoiced, going up and down the dusty highways of Palestine, in His life and in His words, erecting an ideal so lofty that men must always look up to Him, so far ahead of mankind that we can never overtake or attain it.

In his great essay on John Milton, Lord Macaulay said that Judaism never made a convert. He pointed out that the abstract concept of God could not be grasped by men, but that when mankind saw God in the form of His son, when they came within the radiance of His divine personality, when they saw Him walking up and down the highways of Palestine, learned of His cruel trial and judicial murder by the sanction of Pontius Pilate, when they saw Him ascend the rugged steeps of Calvary, suffer and die upon the cross, they had a demonstration of the great truth of Christianity—that God is love and that all men are brothers. Only a thorn-crowned, bleeding Christ could win the love and consecrated belief of mankind. Macaulay pointed out that before the crucified, risen Christ, the doubts of the academy, the prejudices of the synagogue, the pride of the portico and the swords of the 30 legions were humbled in the dust.

Jean Paul Richter says of Him, "He was the mightiest among the lowly, the lowliest among the mighty. With His pierced hands He lifted the gates of empire from their hinges and turned the stream of the centuries into new channels."

He is God's farthest reach toward man and man's farthest reach toward God.

He set an angel beside each cradle, rendered the human body forever sacred and opened a pathway to the stars.

He made of Calvary the loftiest mountain in history and glorified the sacrificial cross as a conquering symbol, and in the triumph of the resurrection demonstrated the life immortal.

When the end came, as Jesus hung upon the cross, His disciples fled, with the exception of John. The devoted women of Galilee who had followed Jesus to Jerusalem did not abandon Him. They were with Him to the end. They were the last at the foot of the cross and the first at the tomb of the risen Saviour.

After the resurrection, the disciples who had deserted Him in death were imbued with faith in Him and surcharged with His courage and from then on they bore witness to His ministry and spread the new religion even at the cost of their lives.

"As the end approached He endured an agony of despair a thousand times more acute than all His torture and exclaimed, 'My God, My God, why hast Thou forsaken

Me?' But His divine instinct still prevailed. As the life of His body became extinguished, His soul became clear and returned to its celestial origin. He regained the idea of His mission; He saw in His death the salvation of the world; He lost sight of the hideous spectacle spread at His feet and united to His father He began upon the cross the divine life which He was to live in the heart of humanity through infinite ages."

Renan in his great Life of the Saviour concluded his account of the death of Jesus with these words:

"Rest now in Thy glory, noble initiator. Thy work is completed; Thy divinity is established. Fear no more to see the edifice of Thy efforts crumble through a flaw. Henceforth, beyond the reach of frailty, Thou shalt be present, from the height of Thy divine peace, in the infinite consequences of Thy acts. At the price of a few hours of suffering, which have not even touched Thy great soul, Thou hast purchased the most complete immortality. For thousands of years the world will extol Thee. Banner of our contradictions, Thou wilt be the sign around which will be fought the fiercest battles. A thousand times more living, a thousand times more loved since Thy death than during the days of Thy pilgrimage here below, Thou wilt become to such a degree the cornerstone of humanity, that to tear Thy name from this world would be to shake it to its foundations. Between Thee and God, men will no longer distinguish. Complete conqueror of death, take possession of Thy kingdom, whither, by the royal road Thou has traced, ages of adorers will follow Thee."

The spirit of Christmas is exemplified in the words, "It is more blessed to give than to receive." Governor Vardaman, of Mississippi, put this truth in deathless words when he said, "In the great bank of eternity, the greatest credit is given to Him who has contributed most to the sum of human joy, who has planted a flower in the fainting heart of despair and kissed it with the sunshine of hope and who has painted the pallid cheeks of care with the roses of health and happiness."

Labor Paper Defends Kaiser

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. SHEPPARD. Mr. Speaker, the following article appeared in the December 15, 1949, issue of the Machinist, official weekly newspaper of the International Association of Machinists, which is published in Washington, D. C. The article was written by the paper's editor, Gordon H. Cole, who contributes this weekly column under the pen name of Joe Henry. It follows:

KAISER—AUTO MAKERS WISH HE'D GO BACK TO BOATBUILDING

(By Joe Henry)

Lots of families, our kind of families, are thinking kindly of Henry Kaiser these days. Henry is going to bring out a new, low-priced automobile. He says he's going to undersell Ford and Chevrolet by $200 or $300. On a standard-size car, too. And one that will give approximately twice the gas mileage you get out of your Ford or Chevrolet—if Kaiser's performance lives up to his claims.

We don't know any more than anyone else whether the small Kaiser car will even ride well, much less whether we will ever want to own one. We do know that if Henry Kaiser succeeds, the price of automobiles will come down. It isn't that Kaiser by some miracle is going to give us twice as much automobile for our money. But, he is going to separate the price of gadgets—the ash trays, the clocks that never run, the cigarette lighters, the arm rests, and all the other frills from the price of the car. If we want frills we can buy them extra. If your family can't afford frills, you won't have to pay for them to get a new car.

You'd think that everybody would agree that this is a step in the right direction. You'd think that everybody ought to be encouraging Kaiser. You'd think * * * well, stop thinking and read the newspaper columnists. Some of them are saying that Henry Kaiser is corrupting the Government. When he got into real financial difficulty, Kaiser went to Uncle in Washington for some help. Like 51,000 other businessmen before him, Kaiser got a loan from Uncle's Reconstruction Finance Corporation. The RFC has lent out a lot of money to business and so far it has actually turned a profit for the Government—and the taxpayers—of $575,000,000 after paying all expenses.

Of course, there is a group of big-business men and their Congressmen who just don't like Henry Kaiser. They say he's not a healthy influence on the free-enterprise system. He thinks it's good business to get along with unions. And, he actually is trying to undersell the market. So they're going to throw as much mud as they know how at Henry Kaiser's new venture. They'd like to put him out of the automobile business.

Maybe they'll succeed. If they don't, Ford, General Motors, and Chrysler are going to have to bring out a new line of low-priced cars to compete with Kaiser. Somehow, we think most families feel that would be a good thing for the country.

The Engineers and Waterways

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. BROOKS. Mr. Speaker, on January 3, 1950, the Shreveport Times, published at Shreveport, La., ran an editorial entitled "The Engineers and Waterways." This editorial presents strong views on a very controversial matter, and I, therefore, include the editorial as follows:

THE ENGINEERS AND WATERWAYS

The National Junior Chamber of Commerce has launched a campaign for full endorsement of the Hoover reports, seeking to arouse public support that will in turn arouse Congress to action toward bringing about the billions in savings of tax money which the reports are aimed at accomplishing.

The local junior chamber has launched a local campaign as its part of the national effort. The local chamber urges Shreveporters to give 100-percent endorsement of all of the recommendations of all of the various task forces whose recommendations make up what generally are called the Hoover reports, although Herbert Hoover personally simply was the guiding general in the investigations.

As we see it, the local junior chamber thus puts itself in a position of seeking support for action contrary to established local interests in relation to waterway development. The Red River Valley Association has devoted much effort and spent much money of citizenry up and down the Red River Valley for objectives which certainly would be endangered, in our opinion, if the Hoover report recommendations for placing the United States Army engineers under the Department of the Interior in their waterway development activities. Many business firms are strong financial supporters of both the junior chamber and the Red River Valley Association.

The Times itself has endorsed the general objectives of the Hoover reports—the infusion of efficiency into operation of Federal Government in a streamlining manner to eliminate billions of dollars of waste through extravagance, overlapping and duplication of operations, and general incompetency. But, that does not mean that we endorse any such plan as placing the age-old Army engineers, strictly nonpolitical and noted for their independence and efficiency through the decades, under a purely political—partisanly political—Government agency. We have stated that we oppose this phase of the Hoover reports and we repeat it now.

The recommendation to place the Army engineers under the Interior Department came from one of the Hoover Commission task forces and as such had the general approval of the Commission itself. The objectives sought in the recommendation are thoroughly worthy—unquestionably there is great duplication of expenditures in waterway surveys by the Interior Department and by the engineers.

But the answer is, as we see it—if there is to be consolidation—to put the Interior Department's waterway work under the engineers and thus get it out of a political setting and put it in a nonpolitical and strictly independent setting, rather than vice versa.

The engineers have a reputation through more than a century of recommending waterway development only on a basis of absolute impartiality, of absolute national need, and absolute economic soundness. No Government political agency possibly could have or build such a reputation or operate in such a manner continuously.

As a matter of fact, while Mr. Hoover—as member of his own Commission—has endorsed the reports of his task forces as a whole, it was noticeable that in a recent speech at a banquet in his honor he did not specifically recommend putting the engineers under Interior Department, as did his task force. He simply stated that there should be consolidation of operations of waterway operations of the Engineers and Interior to eliminate duplication and avoid waste. On that we agree. But the answer is not to put the independent engineers under a partisan political agency where they are subject to the whims of political appointees.

It is our belief that a vast number of junior chamber of commerce members locally hold pretty much the same view that we do on this point. But there should be—and we hope there will be—clarification from the organization's leadership. Otherwise it will lose much support it might otherwise gain in its campaign on the Hoover reports and arouse opposition it otherwise would not have.

It Need Not Have Happened

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. BYRNES of Wisconsin. Mr. Speaker, I join with other Members in

the introduction of a resolution expressing the sense of the Congress that the President should immediately invoke the national emergency provisions of the Taft-Hartley Act in an effort to end the paralyzing coal strike.

In this connection, I include as part of my remarks a letter I addressed to the President on October 19 requesting that he recognize the seriousness of the situation at that time and that he appoint a board of inquiry immediately as called for by the Taft-Hartley Act:

The Honorable HARRY S. TRUMAN,
President of the United States,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: I respectfully call your attention to a situation which requires immediate action by you if innocent people are not to suffer.

The vast Great Lakes region of Wisconsin, Minnesota, and upper Michigan is almost entirely dependent on coal that moves from Lake Erie ports during the shipping season. This season will end on November 15.

Because of the coal strike practically no coal is moving to the dock companies at the present time. If the strike continues, if no more coal moves into this area in the remaining days of the shipping season, the inevitable result will be closed-down industrial plants, unemployment, and heavy suffering among the populace during the bitter northern winter.

The Wisconsin Coal Bureau has already apprised you of these facts. I urge you to verify them by contacting any coal dealer in Wisconsin, Minnesota, or upper Michigan.

In my opinion, this threat to the health and safety of this great area, together with the many other serious effects of a prolonged coal strike upon our national economy, constitutes a clear and present peril of our national health and safety.

I therefore urge you to appoint immediately a board of inquiry into the coal strike as called for under sections 206–207 of the Labor-Management Relations Act of 1947 and to request them to report to you forthwith. I further urge, if the report of the board justifies this course, that you proceed under sections 208–210 of this act in an effort to end this calamitous stoppage.

Any further delay, I assure you, Mr. President, is an invitation to a disaster which need not happen.

Yours very truly,
JOHN W. BYRNES,
Member of Congress.

Mr. Speaker, to this day I have received neither acknowledgment nor reply to this letter.

Mrs. Edna F. Kelly, First Woman Representative From New York City

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. MULTER. Mr. Speaker, the New York City delegation to Congress has been enhanced by the addition of a new House Member, Mrs. EDNA F. KELLY, who was elected last November to represent the Tenth Congressional District of Brooklyn. Mrs. KELLY is t' e first woman Representative ever to be elected from New York City.

I feel quite certain she will be an excellent addition to our delegation. She comes to us after serving for 7 years in the legislative halls of Albany, where she gained considerable experience as research director for the Democratic delegation. Mrs. KELLY, who is a graduate of Hunter College in New York, where she majored in history and economics, is the widow of the late city court justice, Edward L. Kelly.

A devoted mother to her two children, a fully informed and intelligent citizen, and a loyal worker for the Democratic Party, Mrs. KELLY will prove to be a hard-working able legislator. We extend to her our hearty congratulations and sincerest wishes for a long, happy, and successful career.

Mr. Speaker, under leave to extend my remarks, I am inserting an article about Mrs. EDNA KELLY, entitled "One of the 'Flannery Girls' Blazes Borough Political Trail," written by Violet Brown and published in the Brooklyn Eagle, November 13, 1949, as follows:

BROOKLYN'S WOMAN OF THE WEEK: ONE OF THE FLANNERY GIRLS BLAZES BOROUGH POLITICAL TRAIL

(By Violet Brown)

Disillusion was EDNA KELLY'S lot the first time she went to Washington.

Fresh from a class in high school civics, she went with her schoolmates to hear the bonus march debate—and found one droning speaker attended by a few men reading newspapers.

This time she knows what to expect. Flushed with victory as the first woman Representative elected from New York City, Mrs. KELLY has had 7 years' experience in the legislative halls of Albany as research director for the Democratic delegation.

She knows lawmakers can do their jobs without getting their ears bent—and she doesn't expect to do much speaking anyhow. She may not bow to any mid-Victorian dictum about woman's place being wholly in the home, but she knows a freshman's role in the House of Representatives.

Such good sense and balance is typical of the first lady of Brooklyn's Tenth Congressional District. With it she has been able to walk the delicate tightrope of being an inspired political worker and a devoted mother at one and the same time.

EDNA KELLY came into politics by marriage and remained to make it her lifework through necessity.

Her own family was stanchly Democratic, but more concerned with the doings of the seven girls (five of them their own and the other two adopted) that Patrick Flannery and his wife had to bring up.

One of the sisters married Charles R. Duryea, for 17 years Republican mayor of Amityville, and Edna, the youngest of the Flannerys, married Edward L. Kelly, son of William E. Kelly, postmaster of Brooklyn from 1916 to 1929, and right-hand man of County Leader John H. McCooey.

Politics was in Ed Kelly's blood and his bride adopted it. He became a city court justice and had a county court nomination when he was tragically killed in an automobile accident 7 years ago.

Mrs. KELLY, slim, dark-haired and attractive, left at 35 with 12-year-old Billy and 8-year-old Maura Patricia, stepped into the breach.

Now her son is a self-reliant undergraduate at Columbia University, eager to become a lawyer like his father, and Maura Patricia is a cute teen-ager at Marymount Academy, a pitcher on the softball team like her mother before her and a Dodger rooter second only to Branch Rickey.

The Kelly household runs like clockwork under the careful eye of Mrs. KELLY'S sister, Elizabeth, known as Lid to all and sundry, and Mrs. KELLY feels she can be spared "to carry the ball for women" on Capitol Hill.

She is completely informed on the concerns of women, both as citizens and as homemakers. She puts peace first on her legislative agenda and in swift order thereafter repeal of luxury taxes, broadening of social welfare, civil rights, the United Nations—in short, all the concomitants of a liberal Democratic platform.

But when she talks about "luxury taxes," she has a specifically feminine list of examples. She paid a $2 tax on $10 worth of drugstore necessities when she shopped for this summer's stays at her 82-year-old mother's home in East Hampton. She just had to buy Maura Patricia a school bag—with tax—but she hasn't bought a purse for herself since the extra fee was slapped on that wardrobe item.

And that represents a real moral sacrifice for a woman as beautifully turned-out as the five-foot-nine, 127-pound Mrs. KELLY. (Even her chic is home-based, incidentally. She has a dressmaker "living in the first assembly district," gets her hats made on Nostrand Avenue and looks like something out of Dior and Daché.)

Similarly, when she comes out in favor of housing for all, she mentions her gratitude for her own house at 1247 Carroll Street, bought "in the eighteenth assembly district and close to my church in the seventeenth." She knows the advantages of having your own roof over your head at first hand.

When she speaks of education, she has her own theories worked out with her own children. And she has already lived through a phase of social welfare in the very progressively orientated Madison Club, of which she is coleader—there have been many Red Cross drives, civil rights talks, cancer collections, bond rallies and blood donor collections at the club.

But it isn't all work with the Kellys, either. Mrs. KELLY, Edna to her kids, loves football as much as her son, who was on the Columbia team until a knee injury benched him. The family goes to football and baseball games together, goes skiing, ice skating, and golfing.

They dote on music—hot and sweet—and they have a real feeling for good food, as befit the child and grandchildren of a Flannery mother who made each one of her girls cook the meals for 1 day a week so she would learn that most important of arts.

Mrs. KELLY cooks all her own meals, is noted for her fried chicken, cakes, and pies, and herself likes best of all her own beach plum jam, made from fruit gathered on the dunes at East Hampton.

She regularly helps can the produce from the garden first planted by her late father, who was a horticulturist and a graduate of Black Rock College in Ireland. She can even sew, although the quality of her product does not quite come up to her own high standards for everything.

A graduate of Hunter College, where she majored in history and economics, Mrs. KELLY, unlike many legislators, is no lawyer. She did take a few law courses after her marriage—she was married the summer she got her B. A.—but "they were just so I could understand what Ed was talking about when he discussed cases with me."

She always had had a hankering to take more law courses, but now, thanks to the voice of the voters last Tuesday, it will hardly be necessary.

Mrs. KELLY isn't going to be learning law any more. She'll be making it.

S. 1008, the Basing-Point Bill, Vicious in Its Entirety—Its Real Backers Desire the Destruction of Robinson-Patman Act—Even the Saving Kefauver and Carroll Amendments Have Been Eliminated—No Compromise Can Now Be Trusted—Text of Statement Before National Association of Retail Druggists

EXTENSION OF REMARKS
OF

HON. WRIGHT PATMAN
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. PATMAN. Mr. Speaker, last fall the National Association of Retail Druggists held its annual convention in New York City. Among other matters of vital interest to the thousands of home-town druggists has been the juggernaut bill—S. 1008—a bill designed to crush the amendment to the Clayton Act which has done more to protect our small-business economy than any other antitrust law. This amendment, the Robinson-Patman Act, was conceived and sponsored by the small-business interests of our country. It bears my name because I introduced the original bill and fought for it to final passage. I am proud of that fact, but even more proud of the fact that the Robinson-Patman Act has stood test after test in our courts. It has protected small business in every line of endeavor. I shall fight to preserve its integrity until my labors here are concluded.

S. 1008 A VICIOUS BILL IN ITS ENTIRETY—CARROLL AMENDMENT A PALLIATIVE

When I addressed the National Association of Retail Druggists, the so-called Carroll amendment, introduced by the gentleman from Colorado, was still in the bill. This amendment was an improvement on the so-called Kefauver amendment introduced in the Senate, and was a further attempt to mitigate the utterly destructive effects of the bill on the Robinson-Patman Act. Naturally, I was in favor of the Carroll amendment as far as it went. However, as I made abundantly clear in my supplementary statement to the druggists, I was against the bill with or without the Carroll amendment. I showed, by exact citation, that S. 1008 was loaded with provision after provision diametrically opposed to the Robinson-Patman Act, and that by their own statements the real supporters of the bill wanted nothing less than the complete emasculation of the Robinson-Patman Act. I also warned against compromise proposals, by the proponents of the bill, inasmuch as they would necessarily be made in bad faith since they would be entirely inconsistent with the basic objectives of destroying the Robinson-Patman Act and slashing the antitrust laws generally.

CONFEREES ELIMINATED EVEN THE CARROLL AMENDMENT (AS WELL AS THE KEFAUVER AMENDMENT)

Apparently I did not exaggerate in my statement to the National Association of Retail Druggists. The real backers and beneficiaries of the bill must have gone to work with ruthless zeal. What they could not, by reason of the Kefauver amendment, fully accomplish in the Senate, and what they could not, by reason of the even stronger Carroll amendment, fully accomplish in the House, they accomplished with almost absolute finality in conference. Most people thought that the conference committee could, and would, simply choose between the Kefauver amendment of the Senate and the Carroll amendment of the House, settling for nothing less than the Kefauver amendment. And it was also believed that the House conferees were virtually instructed not even to yield on the Carroll amendment in favor of the Kefauver amendment.

However, what did the conferees actually do? They reported the bill with neither one amendment nor the other, with neither the Kefauver nor with the Carroll amendment, nor with any variation of either. In other words, they reported this bill minus even these minimum safeguards to the provisions of the Robinson-Patman Act. Under the conference wording the Commission, in addition to all other proof, must prove that the effect on competition of the alleged illegal acts will be so-and-so and not merely that it may be. By the time the Commission would be in position to prove this specific effect, the victims, presumably, would have to be wiped out of business, even though the Commission's function is injunctive cease-and-desist relief, designed to prevent offenses in their incipiency, and no fines or criminal sentences are imposed. One Member did the signing for the House Members or managers, once for himself and twice as proxy for absent Members. To his credit, the chairman of the House Judiciary Committee refused to sign or vote for the conference report.

CONFEREES ALSO ELIMINATED SECTION 4 AMENDMENT

The conferees went even further and added insult to injury by changing section 4 of the bill. Section 4 also had been modified in the House, and by the House Judiciary Committee itself, in at least token deference to the Robinson-Patman Act. The conferees, not satisfied by requiring proof of what the effect will be, rather than may be, inserted a specific requirement, in proving such effect, for reliable, probative, and substantial evidence, instead of a showing of reasonable probability as voted by the House. Their definition was even stiffer than the Senate version, which did not use the word "reliable." The definition, incidentally, was a complete reversal of high court decisions construing existing law, after years of litigation.

SENATE BLOCKS THE CONFEREES—EVEN SPONSOR OF BILL VOICES OPPOSITION

Although the House accepted the report, by the time it reached the Senate the full import of its radical changes had become so completely understood that the Senate voted to hold back its approval. Even the distinguished Senator who introduced the bill attacked its proponents for what he regarded as their greediness in insisting upon amendments which were not necessary to their immediate objectives, as avowed by them, but which put in peril the very foundations of the antitrust laws. The matter was put over by the Senate until January 20, which is now approaching rapidly and is a day small business and all believers in the Robinson-Patman Act and the antitrust laws generally should carefully mark on their calendars.

ANOTHER PROPOSED COMPROMISE WILL BE ANOTHER TROJAN HORSE

It is my opinion that the real proponents of this bill themselves now feel that they went too far when they amended section 4 to define so strictly the degree of proof required in showing the necessary statutory effect on competition. It is my opinion that they themselves probably feel that this was adding insult to injury, and that it would have been altogether sufficient if the conferees had merely knocked out the Carroll amendment by requiring, as they did, proof of what effect "will" be, instead of "may" be. For they must now realize that by going to such extremes, they have finally completely shown their hand. They have shown that their desire is not merely for a statutory declaration of the right of charging delivered prices and absorbing freight, a right which I say already exists. They have shown that their wish is to destroy the Robinson-Patman Act and to subvert all of the antitrust laws, not only in favor of the basing point and similar systems operated by means of identical delivered prices, practiced for so many years in the steel and cement industries in particular, but in favor of all monopolistic practices, whereby small-business men, including independent retailers, can be kept in line. However, inasmuch as they have inadvertently shown their hand by reason of their own greediness, to use the expression of the bill's own sponsor, I should not be surprised if they are now again going to try out the tune of alleged compromise, in favor of at least some of the opponents to the bill. Just as I said in my statement to the National Association of Retail Druggists, I think they will try—at least if it proves absolutely necessary—to rid themselves of the opposition of the retail associations of the country by specious concessions and specious reasoning designed to show that the retailers—the grocers, the druggists, and others—will not be hurt, at least not directly hurt, if they permit Big Steel, Big Cement, and all the Bigs to continue to sell for identical delivered prices charged by all competitors, as contemplated by the bill. The proponents of the bill may suddenly become generous and say they will not insist upon the amendment to section 4, to which the original sponsor of the bill has objected so strenuously. They may also suddenly agree to drop entirely section 3 of the bill which is an across-the-board amendment to the Robinson-Patman Act, and not confined to freight rates at all. Who knows but that the proponents will even agree to the restoration of the Carroll amendment, or of the Kefauver amendment? In desperation

they might even say they would be satisfied with section 1 alone of the bill which is the section which simply declares that delivered prices and freight absorption are legal. They may try to say that they have no designs on the Robinson-Patman Act at all and they will withdraw objectionable proposed amendments to that act. In this way they will hope to conquer by dividing, and to strengthen their own noncompetitive practices by claiming that these practices do not weaken competition in other fields.

What I said before in my statement to the National Association of Retail Druggists is therefore doubly pertinent now, and I therefore respectfully ask for permission to insert in the CONGRESSIONAL RECORD the text of this statement, delivered last fall.

The statement follows:

STATEMENT BEFORE NATIONAL ASSOCIATION OF RETAIL DRUGGISTS—WHY THE NATIONAL ASSOCIATION OF RETAIL DRUGGISTS SHOULD DEMAND THE DEFEAT OF S. 1008—WITH OR WITHOUT THE CARROLL AMENDMENT

The Robinson-Patman Act, passed by the Congress in 1936, has been—I hope it is no exaggeration to say—a Rock of Gibraltar to the small-business men of this country.

The National Association of Retail Druggists was one of the earliest and strongest supporters of the Robinson-Patman Act. The NARD is looked upon as one of the most powerful friends today of the Robinson-Patman Act and as a sincere believer in the basic philosophy of the Robinson-Patman Act, namely, a fair deal for the little fellow in business.

The Robinson-Patman Act is under heavy fire. Big business does not like the Robinson-Patman Act and is engaged in a gigantic attempt to dynamite your Rock of Gibraltar, together with the many judicial decisions now fortifying the act, to the very bottom of the sea.

We all know of the Cement decision, rendered by the Supreme Court of the United States on April 26, 1948, with only one Justice dissenting. The decision held, after years of litigation, that the use of the basing-point system, as proved in that case, was a violation of the Robinson-Patman and of other antitrust provisions.

This decision, instead of being accepted with grace, was the signal for a barrage on the Robinson-Patman Act and on the antitrust laws in general, the like of which has seldom been seen in legislative history.

BASING-POINT LOBBYISTS STRIKE TO OVERRULE COURTS

In 1948, from June until December, we had the Capehart hearings in the Senate, directly arising out of the Cement decision. Committee counsel of the Senate, Mr. William Simon, was selected from a Chicago law firm, and it is significant that, now that his committee duties are finished, he is a registered lobbyist—and regarded as the chief lobbyist—for amending our antitrust laws, and the Robinson-Patman Act, in the interest of the basing-point system, euphemistically called the freight-absorption or delivered-price systems.

The big boys, having finally lost the Cement case after years of litigation, during which they kept right on with their illegal practices, decided on a new slogan, a new line. This new line was their alleged need for clarification of the law. They said that all they wanted was clarification of the Court's decision and of the antitrust laws as written on the books. They did not understand the words. No "speakee" English, if you please. They did not dare to admit that they were really seeking to amend the antitrust laws; so they said they were trying to clarify them.

S. 1008, as originally introduced, was a moratorium on the antitrust laws in connection with the Cement decision. However, on May 31, 1949, a substitute bill was offered in the Senate, making outright amendments to the antitrust laws, or so-called clarifications. When we refer to S. 1008 today, it is this substitute bill, with or without subsequent amendments.

All that this new S. 1008 was doing, according to its backers, was legalizing delivered pricing and so-called freight absorption. But there is nothing in the antitrust laws forbidding delivered pricing or forbidding freight absorption, provided buyers are treated equally and are not subjected to price discrimination.

S. 1008 GETS FAST RIDE TO FLOOR OF THE HOUSE

Actually, S. 1008 goes much further than to declare, by way of clarification, that delivered prices and freight absorption are legal. Having made this declaration, it goes on in subsequent sections to strike body blows to the Robinson-Patman Act, not only as to freight matters but as to all pricing matters. The real backers are interested not only in the basing-point boys, but in all big business. S. 1008 was to be a Roman holiday against the Robinson-Patman Act and the small-business men protected by it.

Senator ESTES KEFAUVER, always a champion of small business, promptly offered amendments which were accepted by the Senate and by the sponsor of the substitute and which had the effect somewhat of preserving our present law; whereupon on June 1 the bill was passed and sent to the House, where it was referred to the Judiciary Committee. The Judiciary Committee of the House reported the bill in a few days minus the Kefauver amendment. No public hearings were held by the House Judiciary Committee, and only three witnesses were heard in executive session, of whom I was one. When it became apparent that public hearings would not be held, small-business organizations, including the NARD, promptly requested the House Small Business Committee to afford them an opportunity to be heard. On June 28, the House Small Business Committee did start hearings, which were entitled "Small Business Objections on Basing Point Legislation, Particularly S. 1008." Before the hearings had fairly started—in fact, the very next day—the Rules Committee of the House granted a rule on the bill, and thereupon it was rushed to the floor for consideration. The House began consideration of the bill on July 7, and since prior knowledge of this date was available, the hearings before the House Small Business Committee were recessed on July 5, 1949. Actually, we had witnesses representing small-business organizations and many other organizations, as well as many distinguished lawyers and economists familiar with our antitrust laws and able to speak on them with authority, who were willing and anxious to testify against S. 1008.

S. 1008 SHOULD BE BEATEN EVEN WITH SAVING CARROLL[1] AMENDMENTS

It was my thought at that time that the bill should be beaten and I am still of the same opinion. However, amendments were offered which had a beneficial effect by several of my colleagues, among them Hon. JOHN A. CARROLL, of Colorado. Mr. CARROLL aptly described his amendments as so simple that even a lawyer could understand them. When the House saw the danger of Senator O'MAHONEY's substitute bill to the small-business institutions of this country, they promptly voted overwhelmingly for the Carroll amendments. Senator KEFAUVER later said that the Carroll amendments were an improvement upon his own, which had been struck by the House Judiciary Committee, and that he was glad to accept them.

Later, by a parliamentary maneuver, the Senate sent S. 1008 to conference, but not before the distinguished Senator from Louisiana [Mr. LONG] moved to reconsider. The fight on reconsideration was stubbornly and ably fought, and it was one in which many distinguished Members of the Senate joined in the fight for small business. However, the vote to reconsider, as you all know, was lost, and the bill was sent to conference by the Senate. Later, upon public assurance on the floor of the House by those who would represent the House in the conference that the Carroll amendments would be preserved, the House permitted the bill to go to conference. Several meetings of the conferees took place, but no agreement could, at least up to the present date, be reached, since the House conferees stood firm and would not recede from the Carroll amendment.[1]

I repeat: This bill—S. 1008—should be killed. The Carroll amendment, good as it is, strikes down only one assault on the Robinson-Patman Act. S. 1008 is replete with assaults on the Robinson-Patman Act. Indeed I go further and state that S. 1008 is counted on by its real backers to crush and annihilate the Robinson-Patman Act.

BASING-POINT LOBBYIST FINALLY LETS CAT OUT OF THE BAG

These are not idle words when I say that S. 1008 is counted on to crush and to annihilate the Robinson-Patman Act. Now that the cat is out of the bag—as the result of Congress' quick reaction once it realized how fully the Robinson-Patman Act was truly involved in this so-called freight-absorption bill—Mr. William Simon, a lobbyist for clarification, calmly admits all and, instead of further indulging in denial or apology, not only confesses all but loudly proclaims that it was all for a most laudable purpose.

In a speech delivered before the American Bar Association on September 6, he blandly admitted that the bill is directed against the Robinson-Patman Act. But, said he in effect, the Robinson-Patman Act is no good. Why? Because it fosters soft competition among the buyers—that's you—instead of hard competition among the sellers; and because it keeps inefficient small concerns—that's you, the buyers—in business. And he spoke in contempt of the battle against S. 1008 and for the Carroll amendment—I now quote—"spearheaded by the associations of retail druggists and retail gasoline dealers." I note that he left the grocers out, and I hope if there are any here their feelings won't be hurt.

But we don't have to take this somewhat belated confession to find out that S. 1008 is designed to wreck the Robinson-Patman Act. The attacks on the Robinson-Patman Act are written all over S. 1008—although obscured and forgotten in the hot discussion on the Carroll amendment which was directed to only one of these attacks.

HOW S. 1008 EMASCULATES ROBINSON-PATMAN ACT REVEALED

I will now direct your attention to other attacks on the Robinson-Patman Act contained in S. 1008, and you will agree with me, I am sure, that they are equally vicious.

Let us take section 2 of S. 1008. This section creates two exceptions, A and B to section 2 (a) of the Robinson-Patman Act part of the Clayton Act. Exception A does not have the Carroll amendment, as does exception B, and I therefore shall discuss exception A first.

Exception A in the bill provides that it shall not be an unlawful discrimination in price for a seller, acting independently—I now quote—"to quote or sell at delivered prices if such prices are identical at different

[1] See footnote at end of speech.

[1] See footnote at end of speech.

delivery points." This is the zoning system, and its proponents admit that it is the zoning system. The zoning system, as the courts have stated, is a variation of the basing-point system. It has all the vices of the basing-point system—particularly, of course, for heavy products involving substantial freight rates. The zoning system, like the basing-point system, permits supposed competitors—engaging in hard competition, if you please—to employ identical pricing, branded by the Supreme Court in the Cement case—I quote—the "handy instrument" of monopoly and of phony competition. The zoning system, like the basing-point system, of which it is a variation, brings about atrocious price discrimination, compelling nearby purchasers to pay long-haul freight charges and giving giant producers and sellers the political power to build up one region of the country at the expense of another. Such a system, need I tell you, is a flat contradiction of the Robinson-Patman Act and of the fundamental philosophy which not only gave birth to this country but has made it great.

And, please remember, and please do not forget: This exception A in section 2 of S. 1008 is not limited by the Carroll [1] amendment. The Carroll amendment, although it should logically be here, too, appears only in exception B of the section. No doubt it was omitted in A by inadvertence, and in an attempt to do what seemed to be first things first.

S. 1008 GRANTS CLEAR CHARTER TO CHAIN-STORE MONOPOLISTS

I have read this so-called zoning-system provision and have reread it, both alone and in connection with the other provisions of the bill. I can tell you that I see no restriction whatever on this proposed exception A—except the equivocal one that the seller is acting independently. But I take it that a giant corporate seller, with any number of outlets, as long as it is acting by itself, can claim to be acting independently; it thus could do practically anything it wanted to within the framework of a zoning system authorized by this provision. And if such a giant were really not acting by itself, but simply following, as it might claim, the same zoning pattern as other giant producers, who is there who is going to prove, without actual and independent evidence of collusion, that it is not acting independently? Apart from this ambiguous wording of "acting independently," there would be an absolute legalization of delivered prices—I quote again—"if such prices are identical at different delivery points." The wording has a finality that is almost terrifying to any believer in the antitrust laws.

Actually this wording goes even much further than a zoning system, which at least pretends to be an equality of treatment, even though it may be the somewhat spurious equality of equal delivered prices to all buyers in the zone. Under this wording for the proposed exception "A", a seller could select two or more favorite customers in entirely different parts of the country, give them identical delivered prices no matter how great the difference in freight, but much lower prices than for any other customers, and thus, by the device of identical pricing to favorite customers, be legally able to discriminate pricewise against all other customers. Who could say with confidence that such a practice did not fit into the bill's wording authorizing the seller to "sell at delivered prices if such prices are identical at different delivery points"? The language of the bill does not use the words "zoning system." The words used, as quoted by me, are broad enough to include everything, including the kitchen sink, to pile on the prostrate body of the Robinson-Patman Act already laid low by the other sections of S. 1008.

See footnote at end of speech.

S. 1008 PERPETUATES AND LEGALIZES PRICE DISCRIMINATION NOW FORBIDDEN UNDER ROBINSON-PATMAN ACT

Now, let us look at the other exception to the Robinson-Patman Act as provided for in section 2 of the bill; namely, exception "B", which does, at least up to this date,[1] have the protection of the Carroll amendment. And let us assume, which I am not prepared to admit, that the Carroll amendment is fully sufficient to protect against freight-absorption abuses "to meet the equally low price of a competitor in good faith." But, mark this well, the provision goes on to say—I quote—"this may include the maintenance, above or below the price of such competitor, of a differential in price which such seller customarily maintains." In other words—if one of the giant suppliers now "customarily maintains" a price differential, by one device or another, it might continue to maintain this differential. This might be so even if the differential is unlawful under the present antitrust laws or the Robinson-Patman Act. The bill uses the word "customarily"; it does not also use the word "legally."

I am not splitting hairs when I read into the bill a sharp distinction between the words "customarily" and "legally." One of our great Senators, who is intimately connected with this bill, made a speech, after it had left the Senate, trying to reconcile his championship of small business with his sponsorship of this bill. He stated that, if business customs become firmly enough entrenched, it is the function of the law to bow to those customs. That is exactly what this language would do.

The provision contained in exception B of section 2 of the bill is absolution by past indulgence. It is a "grandfather's clause" in favor of antitrust law and Robinson-Patman Act violators. It is a "grandfather's clause" in favor of existing customary price differentials, even those now illegal. At least it would give this argument to the monopoly boys before the courts. It is not only a monstrous mutilation and desecration of the antitrust laws; it is a negation of the underlying American philosophy of free enterprise as we normally expect free enterprise to operate. I am confident that, if it were not for the heat engendered by the Carroll amendment and the failure to hold regular committee hearings, which would have brought out all the issues in advance, this language would have been stricken.

S. 1008 DEPRIVES BUYERS OF STRONGEST EVIDENTIAL WEAPON AGAINST PRICE DISCRIMINATION

Finally, we come to section 3 of S. 1008. This section knocks out the Robinson-Patman Act all across the board—not only as to delivered-price and freight-absorption situations. This is an outright amendment to the entire Robinson-Patman Act. It directly affects all of you people here and association members in all the cases which may be brought before the Federal Trade Commission involving discrimination as to price, discounts, services, etc.

Section 3 of the bill amends section 2 (b) of the Robinson-Patman Act part of the Clayton Act. The present section provides that, upon proof of price discrimination, a prima facie case is made out before the Federal Trade Commission. Nothing more need be proved to make out a prima facie case against the seller by the buyer. The respondent must then step forward, and "unless justification shall be affirmatively shown," a cease and desist order may be issued terminating the discrimination. This rule, putting the burden of proof largely upon the seller, is in the law because of the difficulty of proving this type of case where the facts are too often within the offender's peculiar knowledge. The proceeding is a civil, not a criminal, one; no fines or jail sentences are imposed. The rule is therefore in accord with principles of fairness and due process. Moreover, the Federal Trade Commission, so often maligned by big offenders for being oppressive, has not insisted on its strict enforcement. However, it is an altogether salutary provision to have on the books.

What does section 3 of S. 1008 do with this salutary provision of the Robinson-Patman Act? It just throws it out the window. Section 3 makes it necessary and mandatory for the complainant to show not only price discrimination but also unlawful effect on competition. Even this enlarged showing is not called a prima facie case by section 3, although the section does state that the burden of justification then passes to the respondent.

Finally, believe it or not, section 3 also adopts the "grandfather's clause." It provides that justification may include not only meeting a competitor's price, by selling below or above it, but a differential which the seller "customarily" maintains.

Beautiful, beautiful, wonderful—for the monopolists. But I guess you can see why I oppose S. 1008, even with the Carroll amendment.

S. 1008 LOBBY DESPERATELY ATTEMPTS TROJAN-HORSE MANEUVER

I have been told that Bill Simon, leading lobbyist for clarification, has one more card up his sleeve. His hope has been, of course, that S. 1008, with all its attacks on the Robinson-Patman Act, would pass even without the partial protection to the Robinson-Patman Act afforded by the Carroll amendment. However, the bill is in the hands of the conferees and, by reason of the strong position taken by foes of monopoly, including the druggists, grocers, and other associations, there is considerable doubt as to whether the bill could be reported out without the Carroll amendment. I have been told that, under these circumstances, the ace which this resourceful gentleman is going to produce is an attempt to buy off the opposition of the druggists, grocers, and similar associations by a compromise on the Carroll amendment.[1]

How does he propose to do this? Well, first, he will forget that the whole bill is conceived in destroying the Robinson-Patman Act and that he openly stated only a week or so ago that he does not believe in the Robinson-Patman Act. He will have you forget that section 2 of the bill authorizes the zoning price system, a variation of the basing-point system, and authorizes it without any protection of the Carroll amendment. He will also have you forget that the same section contains the "grandfather's clause" authorizing the perpetuation of price differentials which sellers customarily maintain, even though they may have maintained them contrary to the Robinson-Patman Act. He will try to make you forget section 3 of the bill, the across-the-board attack on the Robinson-Patman Act, applying in all price-discrimination cases, not only freight-absorption cases, and also containing a "grandfather's clause."

BEWARE OF LOBBYISTS BEARING GIFTS

What will he propose? I am told that he will propose that the Carroll amendment [1] may still apply to protect competition among the buyers, but that there should be a change in the amendment so that it should no longer apply to protect competition among the sellers. Under this proposal, the sellers will be permitted to go their own sweet way, eliminating, as far as possible, bothersome competition among themselves. This will be the sellers' end of the bargain.

However, the sellers would still continue to be prohibited, as provided for under the present Robinson-Patman Act and under the Carroll amendment, from conduct which would affect competition among the buyers.

See footnote at end of speech.

See footnote at end of speech.

This will be your end of the bargain. How it would be worked out in words I would like to see.

The sellers would be saying, in effect, to you buyers: Since you are so insistent upon the Carroll amendment, we are now ready to tell you that we would not think of doing anything adversely affecting competition among our various customers, such as discriminating in favor of one buyer, even in good faith, as against others; and you may have your Carroll amendment [1] for that purpose and your associations may go back to you and say that they won this victory for you. All that we ask is that, if we let you alone, you let us alone, and that in return for our concession to you you leave us to our own pricing and zoning devices. I am even told that they might be willing to give up section 3 of the bill, as a final inducement—inasmuch as nothing is mentioned therein, one way or another, about freight absorption. But they will not be willing to give up the zoning-price section, you can be pretty sure, and I doubt that they will give up the "grandfather's clause." They would want to keep these handy instruments of monopoly. They would want to keep all the essentials in the bill which will keep them in the price saddle.

They will be saying to you, "Just let the wolf get big and fat and you, Red Riding Hood, will have nothing to worry about, not a thing, either in the meantime or later."

SMALL BUSINESS WILL NOT BE DECEIVED BY HIGH-PRESSURE LOBBYING TACTICS

Well, this proposed compromise, of which I have been told, sounds a little different than the attacks on the Robinson-Patman Act made by the gentleman in question at the American Bar Association. But it is not too different. It is just reverse English. I am sure you will know how to handle that ball.

No matter what the compromise offered, if any, you will know that, if they decide that half a loaf is better than none, it is because they would be getting the bigger half—in fact, practically the whole loaf.

I think that the conferees on S. 1008 will know that, too; I think that small business will be the winner after all; and I think—and I certainly hope—that S. 1008 will not become a law in any form.

Small-business men are alert to the situation. Your organization is alert to the danger. The danger of any change of this nature in these parts of the Robinson-Patman Act—even a comma, as I so often say—is enough for the Robinson-Patman Act opponents, with their smart and well-paid lawyers, to defy the law again in the course of endless court litigation in construing the meaning of such changes. Years can go by in that process in the future—just like years have gone by in the past—and then when the Supreme Court hands down a clarifying decision they ask for a new law from Congress to clarify the decision by reversing it.

Finally, I am more than confident that small business will settle the S. 1008 controversy for nothing less than the Carroll amendment. Small business will not be misled or deceived by this last desperate drive to sabotage our antitrust laws—the only real protection of small business and free enterprise.

[1] On October 13, 1949, subsequent to the presentation of the above statements, the conference committee reported out the bill with a "compromise" omitting the saving language of both the Carroll amendment and the Kefauver amendment, and inserting absolutely reverse language in section 4 of the bill. Thus, the objectives of the real backers of the bill to destroy the Robinson-Patman Act, referred to in the above, were made quite explicit. Although the House approved the report, the Senate balked, and the matter is scheduled to come up again before the Senate on January 20.

We Must Not Forget

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD, two fine, well-thought-out and well-expressed editorials from the Montana Kaimin, the official newspaper of Montana State University.

It is my hope that the Members of Congress will read these editorials bebecause to me they represent thoughts which should always be in our minds in these troublous times.

To F. G. L. I want to express my thanks for putting into words the truths we must never forget.

HOPE—A 1949 THANKSGIVING THEME

This is Thanksgiving, 1949. It is the fifth since the end of World War II. In the span of five short years, the human mind has shown a resilience that has enabled us to all but forget the Dachaus, Belsens, and San Paulos.

Five short years have supplanted our revulsion of war's brutality with hope that maybe this time, someday, somehow, we will achieve our true destiny as human beings and act like human beings.

In the past 5 years of fumbling, stumbling, anger, fear, and selfishness; many times we have lost sight of our goals while looking for the mileposts. We have made many mistakes for which we cannot be thankful; but the role America has chosen for itself in the brave new world is not an easy one. Often we have stooped to tactics and practices that were once repulsive to us when used by others, but we have never lost hope—that abstract, undefinable something that enables mankind to rise from the muck and mire of its shortcomings and reaffirm pledges of peace for all generations to come.

Yes; there are many things for which we can feel only shame, but there are many other things for which we can truly be thankful.

We can be thankful for American justice. Judge Medina with his patient, impartial handling of the trial of would-be betrayers of our country, earned new greatness and added new dignity to the American concept of justice.

We can be thankful for the United Nations. The past year has seen this organization settle the disputes in Palestine and Indonesia in the sane, human way of using the conference table rather than the battlefield.

We can be thankful that American labor has the right and exercises the right to strike. What better answer can our democracy give to those criticis who call the American capitalist system a slave system. There are no strikes behind the iron curtain.

We can be thankful for the American people's assumption of responsibility as well as world leadership in the fight for a better world. With the Marshall plan we can, and are, restoring the war-torn democracies and with the Atlantic Pact we are underwriting the hopes that all these nations cherish for freedom.

We can be thankful for that softness in the American character that Hitler called decadence. This softness has enabled us to think of a world built on justice and freedom rather than revenge and hatred.

Above all we can be thankful for the laughter of children who live in a world that is the paradise man seeks to regain.—F. G. L.

THE BATTLE FOR PEACE MUST BE WON

It has been 8 years since Pearl Harbor. It has been 4 years since Hiroshima. It has been 8 years since men began dying that man might live.

The thousands of crosses that point heavenward in silent, symmetrical rows are the mute testimonials of faith to what men believed and died for.

In their faith, the dead have left us a sacred trust. A simple but vital trust that unless achieved, will mean more sacrifice of human lives, more degradation, more privation, and more shame.

These men died to win a battle—a battle that links vitally in the chain of struggle that eventually means peace. They have won their battle—the war. Now, lest what they have won be lost, we, the living, must win our battle for peace.

We must never lose sight of freedom from fear, freedom of religion, freedom from want, and freedom of expression. We must achieve these for them and for the dignity of mankind now living and yet to be born.

We must work hard for fulfillment of the dream reborn in the United Nations Charter at San Francisco. We must fight the battle of intolerance to achieve a more perfect democracy.

Hunger and ignorance must be defeated if our trust is to be fulfilled. Freedom of religion must be extended unless we want the moral basis of our society to decay and disappear.

Ours is a battle that does not end in armistices or treaties; but one that never ends because our enemies—intolerance, hunger, ignorance, and prejudice—are ever present waiting for us to relax or drop our guard.

They can destroy our dignity as men and destroy the trust left us by the dead, with appeals to our self-interests, our greeds, our vanities, and our human weaknesses.

To the men under those thousands of crosses, we owe this opportunity to seek truth, establish justice, and regain our human dignity. We owe it to them and to those that will follow our footsteps to wage a total war for peace and a better world for all men.

Anything short of total efforts on our part will make a mockery and a farce out of Pearl Harbor, D-day, Iwo Jima, Bastogne, and Anzio—and slaves of ourselves.—F. G. L.

Practical Internationalism

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD I include therein a very thoughtful address by Mr. Walter Cenerazzo, national president of the American Watchworkers Union, before the International Student's Center at Harvard College, Cambridge, Mass. Mr. Cenerazzo, who is a brilliant and progressive young labor leader, is not only a keen student of Government but also a penetrating analyst of foreign and domestic economic trends.

His viewpoint is refreshingly American and he is a stanch believer in our free

competitive system as well as our basic political and parliamentary institutions.

The address follows:

PRACTICAL INTERNATIONALISM

To address a group of students who come from many foreign lands to obtain an education in American colleges and universities is indeed a rare privilege for a labor leader whose avocation has been to study the economic conditions existing in foreign lands.

Today in this world there exists a sharp cleavage as to the systems of government. One trend of thought is predicated upon the outgrowth of the idea established in the Magna Carta of King John in the thirteenth century, which is that human dignity shall prevail; that men are not the chattel property of anyone, be it feudal lords, kings, or the politburo; that men shall have the right to choose their own religion, their own field of endeavor in employment, and live within their own family unit as dignified human beings.

The other trend of thought is that produced by totalitarian government, which claims as the first obligation from its citizens obedience to the government. Their theory is that men should work, eat, live where they are told, take their recreation as the government plans it, and that men have never the right to criticize their rulers. There is no difference between this modern-day totalitarianism and the slaves of Egypt. Both represent tyranny and lack of respect for human dignity.

The free nations of this earth have come a long way since the signing of the English Magna Carta by King John, and as each century has gone by men have gained more and more freedom in an economic way which has given to them freedom in other ways.

To me, one of the unsung heroes in his battle for the freedom of men was a great American—Benjamin Franklin. This man Franklin had an opportunity to observe conditions in England as a workman and later as a statesman. He visited France and lived there during the French Revolution. He was a student of governments, and it is my opinion that the citizens of the United States owe to this man a deep debt of gratitude for our inalienable Bill of Rights—the first 10 amendments to the Constitution of the United States. The thinking that went into that Constitution, which separated the executive, the legislative, and judicial branches of government, was long-range thinking to forever bar any man or men from treating human beings as serfs within the boundaries of the United States of America.

In the century and a half that followed the adoption of the Constitution of the United States, men and women have lived with human dignity and in the industrial revolution have been the peoples of the only Nation in the world who are a great middle class. Nowhere else in this world will you find a lack of class struggle, nowhere else in this world will you find complete a way of life by which men and women can set their goals within the family unit and achieve them for that family.

In the past several years, I have visited the South American Continent and the European Continent. In South America I had the opportunity to visit Peru, Chili, Uruguay, Argentina, and Brazil. In Europe this summer I visited England, Scotland, Belgium, Holland, France, Italy, Switzerland, and western Germany.

In each of these countries I visited industrial plants to witness the engineering and research skills and to see how productive labor was. I asked many questions concerning living conditions, wages, government controls, and where the ideas in existence in the government of the country came from.

One basic element was missing from every single one of these countries—and that was a virile labor movement dedicated to collective labor bargaining with employers to obtain a fair share of the fruits of productivity for the employees of industry.

Oh, yes, there was a labor movement in each and every one of these countries, but those that led it were either Socialists, Communists, Christian Union Democrats, Falangists, Apristas, or some other type of ism which was dedicated to curing economic ills by government fiat. In each case the labor leader of these countries was wrapped up in a political movement to take over the administration of the government. To me this is not the way that a great middle class of people is created within a nation. In these countries there are only the very rich and the very poor, and the purchasing power of the very poor is indeed very small. You cannot have prosperity for a nation unless the rank and file of the people have purchasing power in their hands and can purchase what they produce.

We in the United States, unfortunately, in my opinion, have at the helm of our State Department a group of men who have no understanding of business economics, and who have been in a daydream for many years on the problems of foreign trade. These men believe that you can purchase goods from a foreign country and give to that foreign country prosperity when the persons that made the goods obtained wages that would not enable them to feed themselves properly let alone clothe themselves properly. There can be no prosperity for any country unless the workers of that country obtain a fair share of the fruits of productivity that will enable them to purchase the goods of other workers to consume themselves.

That's the key of the prosperity of the citizens of the United States. Purchasing power—consumer income—with which to purchase consumer goods.

The United States program for reciprocal trade does not and will not help either the American worker or foreign workers. All it does is make the importer richer at the expense of both the American worker and the foreign worker.

For this reason I have advocated for some time a twofold program in the field of foreign trade, which, in my opinion, if carried out would create a middle class of people with purchasing power in every country in this world.

I believe the United States should lead the way by creating a Board of Foreign Trade, composed of 15 persons. The fifteen to be appointed—five by the President of the United States, five by the United States Senate, and five by the United States House of Representatives. Three of each group should be appointed from the majority party in control, and two from the minority party.

This Board of Foreign Trade should have complete control and jurisdiction over all economics that have to do with foreign trade, and every other department of Government should be stripped of authority in this field.

This Board of Trade, with its 15 members, would negotiate agreements with a foreign country on a bilateral basis only, and every agreement with each country would have to stand on its own merit and what considerations that were granted to one country, would not necessarily have to be given to another country.

The type of men I would like to see appointed to this Board would be the best talent available in the field of business, finance, economics, agriculture, and labor. They should receive at least $25,000 per year for serving on the Board.

This Board of Trade should have established within it a statistical department with competent men to establish the production costs on every article produced in the United States, and these records should be kept up to date so that every time unit costs go up or down it is reflected in the records.

In negotiating an agreement with a foreign country this Board of Trade would ascertain the unit costs of production in the foreign country they are negotiating with, and they would establish tariffs equal only to the difference in the unit costs between the cost of production in the United States and the costs of production in the foreign country with consideration given for transportation and insurance costs to bring the article to the United States.

As wages were increased, or unit costs increased in the foreign country, the tariffs would be reduced accordingly. Thus, as more wages were paid to foreign workers, more purchasing power would be in their hands to buy consumer goods and more prosperity would be available for that nation.

This Board of Foreign Trade would have authority to put a limitation on amount of goods to come into the United States of any type; they would have the authority to impose quotas, raise tariffs, lower tariffs, and to negotiate in any manner they deemed essential.

All tariffs which they collected would be put into a fund which I would call the point 4 fund to be spent for the development of underdeveloped areas throughout the world. The Board would be given authority to refund all of the tariffs to a nation for its development if it deemed it wise.

Thus, a twofold purpose would be accomplished. No goods could compete in the United States except at equality at the border and importers' excess profits would be eliminated. The foreign worker would find his employer paying him more wages, for there would be no point in paying him low wages and then paying the difference in tariff to the United States.

In the distribution of point 4 money the second part of my program would come into play, for I would allow no nation to participate in obtaining any of this money unless they first adopt in the constitution of their country a bill of rights comparable to ours and establish a separation of the powers between the executive, legislative, and judicial branches so that dictators could no longer function or gain a foothold in the future.

With the adoption of this bill of rights would come a new day for the working men and women of foreign countries, for they would be guaranteed the right of free association and forming unions of their own choosing. And thus a virile labor movement would gather momentum and bring about a standard of living that creates a great middle class.

The reciprocal trade program of the United States establishes the same tariff regardless of the wage conditions between nations. Goods produced in a country paying 10 cents an hour wages come into the United States at the same tariff as goods produced in a country paying 50 cents an hour wages. Where do you think investment capital is going to open factories under such a tariff program?

This Board of Foreign Trade that I suggest should have industrial engineers in its employ to visit factories in the United States to make sure they are efficient and productive and have adopted modern technological improvements, and if they have not a leveling factor should be placed on their unit cost of production in the records to penalize them for their inefficiency.

There is no room in this world for inefficiency, obsolete methods, and failure to introduce modern production methods. Only in a world where there is efficiency and modern efficient production can the rank and file of people participate in the enjoyment of the goods they produce.

If every country established such a Board of Foreign Trade it would not be long before all the low wages in this world would gradually disappear and we would have fair living standards for all the workers in the freedom

loving nations of this world. And when misery, terrible housing, improper diet, and squalid living conditions disappear from a nation and an honest democratic labor movement does its job well in obtaining more and more each year in collective bargaining within the framework of prosperous corporate enterprise, those that represent totalitarianism will find the seeds of communism which they spread falling upon sterile ground, which refuses to accept their ideology.

To me there is no substitute for cooperative capitalism to achieve human dignity. Cooperative capitalism to me means adequate dividends to the investor for the risk that he takes in furnishing capital to purchase the tools and equipment, adequate payment to management for furnishing the brains of direction to the enterprise; fair wages to labor for fair work with the accompanying security that prosperous enterprise can give to its employees. And last, but not least, the lowest possible consumer prices for all that effective cooperation between investor, management, and labor can produce.

This is what has made America what it is. It is what has given more people opportunity for a better lot in life than any other economic system yet devised in this world. There is only one way we can preserve it—and that is for every other nation in this world that respects human dignity to achieve the same program and for our Nation to establish a flexible tariff system to protect American workingmen while point 4 does its work in building the production facilities of other nations.

Taxes Can Kill America's Growth

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to include this editorial by Ray Hansen, editor of the Daily Jefferson County Union of Fort Atkinson, Wis.:

TAXES CAN KILL AMERICA'S GROWTH

The gravest and most far-reaching internal issue this country faces is the cost of its government. And of all issues, it is probably the least understood.

At a time when the Federal Government's income is at a near-record peak, and when the burden of taxation borne by the people is without precedent in days of peace, the Nation is unable to make both ends meet. It is running a heavy deficit which will be added to the towering national debt—a debt which is a direct obligation upon every man with an income, a piece of property, or material resources of any kind.

There is, of course, a glib answer to all of this. It is: "Tax the rich man and the rich business; let them carry the load for the rest of us." But the fact is that we could tax the rich into financial extinction and the proceeds wouldn't even come close to paying the bill. It is the tens of millions with moderate means—not the few with large means—who are hurt by extravagant government.

But that is not the end of the story. Something infinitely ominous is quietly happening in this country. Taxes are killing our economic growth.

A recent article in Newsweek describes this. Sales of common stock in industry largely determine whether we shall have good times or bad, an expanding economy or a static economy, more employment or less in the future. Yet, Newsweek says, last year trading in stocks accounted for only 4 percent of the national income where, in the 55 years prior to 1930, it averaged more than 40 percent. This means, the magazine goes on, that "if most of our corporations were not already in existence, it would be impossible today to create them." The money that once went into the enterprises upon which our living standards and world leadership are built is being taxed out of existence.

This is but one illustration out of many that could be cited. Every individual whose income is above the subsistence level knows how onerous taxes are. Practically everyone talks at one time or another about the cost of government and how something must be done. But talk is generally the beginning and the end of it.

This brings us to a fundamental fact. Wasteful, excessively costly government is simply a symptom of a condition of overwhelming significance. That condition cannot be described in cold figures. It exists in the minds and hearts of the people.

In the last 20 years there has been an insidious change in our concept of government. We have turned to it to perform tasks which always before were the duty of the individual and the local community. More and more of us look to Government to protect us in every way. We are losing our independence. We ask Government to protect our health, build our homes, care for us if we are unemployed, and see us through all the way from the cradle to the grave. We ask it to provide more and more goods and services. The polite term for this "gimme" habit is "the welfare state," a softer name for socialism. The welfare state always leads to one of two conclusions: It impoverishes and enslaves the people and subjects them to ruthless dictatorship, as in eastern Europe, or, finally, the people rid themselves of its worst manifestations, as the voters of New Zealand and Australia recently did. But even in the latter case the wealth of nations has been dissipated, and the tentacles of government have been woven so tight that it may take generations to recover.

Therefore, taxation directly affects all our liberties. Excessively expensive government is always supergovernment. It is paternalistic government; it is, in its more advanced stages, government by fiat and decree; it is, in its final stages, government by terror. The Russian Revolution was fought in the name of the common man, and now, in that huge "people's state," tens of millions of common men and women live miserably in medieval darkness and real liberty is unknown.

The basic troubles of the world, from war to human want, can in one way or another be charged to too much government. All-powerful government is simply a reflection of the loss of individual self-reliance, initiative, pride, independence of spirit, the will to work—the qualities which made possible the founding and the growth of this Republic. We, as a people, are fortunate that we have not yet gone so far on the welfare-state road that we cannot turn back. We can still have ourselves from the final disaster that has overcome so much of the world. But we, as a people, must do it ourselves. Big government will not do it for us. We must ask ourselves this question: "Are we willing, in return for a mirage of material security, for which we pay through exorbitant taxation, to sacrifice those liberties for which men have fought and struggled for 2,000 years?"

Immediate Vote on Statehood for Hawaii Recommended by Public Lands Subcommittee

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to bring to the attention of the House a report submitted to the chairman of the House Committee on Public Lands, under date of January 10, by a subcommittee which recently toured the islands of the Central Pacific and the Far East, urging that H. R. 49 be brought to an immediate vote.

I wish especially to invite the attention of the Members of the House to the considerations which prompt this recommendation.

The report follows:

JANUARY 10, 1950.

Hon. J. HARDIN PETERSON,
Chairman, Committee on Public Lands,
House of Representatives.

Mr. CHAIRMAN: Your Special Committee on Pacific Territories and Island Possessions strongly urges that steps be taken to bring to a vote immediately H. R. 49, the bill to admit Hawaii to the Union as a State. This measure has been pending on the House Calendar since last March, when it was reported by the Committee on Public Lands with only one dissenting vote.

En route to Samoa, the Trust Territory, Guam, and the Far East the committee stopped for 2 days at Honolulu. The headquarters of the Pacific Fleet Command and the government of the Trust Territory is stationed there. The officials charged with the government of Samoa, the Trust Territory, and Guam have drawn heavily upon the experience and the personnel of Hawaii in meeting many of their most important problems in the field of education, science, and agriculture. In traveling through these islands the committee found in many places the results of the very important influence being exerted by Hawaii. People of the Pacific look to Hawaii in many respects much as the French do to Paris, the British to London, and Americans to Washington and New York. It is unquestionably one of the principal cultural centers of the Pacific and recognized as such by those who have been charged with the responsibility for the administration of our Pacific possessions.

On its return from Tokyo the committee spent 4 days in Hawaii. Its members met with the principal public officials of the Territory and leaders in every field of civic activities. The committee was a guest at a community luncheon organized by the Honolulu Chamber of Commerce and conferred at length with members of the Hawaii Statehood Commission, an official agency of the Terirtorial government charged with the responsibility of promoting statehood for Hawaii.

The committee found Hawaii more aggressively determined to achieve statehood than at any time in the past. The overwhelming majority of people with whom its members talked expressed themselves emphatically in favor of the admission of Hawaii to the Union, believing this would serve not only

the best interest of the Territory but of the United States.

This point of view has been strengthened rather than weakened by the serious economic situation that has resulted first from the sharp reductions of the Military and Naval Establishment in Hawaii and second from a strike of longshoremen that lasted for a period of almost 6 months. The Territory is preparing to deal vigorously with the serious problem of unemployment that was brought about by the former development and takes pride in the action of its legislature which brought about a resumption of stevedoring operations and at least a limited amount of shipping during the period of the longshoremen's strike. The emphasis given to local responsibility by the Federal administration and the Congress in meeting these problems has caused people in Hawaii to feel more strongly than ever that the additional local authority and greater representation in Washington that would come with statehood should be granted at once.

Prompt enactment of H. R. 49 will strengthen the position of this country among people of the Pacific islands and the Far East. Many of these people regard the future with great apprehension. The advances of communism and the uncertainties as to what course this country might pursue to meet these advances in the Pacific has filled them with grave doubts. That they look to the United States for leadership in meeting this problem and all of the threat that it holds for the freedoms inherent in the democratic way of life is unmistakable. The committee found evidences of this both in the principal centers of population in the islands of the South and Central Pacific and in the Orient. These people are anxious to be reassured that the influence of this country will be exerted to the fullest in support of their efforts to achieve and sustain the freedom inherent in democracy.

The prompt admission of Hawaii to the Union as a State will be notice to the people of the Pacific and to the world that this country intends in no sense to retreat from its position of leadership in the Pacific, won at a great cost in World War II, and on the contrary proposes that every legitimate step be taken to preserve and strengthen the objectives achieved in that struggle.

It will be reassuring to the friends of democracy. The United States will give them a practical demonstration of its belief in the democratic system of government by admitting Hawaii to the Union as a State and its people, thereby, to the full privileges of American citizenship. This example will be of far-reaching influence in Japan, the Philippines, Korea, and China, from whence many of Hawaii's people, now American citizens of long residence in the islands, originally migrated.

It will provide an effective answer to Communist propaganda that is undertaking to persuade the people of the Pacific, and particularly the Far East, that there are racial barriers in the American system of government that militate against people of oriental origin.

It will serve to bring the people of Hawaii into closer relationship to the people of the rest of the country and the latter to a full appreciation of our responsibilities in the Pacific.

Hawaii has long been a proving ground of the American way of life. It has been a lighthouse of democracy in the Pacific. Its relationship to the Pacific and the Far East has been and is today important to the future of our country in this great area. It is both a gateway to the Pacific and the Far East and a common meeting ground of the divergent cultures of Occident and the Orient.

Your committee, therefore, recommends that the promise of statehood long held out to the people of Hawaii be promptly fulfilled. It believes that action at this time is in the national interest.

JOHN E. MILES,
Chairman.
FRED L. CRAWFORD.
WILLIAM LEMKE.
JAY LEFEVRE.
GEORGE P. MILLER.
EDWARD H. JENISON.
JOSEPH R. FARRINGTON,
Delegate from Hawaii.

Defenseless America—The Isolationists' Paradise Penny-Wise but Pound-Foolish

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. PLUMLEY. Mr. Speaker, under leave heretofore granted, I would like to say that an old-time philosopher, one Will Rogers, used to preface his remarks by saying, facetiously, that all he knew about it was what he had read in the papers. He neglected to supply the unnecessary information that he read what he had told the papers.

So I am confronted with some newspaper items relating to what I told the newspapers' representatives. Here they are:

I see a headline in the Rutland Herald of the 10th ultimo, "PLUMLEY warns of United States Pacific defense needs" in big letters across the column. And then here comes another, "More than one big carrier is needed," declares PLUMLEY, who goes on to say as follows:

"The Communists have pushed us into Pacific and Asiatic waters up to our necks and we will need more than one big carrier as a life preserver," Congressman CHARLES A. PLUMLEY, Republican, of Vermont, told the press today as he emerged from a hearing of the House Subcommittee on Appropriations for Armed Services.

Today's was the first of daily hearings scheduled up to March 12 by the five-man subcommittee of which the Vermont Congressman is a member.

The subcommittee is considering a total appropriation of $13,500,000,000.

"Recent action of the State Department relative to Formosa," the Congressman said, "seems to make it necessary to protect ourselves at sea rather than on, off, or from land bases. Eventually, we'll fight either here or on the sea. And do not fool yourself," he warned, "we had better be prepared."

The Vermont Congressman was among Members of Congress who vigorously protested Secretary of Defense Johnson's order to abandon construction of a huge naval carrier last spring.

Now both of these things remind me of the fact that way back last March there appears an article in the CONGRESSIONAL RECORD entitled "Our Place in the Far East," which, by reason of permission heretofore granted, I quote:

OUR PLACE IN THE FAR EAST

(Extension of remarks of Hon. CHARLES A. PLUMLEY, of Vermont, in the House of Representatives, Thursday, March 3, 1949)

Mr. PLUMLEY. Mr. Speaker, by virtue of permission granted, I am including a letter I wrote the State Department and the answer thereto.

I am putting this correspondence into the RECORD as a matter of protection.

Some years ago while a member of the Military Affairs Committee, I protested the shipment of iron scrap to Japan. I insisted upon the building of stock piles of necessary material. While I made my position perfectly clear with regard to those two matters, I did not at that time make any statement in the CONGRESSIONAL RECORD. This time, however, I wish my position to be a matter of public record.

For some time I have disagreed with the State, Army, and Navy Departments relative to the policy we have pursued with respect to China.

While chairman of the Subcommittee on Appropriations for the Navy, I sent around the world one very well qualified to make a report to me relative to our situation in the East, for the use of the subcommittee.

I have repeatedly announced my layman's opinion with regard to what should be done by us to maintain a world position we did not seek but which we must either sustain or quit.

Here are the letters which briefly outline my position concerning the present situation in the Far East. I am still compelled to think we are making the greatest mistake possible unless and until we assume the burden of our responsibility.

JANUARY 24, 1949.

Hon. DEAN G. ACHESON,
Secretary of State,
Department of State,
Washington, D. C.

DEAR MR. SECRETARY: Some time ago I informed the Secretary of Defense as to my intense interest in the matter of our lack of proper consideration of what our situation in China soon will be.

Last fall, as chairman of the Subcommittee on Appropriations for the Navy, I sent a qualified representative to China to make an inspection and to report to me the result of his investigation. I have transmitted the substance of the report to the Secretary of the Navy.

I desire to be informed what has been done by the State Department looking toward the acquisition, under some kind of lease arrangement, of Tsingtao.

Tsingtao, German planned and built, "has almost everything to recommend it as a base for military and naval operations. As you know, it is situated on the coast of the strategic Shantung Peninsula and possesses one of the world's most excellent harbors. Here the Germans builded well and their handiwork remains in use even today. The topography of the area with rugged mountains surrounding it ideally recommends itself to military defenses. This fact was patently shown by the first German defense of Tsingtao during the First World War.

"The plain facts are that we are spending limited amounts of money here in the maintenance of our garrison on invitation of the present Chinese Government. Expenditures are made, however, only to that extent which is necessary to maintain it as a temporary makeshift base of operations with no real control over the area. This place has great

possibilities for development but as previously indicated we are here merely on invitation and common sense would dictate that it would be foolhardy to expend large sums to install those permanent installations so necessary for the creation of a modern naval establishment unless there were assurances forthcoming that we alone would be the recipients of the benefits of our own handiwork. In my judgment the acquisition of Tsingtao under lease arrangement should be attempted. It would require hard work and delicate diplomacy but it is well worth that try. Such an accomplishment would be of tremendous benefit to the United States of America.

"Tsingtao definitely lies across the Russian path southward down the coast of China. Developed, it would stand as a powerful checkmate to Russian communism at Dairen, Manchuria, and Vladivostok. Most important of all is the fact that it would be a toehold for America on the China coast in the event that all of China falls into the hands of the Chinese Communists. I am not one who believes that Russia will absorb China if this should take place. I do believe, however, that the Chinese Reds will, if they obtain the ascendancy, need economic aid and that should we be so located we would still be in a position to approach them—and they approach us—in the channels of trade. I am also not so sure but that this Chinese brand of communism in due time if properly handled could be changed to something less than Red. It is well worth noting that past events indicated that millions of Chinese are susceptible to the persuasion of economic conditions. At least the chances of modification or conversion of Chinese communism would be far greater than if we were nonexistent on the China coast.

"Most diabolical would be the withdrawal of American forces from China and the subsequent establishment of leased Russian bases along the Chinese coast provided by a Chinese Government friendly to and in obligation to Red Russia. To face such a situation, the United States as I see it would be forced to expend untold billions in Japan, Okinawa, Guam, and the Philippines or else be reconciled to a withdrawal from the Western Pacific. The latter would be a most dangerous step."

We should, if it now be possible, negotiate a lease of the old German base at Tsingtao, rebuild and modernize it, and that at the earliest possible moment.

We should not continue to be so inconsiderate of our own welfare as we were when, against the protests of many, we continued to ship scrap iron to Japan, neglected to afford ourselves a second waterway route from the Atlantic to the Pacific transisthmus, anchored our fleet in the harbor of Oahu as a target and an invitation to the massacre which occurred.

I feel very deeply about the matter of the lease of the fortifications at Tsingtao, as I have felt concerning the other matters to which I refer, and I am writing this letter as and for a matter of record in that respect.

Yours very truly,

CHARLES A. PLUMLEY,
Member of Congress.

FEBRUARY 4, 1949.

The Honorable CHARLES A. PLUMLEY,
House of Representatives.

MY DEAR MR. PLUMLEY: The receipt is acknowledged of your letter of January 24, 1949, indicating your interest in the acquisition by the United States of the city of Tsingtao under a lease arrangement with the Chinese Government and asking that you be informed regarding the steps which the Department of State has taken to that end.

The Department of State had not previously been aware of your deep concern in this problem and your views have been received with interest. They have been made available to the immediately concerned officers in the Office of Far Eastern Affairs who are available for consultation with you at any time about the problems involved in your suggestion that this Government acquire Tsingtao under a lease arrangement. This Department has not been informed by the National Military Establishment that such action is desirable for military purposes and has taken no steps looking toward the negotiation of such a lease. Thank you for making your views available and be assured of this Department's interest in receiving them.

Sincerely yours,

CHARLES E. BOHLEN,
Counselor
(For the Secretary of State).

Mr. Speaker, it is a sorry story but, in the face and eyes of such a group as was confronting our civilization, we did nothing, as usual, under our alleged foreign policy of appeasement and on have come the Communists till they have reached Formosa as was to be anticipated. So, some months ago, I raised my feeble voice to suggest that we enter into a long-term lease with Chiang Kai-shek in order to try to cover us, that is to say, to protect us, and by us I mean the world, against the further advance of communism in Formosa, and I offered the suggestion that if such action in the premises were impossible of accomplishment or of performance, diplomatically, that in order to preserve the peace of the world, quietly, we might submit the possibility of the negotiation of some kind of leasehold right for us to a plebiscite for the consideration of the people of Formosa. So far as I know, no action was ever taken along the line which I, a nondiplomatic statesman and just a common Congressman, had suggested. Nothing was done, as usual, by us, but the Communists continued to advance.

DIPLOMACY RESPECTED

Now, I respect the necessity of diplomacy in world affairs and defer to diplomatic action, so long as it conserves our safety as a body politic. Nevertheless, I like 24 hours' notice in advance as to who is going to massacre me, even with words. Do you think, Mr. Speaker, that the people think we have a competent State Department to protect us, to protect you against Communist advances, which will hear nothing to suggestions made so practical, as everybody acknowledges, they would have resisted their advances?

PRO-RUSSIAN SYMPATHIZERS?

I regret I am compelled to believe, by reason of the reception accorded my suggestions, that the State Department of the United States is so saturated with pro-Russian sympathizers that we are vitally embarrassed. I think it is high time that we found out whether or not my suspicions are or are not well founded. Certainly no action taken by the State Department recently is in denial of my suspicions. Naturally, I would prefer that Russia be our friend but friendship is not to be bought by the sale of all that we hold dear nor by permitting her, I mean Russia, to tell us why and what to do and when to do it. It is time we stopped dead and started the clock which ticks appeasement.

SWITCH TO ALARM

It is time we switched it on to the alarm. Today we are not as capable as we would have the world think as to be thought transcendent militantly. That place can only be bought again at the cost of unnecessary blood and tears and treasure because of our unpreparedness which is the reason why we should properly prepare to so defend ourselves and so organize aggressively as to be able to make defense successfully and now.

It would seem to me, Mr. Speaker, that since the State Department has declared we are to have no bases on, off, or land from which to fight to defend ourselves and our rights, the only answer is that we will have to fight from the sea. To do that with the contemplated inadequate Navy and Marine Corps provided by proposed appropriations is nothing more or less than a challenge to a catastrophe.

We should be the rulers and the masters of the sea. That we can be, but it will cost money so to be. That we will not be as is proposed.

Unless we are willing to pay the price, we might as well, in the language of the State Department, "fade out of the picture" as some of those who are undertaking to dictate our alleged foreign policies and our programs obviously would have us to do, I know not why except I know their background.

THE PLACE OF THE CARRIER

One who reads dispassionately, fairly, impartially, as between the armed services, the history of the last war as written by representatives of all the services, must be struck by the repetition of the statement, "and the battle would have been lost if not then had come the carriers." The truth is, seaborne planes won the war initially, and it is so admitted by all the services undeniably. It is the truth that without the carriers the war could not have been won and would not have been won and would have been lost.

So, Mr. Speaker, I am for the big carrier and for a rescinding of the order blocking the building of the big carrier and for ordering it to be constructed at once. That was an act involving malice prepense.

As of today, more perhaps than at any other time in the history of this country, we need it, and others, for the protection and the safety it will afford us and insure. We need it, and more and others like it, and, in truth, a lot of small carriers.

The history of the last war proves my point, any civilian Secretary of Defense to the contrary notwithstanding.

I recognize the importance and the place of the airplane in the wars of the days that have to be as is evidenced by the position which I have taken. I am still more firmly convinced than ever, by reason of the position in which we find ourselves today, since Congress last met, and will find ourselves tomorrow that we need the big carrier, and more of them, and more now than ever.

Mr. Speaker, I have spent hours, days, weeks, months, and long years listening to and studying the advice of men who came up from Annapolis to be lieutenant commanders to captains to admirals, to membership on the Board of the Chiefs of Staff, and of graduates of West Point who have similarly become captains and major generals and members of those

boards to which I referred, as they tried to tell me the story of how a world war should be won, and as they demonstrated it should be won. Out of it all, I feel I have learned the lesson of the necessity for us this day to be able and capable and prepared to dominate and to control the sea primarily; and so it will ever be.

Sea power, Mr. Speaker, true sea power, is unique in military operations because it demands exclusiveness of possession. It becomes all or nothing at all. The security of the United States, and indeed the security of the western civilization, is dependent upon our maintenance of our present position in naval affairs. Maintenance of this position can only be continued as long as the Navy is provided the tools with which to carry out its responsibilities. Naval power requires air power in the fleet. World War II demonstrated that the airplane was the primary weapon of destruction and defense. The aircraft carriers of World War II paid for themselves over and over again by the efficiency and dispatch by which they destroyed both the German and Japanese sea power and brought the war to an early, successful conclusion. The carriers of World War II were mainly built in dire necessity for a specific period of operation. The submarine threat required a large number of small, easily built carriers known as the CVE's. These were built and performed their duty admirably but their continued use in the future is somewhat limited, except for special operations. The *Essex*-type carriers were mainly built for certain types or sizes of aircraft current in World War II. These too will pass into obsolescence in the next decade and are now limited to operation of present-day aircraft.

Since World War II the naval problem has been complicated. The problem of maintenance of naval superiority has been further threatened by the advent of faster and higher performance aircraft, the development of guided missiles, and the increased difficulties in handling the snorkel submarine.

The modern aircraft are mostly high-performance jet type. In order to get high rate of climb, high altitude performance, longer range, and greater striking power, these new aircraft have had to be built larger and stronger and hence are more dense. This density factor requires that the carrier decks be stronger than heretofore. The jet aircraft requires longer decks for take-off and for parking or handling a large number of bigger aircraft. The size of the new aircraft requires that the hangar deck space be larger than previously required. The heavier aircraft require heavier arresting gear and catapults. Jet aircraft are notoriously high fuel consumers and hence the new carriers must have a larger fuel capacity for aircraft. Efficient and continuous aircraft operations with high performance aircraft indicate the desirability for a flush deck carrier, such as was proposed for the U. S. S. *United States*. The increasing threat of the atomic bomb, guided missiles, and submarines to our shipping and naval forces requires greater protection by naval forces to reduce the losses to within acceptable limits. The lessons of Bikini must be applied to minimize damage from the A bomb. The lessons of World War II operations must find expression in new construction. These are the problems in a nutshell as I hope I have learned them.

I submit that the dynamics of air power and naval power requires new weapons to maintain the offensive capabilities, without which a navy is not capable of maintaining true sea power. It may be asked, "Why couldn't World War II carriers be modified to take care of these changes?" To some extent they can. I speak only as one who has listened trying to learn.

Two carriers of the *Essex* type are undergoing modernization at this time, and these modernizations are valuable. But to expect a World War II carrier to be suitable for extensive modernization is, in many ways, akin to recommending modernization of the B–17 and the B–29 aircraft of the Air Force for modern combat use. Major changes in structures and clearances and stowage space would make such attempts to modernize prohibitively costly and militarily and economically unsound. So I see it as a layman.

Time is a factor that is often overlooked in military affairs. The time required to design and construct a new carrier to incorporate the required improvements as were part of the U. S. S. *United States* was approximately 6 years. Preliminary talks and requirements were set up in 1945. The design took approximately 2 years, from 1946 to 1948. Construction was estimated between 36 and 48 months, giving the earlier date of completion somewhat in or after 1952. This carrier design was the result of studies of requirements to operate first-line aircraft developing today and operational in the next few years. This problem of a suitable carrier for the modern planes of the next decade is at present unsolved. It is still and will be a problem for years to come.

If this carrier is not built, two problems will face the Navy. The first is the gradual withdrawal from certain areas now under our control, such as the coastal waters of Europe, Mediterranean, and Middle East, due to the threat of modern and superior land-based aircraft. The second is the rapid obsolescence of United States naval power which no compensating gain by any other arm can overcome. This withering of naval power will result in the United States fleet becoming mainly a supply or logistic service which is liable to heavy losses and uncertain in performance due to its lack of combatant strength for exclusive control of the seas. Until the advent of guided missiles for primary missions of long-range attacks, the carrier task force capable of projecting high-speed, long-range, high-performance aircraft against the enemy, wherever he may be, is a necessity. Failure to build the new carrier automatically denies the Navy the tools required to discharge its responsibilities and to maintain its present superiority over all other navies. This fact has been amply supported before the congressional committees.

Who can say, that in the dynamics of weapons and aircraft changes, that the arresting of the carrier and naval aircraft development may not prevent our early and successful termination of world war III, if, and when it occurs. No competent naval man would take that responsibility for such stoppage in view of the high stakes involved.

We are primarily a maritime power and shipbuilding is vital to United States security. It must provide a base for ready expansion in time of war. It must be kept alive with new construction during times of peace to keep the art current and the skills retained. The supply activities for such shipbuilding must be maintained in some degree in order that the know-how procured in World War II will be ready for war mobilization. National readiness demands that these conditions be met.

In my opinion, the Navy is entirely correct in its demands to build the U. S. S. *United States*. It was a logical development in carriers and represented a new prototype with which the evaluations and operations techniques could be continued. It was a prototype, authorized by Congress, and within the right and duty of the Navy to develop.

Obsolete carriers require the operation of obsolete aircraft. Such operations can cause unnecessary losses of men and forces, in any emergencies in the face of first-class air opposition. The loss of any American boy, through lack of required modern fighting equipment, is a tragedy that we can ill afford to generate. We owe it to ourselves and the country to provide those who might fight to protect her the best available weapons for their mission.

I emphasize the fact that any new carriers built will be used to the fullest extent in supporting naval missions in conformity with the Key West and Newport agreements. The new fast snorkelling type submarine creates a threat against control of the seas many times greater than existed from the submarine of World Wars I and II which almost defeated us in these two wars. To combat this threat every means possible must be used. The Navy has two general methods that can be used; one is offensive and the other defensive. The former is composed of the carrier task force which seeks out the submarine at its source by mining of harbors and bombing the submarine and submarine facilities in enemy ports. The other seeks the submarine at sea by protecting convoys, by hunter-killer operations, which are teams of light carriers and destroyers, and various other means, such as blimps, patrol planes, and defensive mining of own harbors. The importance of containing the submarine threat can be realized only if one understands that unless the submarine is defeated no army, air force, or foreign ally can be supported overseas.

If first things come first, as normally they should, then an adequate carrier task force is one of the first requisites for the defense of this vast insular Nation of ours.

As a valedictory, I wish it to be distinctly understood I am unalterably opposed to the usurpation by the Executive

of the legislative prerogatives. When Congress, representing the people, undertakes specifically and definitively to say where dollars shall be spent, it is beyond the law and in derogation of the Constitution for any Secretary of Defense or any President to undertake to divert otherwise the expenditure of funds appropriated for a specific purpose by the representatives of the people. Any attempt to usurp the rights and the prerogatives of the Congress, the legislative branch of the Government, by the Executive, is dictatorship, pure, simple, and undefiled, which Congress—that is, the people—should resent to the extent, if necessary, of impeaching those responsible for such acts in the premises. It is time to take notice.

Award for Distinguished Public Service to Gen. George C. Marshall

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. DAVIS of Tennessee. Mr. Speaker, the United States conference of mayors is a well established and useful organization. It is unnecessary to remind my colleagues that the mayors of our cities directly represent the general thinking of the people of this great country. On January 19, 1949, formal action was taken by the trustees of the conference of mayors to make a national award for distinguished public service. That public service was specifically defined to include service to any level of government, whether it be Federal, State, or local.

In a ceremony at the White House on November 25, 1949, the President of the United States presented the first award authorized by this resolution to Gen. George C. Marshall.

In order that the House may know the basis for the award, the members of the award committee, and the language of the citation which was read by President Truman in presenting this recognition to General Marshall, I have asked for permission to include that information as a part of these remarks. They follow:

THE UNITED STATES CONFERENCE OF MAYORS AWARD FOR DISTINGUISHED PUBLIC SERVICE

HISTORY

On January 19, 1949, by formal action of the trustees of the United States Conference of Mayors; a national award for distinguished public service was authorized. Public service was specifically defined to include service to any level of government—either Federal, State or local.

Initiation of the United States Conference of Mayors Award for Distinguished Public Service was based upon the fact that in the United States outstanding and meritorious public service has not been nationally honored to the extent that individual achievements and major contributions in various professional fields of endeavor have been recognized.

THE AWARD

The award itself is in the form of a mounted bronze plaque, the model for which was designed by an eminent American sculptor. The plaque carries the words "Public service is a public trust."

The award will be granted from time to time as determined by the trustees of the conference of mayors. The trustees function as the award committee.

It is planned that, when circumstances permit, the award be presented to the recipient by the President of the United States on behalf of the United States Conference of Mayors.

By unanimous vote of the award committee the first award for distinguished public service was bestowed upon Gen. George C. Marshall by the President of the United States at the White House on November 25.

* * * * *

GEN. GEORGE C. MARSHALL CITATION READ BY PRESIDENT HARRY S. TRUMAN

Holder of the Nation's highest military office and honors, a truly great soldier and organizer, this award is given for distinguished and outstanding public service. At a time when retirement was justly earned, you accepted major public responsibilities in the field of our country's foreign affairs. You have again heeded another call to humanitarian duties. As Chief of Staff, Secretary of State, and now President of the American Red Cross, this award is richly deserved and is presented to you by the United States Conference of Mayors in grateful recognition of your distinguished public service.

UNITED STATES CONFERENCE OF MAYORS AWARD PRESENTATION COMMITTEE

Mayor W. Cooper Green, of Birmingham, president, the United States Conference of Mayors.

Mayor David L. Lawrence, of Pittsburgh, vice president, the United States Conference of Mayors.

Mayor Thomas A. Burke, of Cleveland, member of the executive committee, the United States Conference of Mayors.

Mayor Thomas D'Alesandro, Jr., of Baltimore, chairman, standing committee on legislation, the United States Conference of Mayors.

Mayor Michael V. DiSalle, of Toledo, chairman of the advisory board, the United States Conference of Mayors.

Paul V. Betters, Washington, D. C., executive director, the United States Conference of Mayors.

One Person We Know Gives Us a Greater Appreciation of Honor, Integrity, and of Truth; Another Gives Us a Fuller Appreciation of Patience, Earnestness, Courage, Steadfastness, While Others Give Us a Richer and Deeper Appreciation of Humility, Charity, Tolerance, or, Perchance, Understanding and Tact

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. BOYKIN. Mr. Speaker, sometime, somewhere, someone once said:

I would not grieve in the least if a friend of mine gave a great feast and did not invite me to share with him at his festive board; but, if I had a friend who was sorely tried, and had a great sorrow which he did not invite me to share, then, indeed, I would feel bereft, knowing that I was not permitted to participate in that which to me is the highest privilege of a true friend.

I think it is unnecessary, Mr. Speaker, to tell you that nothing in life could have caused my absence at the testimonial paid you by our mutual friends on the occasion of your sixty-eighth anniversary on Friday last except that which I regarded as my bounded privilege and duty to serve a friend and in that instance it was one not as fortunately situated, and surrounded by a multitude of his friends at that particular hour as was your own good self.

But I was with you in spirit SAM, throughout every waking hour of that happy, happy day. My good wife and I thrilled at the knowledge that you again had passed another milestone in the long years of service to your country and your fellow men.

I remember many, many years ago when in a discussion evaluating the elements and essence of friendship that a great savant made the statement that we only have friends for the things which they could give us, and that thought shocked every fiber of my being. Passionately I asked him what he meant when he said that we only have friends for what they can give us, and from the lips of that great man came words of wisdom that burned themselves into my very soul and which I shall remember until the day I die:

We meet, nurture, and cultivate friendship for someone whom we learn to know—

He explained—

because they personally in some undefined method give us something that feeds either or both our mind and our soul.

One person whom we know—

He continued—

gives us a fuller appreciation of patience, earnestness, courage, steadfastness, while others give us a richer and deeper appreciation of humility, charity, tolerance, or, perchance, understanding and tact.

From one we learn more fully the teachings of the Master himself—that we should clothe the naked, feed the hungry, minister to the sick—while another gives wisdom and knowledge as to the fruits of tolerance, patience, and a clear recognition of the dignity of man regardless of how humble his station in life.

Mr. Speaker, it is thus that we come to the realization that we nurture the friendship of any man who in some manner contributes something worth while to our lives. The more of the spiritual and the less material benefits which they contribute—the greater I have found is the bond of friendship that ensues.

SAM RAYBURN, I have been knowing you for a long, long time. You have not given me a greater understanding of any single one of the aforementioned attributes, you have contributed to me and to all of your legion of friends as well as to the friendships that you have bestowed upon human beings everywhere a greater understanding of all of the elements and virtues that go to make up the greatest of all friendships among men.

It is because of these facts that today you enjoy the fullest confidence and are

beloved by every person who knows you—from our great President sitting in the White House down to the humblest citizen of our land.

Mr. Speaker, this House has had other great Speakers, but it has never had a greater Speaker than Speaker SAM RAYBURN; and I know that in praying that your shadow never grows less I bespeak the sentiments of every man who sits on both sides of the aisle.

Of a certainty this body was never chaired by one who had at one and the same time a more complete understanding of the problems of his colleagues as well as the problems of his country.

In the administration of our proceedings it is, of course, impossible for the Speaker to please every individual, and where all are of equal rank as in such a body as constitutes the House of Representatives. But he can be fair; he can be impartial, unbiased, unprejudiced and rise above party or private preferment; and you, Sam, alway do so rise above them, and at the same time, as a true leader, spend your every talent in bringing harmony out of chaos and good out of everything you do.

Mr. Speaker, acknowledging that you have a heart as big as a Texas steer, we, your colleagues, hail you on this your sixty-eighth calendar year.

I pray that you will live another hundred in order that you will continue to spread the beneficence of your own soul to the benefit of your fellows everywhere throughout the world.

Federal Extension of Rent Controls Necessary To Maintain High Employment Figures

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. YATES. Mr. Speaker, it is not premature for us to be thinking about one of the most crucial decisions which we will have to face later in this session of Congress, namely, the extension of the Federal rent control law after June 30, 1950.

In an effort to develop some unemotional thinking about rent control, there is reprinted below an excellent article on the subject by Mr. Leo Lerner, the editor of the Lincoln-Belmont Booster in Chicago, Ill.

The article follows:

THE QUESTION MARK OF 1950

In predicting that 1950 will be a good year, with purchasing power ascending, economists have soft-pedaled the big question mark of the coming year.

The big question mark is rent control.

Federal rent control expires next June. I have heard Members of the present House and Senate predict that there is little if any chance of squeezing through an effective rent-control measure in the next Congress. One reliable Senator has said flatly that there will be no rent control after June, period.

It is believed that Congress will fail to protect renters mainly because most rural areas are now decontrolled or not affected, and that there aren't enough city votes to swing the legislation alone. The seeds of the coming rent and housing crisis were sowed by the last rent bill, which did not provide adequate funds for enforcement and which opened the way for national as well as regional pressure by powerful lobbies.

The big cities, where housing is still very tight and only the rent law keeps many people in their present facilities, are going to suffer most if Congress fails to act. A suggestion has been made that the city or State could step into the breach if Federal control ends, but it must be admitted that Uncle Sam, even though he makes mistakes at times, is best fitted by authority and experience to save renters from the possibility of fantastic and sudden increases in rent. The city of Chicago does not have the funds for control, and there is the strong possibility that if we had a city rent control law, political considerations, which have certainly been at a minimum under Federal enforcement, would prevail. The State of Illinois would be a better medium for holding the line on the cost of having a roof over your head, but there is a real doubt as to whether the State legislature could pass an effective law considering that the farm districts dominate the legislature.

I admit that landlords have a good argument when they say that since everything else has been decontrolled, rents should be put back on a free enterprise basis. It is also true that some landlords have not had justice in their quest for fair compensation considering that all their costs have risen. Further, it must be said that many landlords have not cheated or profiteered, and don't intend to if rent controls go off. I know some landlords who say they are satisfied with present rents and wouldn't put through any further increases.

But the total economic picture would be vastly affected by a sudden lifting of controls in cities like Chicago. I look back with a shudder to the twenties, when rent ate up a disproportionate share of the family income. I wonder what would happen to family purchasing power if some rents jumped to much higher figures. Who would buy the automobiles and television sets and clothing and other products we are now producing in great quantities if housing, still the rarest commodity, were decontrolled? Maybe you will say you don't care who buys an automobile or a television set, but you will care eventually if the high employment figures we are now enjoying, because production is in full swing, take a sharp drop because rents skyrocket.

I heard a war veteran say the other day that although he had sympathy for the landlord, he looked upon housing as he did upon the gun and ammunition business. You have to control that business because it deals in dangerous weapons. The housing shortage, he said, makes shelter a weapon which is held against the head of the entire renting population and which needs to be strictly controlled until the power to provide housing or take it away is not a danger.

In the meantime, those concerned with this major problem of 1950 will have to continue to look to the Great White Father in Washington for a solution until all hope from that source must be abandoned. The people will have to do their best to persuade Congressmen that their votes on this issue in 1950 will be the deciding factor in the 1950 elections. Also, the economic effect of decontrol will have to be made crystal clear to all of those interested in having prosperity in the next several years.

That Filibuster Business

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. BIEMILLER. It has been clear from the beginning of the civil-rights controversy in the Eighty-first Congress that the Republicans have consciously chosen to take an effective, if indirect, position against major civil-rights legislation.

Any doubts about Republican action and motivation on civil rights were removed by the revised Senate cloture rule which ended last year's Republican-assisted filibuster. Devised by Senator WHERRY and his colleagues and publicly supported by a majority of Senate Republicans, the rule was advertised as smoothing the way to end filibusters and make easier the passage of civil-rights bills.

Administration Democrats rightly rejected the phony advertising at the time. To their support at this somewhat later date have come the National Committee for Strengthening Congress and the Milwaukee Journal, an outstanding independent newspaper, in an editorial statement of January 7. They now point out, as administration supporters did at the onset, that the new cloture rule is a backward step—that it actually makes passage of civil-rights legislation almost impossible because of its demand that 64 Senators must approve closing of debate.

Under leave to extend my remarks, I desire to include the following editorial:

THAT FILIBUSTER BUSINESS

There was a hot controversy last spring over Senate adoption of a revised cloture rule backed by southern Democrats and most of the Republicans. The action ended a southern filibuster on civil-rights legislation.

Republicans, led by WHERRY of Nebraska, one of the authors, said the new rule would make it easier to invoke cloture and pass civil-rights legislation. The Democrats vowed that it wouldn't and said that WHERRY and his followers had fallen into a southern Democratic trap. So noisy were the orators that it was difficult for the average citizen to figure out who was right.

A voice of authority has now been heard on the subject. It is that of the National Committee for Strengthening Congress, a group of outstanding citizens concerned with making congressional procedures workable and efficient. It says, in a letter to Congressmen, that adoption of the new cloture rule was a retrogressive step and recommends its repeal.

"The new rule," writes the committee, "makes it possible to stop a filibuster on the approval of the Senate Journal and on motions to take up bills. But by requiring approval of 64 Senators to close debate, compared with two-thirds of those present under the old rule (which might be as few as 33), the new procedure so stiffens the voting requirements that we anticipate that it will be harder hereafter—rather than easier—to limit debate * * *"

The committee urges, as did the northern Democrats last spring, that Senate rules be

liberalized to enable a majority of those present to limit debate on any motion, measure, or other pending matter after there has been an adequate opportunity to debate it fully. This is the sensible and thoroughly democratic solution.

The coming session of Congress is to consider civil-rights legislation. That will undoubtedly bring another Dixie filibuster. If it does, the opportunity is perfect to make the rules change proposed by the National Committee for Strengthening Congress, thus ending filibusters for good. This time northern Republicans should be smart enough to vote on the right side—and let WHERRY play with the southerners, if he thinks that's politically wise.

Joseph Scott Denounces Communism

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. McDONOUGH. Mr. Speaker, the Honorable Joseph Scott, of Los Angeles, recently made a speech in Pasadena, Calif., concerning the college and university professors who refused to denounce communism. A report of his speech was published in the Gaelic American, issue of January 7, which I am submitting herewith.

Mr. Scott is a stalwart American and has dedicated his life to advocating the high principles of good sound American government. He is a former president of the Los Angeles Board of Education and has been prominent in civic and political activities for the past 50 years. I am certain that the Members of Congress will be edified by his sound judgment as expressed in the following:

JOSEPH SCOTT FLAYS COLLEGE PROFESSORS ON RED TEACHINGS

LOS ANGELES, December.—At the dedication recently by His Excellency Archbishop McIntyre of the new St. Andrew's High School in Pasadena, Joseph Scott, the veteran warrior of many battles for truth and justice was the principal speaker.

Mr. Scott, who is national president of the American League for an Undivided Ireland, said:

"Some time ago, our venerable apostolic sovereign pontiff offered these words of warning: 'He only is at peace with God, who is at war with the forces of evil.'

"In the spirit of that admonition from our Holy Father, I am appealing to the officers and members of our various councils to renew their faith and zeal against the gigantic attack that confronts us, in the battle against atheistic communism.

"Recently, Dr. Robert G. Sproul, the distinguished president of the University of California and a native son of this State, felt compelled to arrest the attention of the delegates to the American Bankers' convention meeting in San Francisco, to the grave crisis that confronts himself and the regents of the university through the amazing attitude of many of the professors, some 700 in number, who declined to subscribe to the pledge of allegiance, as required by the regents. These professors demurred to this action on the ground of "academic freedom," because the oath required them to state that they were not Communists or in sympathy with the philosophy of the communistic ideology.

"The San Francisco Argonaut, referring to these professors, say: 'The teachers believe in a substitution known as academic freedom. What this means in reality is a license issued to every professor to say what he pleases in classrooms and laboratories, and be paid for doing it.'

"The late Thomas Woodrock described this substitution as a license for irresponsibility, contempt for authority and insubordination of the gravest kind.

"By contrast with that attitude we have the comforting demonstration of the reaction of the school teachers of the Los Angeles city schools, some 10,000 strong, all of whom, with only three exceptions, took this obligation without objection or protest.

"Dr. Alexander J. Stoddard, the superintendent of schools for Los Angeles, in a public address recently, deplored this attitude of the professors and applauded the wholesome example set by the teachers under his jurisdiction, saying, 'We should make it impossible for those who do not agree with the American viewpoint and way of life to be in a position to teach our prospective teachers.'

"Years ago, when the question of a branch of the University of California was under consideration, some of us old pioneers enlisted the regents of the California University to meet on a proposed site for the university, which is now known as Westwood. Little did we think as we urged the regents to give the young men and women at this end of the State the same opportunity that they had in the north, by opening a branch here, that we would live to see the day when a host of scholars and scientists would set such an unwarranted and diabolical example of lack of patriotism as the behavior of these professors.

"Some of these professors draw down salaries of $8,400 a year for 10 months' work, which could be equivalent to more than $10,000 for the normal 12 months' salary.

"We taxpayers, and that means all of us, are grinding our faces to supply that kind of people to mold the minds and hearts of young Californians.

"I quote this example to emphasize the necessity for continued and unceasing alertness and concern to our bounden American duty, to set our faces like flint against all kinds of subversive influence; they are all around and about us—in Hollywood movieland, in labor unions, among lawyers, the journalists, the authors—everywhere.

"We face this evil, diabolical philosophy of life, godless and unprecedented. We must face it without flinching and hearts full of trust in the omnipotence of God and the righteousness of our cause.

"Of old, the lonely Nazarene said: 'He that is not with Me is against Me.' Let that be our slogan, and individually or collectively, let us emulate the words of the immortal Lincoln, 'With malice toward none, with charity for all, with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in'."

Food Surpluses Should Be Sent to the Needy in Other Countries

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. HAYS of Arkansas. Mr. Speaker, those of us who come from agricultural States are deeply interested in the problems of farm production and farm surpluses. And we are also much concerned in creating American good will in the world by demonstrating that we want to help those who are less fortunate than we are. Since the end of the war, we have given generously of our wealth through governmental and international relief agencies and through the Economic Cooperation Administration.

Our citizens also have contributed to meet the needs of the world through the various private relief agencies such as the Protestant Church committees, the war-relief services of the National Catholic Welfare Conference, the American Friends Service Committee, Church World Service, CARE, the American Jewish joint distribution committee, and many others. And I believe that we must continue to help the world to the place where they have sufficient to eat and enough clothing to protect them and keep them warm. To do less is not only un-Christian, but leads to the kind of social and economic insecurity in which communism thrives.

The surplus agriculture products that we now hold could be, and should be, given to the peoples of the nations needing food and clothing. We have made the original investment and it would require only a small additional fund to ship them overseas where they would attest to our good will.

There are several ways of handling such a program, but I would prefer to see it handled by a nongovernmental agency, like CARE, which has done such a magnificent job in the past 4 years in distributing more than 9,000,000 packages worth nearly $90,000,000 in Europe and Asia. I know that on the basis of their experience they could see that our farm surplus goes to those in need as a friendly token of our desire to help them. I trust that the Secretary of State and the Secretary of Agriculture will give serious consideration to this suggestion and invite the CARE organization to distribute such surpluses as are now in their possession.

It's Up to the People

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Altoona (Pa.) Tribune:

IT'S UP TO THE PEOPLE

The answer to continued American freedom lies directly with the people. Our country now is deeply involved in the process of socialization, which brings with it constantly increasing regulation of the lives and efforts of the American people.

We are being placed under such a terrific tax and Government spending burden that as a people, we are in dire danger of being forced to ask Government for ordinary living subsidies.

The lowering value of the dollar, the taxes taken from us, the controls thrust upon us,

are all drawing more tightly the noose of regimentation, and the elimination of a free people under a free government.

Mr. Truman and his official family appear to be engaged mainly in playing politics. The President said from Key West a week ago that he favored streamlining Government according to the recommendations of the Hoover committee, which has been approved by most of the Nation's able business and industrial leaders.

Yet, while stating his belief in the Hoover report, the President, nevertheless, does not give up his fantastic program of spending which he outlined nearly a year ago.

Thus, he plays a politically expedient game, one day praising free enterprise, speaking highly of economy in Government, and a few days later, speaking up again for national health insurance pensions for all, and the rest of his costly and impractical proposals.

He has his official family doing the same thing. Secretary Maurice J. Tobin, who he counted upon to hold labor on the Truman bandwagon, one day speaks up for economy, and the American system. The next, he makes a speech advocating $100 a month pensions, socialized medicine, and higher farm payments.

If the American people will take time to look closely at the utterances of their leaders, they will find many an inconsistency in them.

Their praise of economy and the Hoover report scarcely fits in with plans to pension everybody with free medical and hospital service.

The administration in this country has found a rabble-rousing appeal in the soak-the-rich program. Yet, not long ago, Mr. Truman said he was in favor of more taxes on the $6,000 a year people.

In Britain, the wealthy class has been nearly all eliminated. Few really rich families are left in England. Great estates are being rented, or closed, or sold. Yet, the British working people are no better off than ever—in fact, much worse than they have been for 100 years.

Planned programs, of a vague and insidious kind little understood by the people, are weakening the fiber of America, and leading us directly into Government control.

The Government, through its huge propaganda machine, consisting of a costly publicity bureau in every main department, carefully nurtures the idea that profits are an evil thing, and thus, whereas it never before was considered a sin in this country to make money, or to be thrifty, and to save, or to invest savings, now, that philosophy has changed so that the amount of profit of an individual or corporation can make is carefully scrutinized by Government, and the amount of income that may be kept has been established and controlled by Government, which is thus seeking to do everything for everybody, even to the running of his private life.

Soon, such things as the Brannan plan, and other proposals indicate, every farmer may be told what he may plant, and how much he may market, besides how much profit he may make, and much income he may keep.

Government is fumbling from one thing to another, cracking down on great American industries under the antitrust act, yet allowing labor dictators like John L. Lewis to control industry's output, and to challenge the American workingman's right to stay on his job.

It is giving away billions in subsidies to some businesses, such as airlines, and taxing and regulating others like the railroads to death.

Obviously, only the public can do anything about this. It is up to the public, as Congress convenes, to tell its representatives that it is sick and tired of big Government, of Government spending, and taxing and controls, and that it wants the country given back into the hands of the people, and taken away from Government and labor dictators.

Congress is under pressure constantly by well-organized minority pressure groups. Only the vast bulk of the free public, men and women thinking like free Americans, can counteract these little but powerful pressure groups, and give Congress the real mandate of the people.

States' Rights and Lefts

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. HÉBERT. Mr. Speaker, at this time the most articulate and effective editor in New Orleans on the side of consitutional government is William H. Fitzpatrick, editor of the New Orleans States.

Billy Fitzpatrick has consistently stood up and declared himself against any form of socialistic government and has consistently denounced the tragic trends of the present administration in the direction of regimentation of the American people and centralized control of the daily existence of the people.

In a recent column Mr. Fitzpatrick hits right at the core of the proposed socialized medicine scheme.

For those who are inclined to think that there can be obtained something for nothing there is to be found reason for an examination of the facts. If the good of the country instead of political expediency for the purpose of vote catching is the sincere purpose of those who advocate this program of socialized medicine, then I suggest they reexamine the facts and then let the people of the Nation know whether it is votes or the welfare of all the people that is uppermost in their minds.

Here is Mr. Fitzpatrick's column as it appeared in the New Orleans States recently:

STATES' RIGHTS AND LEFTS

(By W. H. Fitzpatrick, editor, New Orleans States)

Well, you can always give up your New Year's resolutions for Lent, if they last that long.

The advocates of statism are going to try to put over their socialized medicine scheme again in the Congress which meets day after tomorrow.

The Federal Security Agency has made a study of the costs of the plan. That agency estimates the first year toll to be about $4,700,000,000. Doctors who have also studied this scheme say it will cost much more than that. It is not unusual for Federal agencies to underestimate costs and expenditures.

There are about 138,000 physicians in private practice in this country, most of whom would be driven to Government work if the panacea is adopted. It is being held out as a cure-all for many of our ills, but the treatment may very easily prove to be more painful than the disease.

We have seen what happened in England where socialized medicine was adopted. They gave wigs away and false teeth, and everyone who had an itch or an ailment, fanciful or real, hopped to the doctor's office for free treatment. The corridors were so crowded people who were really sick couldn't get in. The hypochondriacs were already there telling about the operation they were going to have.

Now the Commerce Department in Washington estimates the per capita income for 1948—the last year reported—at $1,410. And during 1948, the 41,578,000 Americans who paid income taxes paid a total of $18,079,000,000. Figure that up, and it amounts to roughly $535 each person paid.

And that is only Federal income tax.

Herbert Hoover, in his talk at Stanford University, showed that the average citizen works 61 days a year for the Government. What he earns in those 61 days goes to pay taxes. Mr. Hoover listed them as follows:

	Days
Obligations from former wars	11
Defense and cold war	24
Other Federal expenditures	12
State and local expenditures	14
Total	61

How many more days will we all be working for Uncle Sam if all the panaceas such as socialized medicine and the Brannan farm plan are adopted? Add the $4,700,000,000 the Federal Security Agency figures socialized medicine will cost to all your taxes and see how broke you're going to be.

Now if the Government is really interested in better health for the Nation and not just in starting up another agency to eat out our substance, we have a proposal we wish to make. And not in jest.

Why doesn't the Congress allow taxpayers to deduct from their income taxes all medical bills, and pharmacists' bills and all hospital and doctors' bills?

It wouldn't do the whole job of bettering Nation-wide health, but it would help a mighty lot. And it would save the people from paying more taxes, and it would keep our medical practice free of Government constraint. It would also end the very dangerous threat to medical advancement and learning which must follow any lessening of personal ambition.

Nobody can convince me that medical research will not decline in direct proportion to the amount of Government interference. Socialized medicine places the practice on a production-line basis, with doctors being paid so much per head per visit. It gives them the least possible time to attend individual patients or to devote to research and development.

The doctors are worried about it, and they ought to be. The reader of this column ought to be worried about it, too. Because a lot of the doctors feel like one young sawbones friend I have. He said:

"Listen, if they pass that socialized medicine proposition, anybody who calls me at 2 a. m. is going to get told to call up his congressman."

Hanley: Good Legionnaire

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix to the RECORD, I wish to request the inclusion of a newspaper article regarding Joseph William Hanley, a Louisianian in the employ of the United States Government.

Mr. Hanley is one of the most active members of the American Legion in Washington, D. C., and has won many awards for obtaining membership for the American Legion posts in Washington.

In addition, Mr. Hanley takes active part in the affairs of the Louisiana State Society.

Mr. Speaker, the article to which I refer was published in the Natchitoches Enterprise, of Natchitoches, La., of date November 24, 1949, and is as follows:

GOVERNMENT EMPLOYEE ON ANNUAL VISIT TO NATCHITOCHES

An annual visitor to Natchitoches, both city and parish, is Joseph William Hanley, who comes here from Washington, D. C., where he is a duly appointed employee of the United States Senate.

Mr. Hanley is a former resident of Chopin, which by the way is still his legal residence. He is at home to visit his hundreds of relatives in different parts of Louisiana and will return to his duties in Washington after the Christmas holidays.

He came via a most enjoyable trip down the eastern coast line, visiting cities in Florida before going to New Orleans. While in that city he paid tribute to the late Mrs. Allen Ellender, taking flowers to her grave.

Mr. Hanley is a veteran of World War I, having served overseas, and is a most active member of Vincent B. Costello Post No. 15, American Legion, Washington, D. C. He has won many awards for securing members for this organization.

The Potentialities of Local and State Government in Forestalling Further Centralization

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. HUGH D. SCOTT, JR. Mr. Speaker, one of the most thoughtful and scholarly speeches which it has been my privilege to hear in a long time was delivered by Prof. Edwin A. Cottrell, consultant on local government of the Haynes Foundation of Los Angeles, Calif., to the Institute of Public Affairs at Pomona College, December 3, 1949. The theme of the institute was, Can Voluntary Effort Do the Job?

I recommend Professor Cottrell's speech to everybody who is interested in the problems created by the growth of big government, with especial reference to the overlapping functions of State and Federal authority.

THE POTENTIALITIES OF LOCAL AND STATE GOVERNMENT IN FORESTALLING FURTHER CENTRALIZATION

(By Edwin A. Cottrell, consultant on local governments, Haynes Foundation, Los Angeles, Calif.; professor of political science, emeritus, Stanford University)

"Do not basely relinquish what the forefathers have with great difficulty maintained," is the Latin inscription on the gravestone of Governor Bradford in Plymouth, Mass.

Let me begin our consideration of centralization by quoting from a writer known to many of you:

"In the eleventh century of our era, the Chinese nation, under the dynasty of Sung, presented a spectacle nearly analogous to that seen in Europe, and France, especially, of late years. The great and knotty problems, questions of social and political economy filled all minds, and split into parties every class of society. Those people who at other times have seemed so indifferent to proceedings of their government, then flung themselves passionately into the discussion of systems which aimed at an immense social revolution. Matters had come to such a point, that the ordinary business of life was neglected; commerce, handicrafts, and even agriculture, were abandoned for polemical agitation. The nation was divided into two furious parties; pamphlets, libels, inflammatory writings of all kinds were daily flung profusely to the multitude, who devoured them with avidity.

"The reformer, or chief of the Socialist Party, was the famous Wang-ngan-che, a man of remarkable talent, who kept all classes of the empire in excitement during the reign of several emperors. * * *

"According to Wang-ngan-che, the carrying out of his scheme was to procure infallible happiness to the people in the development of the greatest possible material enjoyment for every one. * * *

"The first and most essential duty of the Government is to love the people and to procure them the real advantages of life, which are plenty and pleasure. To accomplish this object it would suffice to inspire everyone with the unvarying principles of rectitude; but as all might not observe them, the state should explain the manner of following these precepts, and enforce obedience by wise and inflexible laws. In order to prevent the oppression of man by man, the state should take possession of all the resources of the Empire, and become the sole master and employer. The state should take the entire management of commerce, industry, and agriculture into its own hands, with a view of succoring the working classes and preventing their being ground to the dust by the rich."

Wang-ngan-che maintained his ascendency throughout the reign of several Emperors. He overturned the country at his ease and put all his plans into execution. According to historians his plan lasted for over 100 years but, in the end, his social revolution was not successful, the nation being plunged more deeply into misery than ever.

These quotations of an early socialistic experiment, beginning in the year 1069, after the Emperor had been accused of being responsible for several epidemic maladies, earthquakes, and a severe drought, were taken from the story of the two Paulist fathers, M. Huc, who made the trip through Tartary, Tibet, and China in the years 1840 to 1857. (A Journey Through the Chinese Empire, Harper & Bros., New York, 1859, 2 vols.)

Confucius asked, "Is there a single sentence that can ruin a country? If men's words be good, is it not also good that no one oppose them? But if they are not good, and no one opposes them, may there not be expected from this one sentence the ruin of his country?" "Tax and tax; spend and spend; elect and elect" has become that single sentence in our middle twentieth century. Our own Lincoln, in 1854, gave us one of the best statements of the province of government. "The purpose of government," said Lincoln, "is to do for the people what they cannot do for themselves, or cannot do as well for themselves." Our historical past is well marked by the proposals of its statesmen to enlarge or diminish the sphere of governmental activities, mostly at the Federal level. The proposal of Henry Clay for internal improvements, public works, public schools, management and disposal of the public domain, the building of roads, canals, railroads, and harbors, were all in the interest of that familiar portion of the preamble of the Federal Constitution, and copied into many a State constitution, "promote the general welfare." The Hamiltonian theory of the duties of the Federal Government, now very generally followed by the leaders of the conservative wing of the Republican party, and recently characterized by Senator HUMPHREY as the "trickle down theory," was the establishment of all forms of tariffs and subsidies to aid manufacturers, agriculture, transportation, and other enterprises, and exemplified recently in the creation of the Reconstruction Finance Corporation under President Hoover; the increasing quantity of subsidies to the users and carriers of the mail; the safeguarding of waterways, and more recently of the airways; the subsidies to maritime and air service companies to assist in competition with foreign countries employing labor at a lower standard of pay than our own. All these, and others were based upon the proposition that they were, in large part at least, sustaining the national income of the people. We have accepted protectionism as a natural part of our American economy. Only the recent program of reciprocal agreements has focused attention on the abuses of the high tariff exclusion policy.

Lately the New Deal or Fair Deal theories have been uppermost in the attention of the American public mind. Security, productivity, and the basic prosperity of the people have been the justification for much of the legislation enacted during these past 16 years. We must keep up the levels of employment, provide a universal standard of common education, guaranty social security, and adequate low-cost public housing for all citizens unable to secure these benefits. We must improve conditions that encourage the maximum private and individual enterprise by placing minimum flooring under all economic undertakings—minimum wages, adequate farm-product prices; fair price laws to prevent cut-throat competition; guaranties on bank deposits; adequate retiring or old-age pensions; unemployment compensation; school lunches, school medical service, and transportation to and from home and school; development of public health facilities—clinics, hospitals, diagnostic centers, sanitoria, possibly an extension into low-cost voluntary or compulsory medical service; further development of rivers and harbors; seizure of tideland oil resources; flood control; irrigation and power works, some as individual operations, other under regional authorities, as the Tennessee Valley Authority, the California Central Valley project, or the proposed Missouri and Columbia River developments; sound soil conservation, coupled with adequate instruction to the farmer and ranger on the proper use of land and its products; rural electrification to those areas where the price of construction and distribution would be prohibitive otherwise; and assistance in slum clearance in our congested municipalities.

Subsidies or grants-in-aid have a long history. They were first introduced as land grants for schools and railroad development, a relic of the ancient glebe system of the colonies, later as monetary payments for the partial support of land-grant colleges, and more recently as 50–50 matching funds for a dozen or more programs of public works, health institutions, redevelopment of blighted areas, and sanitation projects. All of these grants stifle initiative and encourage dependency. They distort the spending program of the local units as they are obtained not for what is most needed, but for what will bring the maximum aid under a Federal or State grant. There is also considerable evidence that in handling someone else's money, or "manna from heaven," carelessness in spending and accounting has been common.

Federal-State-local relations in the field of taxation, grants-in-aid, regional development, transportation arteries, farming, resources, fuel and energy, rural electrification, RFC loans, low-rental housing, Federal ownership of nontaxable land in cities and rural areas, all pose a problem of segregation of authority. Intergovernmental fiscal competition to create and maintain activities demanded by the people has become a bankruptcy-developing race. There are, however, no sources of revenue that belong exclusively to any one Government level.

We are developing in our States a type of centralization that in some cases is wholly acceptable to all citizens and in others repugnant to the last degree. It is well establish that the administration of institutions for criminals incarcerated under State laws, mental and physical defectives; the construction and maintenance of the most important portions of the highway system, including freeways through the principal cities, and toll bridges are operations generally accepted. Under the recently repealed article XXV of the State constitution, all aid to the aged and blind was administered through central State administration rather than the counties. Many still maintain that this is better than county administration. The school system of the State is largely centralized in its administration through the standardization of curricula, textbooks, schoolhouse construction, safety, teachers' credentials, and other matters. School lunches, nursing and medical service, textbooks, bus transportation, building and facility construction are all supported, in part at least, by the State and Federal Governments. The State has administered systems of unemployment insurance, employers' compensations, pensions for public employees under direct grant of State authority or by contract with the local jurisdictions.

We like and support our public-school systems, socialistic or welfare, as many dub them. We encourage tuition-free colleges and universities, adequate teaching training, higher salaries for teachers, better school buildings and facilities, and for all the supplementary features of free lunches, transportation, textbooks, medical service, and even for an extension of these into other fields to take proper care of the younger generation. We are demanding and obtaining more and more junior colleges and extension of our State universities in order that more of our young may be able to obtain every sort of education which is advisable to aid their future careers. We don't even argue about these matters any more. We do believe, however, that there are too many small school districts with inadequate financial resources to give proper support to the necessary school operations. Distressed school districts, too proud or jealous to consolidate with larger and more prosperous districts, are a decided detriment to the education of the children within their restricted borders.

Federal aid to the secondary highway system of the country requires a coordinated or joint engineering study by all levels of government concerned in the selection of standards and programing. This makes a most complicated arrangement in our metropolitan communities where the various levels of government are all authorized to build and maintain highways and bridges. Planning, construction, and maintenance varies so widely that the traveling public suffers in its movement from one area to another. The question of freeway planning and construction has aroused considerable dispute between the local areas and the Federal and State engineering departments. The maintenance of standards to meet the requirements for the payment of subsidies or grants-in-aid from the higher to the lower governments always creates acrimonious discussion. Fluctuation in policy is due to the change of administrations, change of plans of policies of the superior government officials, and the pressure of influential groups favoring one plan or another, or advocating strong local autonomy or strong centralization in highway matters. Financial assistance from superior governments inevitably means the introduction of governmental direction of business policy, and that, in this day, is the forerunner of State control, domination, management, and ownership.

Local governments are seriously affected by national and international policies in the economic spheres. The removal or altering of a tariff schedule or rate, the assistance or lack of authorization in the development of rivers and harbors, the financing of the cold war and the European recovery program, and other policies have their direct influence in the improvement or harming of local economic conditions. Farm policies with their pegging of prices, storage of surpluses, control of acreage production, subsidies to maintain parity prices, the establishment of fair price or fair trade laws, protection of restrictive patents, all constitute a form of legal monopoly. We must all realize, however, that Government takes the responsibility to keep output at full production through long-range planning, which can be done only by some central authority.

I do not oppose Government assistance to farmers. Anyone who has to face the hazards of unpredictable weather, the rapid changes of consumption patterns, and the constantly changing price levels for things he has to purchase, is as much entitled to the artificial maintenance of high level of stable prosperity as other production groups. The whole country, in fact now, the whole world, more or less depends on the quantity of their production and level of prices to which they are entitled. The farmer must not be left to the mercy of the so-called free market. But, on the other hand, the farmer has no right to a guaranteed revenue income whether there is a demand for what he produces or not. The purchasing power must be effectively maintained at a level corresponding to the national productive capacity.

It must never be forgotten that to support the farmer, the manufacturer, and the importer, the consumer pays twice over for all his purchases, once at the store or office, and once again to the tax collector. Tariffs, subsidies for transportation, parity support, no matter what it is called, is Government placing a floor under production and distribution for the benefit of the producer at the expense of the consumer and taxpayer.

Fred G. Gurley, president of the A. T. & S. F. Railroad, speaking recently for the railroads, maintains that our entire governmental system is in danger from two groups. First, those who are opposed on ideological grounds to our system of private ownership and management of property, and, secondly, those who, while professing belief in the system, seemingly fail to see danger in accepting financial assistance from Government.

Government aid to maritime and internal waterways transportation, commercial air lines, trucking companies, and other modes of transportation through the construction and maintenance of lighthouses, harbors, wharves, warehouses, Coast Guard protection, marine hospitals, pilot service, air beacons, radio beams, special weather service, mail subsidies, airports, superhighways, and other assistance generally paid through taxation, is naturally resented by the various competitors who have been established over past years. What do people think of the subsidizing of airmail, transportation of newspapers and magazines, fishing and hunting grounds, child and prenatal clinics, recreational centers like beaches and parks, water and power supplies, forest and wild life protection, parcel post system, postal savings system, bank deposit insurance, and other operations?

States and local governments have universally furnished relief to the indigent in the form of food, clothing, and shelter; free medical and hospital services to those unable to pay the rates of the general practitioner or private hospital; free education to all; unemployment opportunities or insurance; and other services. The question now is only of wider or more adequate coverage, and by whom. We have current questions in the local economic, and unfortunately, in the political field, in the Central Valley project and Colorado River water distribution. We have depended on national and State agreements for sufficient flow of water to meet the needs of our southern California population and industry. Pressures now at work on a national scale are attempting to establish legislation which would seriously affect these agreements. Water, or the lack of it, is an ever-present threat to the economic stability of California. In the Central Valley project there is all the more reason why the people of this State should take a serious interest in this vast undertaking. This project was planned and started by the State of California and during the depression years 1933–37 was taken over by the Federal Government in order that the necessary work should be done to preserve and develop the agriculture of the State. The Bureau of Reclamation is spending something in the vicinity of $440,000,000 for irrigation and power development and the Corps of Engineers of the Army is spending many millions more in the guise of flood control of the rivers. Constant bickering between these two divisions of the Government, the local irrigation districts, and the State authorities, has brought this huge project under serious danger of failure. The important question is whether the people of California should surrender control of its agricultural development and irrigation districts in return for financial assistance from the Federal Government in the construction of the necessary works to impound and distribute the water and power.

The State might recover this necessary project and construct the remaining multiple-purpose dams and other facilities for the best interest of the farmers and people of the State. Expenditures of somewhere near the cost of construction are legally possible, either through a bond issue, borrowing from the RFC, or purchasing each segment of the plant from current income. The State has authority and the fiscal ability to acquire the entire undertaking. The needs of the local county and municipalities of the Central Valley, in fact those of the entire State would be benefited by such an acquisition. National political policy formation and control would thus be eliminated, in large part at least.

Recent court decisions regarding the tideland oil reserves which have upset the historical understanding concerning marginal and land-recovered waters, is another indication of the constant encroachment of the Federal Government over local jurisdictions. We have always known that the control of navigable rivers and harbors, no matter how shallow, was in the jurisdiction of the Federal Government. No bridge, pier, or other type of encroachment on a waterway is possible without Federal permission.

Enough of this partial listing of the operations of the central government or those of the State government which may or may not encroach on local governments. Which of these activities are subject to local control, operation, and financial support? Are we leaning on the Federal Government for too many functions, or for everything? Does the legislation which creates this condition destroy individual initiative? Where shall we draw the line of demarcation between what the individual should do for himself, what the Government should do for him, and which government is best fitted to perform

the services which he demands? What is the alternative road? We can't say take this road—follow us, without having a real program to present. The taxpayer is groaning under his burden, bound like a mummy in layer upon layer of government units. Disentangling him is not a pleasant but a thankless task.

We have introduced into our local political vocabulary lately the word "statism." In looking up this word in the dictionary, I was surprised to find, as I know others would be also, that statism is a belief in a State government, as in a republic, in contrast with belief in communism or a soviet government. The answer of those who are supporting this centralization of functions is that it offers more employment, more profits to the farmer and industrialist, more construction and expansion of plant and living facilities, more education, more service of all governmental operations to more people, and that the citizens are becoming initiative-conscious. If this is the welfare state, is the legislation which creates it demanded by the people whom it is designed to serve? Or is it improving the economic well-being of special groups in our society at the expense of others? Many people prefer to deal with a big national government and international problems rather than those of our local counties and cities. We often need a scandal in the local treasurer's office, a police shake-up, an epidemic of some controllable disease, a conflagration, a school lock-out of eligible pupils, inadequate playgrounds emphasized by street accidents to children, a failure of the water or power supply, or other function whose continuous and inconspicuous operation we take for granted, to arouse citizen interest in local affairs.

Duplication and overlapping services of several levels of government fail to disturb our people. That the milk, meat, vegetable, and other supplies that come to our tables are examined and certified by several sets of officers, all of whose salaries are charged in the cost of the articles, means little as long as someone is doing it. James F. Byrnes has stated recently: "Too many people are asking the Federal Government to perform the functions of State governments; too many people are asking the State government to perform the services needed by local governments; too many people are thinking of security instead of opportunity. They seem more afraid of life than death. * * * We are threatened with the concentration in Washington of the powers of the local governments, including the police powers, and with the imposition of creeping, but ever-advancing socialistic programs. Failure of State governments to provide more efficient government is generally due to the fact that the Federal Government has stepped in and monopolized most sources of taxation. Big government is more dangerous than big business."

Obviously the logical solution is a compromise, representing sufficient State authority to insure orderliness and uniform local improvement, with adequate retention of State investment of funds, while preserving local initiative and autonomy. Is there dictation to local units from superior Government officers? Yes, and found in practically every activity in which the superior government aids or subsidizes the inferior one. Education, welfare, health, highways, are all examples in which there is a real tendency for the Federal Government to set up rules and regulations and the local-Federal administrators to see that the local units set up the same rules and regulations with only the change of name at the top of the first page and the signature of the administrative officer at the end of the listing.

Localities differ greatly in their ability to pay for the necessary services needed by their populations. The demands made upon the governments to satisfy the social and economic needs of their populations vary widely, even within a relatively small metropolitan area. The size, density, and character of the population differ enough to make peculiar demands for particular kinds of service. City, county, and State governments must furnish more services which are absolutely needed and which, in many cases, are demanded by a vote of the people.

Functions and responsibilities of local governments expand, and we have to consider ways and means of improving the quality and efficiency of municipal government. Various arguments are used as means to kill off many progressive proposals, such as social-security measures or enlargement of the benefits of those already in operation, public housing, extension of medical facilities, and others, at the State as well as at the Federal level. Is this objection to centralization or is it to the liberal legislation wherever it is proposed?

If all governments did what they should do, including paying off their debts, furnishing sufficient and adequate public buildings, paying adequate salaries to their personnel at all levels, and operating all public services to meet popular demands, the total of all budgets would be in the vicinity of $75,000,000,000 as compared with some fifty billion at the present time. Seventy-five billion dollars is only one-third of the national income, less than one-half of all salaries and wages paid in the country last year.

The 1950 Federal budget now in operation contains 80 percent authorizations for meeting the expenses of past wars and the estimated requirements of the armed services. Twenty percent, or only eight billion out of forty-two billion, goes for natural resources, health, welfare, education, transportation, communication, postal service, and miscellaneous services.

A comparison of the budgets of 1939 and 1949 gives us some pause in understanding the road we are traveling:

Dollars per capita

1939:	
National defense	8
International affairs	15
Veterans	4
Debt payment	7
All others	49
1949:	
National defense	98
International affairs	46
Veterans	37
Debt payment	38
All others	68

"All others" in purchasing power is spending less in amount than in 1939.

A more startling presentation of the change which has taken place in our pattern of taxing and spending is illustrated in this table:

Cents on the dollar

1932:	
Federal	24.0
State	22.6
County	28.7
City	24.7
Total	100.0
1947:	
Federal	74.7
State	13.6
County	6.0
City	5.7
Total	100.0

In a total of $51,000,000,000, a peace-time high, the Federal Government has increased at the expense of local governments. In 1932 each level of government was receiving approximately one-quarter of the total tax revenue. In 1947 the proportion was three-quarters to the Federal Government and one-quarter to all the three lower levels combined.

The necessary increase in costs of government has brought with it the necessity for increasing the base of revenues. The ad valorem tax on real estate has been strained beyond the limit for many years. The introduction or adoption of taxes or fees on sales, personal or business income, trades and professions, amusements, luxuries, utilities, refuse collection, sewage disposal, automobile parking, and hotel transients, is becoming almost universal. More and more there is a demand on the State for a larger share in the centrally collected taxes such as those on automobiles, gasoline, sales, liquor, and others. The erection of an equitable and properly coordinated tax structure, with proper relationships between the Federal, State, and local governments has been long discussed, studied, reported upon, and adequately shelved for future reference. Financial self-help is the backbone of any successful democracy. Home rule and practical local autonomy must be based on ability to carry one's own fiscal load and cease mooching on superior governments—Federal and State—for financial assistance to local projects and activities.

How do we get the money to operate our local governments to the capacity demand for services? Taxes collected in California in 1948–49 amounted to $4,500,000,000, an increase from one billion in 1940–41. Of this amount the Federal Government took three billion, the State eight hundred and eighty-six million, and the local governments six hundred and eighty-seven million. The 397 largest cities in the country collected $4,000,000,000 in 1948, an increase of 16 percent over 1947. The Federal and State governments have practically monopolized all the major supplementary fields of taxation, leaving the dried-up property tax as the main source of local revenue.

Too many officials talk glibly of State and Federal aid. Aid is a false term, as all taxes, whether levied directly or indirectly, or by whatever government, come from the earnings of the people. State and Federal aid represents an avoidance of responsibility by our local officials. "He's a hero. He got us some money from Washington. He didn't tax us." Thus local public officials have not been backward in advancing on Washington, hat in hand, where temporary local enthusiasms have prompted the people of the community to go after something that Uncle Sam will give, or assist in building, primarily because the city or district next door has already received its grant. Cities have even opened headquarters in Washington for this purpose. "Living up to the Joneses," "Gimme mine," "It costs nothing; let's get ours," have all been magic words of local areas seeking relief from higher taxes assessed at home. And the sad part of the story is, that these same people never realize that they are paying the taxes which make these "free" grants possible and that those same taxes are higher than they would be if the same undertaking were done by local governments and paid for out of strictly local funds. If the local areas are in dire need, as many school districts are at the present time, then it is conceivable that some effective solution might be reached with the higher level government whereby the acute problem will be met and the local area allowed to reimburse the higher government. This is the solution, good or bad as it is, that was voted on proposition No. 1 at this last State election. There are distressed school districts where facilities for the increased pupil population are not adequate and where the taxing ability of that district has reached its legal limit, or in many cases the absolute economic limit of its residents to stand the cost of education required by our laws. Rather than depend on these superior governments, it would have been far better, and much safer for local autonomy to lay aside petty neighborhood dif-

ferences and act together to perform the necessary services on a major scale. Local governments must be given powers commensurate with the responsibilities which the State or people has placed upon them.

There is not one single major function of government in which governmental units on all four levels are not actively concerned. Fortunately, we are ignoring the old political jurisdictional boundaries in dealing with flood control, irrigation projects, soil conservation, air pollution, mosquito abatement, sanitation, water supply, and other services. Why should not the large overlapping metropolitan areas, some of them more populous and wealthier than half of our States, inaugurates more regional functional activities like our Metropolitan Water District, or the East Bay Municipal Utility District, and extend these same principles of organization and operation to transportation, street and freeway construction, recreation, schools and other cultural facilities, light and power services, collection and disposal of wastes, police protection, planning and zoning, and other operations?

We have in this State the "Joint Exercise of Powers Act of 1921" authorizing legislative or governing bodies of two or more public agencies to enter into agreements to exercise any common power jointly. Larger cities or counties may render technical assistance and professional services to smaller cities, or two or more counties or smaller cities may render a service jointly. Such joint undertakings have been programed and operated in the fields of law, planning, personnel, engineering, health, police, fire, recreation, library, water supply, power and light sanitation, and similar functions. All levels of government have developed programs within the same functional fields, and usually without any over-all planning or central coordinating agency. This procedure has brought about much overlapping, duplication, and waste. The Hoover Commission has been a prototype for many others in States and cities which are demonstrating this dislocation of functional operation.

Most of our local governments are going through a period of great financial strain. Communal housekeeping suffers the same economic struggles and pains as the individual pocketbook. There is always a demand for more and better service, modernization of housekeeping gadgets, conveniences and luxuries to keep up to the Joneses next door. The postponement of needed public works during the war caught the governments with a decreased purchasing power, necessary construction and equipment costs soaring beyond reasonable estimates, real estate values inflated and unreasonable, and personnel problems complicated by unionization of public employees demanding collective bargaining, cost of living bonuses or increased wages and salaries, specialized job assignments and featherbedding, shorter work day, longer vacations, more adequate insurance and pension allotments, and other types of industrial labor demands. Many of these may be justified and necessary in our present-day economy, but all press upon the citizen in both his personal and public capacity.

Local government officials or civic bodies must take the first step in improving the quality and amount of service rendered per tax dollar collected. Higher prices, deferred building programs, wage and salary increases, general reluctance of the voters to support bond issues or create new sources of revenue, all contribute to the dilemma of the legislator. Many liberals will agree that the present necessity of looking to Washington for the support or solution of our governmental problems can, over a period of time, result in a dangerous over-centralization of governmental power. In fact this is the very condition that will destroy utterly all semblance of local autonomy. I do not believe that this run on Washington for fiscal or security assistance is the fault of the President, of Congress, of the Republicans or Democrats, or of the local State, county, or municipal officials. This rush to the gold fields of Fort Knox is due to two conditions: First, the impatience of the people to obtain, as quickly as possible, solutions to pending troublesome conditions; and, secondly, the result of the fever of depression spending when necessity taught some of us that we could spend ourselves into prosperity and future security.

Now that we know the dangers of centralization, what are we going to do about it? What can the local governmental agencies do to prevent further centralization and avoid the evils of the present condition? What kind of government do we want in these United States? Is it to be a completely centralized one with the tax collecting, fund-appropriating, policy determination at national headquarters, or shall we preserve the historical prestige of the local control over all the problems which can be handled efficiently and economically by the smaller units of government? Are we to continue to ask the Federal Government to dole out money and to enlarge the size of its centralized control? The vanguard of our democracy has always been and must continue to be in the local community.

What shall we preserve? Where shall the line of demarcation be drawn? Have we a choice between annihilation and agreement? I sincerely believe that we have. There are three strong convictions in my mind. First, this country is going through a series of violent and rapid changes, some due to the depression of the thirties, the World War, the cold war, and others due to readjustments new to our economy. Second, the local governments are just becoming conscious of the dangers of extreme centralization of governmental activities in Washington. And third, the local governments have it within their power to bring about a new self-interest in local problems and to accomplish for themselves those services which the citizens want and for which they are able to pay. In other words, local autonomy and pay as you go, and not being dependent on second-hand money from the great Father in Washington.

The problem really is where the line should be drawn between central government expenditures for welfare of the people and opportunity of the people to develop programs for their own welfare. "You can't have a democracy until you have a certain standard of living. A people must have a certain amount of leisure in which to pay attention to the affairs of a democracy." (James T. Watkins IV.) Governor Warren, of California, has said recently, "Just as long as government is on a sound basis in our local communities, we can be sure that it will be sound nationally. If our own government is sound we will solve our national and international problems." Dr. Vannevar Bush in his newest book, "Modern Arms and Free Men," finds that the immediate danger in our country is a creeping socialism. He says that "the central problem is summarized in the idea of the welfare state. The dangers of rushing headlong into a full welfare state are very practical and very immediate," he warns. "A horde of bureaucrats takes $2 from Jones to furnish $1 to Smith and makes Smith stand in line to get it." "The next thing the United States knows," he says, "it will have taken care of everyone at the expense of everyone else, and failed to take care of the primary national interest. We cannot afford today to interfere unduly, even in the name of humanitarianism, with the diversified, vigorous, private initiative that has made us great." If the people ignore their responsibilities in their local governments, we will get the welfare state by default. For, as Bush points out, "A passion for personal security is an opiate which tends to destroy the virile characteristics which have made us great."

Suppose we were to review the operations of the Federal Government which, in many respects, parallel or overlap those of our local jurisdictions. Which of the following operations would we abolish; which would we leave in the Central Government; which would we embrace into the activities of our local governments? Taken at random we find the Federal Government carrying out the following activities of the so-called welfare state: regulation of production and distribution of food; control of exports; handling of admiralty and bankruptcy matters; supervising advertising to prevent fraud; control of the building of airports and operation of civil aeronautics; conservation of natural resources; control of farm production and prices; crop production loans; farm credit; farm mortgages; research and publications in farm operations; home loans; rural electrification; Federal Reserve supervision of commercial operations; insurance of bank deposits; control of rents; aid to the blind, aged, and crippled and dependent children; old-age and survivors' insurance; supervision of communications, power, trade, radio, interstate commerce, commodity exchanges, grain stabilization; loaning through the RFC; aids to marine and air navigation; movement of goods and crops by internal waterways; or the granting of aid to education, health institutions and hospitals, maternal and child clinics, public works, especially for irrigation and flood control, power projects like Hoover Dam, highways and bridges, tuberculosis control; unemployment insurance; workmen's compensation for injuries and industrial illness; venereal-disease control; vocational education; vocational rehabilitation; wildlife restoration; and many others. I repeat, which are you going to continue as Federal, which would you abolish, and which would you absorb for operation by the local governments?

The challenge to reestablish true democratic home rule is almost overpowering. Yes; we have the potentialities. Combined and enlightened intelligence of our citizens behind programs for recovering local autonomy can stop the trend toward centralization. We need agreement and leadership at home. We must elect and appoint men and women of real ability. We must pursue this program free from political party complexion or assistance. We have the authority. We have the fiscal ability. Local governments succeed in proportion to the efforts that citizens give attention to their communal needs, problems, and activities. They must promote a businesslike, honest, and efficient government. The quality of that government depends entirely on the quality and reasoned demands of its people. They must be alert to their situation, informed of the facts, and united in their action. It is the apathetic official and citizen with his sights on the Federal Treasury that is the greatest danger to our local institutions. Local communities are usually divided geographically and politically into clashing areas, districts, racial, religious, labor, industrial groups, school supporters versus welfare adherents, and others. Voters are seldom given an opportunity to vote intelligently on area-wide or regional problems. They are limited to expressing themselves on a small segment of a very important matter that concerns ultimately the whole region in which they live. Policies to improve regional problems of transportation, water supply, sanitation, educational facilities, police and fire services, and other matters of primary importance are not placed within their direct control. Thus it becomes an easy matter to pass these questions up to the State or Federal Government for solution. We must integrate our separate local political entities and fiscal economies to meet these larger regional problems.

Coordination or federation of local governments would simplify our fiscal problems, prevent duplication of functions, provide the necessary services more effectively and economically, destroy sectional or provincial jealousies and pride, recover an interest of the suburbanite who has left the crowded city for the freer living conditions of the country, but those vital interests are still within the more populous area, and more important of all, establish the local region as a control agency for the satisfaction of the necessities of communal living.

"The dog in the kennel barks at his fleas, but the dog who is hunting does not feel them."—Chinese maxim.

Cancer Research Should Be a Function of the Government

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. MULTER. Mr. Speaker, the scourge of cancer kills off many thousands of people each year in the prime of their life. I have long urged that cancer research should not be left entirely in the hands of private scientific research with limited means, but that a concerted drive supported and financed by our Government should be undertaken at the earliest possible date. The aid of all scientists and specialists in this field should be enlisted in the hope of finding the causes of this dread disease and to conquer it as we have successfully conquered other diseases with which mankind was afflicted in the past.

A suggestion along these lines is contained in a recent article in the Brooklyn Eagle. I am sure many Members of this House will find the suggestion, made by Mr. Julius Miller, of Brooklyn, both interesting and stimulating. I am proud to number him among my friends. The article entitled "He'd Mass United States Scientists for All-Out Cancer Battle," written by Richard J. Roth, was published on December 4, 1949. It reads:

BROOKLYN'S MAN OF THE WEEK—HE'D MASS UNITED STATES SCIENTISTS FOR ALL-OUT CANCER BATTLE

(By Richard J. Roth)

Eagerness—about his work and family, about life itself, in fact—could well be considered the prime characteristic of Julius Miller. He radiates that quality and he continually encourages his associates to do the same.

"The word for personality is eagerness" is the way the energetic president of the Rand Stores, Brooklyn's giant cleaning chain, sums up what might be called his philosophy of life.

This enthusiasm has paid dividends for the 45-year-old executive, and it has paid dividends for Brooklyn. To it he attributes the rapid growth of the Rand chain, which began less than 20 years ago with a tiny Kings Highway store and now boasts 72 borough establishments.

HE AIMS AT CANCER

Mr. Miller has carried his spirit with him into other fields of endeavor with equally successful results. His greatest hope today is that his success will continue, that he'll be able to pass on this quality to his fellow Americans in his latest and most important activity—the marshaling of the American assembly line genius into the fight against cancer.

Not long ago, after cancer killed a close friend, Mr. Miller determined to do something about the scourge. Recalling the miracle that had been wrought at Oak Ridge during the war he posed a question for himself:

"Why shouldn't cancer research be a function of the Government, like the atomic project, with the greatest figures in science working together, perhaps under one roof, concentrating their efforts and collecting and collating the results of their experiments?"

WANTS CONCENTRATED ACTION

Mr. Miller is determined to have his question answered. Although acknowledging the value of public collections to help care for those stricken he feels that without the concentrated effort of the Nation's researchers only the surface of the real problem can be scratched.

"Are we going to have a project like finding the cure for cancer depend on the collection of dimes?" he asked. "This idea of getting people together to cooperate on something like this is not far-fetched. We shouldn't need a war to show us what can be done. We should be more farsighted."

The Miller campaign already is under way. A letter to President Truman brought a sympathetic reply, and Mr. Miller has contacted several members of Congress and other influential persons to rally their support. There are bills before Congress which would incorporate many of his ideas, and he is hopeful that the coming session will see some of them enacted.

Mr. Miller was born in lower Manhattan in 1904 and lived for a few years in the Bronx before he came to Brooklyn about 25 years ago. Following his graduation from Evander Childs High School he entered New York University, where he earned a law degree.

SEES BIG OPPORTUNITY

After successfully practicing law for a short time he decided to join his father, Philip Miller, and his brother, Leon, in the cleaning store they had started at 161 Kings Highway. From an investigation of chain-store cleaning methods he had made for a law client, Julius, who always has been interested in science, saw a great opportunity for a low-cost, big-volume cleaning business in Brooklyn.

As two decades slipped by new Rand Stores were added every year until today there are 72 scattered all over Brooklyn with a modern, 65,000 square-foot headquarters and plant at 4201 Avenue H. More than 650 men and women are employed and Mr. Miller prides himself on the fact that he knows the majority of his Rand workers—"they're a wonderful group with a wonderful spirit of eagerness"—by name.

HAS APPEARED ON TV

As expert at cleaning as any one in the industry, in which he is highly regarded, Mr. Miller has appeared on television programs to demonstrate effective methods of stain removal, a science which he finds fascinating. Generally, however, he can be seen at the receiving end of television, which he enjoys very much in his East Twenty-seventh Street home.

Chess captain in high school, Mr. Miller still finds time for a game now and then with his sons, Danny, 13, and Jimmy 8, both students in Public School 193. His wife, Belle, is active in many community affairs, particularly as vice president of the school's Parents Association and of Midwood chapter, B'nai B'rith. She's also a stanch supporter of the Mary Richter League of the National Children's Cardiac Home at Miami, a favorite charity of her husband.

Besides the 150 charities aided by Rand, the untiring executive holds office in both the United Jewish Appeal and the Federation of Jewish Philanthropies drives. He's also a member of the advisory board of the East Midwood Jewish Center.

In the professional field Mr. Miller is chairman of the board of the Empire State Chain Cleaning Stores Association and a director of the New York State Cleaners and Dyers Association. He is a vice chairman of the Brooklyn Orchestral Society.

Not long ago the Bear Club was organized at Rand to recognize employees who typify the initial letters of "Be Eager About Rand." The members, now numbering 53, are eligible for theater parties and other treats.

The club members are outstanding examples of the influence of Mr. Miller, but it's a cinch that none exemplifies eagerness more than their employer. He's eager about life and his contagious enthusiasm is making itself felt in Brooklyn.

The Unemployment Compensation Program Should Be Extended and Improved

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include the text of the bill I am introducing today which provides for the extension and improvement of our unemployment compensation program. I also include a brief summary explaining the principal provisions of the bill. These follow:

A bill to extend and improve the unemployment compensation program, and for other purposes

Be it enacted, etc., That this act may be cited as the "Employment Security Amendments of 1950."

SEC. 2. Effective January 1, 1951, sections 301 and 302 of the Social Security Act, as amended, are amended to read as follows:

"FEDERAL UNEMPLOYMENT ACCOUNT

"SEC. 301. (a) There is hereby appropriated to the Federal unemployment account in the unemployment trust fund for the period beginning January 1, 1951, and ending June 30, 1951, for the fiscal year ending June 30, 1952, and for each fiscal year thereafter, amounts equivalent to 100 percent of the taxes (including interest, penalties, and additions to the taxes) received after December 31, 1950, under the Federal Unemployment Tax Act and covered into the Treasury. There is also authorized to be appropriated to the Federal unemployment account such additional sums as may be required to carry out the purposes of this title.

"(b) For the purpose of assisting the States in the administration of their unemployment compensation laws, and in the establishment and maintenance of a system of public employment offices in accordance with the provisions of the act of June 3, 1933 (48 Stat. 113), as amended, there is hereby authorized to be expended, for payments to the States, from the Federal unemployment account in the unemployment trust fund for the fiscal year ending June 30, 1951, and for each fiscal year thereafter, sums not to exceed the amounts, including amounts to be expended only in the event of unforeseen changes in conditions, specified by Congress in the appropriation act or acts for the Department of Labor for each such fiscal year.

"(c) There is authorized to be expended from the Federal unemployment account

for the fiscal year ending June 30, 1951, and for each fiscal year thereafter, a sum not to exceed the amounts specified by Congress in the appropriation act or acts for the Department of Labor to be necessary for the administration by the Department of Labor of its functions under the Federal Unemployment Tax Act and this title and titles IX and XII of the Social Security Act and the act of June 6, 1933 (48 Stat. 113), as amended.

"PAYMENTS TO STATES

"SEC. 302. (a) The Secretary of Labor shall from time to time certify to the Secretary of the Treasury for payment to each State which (a) has an unemployment compensation law approved by the Secretary under the Federal Unemployment Tax Act, and (b) which is in compliance with the act of June 6, 1933 (48 Stat. 113), as amended, such amounts as the Secretary determines to be necessary for the proper and efficient administration of such law during the fiscal year for which such payment is made. The Secretary's determination shall be based on (1) the population of the State; (2) an estimate of the number of persons covered by the State law and of the cost of proper and efficient administration of such law; and (3) such other factors as the Secretary finds relevant. The Secretary shall not certify for payment under this subsection in any fiscal year a total amount in excess of the amount specified for such purpose in the appropriation act or acts for the Department of Labor for such fiscal year.

"(b) The Secretary of the Treasury shall, upon receiving a certification under subsection (a), pay from the Federal unemployment account in the unemployment trust fund, prior to audit or settlement by the General Accounting Office, in accordance with such certification."

SEC. 3. (a) Section 303 (a) (1) of the Social Security Act is amended by inserting after the words "when due" the following: "and such methods for the prevention, detection, and administrative adjudication of cases involving willful misrepresentation or nondisclosure of material facts as are found by the Secretary to be reasonably calculated to insure the payment of compensation only to individuals entitled thereto."

(b) Section 303 (a) of the Social Security Act is amended by adding the following new paragraph:

"(10) Participation in plans and methods for the combining of wage credits earned under the State law and wage credits earned under the unemployment compensation law of other States or the Federal Government, and for the payment of interstate claims, as are found by the Secretary to be reasonably calculated to assure the prompt and full payment of benefits in such situations."

SEC. 4. Title III of the Social Security Act is amended by adding the following section:

"SEC. 304. The term 'State' when used in this title includes Alaska, Hawaii, Puerto Rico, and the District of Columbia."

SEC. 5. Effective January 1, 1950, title XII of the Social Security Act is amended to read as follows:

"TITLE XII. GRANTS TO STATE UNEMPLOYMENT FUNDS

"SEC. 1201. (a) A State shall be entitled to a reinsurance grant if on March 31, 1950, or on the last day of any ensuing calendar quarter, (1) the balance in a State unemployment fund does not exceed a sum equal to the amount of compensation paid under the unemployment compensation law of the State from the State fund during such quarter and the immediately preceding quarter, and (2) the minimum rate of contribution required to be paid into the State fund was not less than 1.2 percent during each of the taxable years after 1952, or after 1957, during each of the five most recently completed taxable years if, on the computation date for such taxable year, the balance in the State's fund did not exceed a sum equal to 6 percent of the most recent taxable pay roll or the amount of compensation paid under the State unemployment compensation law from the State fund during the 2 years immediately preceding such date whichever is the higher. A reinsurance grant shall be an amount estimated by the Secretary of Labor to be equal to three-fourths of the excess of the compensation which will be payable under the provisions of the State law during the next calendar quarter over 2 percent of the remuneration paid during such quarter and subject to the State unemployment compensation law.

"(b) The Secretary is authorized and directed, on application of a State agency, to make findings as to whether the conditions entitling a State to a reinsurance grant provided for in subsection (a) hereof have been met; and if such conditions exist, the Secretary is directed to certify, to the Secretary of the Treasury, from time to time, the amount of such grant, reduced or increased, as the case may be, by any sum by which the Secretary finds that the amounts granted for any prior quarter were greater or less than the amounts to which the State was entitled for such quarter. The application of a State agency shall be made on such forms, and contain such information and data, fiscal and otherwise concerning the operation and administration of the State law, as the Secretary deems necessary or relevant to the performance of his duties hereunder.

"(c) The Secretary of the Treasury shall, upon receiving a certification under subsection (b), pay from the Federal unemployment account in the unemployment trust fund, prior to audit or settlement by the General Accounting Office, in accordance with such certification.

"(d) All money paid to a State under this title shall be used solely for unemployment compensation benefits; and any money so paid which is not used for such purposes shall be returned to the Treasury to the credit of the Federal Unemployment Account when such State is no longer eligible for a reinsurance grant."

SEC. 6. Section 904(h) of the Social Security Act is amended by striking out "1949," occurring in the second sentence after the words "December 31," and before the words "over the" and inserting in lieu thereof "1950;" and by striking out the third sentence thereof.

SEC. 7. Effective January 1, 1952, section 1600 of the Internal Revenue Code is amended to read as follows:

"SEC. 1600. Rate of tax.

"Every employer (as defined in sec. 1606 (a)) shall pay for the calendar year 1950 and for each calendar year thereafter an excise tax with respect to having individuals in his employ equal to 1.5 percent of the total wages (as defined in sec. 1606 (b)) paid by him during the calendar year with respect to employment (as defined in sec. 1606 (c)) after December 31, 1949."

SEC. 8. Effective January 1, 1952, section 1601 of the Internal Revenue Code is amended to read as follows:

"SEC. 1601. Credits against tax.

"(a) Contributions to State unemployment fund:

"(1) The taxpayer may, to the extent provided in this subsection and subsection (b), credit against the tax imposed by section 1600 the amount of contributions paid by him into an unemployment fund maintained during the taxable year under the unemployment compensation law of a State which is certified for the taxable year as provided in section 1602.

"(2) The credit shall be permitted against the tax for the taxable year only for the amount of contributions paid with respect to such taxable year.

"(3) The credit against the tax for any taxable year shall be permitted only for contributions paid on or before the last day upon which the taxpayer is required under section 1603 to file a return for such year; except that credit shall be permitted for contributions paid after such last day, but such credit shall not exceed 90 percent of the amount which would have been allowable as credit on account of such contributions had they been paid on or before such last day.

"(4) Upon the payment of contributions into the unemployment fund of a State which are required under the unemployment-compensation law of that State with respect to remuneration on the basis of which, prior to such payment into the proper fund, the taxpayer erroneously paid an amount as contributions under another unemployment compensation law, the payment into the proper fund shall, for purposes of credit against the tax, be deemed to have been made at the time of the erroneous payment. If, by reason of such other law, the taxpayer was entitled to cease paying contributions with respect to services subject to such other law, the payment into the proper fund, shall for purposes of credit against the tax, be deemed to have been made on the date the return for the taxable year was filed under section 1603.

"(b) Limit on credit: The credit allowed to a taxpayer under this subchapter shall not exceed 80 percent of the tax against which such credit is allowable.

"(c) Refund or credit: Refund or credit of the tax (including penalty and interest collected with respect thereto, if any), based on any credit allowable under this section, may be made in accordance with the provisions of law applicable in the case of erroneous or illegal collection of the tax (including statutes of limitations). No interest shall be allowed or paid on the amount of any such credit or refund."

SEC. 9. Effective January 1, 1952, section 1602 of the Internal Revenue Code is repealed.

SEC. 10. Effective January 1, 1952, section 1603 of the Internal Revenue Code is renumbered as section 1602 and amended to read as follows:

"SEC. 1602. Approval of State laws.

"(a) Requirements: The Secretary shall approve any State law submitted to him, within 30 days of such submission, which he finds provides that—

"(1) All compensation is to be paid through public employment offices or such other agencies as the Secretary may approve;

"(2) No compensation shall be payable with respect to any day of unemployment occurring within 2 years after the first day of the first period with respect to which contributions are required;

"(3) All money received in the unemployment fund shall (except for refunds of sums erroneously paid into such fund and except for refunds paid in accordance with the provisions of sec. 1606 (b)) immediately upon such receipt be paid over to the Secretary of the Treasury to the credit of the unemployment trust fund established by section 904 of the Social Security Act;

"(4) All money withdrawn from the unemployment fund of the State shall be used solely in the payment of unemployment compensation, exclusive of expenses of administration, and for refunds of sums erroneously paid into such fund and refunds paid in accordance with the provisions of section 1606 (b): *Provided*, That an amount equal to the amount of employee payments into the unemployment fund of a State may be used in the payment of cash benefits to individuals with respect to their disability, exclusive of expenses of administration;

"(5) All the rights, privileges, or immunities conferred by such law or by acts done pursuant thereto shall exist subject to the power of the legislature to amend or repeal such law at any time.

"(6) Effective July 1, 1952, compensation is payable to insured individuals for a week of total unemployment in amounts (up to a maximum of at least $30) generally equal to at least 50 percent of the weekly wages of such individuals if they have no dependents, 60 percent (up to a maximum of at least $36) for individuals with one dependent, 65 percent (up to a maximum of at least $39) for individuals with two dependents, and 70 percent (up to maximum of at least $42) for individuals with three or more dependents;

"(7) Effective July 1, 1952, compensation will not be denied to an insured individual (except in the case of willful misrepresentation or nondisclosure of material fact) by reason of exhaustion or reduction of his benefit rights or cancellation of his wage credits until he has been paid within his benefit year an amount equal to 26 times the weekly amount of compensation which he is entitled to receive for total unemployment;

"(8) Effective July 1, 1952, an individual shall be insured for compensation if he has been paid in his base period as much as 18 times his 'weekly wages' as defined herein.

"(9) Effective July 1, 1952, compensation will not be denied, except by reason of exhaustion of benefit rights, to any insured individual who is able to work and is available for suitable work: *Provided*, That such approval shall not be withheld because of provisions denying compensation under any of the following conditions: (A) For the first week of unemployment occurring within the benefit year; (B) for a period not in excess of the 4 weeks immediately following the week in which (i) the individual left suitable work without good cause (including compelling personal cause); or (ii) the individual was discharged or suspended for misconduct connected with his work; or (iii) the individual refused suitable work without good cause (including compelling personal cause); (C) for any week in which individual left or lost his employment due to a stoppage of work which exists because of a strike at the immediate factory, establishment, or other premises at which the individual is or was last employed and for any subsequent weeks not in excess of 8 weeks in which an individual, having so left or lost his employment, continues to be unemployed due to such stoppage of work and the individual is participating in or directly interested in the strike or is a member of a grade or class of workers any of whom were participating in or directly interested in the strike; (D) with respect to any individual who makes a false statement or representation with respect to a material fact knowing it to be false, or who knowingly fails to disclose a material fact with the intent to obtain or increase any payment of compensation.

"(10) Effective July 1, 1952, work under any of the following conditions shall not be deemed suitable for any individual:

"(A) If the position is vacant due directly to a strike, lock-out, or other labor dispute;

"(B) If, as a condition or consequence of being employed, the individual would be required to join a company union or to resign from, or refrain from joining, any bona fide labor organization;

"(C) If the wage rate, weekly earnings, hours, or other conditions of the work are substantially less favorable to the individual than those prevailing for similar work in the locality."

"(b) Notification: The Secretary shall, upon approving such law, notify the Governor of the State of his approval.

"(c) Certification: On December 31 of each taxable year the Secretary shall certify to the Secretary of the Treasury each State whose law he had previously approved, except that he shall not certify any State which, after reasonable notice and opportunity for hearing to the State agency, the Secretary finds has changed its law so that it no longer contains the provisions specified in subsection (a) or has with respect to such taxable year failed to comply substantially with any such provision.

"(d) Notice of noncertification: If, at any time during the taxable year, the Secretary has reason to believe that a State whose law he has previously approved, may not be certified under subsection (c), he shall promptly so notify the Governor of such State."

SEC. 11. The Internal Revenue Code is hereby amended by renumbering sections 1604, 1605, 1606, 1607, 1608, and 1609 as sections 1603, 1604, 1605, 1606, 1607, and 1608, respectively.

SEC. 12. Effective January 1, 1952, section 1606 (a) of the Internal Revenue Code as renumbered herein is amended to read as follows:

"(a) Employer: The term 'employer' means any person who, at at any time during the taxable year, has one or more individuals in employment."

SEC. 13. (a) Section 1606 (b) of the Internal Revenue Code as renumbered herein is amended to read as follows:

"(b) Wages: The term 'wages' means all remuneration for employment, including the cash value of all remuneration paid in any medium other than cash; except that such term shall not include—

"(1) That part of the remuneration which, after remuneration (other than remuneration referred to in the succeeding paragraphs of this subsection) equal to $4,800 with respect to employment has been paid to an individual by an employer during any calendar year, is paid to such individual by such employer during such calendar year. If an employer during any calendar year acquires substantially all the property used in a trade or business of another person (hereinafter referred to as a predecessor), or used in a separate unit of a trade or business of a predecessor, and immediately after the acquisition employs in his trade or business an individual who immediately prior to the acquisition was employed in the trade or business of such predecessor, then, for the purpose of determining whether such employer has paid remuneration (other than remuneration referred to in the succeeding paragraphs of this subsection) with respect to employment equal to $4,800 to such individual during such calendar year, any remuneration with respect to employment paid (or considered under this paragraph as having been paid) to such individual by such predecessor during such calendar year and prior to such acquisition shall be considered as having been paid by such employer;

"(2) The amount of any payment made to, or on behalf of, an employee under a plan or system established by an employer which makes provision for his employees generally or for a class or classes of his employees (including any amount paid by an employer for insurance or annuities, or into a fund, to provide for any such payment), on account of (A) retirement, or (B) sickness or accident disability, or (C) medical or hospitalization expenses in connection with sickness or accident disability, or (D) death;

"(3) Any payment made to an employee (including any amount paid by an employer for insurance or annuities, or into a fund, to provide for any such payment) on account of retirement;

"(4) Any payment on account of sickness or accident disability, or medical or hospitalization expenses in connection with sickness or accident disability, made by an employer to, or on behalf of, an employee after the expiration of six calendar months following the last calendar month in which the employees worked for such employer;

"(5) Any payment made to, or on behalf of, an employee (A) from or to a trust exempt from tax under section 165 (a) at the time of such payment unless such payment is made to an employee of the trust as remuneration for services rendered as such employee and not as a beneficiary of the trust, or (B) under or to an annuity plan which, at the time of such payment, meets the requirements of section 165 (a) (3), (4), and (6);

"(6) The payment by an employer (without deduction from the remuneration of the employee) (a) of the tax imposed upon an employee under section 1400, or (B) of any payment required from an employee under a State unemployment compensation law;

"(7) Remuneration paid in any medium other than cash to an employee for service not in the course of the employer's trade or business; or

"(8) Any payment (other than vacation or sick pay) made to an employee after the month in which he attains the age of 65, if he did not work for the employer in the period for which such payment is made.

"Tips and other cash remuneration customarily received by an employee in the course of his employment from persons other than the person employing him shall, for the purposes of this title, be considered as remuneration paid to him by his employer; except that, in the case of tips, only so much of the amount thereof received during any calendar quarter as the employee, before the expiration of 10 days after the close of such quarter, reports in writing to his employer as having been received by him in such quarter shall be considered as remuneration paid by his employer, and the amount so reported shall be considered as having been paid to him by his employer on the date on which such report is made to the employer."

(b) The amendment made by this section shall be applicable only with respect to remuneration paid after 1951. In the case of remuneration paid prior to 1952, the determination under section 1607 (b) of the Internal Revenue Code (prior to its amendment by this act) of whether or not such remuneration constituted wages shall be made as if subsection (a) had not been enacted and without inferences drawn from the fact that the amendment made by subsection (a) is not made applicable to periods prior to 1952.

SEC. 14. (a) Section 1606 (c) of the Internal Revenue Code as renumbered herein is amended to read as follows:

"(c) Employment: The term 'employment' means any service performed prior to July 1, 1946, which was employment as defined in this section as in effect at the time the service was performed, and any services performed after July 1, 1946, and prior to January 1, 1952, which was employment as defined in this section as in effect at the time the service was performed, and any service of whatever nature performed after December 31, 1951, either (A) by an employee for the person employing him irrespective of the citizenship or residence or either, (i) within the United States, or (ii) on or in connection with an American vessel or American aircraft under a contract of service which is entered into within the United States or during the performance of which the vessel or aircraft touches a point in the United States, if the employee is employed on and in connection with such vessel or aircraft when outside the United States, or (B) outside the United States by a citizen or resident of the United States as an employee for an American employer under a contract of service which is entered into within the United States; except that in the case of service performed after December 31, 1951, such term shall not include:

"(1) Agricultural labor (as defined in subsection (e));

"(2) Domestic service in a private home;

"(3) Service not in the course of the employer's trade or business performed in any

calendar quarter by an employee, unless the cash remuneration paid for such service is $25 or more and such service is performed by an individual who is regularly employed by such employer to perform such service. For the purposes of this paragraph, an individual shall be deemed to be regularly employed by an employer during a calendar quarter only if (A) such individual performs for such employer service not in the course of the employer's trade or business during some portion of at least 26 days during such quarter, or (B) if such individual was regularly employed (as determined under clause (A)), by such employer in the performance of such service during the preceding calendar quarter;

"(4) Service performed by an individual in the employ of his son, daughter, or spouse, and service performed by a child under the age of 21 in the employ of his father or mother;

"(5) Service performed by an individual on or in connection with a vessel not an American vessel or on or in connection with an aircraft not an American aircraft, if the individual is employed on and in connection with such vessel or aircraft when outside the United States;

"(6) Service performed in the employ of the United States Government or of an instrumentality of the United States which is (A) wholly owned by the United States, or (B) exempt from the tax imposed by section 1600 by virtue of any other provision of law;

"(7) Service which is performed in the employ of a State, or any political subdivision thereof, or any instrumentality of any one or more of the foregoing which is wholly owned by one or more States or political subdivisions; or which is performed in the employ of any instrumentality of one or more States or political subdivisions to the extent that the instrumentality is, with respect to such service, immune under the Constitution of the United States from the tax imposed by section 1600;

"(8) Service performed by a duly ordained, commissioned, or licensed minister of a church in the regular exercise of his ministry or service performed by a regular member of a religious order in the exercise of duties required by such order;

"(9) Service performed by an individual as an employee or employee representative as defined in section 1532;

"(10) (A) Service performed in any calendar quarter in the employ of any organization exempt from income tax under section 101, if the remuneration for such service is less than $100;

"(B) Service performed in any calendar quarter in the employ of a school, college, or university, not exempt from income tax under section 101, if such service is performed by a student who is enrolled and is regularly attending classes at such school, college, or university and the remuneration for such service does not exceed $100, exclusive of room, board, and tuition.

"(11) Service performed in the employ of a foreign government (including service as a consular or other officer or employee or a nondiplomatic representative);

"(12) Service performed in the employ of an instrumentality wholly owned by a foreign government—

"(A) If the service is of a character similar to that performed in foreign countries by employees of the United States Government or of an instrumentality thereof; and

"(B) If the Secretary of State shall certify to the Secretary of the Treasury that the foreign government, with respect to whose instrumentality exemption is claimed, grants an equivalent exemption with respect to similar service performed in the foreign country by employees of the United States Government and of instrumentalities thereof;

"(13) Service performed as a student nurse in the employ of a hospital or a nurses' training school by an individual who is enrolled and is regularly attending classes in a nurses' training school chartered or approved pursuant to State law; and service performed as an interne in the employ of a hospital by an individual who has completed a 4 years' course in a medical school chartered or approved pursuant to State law;

"(14) (A) Service performed by an individual under the age of 18 in the delivery or distribution of newspapers or shopping news, not including delivery or distribution to any point for subsequent delivery or distribution;

"(B) Service performed by an individual in, and at the time of, the sale of newspapers or magazines to ultimate consumers, under an arrangement under which the newspapers or magazines are to be sold by him at a fixed price, his compensation being based on the retention of the excess of such price over the amount at which the newspapers or magazines are charged to him, whether or not he is guaranteed a minimum amount of compensation for such service, or is entitled to be credited with the unsold newspapers or magazines turned back.

"(15) Service performed in the employ of an international organization;

"(16) Service performed by an individual in (or as an officer or member of the crew of a vessel while it is engaged in) the catching, taking, harvesting, cultivating, or farming of any kind of fish, shellfish, crustacea, sponges, seaweeds, or other aquatic forms of animal and vegetable life (including service performed by any such individual as an ordinary incident to any such activity), except (A) service performed in connection with the catching or taking of salmon or halibut, for commercial purposes, and (B) service performed on or in connection with a vessel of more than 10 net tons (determined in the manner provided for determining the register tonnage of merchant vessels under the laws of the United States)."

(b) Section 1606 (i) of the Internal Revenue Code as renumbered herein is amended to read as follows:

"(i) Employee: the term 'employee' means——

"(1) any officer of a corporation; or

"(2) any individual who, under the usual common law rules applicable in determining the employer-employee relationship, has the status of an employee. For purposes of this paragraph, if an individual (either alone or as a member of a group) performs service for any other person under a written contract expressly reciting that such person shall have complete control over the performance of such service and that such individual is an employee, such individual with respect to such service shall, regardless of any modification not in writing, be deemed an employee of such person (or, if such person is an agent or employee with respect to the execution of such contract, the employee of the principal or employer of such person); or

"(3) any individual (other than an individual who is an employee under paragraph (1) or (2) of this subsection) who performs services for remuneration for any person——

"(A) as an outside salesman in the manufacturing or wholesale trade;

"(B) as a full-time life-insurance salesman;

"(C) as a driver-lessee of a taxicab;

"(D) as a home worker on materials or goods which are furnished by the person for whom the services are performed and which are required to be returned to such person or to a person designated by him;

"(E) as a contract logger;

"(F) as a lessee or licensee of space within a mine when substantially all of the product of such services is required to be sold or turned over to the lessor or licensor; or

"(G) as a house-to-house salesman if under the contract of service or in fact such individual (i) is required to meet a minimum sales quota, or (ii) is expressly or impliedly required to furnish the services with respect to designated or regular customers or customers along a prescribed route, or (iii) is prohibited from furnishing the same or similar services for any other person—

if the contract of service contemplates that substantially all of such services (other than the services described in subparagraph (F) are to be performed personally by such individual; except that an individual shall not be included in the term 'employee' under the provisions of this paragraph if such individual has a substantial investment (other than the investment by a salesman in facilities for transportation) in the facilities of the trade, occupation, business, or profession with respect to which the services are performed, or if the services are in the nature of a single transaction not part of a continuing relationship with the person for whom the services are performed; or

"(4) any individual who is not an employee under paragraph (1), (2), or (3) of this subsection but who, in the performance of service for any person for remuneration, has with respect to such service, the status of an employee, as determined by the combined effect of (A) control over the individual, (B) permanency of the relationship, (C) regularity and frequency of performance of the service, (D) integration of the individual's work in the business to which he renders service, (E) lack of skill required of the individual, (F) lack of investment by the individual in facilities for work, and (G) lack of opportunities of the individual for profit or loss."

(c) Section 1606 (j) of the Internal Revenue Code as renumbered herein is amended by inserting "Puerto Rico," after "Hawaii," and by adding at the end thereof the following:

"The term 'United States' when used in the geographical sense includes Puerto Rico."

(d) Section 1606 (l) of the Internal Revenue Code as renumbered herein is amended to read as follows:

"(1) Agricultural labor: The term 'agricultural labor' includes all services performed—

"(1) On a farm, in the employ of any person, in connection with cultivating the soil, or in connection with raising or harvesting any agricultural or horticultural commodity, including the raising, shearing, feeding, caring for, training, and management of livestock, bees, poultry, and fur-bearing animals and wildlife.

"(2) In the employ of the owner or tenant or other operator of a farm, in connection with the operation, management, conservation, improvement, or maintenance of such farm and its tools and equipment, or in salvaging timber or clearing land of brush and other debris left by a hurricane, if the major part of such service is performed on a farm.

"(3) In connection with the production or harvesting of any commodity defined as an agricultural commodity in section 15 (g) of the Agricultural Marketing Act, as amended, or in connection with the ginning of cotton.

"(4) (A) In the employ of the operator of a farm in handling, planting, drying, packing, packaging, processing, freezing, grading, storing, or delivering to storage or to market or to a carrier for transportation to market, in its unmanufactured state, any agricultural or horticultural commodity; but only if such operator produced more than one-half of the commodity with respect to which such service is performed.

"(B) In the employ of a group of operators of farms (other than a cooperative organization) in the performance of services described in subparagraph (a), but only if such operators produced all of the commodity with respect to which such service is performed. For the purposes of this subparagraph, any unincorporated group of operators shall be

deemed a cooperative organization if the number of operators comprising such group is more than twenty at any time during the calendar quarter in which such service is performed.

"(C) The provisions of subparagraphs (A) and (B) shall not be deemed to be applicable with respect to service performed in connection with commercial canning or commercial freezing or in connection with any agricultural or horticultural commodity after its delivery to a terminal market for distribution for consumption. As used in this section, the term 'farm' includes stock, dairy, poultry, fruit, fur-bearing animal, and truck farms, plantations, ranches, nurseries, ranges, greenhouses or other similar structures used primarily for the raising of agricultural or horticultural commodities, and orchards."

(e) Section 1606 of the Internal Revenue Code as renumbered herein is amended by striking out subsection (m) and (n) and adding the following new subsections:

"(m) American vessel and American aircraft: The term 'American vessel' means any vessel documented or numbered under the laws of the United States; and includes any vessel which is neither documented or numbered under the laws of the United States nor documented under the laws of any foreign country, if its crew is employed solely by one or more citizens or residents of the United States or corporations organized under the laws of the United States or of any State, and the term 'American aircraft' means an aircraft registered under the laws of the United States.

"(n) American employer: The term 'American employer' means (1) an individual who is a resident of the United States, (2) a partnership, if two-thirds or more of the partners are residents of the United States, (3) a trust if all of the trustees are residents of the United States, (4) a corporation organized under the laws of the United States or of any State.

"(o) Benefit year: The term 'benefit year' means the benefit period, not in excess of fifty-two consecutive weeks, prescribed in the State unemployment compensation law.

"(p) Base period: The term 'base period' means such period, not in excess of fifty-two consecutive weeks as may be defined in the State unemployment compensation law for the determination of the qualifying requirement.

"(q) Dependent: The term 'dependent' means, with respect to an individual as of the initiation of a benefit year, an unmarried child (including a stepchild or adopted child (who is under the age of 18 and who is living with such individual or receiving regular payments toward his support from such individual; and a wife (or a husband unable to work) who is living with or receiving regular support from such individual and who is not regularly engaged in rendering services for remuneration or in any occupation for profit, and who is not in receipt of unemployment compensation.

"(r) High quarter wages: The term 'high quarter wages' means with respect to an individual, the amount of wages (as defined in the State unemployment compensation law) paid to such individual in that calendar quarter of the base period in which the total of such wages was highest.

"(s) Weekly wages: The term 'weekly wages' means, with respect to an individual, the amount of wages (as defined in the State unemployment compensation law) paid to such individual during the period used for determining his compensation for a week of total unemployment (1) divided by 13 if it is the calendar quarter in which such individual was paid his high quarter wages; or (2) divided by the number of weeks, in the period used, in which he performed services in employment (as defined in the State unemployment compensation law).

"(t) Week of unemployment: The term 'week of unemployment' as used in paragraph 9 of section 1602 (a) of the Internal Revenue Code, as amended by section 11 of this act, means, with respect to an individual, a week during which such individual performs less than full-time services if the remuneration payable to him for such week is less than the compensation payable to him for a week of total unemployment."

(f) The amendments made by this section shall be effective January 1, 1952.

SEC. 15. Section 1608 of the Internal Revenue Code as renumbered herein is amended by adding at the end thereof the following: "The Secretary of Labor shall utilize appropriate means for consulting with the States on matters of policy with respect to any rules or regulations affecting the States which he may make under this section for the purpose of carrying out the provisions of this subchapter or for insuring effective compliance by the States with any of such provisions."

SEC. 16. The effective date of sections 4 and 11 (c) of this act shall be January 1 of the first calendar year which begins more than 90 days after the date on which the Governor of Puerto Rico certifies to the President of the United States that the legislature of Puerto Rico has by concurrent resolution resolved that it desires the extension to Puerto Rico of the provisions of titles III, IX, and XII of the Social Security Act, as amended, and of subchapter C of the Internal Revenue Code, as amended.

SEC. 17. The Internal Revenue Code is hereby amended by inserting the following new section:

"SEC. 1609. Provisions relating to Puerto Rico: (a) Notwithstanding any other provision of law respecting taxation in Puerto Rico, all taxes imposed by this subchapter shall be collected by the Bureau of Internal Revenue under the direction of the Secretary and shall be paid into the Treasury of the United States as internal-revenue collections.

"(b) The provisions of section 1602 (a) (2) of subchapter C of the Internal Revenue Code, as amended, shall not be applicable with respect to Puerto Rico, and paragraphs (6), (7), and (8) of section 1602 (a) of such law, as hereby amended, shall not be applicable with respect to Puerto Rico until 4 years after the effective date of sections 4 and 11 (c) of this act.

SEC. 18. The Social Security Act is amended by adding the following new title at the end thereof:

"TITLE XIV. UNEMPLOYMENT BENEFITS FOR FEDERAL WORKERS

"SEC. 1401. Definitions: When used in this title—

"(a) The term 'Federal services' means services including services performed outside the United States by a resident of the United States performed after 1948 for the United States, or any instrumentality thereof which are not included as employment under section 1607 of the Federal Unemployment Tax Act solely by reason of section 1607 (c) (6) except that the term shall not include services performed by an elective officer in the executive or legislative branches of the Government of the United States, or services performed in the military or naval forces of the United States.

"(b) The term 'Federal wages' means the remuneration paid for Federal services after 1948 including cash allowances and remuneration in any medium other than cash.

"(c) The term 'Federal employee' means an individual who has performed Federal services.

"(d) The term 'benefits' means cash benefits payable to individuals with respect to their unemployment (including any portion thereof payable with respect to dependents).

"SEC. 1402. Information concerning Federal services and wages: All Federal departments, agencies, and instrumentalities of the United States are directed to make available to State agencies who have entered into agreements under this title or to the Secretary of Labor, as the case may be, such information with respect to the Federal services and Federal wages of any individual as the Secretary of Labor may find practicable and necessary for the determination of the individual's entitlement to benefits under this title.

"SEC. 1403. Benefits for Federal employees:

"(a) The Secretary of Labor is authorized on behalf of the United States to enter into an agreement with any State, or with the unemployment compensation agency of such State, under which such State agency (1) will make, as agent of the United States, payments of benefits, on the basis provided in subsection (b) to Federal employees and (2) will otherwise cooperate with the Secretary and with other State agencies in making payments of benefits authorized by this title.

"(b) Any such agreement shall provide that benefits will be paid to Federal employees, with respect to unemployment occurring after January 1, 1951, in the same amount, on the same terms and subject to the same conditions as the benefits which would be payable to such individuals under the unemployment compensation law of the State in which he last performed Federal services if such individual's Federal services and Federal wages had (subject to regulations of the Secretary concerning the allocation of such services and wages among the several States) been included as employment and wages under such law provided, that in the case of an individual who last performed Federal services outside of any State, his benefits shall be determined under the unemployment compensation law of the State of his residence.

"(c) If in the case of any State an agreement is not entered into under this section or the State agency of such State fails to make payments in accordance with such an agreement, the Secretary, in accordance with regulations prescribed by him, shall make payments of benefits to individuals who file a claim for benefits which is payable under such agreement, or would be payable if such agreement were entered into, on a basis which will provide that they will be paid benefits in the same amounts, on substantially the same terms, and subject to substantially the same conditions as though such agreements had been entered into and such agency made such payments. Final determination by the Secretary of entitlement to such payments shall be subject to review by the courts in the same manner and to the same extent as is provided in title II with respect to decisions by the Federal Security Administrator under such title.

"SEC. 1404. Adjustment of duplicate benefits: Where benefits are payable to an individual under this title and where for the same period an allowance is received under title V of the Servicemen's Readjustment Act of 1944, the amount of such allowance shall be deducted from the benefits payable under this title under regulations prescribed by the Secretary.

"SEC. 1405. Operation:

"(a) Determination of entitlement to payments of benefits by a State agency under an agreement under this title shall be subject to review in the same manner and to the same extent as determinations under the State unemployment-compensation law, and only in such manner and to such extent.

"(b) For the purpose of payments made to a State under title III, administration by the State agency of such State pursuant to an agreement under this title shall be deemed to be a part of the administration of the State unemployment-compensation law.

"(c) The State agency of each State shall furnish to the Secretary such information as the Secretary may find necessary in carrying

out the provisions of this title, and such information shall be deemed reports required by the Secretary for the purposes of section 303 (a) (6).

"SEC. 1406. Payments to States:

"(a) Each State shall be entitled to be paid by the United States an amount equal to the additional cost to the State of payments of benefits made under and in accordance with an agreement under this title, which would not have been incurred by the State but for the agreement.

"(b) In making payments pursuant to subsection (a) of this section there shall be paid to the State, either in advance or by way of reimbursement, as may be determined by the Secretary, such sum as the Secretary estimates the State will be entitled to receive under this title for each calendar quarter, reduced or increased, as the case may be, by any sum by which the Secretary finds that his estimates for any prior calendar quarter were greater or less than the amounts which should have been paid to the State. The amount of such payments may be determined by such statistical, sampling, or other method as may be agreed upon by the Secretary and the State agency.

"(c) The Secretary shall from time to time certify to the Secretary of the Treasury for payment to each State the sums payable to such State under this section. The Secretary of the Treasury, prior to audit or settlement by the General Accounting Office, shall make payment at the time or times fixed by the Secretary of Labor in accordance with certification, from the funds for carrying out the purposes of this title.

"(d) All money paid a State under this title shall be used solely for the purposes for which it is paid; and any money so paid which is not used for such purposes shall be returned to the Treasury upon termination of the agreement.

"(e) An agreement under this title may require any officer or employee of the State certifying payments or disbursing funds pursuant to the agreement, or otherwise participating in its performance, to give a surety bond to the United States in such amount as the Secretary may deem necessary, and may provide for the payment of the cost of such bond from funds for carrying out the purposes of this title.

"(f) No person designated by the Secretary, or designated pursuant to an agreement under this title, as a certifying officer, shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to the payment of any benefits certified by him under this title.

"(g) No disbursing officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payment by him under this title if it was based upon a voucher signed by a certifying officer designated as provided in subsection (f).

"(h) Whoever, for the purpose of causing any benefits to be paid under this title or under an agreement thereunder where none is authorized to be so paid, shall make or cause to be made any false statement or representation as to any wages paid or received, or whoever makes or causes to be made any false statement of a material fact in any claim for any compensation authorized to be paid under this title or under an agreement thereunder, or whoever makes or causes to be made any false statement, representation, affidavit, or document in connection with such claim, shall, upon conviction thereof, be fined not more than $1,000 or imprisoned for not more than 1 year, or both.

"(i) Whoever shall obtain or receive any money, check, or benefit under this title or an agreement thereunder, without being entitled thereto and with intent to defraud the United States, shall, upon conviction thereof, be fined not more than $1,000 or imprisoned for not more than 1 year, or both.

"SEC. 1407. Appropriations: There is hereby authorized to be expended out of any moneys not otherwise appropriated such sums as are necessary to carry out the provisions of this title."

SEC. 19. The Social Security Act is amended by adding the following new title at the end thereof:

"TITLE XV. EXTENDED DURATION OF BENEFITS

"SEC. 1501. When used in this title—

"(a) The term 'weekly benefit amount' means the amount of compensation to which an individual is entitled with respect to a week of total unemployment, under the provisions of a State unemployment compensation law.

"(b) The term 'benefit year' means the benefit year prescribed in the applicable State unemployment compensation law; except that, if such State law does not prescribe any benefit year, such term means any period of 52 consecutive weeks specified in an applicable agreement made under this section, or, if there is no such applicable agreement, then any period of 52 consecutive weeks prescribed by the Secretary of Labor (hereafter in this section referred to as the Secretary).

"(c) 'Insured unemployment' means a week of unemployment as defined in section 1606 (t) of the Internal Revenue Code with respect to which an individual who has met the qualifying wage requirements of a State law and who has not exhaused his right to benefits under such law files a claim for benefits or waiting week credit.

"(d) The term 'State' includes the District of Columbia, Alaska, Hawaii, and Puerto Rico.

"SEC. 1502. (a) Upon the written request of the Governor of any State (or, in the case of the District of Columbia, upon the written request of the commissioners of said District), the Secretary is authorized on behalf of the United States to enter into an agreement with any State, or with the unemployment compensation agency of such State, under which such State agency (1) certifies that the insured unemployment of individuals covered under the State law during each of the three immediately preceding calendar months is in excess of 10 percent of the average monthly covered employment during the preceding calendar year, (2) will make, as agent of the United States, payments of compensation as authorized in this section and pursuant to such agreement with respect to unemployment, and (3) will otherwise cooperate with the Secretary and with other State unemployment compensation agencies in making payments of compensation authorized by this section. (b) Any such agreement shall provide for supplementing the amount of compensation payable to any individual during his benefit year in such amount that compensation will not be denied to any individual by reason of exhaustion of his benefit rights, until he has been paid an amount equal to 52 times his weekly benefit amount (or such lesser amount as may be specified in the agreement) and that such agreement shall be effective with the first day of any month in which the State agency makes the certification required by section 1502 (a) (1) and shall continue in effect until the Secretary determines that the insured unemployment of individuals covered by the State law during each of the three immediately preceding calendar months is less than 10 percent of the average monthly covered employment during the preceding calendar year.

"SEC. 1503. Sections 1302 (b), 1304, 1305, and 1306 of the Social Security Act, as amended, shall apply in the administration of this section."

BILL TO EXTEND AND IMPROVE THE UNEMPLOYMENT-COMPENSATION PROGRAM

Brief summary of the principal provisions of the bill to amend the Social Security Act and the Internal Revenue Code so as to extend and improve the unemployment-insurance program.

I. AMENDMENTS TO TITLE III OF THE SOCIAL SECURITY ACT

A. Changes with respect to financing States' costs of administering the State unemployment-compensation laws and public employment offices: Section 2 of the bill amends section 301 of the Social Security Act so as to—

1. Provide a permanent appropriation of the proceeds of the Federal unemployment tax, received after December 31, 1950, to the Federal unemployment account. It also authorizes the appropriation of such additional sums to this account as may be necessary to carry out the purposes of this bill (sec. 301 (a), p. 1).

2. Authorize appropriation from the Federal unemployment account to the Department of Labor such sums as are necessary to provide payments to States to finance the administrative costs of their unemployment-compensation laws as well as their public employment offices under the Wagner-Peyser Act (sec. 301 (b), p. 1).

3. Authorize contingency appropriations to be available to States only when unforeseen emergencies arise (sec. 301 (b), pp. 1, 2).

4. Authorize appropriations from the Federal unemployment account the amounts necessary for the Department of Labor to carry out its functions under the Wagner-Peyser Act, and under the unemployment-insurance program as extended to provide reinsurance grants to States (sec. 301 (c), p. 2).

B. Payments to States (no substantial change): Section 302 is amended in technical respects to conform to changes made in section 301 (pp. 2, 3).

C. Additional provisions required to be incorporated into State laws in order for States to qualify for grants for administrative expenses: The bill amends section 303 (a) of the Social Security Act so as to require States to incorporate into their laws two additional provisions in order to qualify for grants under section 302, namely:

1. Additional methods of administration (section 303 (a) (1)) which the Secretary finds are reasonably calculated to prevent the misuse of the unemployment compensation program by fraudulent claimants and to assure the payment of compensation only to individuals entitled thereto (sec. 3 (a), p. 3).

2. Participation in plans and method of combining wage credits and handling interstate claims which the Secretary finds are reasonably calculated to assure the prompt and full payment of benefits to interstate claimants (sec. 3 (b), p. 3).

D. Extension of title III to Puerto Rico: The bill redefines the term "State" to include "Puerto Rico," making Puerto Rico, upon the concurrence of its legislature, eligible for participation in the Federal-State unemployment insurance program (sec. 4, p. 3; sec. 17 and 18, p. 27).

II. AMENDMENTS TO TITLE XII—REINSURANCE GRANTS TO STATE UNEMPLOYMENT FUND

Title XII of the Social Security Act presently authorizes the Secretary to make advance of funds to States if the State's unemployment trust fund falls below a certain minimum. Such advances carry no interest charges but the States are required to refund the advances so made. Such advances may be made only until January 1, 1950.

Section 5 of the bill rewrites title XII so as to authorize the Secretary to make outright grants of funds, from the Federal unemployment account, to States when the balance in the State's unemployment trust fund falls below a certain amount. The bill contains the formulae to be applied in determining when a State becomes entitled to a reinsurance grant, as well as the amount of such grant. The bill requires the repayment of any unexpended balance of a grant when

the State is no longer eligible for a reinsurance grant (sec. 5, pp. 3–5).

Section 6 continues indefinitely the present authorization to appropriate the excess of Federal unemployment tax collections over administrative grants for the years prior to 1950 (sec. 6, p. 5).

III. AMENDMENTS TO CHAPTER 9, SUBCHAPTER C, INTERNAL REVENUE CODE

Sections 7 and 8 of the bill amend the Internal Revenue Code in the following principal respects:

A. Reduces the Federal unemployment tax from 3.0 to 1.5 percent of taxable wages and changes the offset for contributions to approved State laws from 90 to 20 percent. Repeals the "additional credit" conditions under which an employer can get credit for what he would have contributed except for a lower experience rate. The effect would be to establish a minimum State contribution rate of 1.2 percent (80 percent of 1.5 percent). The States would be free to experience rate above 1.2 percent in any form they see fit (sec. 7, p. 6).

B. Added standards required to be incorporated into State laws in order for taxpayers to qualify for credit allowance of 90 percent of the 3-percent pay-roll tax:

1. Payment of unemployment benefits of at least 50 percent of the claimant's weekly wages up to at least $30 a week for individuals with no dependents; at least 60 percent of claimant's weekly wages up to at least $36 a week for individuals with one dependent; at least 65 percent of claimant's weekly wages up to at least $39 a week for individuals with two dependents; and at least 70 percent of the claimant's weekly wages up to at least $42 a week for individuals with three or more dependents (par. (6), p. 9).

2. Payment of benefits for 26 weeks in a benefit year if the claimant remains unemployed long enough to draw that many weeks of benefits. Cancellation of wage credits or the reduction in the number of weeks which a claimant may draw benefits is prohibited under all circumstances except in case of fraud (par. (7), p. 9).

3. Qualifications for benefits of all claimants who have acquired the minimum amount of wage credits set forth in paragraph (8) (par. (8), p. 9).

4. Payment of benefits to all claimants able and willing to work except that a State may require a 1-week waiting period; it may postpone (but not reduce the benefits potentially payable) up to 4 weeks if the claimant voluntarily quit work without good cause, was discharged for misconduct connected with his work, or refused suitable work without good cause; a State may deny benefits while an employee is participating in a strike up to a maximum of 8 weeks; and a State may deny benefits to any person who has made a false claim for benefits (par. (9), p. 9).

5. Amends clause (B) of section 1603 (a) (5) by substituting the words "wage rate, weekly earnings" for the word "wages" (sec. 10, par. (10) (C), p. 10).

C. Increase in taxable wages: The term "wages" is redefined to exclude remuneration paid in excess of $4,800 (instead of $3,000, as at present). The $4,800 limit is applicable to wages paid either by the employer or by a predecessor employer (new provision). The bill provides that "tips" are to be counted as wages, and spells out in greater detail the payments which need not be counted as wages (see redefinition of term "wages," sec. 13, pp. 11–14).

D. Extension of coverage:

1. Extension of Federal Unemployment Tax Act to employers of one or more: Coverage is extended to every employer who has one or more individuals in his "employment" during a taxable year (sec. 14, pp. 14 ff.).

2. Extension of coverage by redefinition of term "employment": The bill redefines the term "employment" so as to bring within the coverage of the unemployment-insurance program many services which are presently excluded (see definition of "employment," pp. 14–19). Some of the more significant types of services which would be brought within the term "employment" are:

(1) Services performed abroad on American aircraft under a contract of services entered into with the United States or during the performance of which the aircraft touches a point in the United States (sec. 14 (a), p. 15).

(2) Services performed abroad for American employers by United States citizens or residents under contract of service entered into within the United States (sec. 14 (a), p. 15).

(3) Services performed for nonprofit institutions and organizations exempt from income tax under section 101, except in the case of clergymen and members of religious orders and part-time workers earning less than $100 a quarter (sec. 14 (a) (6), p. 17).

(4) The term "agricultural labor" is redefined as in H. R. 6000. The effect of the redefinition of this term would bring within the coverage of the unemployment insurance program many industrial operations performed on or off the farm on farm commodities which are presently excluded, and workers engaged in the handling, packing, packaging, and processing of agricultural commodities for other than the farmer (compare present definition of "agricultural labor" (Tt. 26, U. S. C., 1426 (h)) with proposed redefinition (pp. 22–24, incl.)).

3. Extension of coverage by redefinition of term "employee": The bill redefines the term "employee." Public Law 642, Eightieth Congress, excluded from the Federal Unemployment Tax Act all individuals who, under the common law rules, have the status of independent contractors. While the bill preserves this test, it specifically includes within the term "employee" many classes of individuals who are economically dependent upon the employer, such as outside salesmen, full-time insurance salesmen, driver-lessees of taxicabs, homeworkers, contract loggers, and certain classes of lessees or licensees of space within mines. The bill also includes within the term "employee" all individuals who meet certain tests which were used by the Supreme Court in determining whether an individual was an "employee" or an "independent contractor" within the meaning of the Social Security Act of 1935 prior to the enactment of Public Law 642, Eightieth Congress. (For definition of term "employee," see pp. 20–22, incl.)

IV. ADDITION OF TITLE XIV TO SOCIAL SECURITY ACT—UNEMPLOYMENT BENEFITS FOR FEDERAL EMPLOYEES

Section 19 of the bill adds a new title to the Social Security Act providing for unemployment benefits for Federal employees. The amounts of the benefits would be determined by State law where the employee last performed Federal services. The benefits would be administered through State employment security agencies under agreements entered into between the States and the Secretary. Costs of the program would be met from a permanent indefinite appropriation. (For details of the plan, see section 18, pp. 28–34.)

Dictatorship

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. GOSSETT. Mr. Speaker, a constituent of mine, Mr. Glen I. Myers, of Denton, Tex., has asked me to insert in the CONGRESSIONAL RECORD a quotation from Dr. Vannevar Bush's speech of December 5, 1949. This quotation is so sound and timely that I agree with Mr. Myers it should be as widely disseminated as possible.

Speaking of dictatorship, Dr. Bush says:

* * * but we cannot meet the threat of dictatorship if we turn this country into a wishy-washy imitation of totalitarianism, where every man's hand is out for pabulum, and virile creativeness has given place to the patronizing favor of swollen bureaucracy.

Dictatorship can compete with dictatorships, and a free virile democracy can outpace any such in the long pull. But a people bent on a soft security, surrendering their birthright of individual self-reliance for favors, voting themselves into Eden from a supposedly inexhaustible public purse, supporting everyone by soaking a fast disappearing rich, scrambling for subsidy, learning the arts of political logrolling and forgetting the rugged virtues of the pioneer, will not measure up to competition with a tough dictatorship.

A Positive Foreign Policy for the United States

EXTENSION OF REMARKS
OF
HON. ABRAHAM RIBICOFF
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. RIBICOFF. Mr. Speaker, in September the Foreign Affairs Committee of the House of Representatives appointed the Honorable THURMOND CHATHAM, of North Carolina, and myself as a special subcommittee to make a survey of western Europe in regard to the foreign policy of the United States.

On my return to the United States I made a speech in West Hartford, Conn., on November 28, 1949, and wrote a series of articles which were distributed to various newspapers by the North American Newspaper Alliance.

Pending the writing of a formal report by the subcommittee it has occurred to me that a reprint of these observations may be of interest to the other Members of the House. I, therefore, extend my remarks in the RECORD by including them together with editorial comment:

A POSITIVE FOREIGN POLICY FOR THE UNITED STATES

(Speech by Congressman A. A. RIBICOFF, November 28, 1949, at the Alfred Plant School, West Hartford, Conn., under the sponsorship of the West Hartford League of Women Voters and the Hartford Foreign Policy Association)

This evening I propose to discuss with you not the personalities of Europe, but the problems which the United States faces in Europe. These problems are not easy to describe, let alone to solve. They are harder and tougher today than they have ever been before; and in some ways the American people are less prepared now for the truth of their relations with Europe than they were some years ago. But it is incumbent upon me as a Congressman of the United States and as a Representative of this district, to state as clearly as I can, and as completely as I can, the essential difficulties with Europe. I can only hope that you will bear with me if at times the description becomes

excessively technical. This is a technical and complicated world in which we live; and we are certainly charged with the responsibility of understanding it. More than this, our very lives depend upon our understanding it.

As everyone in this room knows, Europe today stands between the colossus of Russian power on the east, and the gigantic power of the United States on the west. Europe, this middle ground, which is the traditional soil of our civilization, is no longer the leader of western thought and action. The force and direction of the future is coming not from the time-honored sources of Britain, France, Italy, and the rest of Europe; rather it is coming from the far steppes of Russia, and the very close Washington, D. C. The fact that Russia and the United States are unable to solve their mutual problems is the fact that creates the major problems in the middle ground. In Europe, between the two poles of power, dwell millions of people who have a right to life, and in our terms, the pursuit of happiness, just as you and I have that right; yet they are not in command of their own destiny, and they do not have the power to control the future.

Europe will never again have the political and economic balance which was hers during the nineteenth century. The past few years have seen the disappearance, as such, of two military and naval powers—Germany and Japan—and the eclipse of a third—Italy. It has witnessed the serious economic and military depletion of two western powers—England and France. The recovery of their former strength is by no means assured. It has seen the thrusting of Soviet power into central Europe, and, for a year, to the Adriatic. Further, the Politburo has extended its orbit into vast portions of eastern Asia.

Our traditional feeling of security has been blasted. An ocean doesn't mean very much any more in terms of defense. Airplanes can cross it in 10 hours, and a guided missile with an atomic warhead could probably cross it in 3. There isn't any security in water any longer—oceans are now highways instead of barriers.

While Europe declined, the United States has involuntarily emerged into the pre-eminent position of power among western nations. This pre-eminence is inherent and cannot be abdicated. It is doubtful that history gives us a precise parallel of such a shift in the power situation in so short a period. Such shifts in power do not lend themselves to fast balance. The adjustment is necessarily prolonged over many decades. The economic and security problems of Europe—and this Nation—will not be over in a year or in 25 years. They will continue to challenge our wisest thoughts and best efforts for many years to come. But our thinking will not be wise nor our striving adequate if we cling to the illusion that the situation is a transient one or that we can turn our backs upon it any time we wish and, at most, in just a few years.

The European knows this as well as we know it. He knows that we must depend upon him to go west rather than east. He knows we must depend upon him to keep from the panaceas of fascism and communism. He knows that the life of the United States, powerful as she is, is inexorably linked to the life of Europe.

Perhaps more important is the fact that the United States is no longer able to afford either economic or political isolationism. We could afford it once, in the years before the atomic bomb. If we look at it realistically, we should include only the years before 1914. It was only in these years that the American people could afford the luxury of separation from the rest of the world. We had a fairly well-balanced economy, we were pushing our own frontiers farther and farther West, we were developing a vast system of productive enterprise, and we were in general living well with ourselves and the rest of the world.

What we fail to realize, however, is that we were living this way because Europe was in a kind of balance. During the nineteenth century France became wealthy, Germany became highly industrialized and wealthy, Italy was able to live with a degree of security and a minimal fulfillment of her basic requirements. And so one could go through the list. The nineteenth century was a stabilized period in the history of western civilization. Ideas of freedom, justice and equality were important, and held to by large numbers of people. The dignity of man was not an idle phrase mouthed by politicians and stated with conviction only by a few; it was an actual living force in the lives of European people, low and high. There was a certain freedom of economic relationships which allowed men to change their jobs when they wanted to, rise to a higher standard of living if they had sufficient courage, and pass on productive wealth to future generations. It was not all rosy, for there were certainly situations which outraged decency and cried out for reform. Nevertheless, the Europe of the nineteenth century was a Europe that produced leadership for the world and a fairly adequate standard of living.

The changes have been wrought through a number of factors. For one thing, the population of Europe became too heavy for its semifeudal land system, and the strife between farmers and city dwellers came into the open. The productive plant of Europe became obsolete, especially since it was having to compete with a new and well integrated industry in the United States. The age of empire ended without the European mind or economy being prepared for the change. War was taken as the only way out, and all the wars did was to create new and more dangerous difficulties. Over and over again, vested privilege in Europe sought to preserve its traditional power through violence and intrigue. Instead of fairly facing the issues of the changing world, European statesmen allowed their moral resources to dry up, and were left simply with hollow phrases and finally with concentration camps.

The fortunate position of the United States, which was made possible by the balance and humanism of nineteenth century Europe, was consequently destroyed. The frontier of the United States ceased to be the Statue of Liberty, and suddenly became the Rhine. American statesmen, most especially those of the Woodrow Wilson variety, saw that we must have a positive government capable of making positive decisions and capable of planning for a positive future. But the old idea of isolation and insulation was hard to kill. Over and over again, Wilson warned that unless we made the League of Nations work, the future would be filled with bloody and terrible wars; and over and over again, those who could not see the change resented the idea of a positive government and retreated into the past. After all, they argued, we have gotten where we are by rigidly adhering to George Washington's dictum--no foreign entanglements. What they forgot was that George Washington lived some years earlier, and that change is as inevitable as life itself.

When Franklin Delano Roosevelt took over the Presidency in 1933, we had no positive government with regard to foreign policy, and we had no positive government regarding our domestic policy. Roosevelt was faced with the necessity of creating a positive government almost overnight. He had to throw together countless numbers of bureaus and agencies to solve pressing domestic problems. He of course made a large number of errors. But had he acted in the tradition of the past, the United States would have seen horrible, bloody strife. The bread lines were bad enough. The marches on Washington seemed almost impossible. The itinerant beggars who wanted to work, who had skills, but who could not find work, presented a picture that this country found revolting and rather incomprehensible. Out of the stuff that usually breeds revolution, Roosevelt was able, through a lot of luck and a real social vision, to fashion a positive state.

But this was the domestic side of our problem. He did little or nothing at that time with foreign affairs. As far as the rest of the world was concerned, we were still isolationists. Admittedly we were waking up to the fact that we could not live forever on an unconscious, unplanned road of happy prosperity. But we were not recognizing that the peace of the world was ultimately going to depend upon whether or not the United States could recognize its responsibilities and formulate a positive policy of leadership.

One thing, at least, should be pointed out. All during the period which stretched between the two world wars, the American people were giving money to Europe. It was not organized, and the fact that it wasn't was a very substantial cause of the 1929 crash. In those dim days European governments floated countless securities in the United States. Our banks, insurance companies, and individual investors bought these securities and soon found them worthless. Untold millions of dollars poured into European reconstruction, and untold numbers of investors lost their savings.

Because the United States Government had no positive idea of our relations to Europe, we individually and collectively through our banks and investors, helped to rearm Europe. We rebuilt German cities, and then the cities defaulted on their debt; we rebuilt French industry and got no return on our investment; and we did the same for other countries.

There is nothing to be gained by reviewing the years between 1933 and 1941 when the scrap metal from the Third Avenue El in New York City fell in Pearl Harbor. Perhaps it would be a good idea to review it simply to show how wrong we were, and how incapable we were of recognizing facts right before our noses. But the task is embarrassing, and I am sure that we all know the facts.

Now we are faced with the necessity of seeing into the future once again. We cannot afford an atomic war, and every American citizen knows it. We cannot afford to be guided by the clichés of the past which cry, "Peace, peace," when there is no peace. We cannot afford to be taken in by panaceas dreamed up in libraries or conference rooms throughout the world. We can actually afford only one thing, and that is to face the facts as squarely as we can and plan our future in the light of them.

What are the facts of Europe? Even if you leave aside Russia's threat, Europe is today a land of desperate people. Europe does not understand now, and it never has understood, the spiritual foundations of American democracy. The German people, for example, knew nothing about democracy, and consequently our attempt to impose the Weimar constitution upon them was little short of ridiculous. We must recognize that we cannot export American democracy and impress it upon Europe. Democracy grows out of a people; it cannot be imposed upon a people.

Another fact one learns when in Europe is that the idea of American free enterprise, as well as its practice, has long disappeared from the countries of its birth. Free enterprise as we know it is not a live option for present-day Europeans. We are going to have to live with a socialized Europe, and we might as well face it now. The surplus which makes our economy possible for us is not present in Europe, and it may never be revived. There are too many people and too few goods. Much of European land is worn out, and much of the possibility for

world trade has been taken away. England has been losing her surplus since the close of the First World War. She must pattern her life according to the greatest good for the greatest number. England and the rest of Europe have their backs against the wall. In many areas they cannot afford the type of freedom and liberty which the American people enjoy. In essence England's problem is no different from that of the rest of Europe.

If we look at England carefully we can see some of the reasons for Europe's present plight. About 30 years ago, when the world was coming out of its First Global War, England was burdened with a heavy internal debt for the first time since Henry VIII. She had always been dependent upon her export markets, and now she found them sadly shrunken. Many of her most important customers had become self-sufficient. And rapid strides in industrialization had raised up new competitors. The whole period between the two wars was a period of increasing difficulty for England's exporters.

Now, it must be remembered that England is an island economy. It is the least self-sufficient of all nations. It is a heavily populated, small section of the world. It must import some 50 percent of its food supply and over 80 percent of its raw materials. If there is no export of finished goods, there is no way of paying for the imports. With a shrinking of export markets, England had to find some other method for paying for her imports, or starve herself out of business.

England's salvation between the wars came in the form of interest on overseas investments and from shipping and insurance earnings. Interest on investment alone gave her a net income of about $800,000,000 each year. Through these earnings England paid for approximately one-third of her total imports.

England was living off her fat. Instead of reorganizing industry and setting off on an aggressive campaign to recapture world markets, the English took an almost wholly negative approach to their problem. Industrial management, unfettered by antitrust laws, got together and set prices and divided what markets they had. They set the prices high, high enough to keep the least efficient producer in business. They consequently aided the downward plunge of British business.

The labor unions did the same thing in their area. Instead of trying to achieve high production at low cost, the workers increased featherbedding and promoted the growth of restrictive practices. They wanted to make the work go as far as possible by dividing it up rather than by satisfying new demand.

When England went into the Second World War she went in with an inadequate productive capacity, and was consequently thrown on her overseas resources. Throughout the war she liquidated her investments to buy arms and food. Private holdings by individual Britons were confiscated, and the Government used the money. By the end of the war Britain had debts where she used to have investments. And her productive plant was even more obsolete. England came out of World War II with a heroic record for fighting totalitarianism, a terrific debt, and one of the lowest standards of living in Europe.

In varying degrees, England's history and problem illustrate the situation all over Europe. The two great World Wars have knocked out traditional wealth, and the people of Europe are looking for a new way to make a living and be free. They have been forced by their own short-sightedness and by the march of progress in non-European countries to discard many of their ancient patterns of thought and action. Not since the upheaval of the sixteenth century has Europe been forced to such a radical reexamination of her aims and purposes in life. In country after country that I visited, the people expressed the same confusion and the same sense of being violently uprooted from a traditional past.

The serious life and death question for Europe is whether or not it can discover a specific mission in the world. The European peoples are going to live, and what we want to know is how they are going to live. People can cooperate with each other to solve mutual problems in a number of ways. After all, Hitler, Mussolini, and Stalin, all three, got people working together and the trains running on time. The trouble is that we can't live in a world where Europe solves its problems in the fashions proposed by these men, and it is my conviction that confused as they may be, the peoples of Europe don't want this kind of solution. They would like to be able to live in peace, they would like to be able to live harmoniously with others, they would like to be able to count innumerable friends all over the world. But they will forego that desire if it means death through starvation, or a very, very low subsistence living.

What the United States wants for Europe is not that it be a colonial possession of ours but rather that it be an independent association of nations living in peace and harmony with each other, and with us. What Russia wants is that Europe become a colony of the Kremlin. By so doing, Europe would be able to produce for the Russian people and Europeans would live in a slave-labor camp. It would further provide Russia with the opportunity for jumping to the Western Hemisphere and ultimately bringing to fruition the Communist dream of world revolution and domination. Without Europe, Russia is contained. With Europe, Russia will be able to gain absolute control over the peoples of this planet. The European peoples themselves have a vague recognition that this is the case. They don't want to go to Russia, but they are not quite sure that the United States has the plan or the understanding necessary for their salvation.

In the past years we have not offered a constructive alternative to fascism, nazism, and communism. In fact, if you take our public opinion as something measured by the editorials in the isolationist press and the speeches of unaware politicians, all we have done is to resent the fact that Europe has a problem. And this resentment is certainly no alternative to the totalitarian dictatorships.

The constant debate we conduct with ourselves—whether or not to participate in the affairs of Europe—is only a dilemma of the mind. In the real situation, there is no choice, no place else to go. We are not willing to submit to failure as a power and to abdicate the leadership which has been thrust upon us. The difficulty is that in keeping alive the illusion that we might do so we reduce the effectiveness of our efforts in world leadership.

We are today, whether we like it or not, the leader of western civilization. Whether we like it or not, we have to supply the saving grace for western Europe. There is no longer the buttress of British diplomacy, the British Navy, and a fairly stabilized economy of Europe. We have no way of escaping the role history has given us to play. When President Monroe issued the Monroe Doctrine, he issued it without a navy to back it up. He was confident, however, that the British Navy would defend the integrity of that doctrine. Over and over again in American history, we have counted on these buffers between us and a responsible role in Europe. Now the buffers are all gone. We will lead Europe, and we will either lead Europe into the death-trap of Communist dictatorship, or we will lead her into a tolerably well-ordered and tolerably free society. But willynilly, we are the leaders. This means that those of us who thought that at least by 1952 we would be able to pull out of Europe and that we would stop the ECA and get back to hunting, fishing, baseball and business as usual, have been all wrong. We will never be able to get out of Europe, because if we ever do leave, the vacuum created by our departure will be filled at once by an imperialistic Russia; and it is a simple step from a Russia-dominated Europe to a Russia-dominated United States. To remain alone as a sitting-duck with Russia dominating the productive capacity of Europe and their people and the people of Asia, would cast such a definite burden on the United States that our expenditures today would be insignificant and in the process free enterprise and democracy would vanish.

The running debate we conduct with ourselves—whether we will or will not participate in the affairs of Europe—is a gigantic illusion. It is carried on in our minds, not in our actions. Actually, of course, we have participated in European affairs in a large way since 1914. We were involved in two World Wars. It has been estimated that the American people have sent in cash to Europe, between 1914 and 1948, before the Marshall plan, some $50,000,000,000 for nonmilitary expenditures such as loans, private charities, immigrant remittances, UNRRA, buying of gold, etc. Now, at least, we should be thoroughly aware of the part we are to play. The real situation is now, as it has been for some time: we have no choice. We cannot abdicate, but we can play our part so badly that only disaster can result. The difficulty with keeping this illusory debate alive is that we reduce our effectiveness in world leadership. We were not good leaders in the twenties and thirties—but our very lives depend upon our being excellent leaders in this day.

World leadership has always been, and will always be, expensive. Leadership of any kind is expensive. It costs time to be a political leader, and, of course, it costs a lot of money. The men who are the leaders in our community are men who say that they are willing to devote time and effort and money to the good of the community. You don't elect as president of your local club a person who tells you at the outset that he will be glad to consult with you twice throughout the year, but not to expect time from him in actual leadership. Well, this is what the world expects of us—time. Time in the form of military aid and military personnel. Time in the form of conference time. But most important of all, time in that crystallized form known as money. After all, the thing which makes an object valuable is the time that went into its production. If it takes a great deal of time, it costs more in our money exchange than if it takes a small amount of time. So money is in a sense solidified time—the time that the American people as a Nation are willing to give to the leadership of the world. The expense of leadership must therefore be measured in terms of time. How much time are you and I willing to give for world peace? How much of our day's working time are we willing to give so that Europeans may find the proper answer to their life and death questions? When the Congress appropriates a fund for European relief, they are appropriating a portion of your time. If you are not willing to give it, then you are unwittingly aiding the imperialistic ambitions of one of the most vicious tyrannies civilization has seen. Don't forget that Britain paid heavily for her leadership of the world. Don't forget that the United States must pay heavily for its leadership of the world. We have a heavy burden or a heavy opportunity.

The only cement that holds Europe together is its confidence in the United States. American initiative is a must. Most of us who think about integration use it as a form of escapism, thinking that if Europe organ-

izes we can give up the burden of leadership and go back to fishing and the old ball game.

The fact of the matter is, I suppose, that we don't want leadership. Of course, we would rather go hunting, fishing, see ball games, live quietly on tree-lined streets, have our children grow up in comfort and security—live in general the kind of independent life that we Americans mean by well-being. Unfortunately for us, we haven't the decision to make. We will lead. We have to lead. We are compelled to lead. And the question is only where we will lead.

The question, Where will we lead? is being asked all over Europe, and it should be asked all over the United States. What will we do about Germany? What we do about Germany may be the decisive force that will make the future one of war or peace. What should we do about President Truman's justly famous fourth point? Should we actually set to work to rebuild depressed areas, raise standards of living, create customers and prosperity? These and a host of other questions force themselves upon us when we ask the question, Where will we lead?

We still like to woo constancy with philandering words. In enacting the European recovery program we reserve our position not only with respect to the sequel, but also during the term of the program itself. Thus we make the leadership effective for only a year at a time, and each spring Congress renews the debate not only as to the amount to be spent in the ensuing year, but also upon the question of whether the program is to be continued or to be summarily dropped. Moreover, the relevant legislation reserves the right of the Congress to back out and call off the program by concurrent resolution at any moment it may choose to do so. Likewise with the mutual defense assistance program. This is supposed to supply the sinew of a solemn, permanent alliance, and yet the legislation is enacted for only a year at a time. Our Nation thus seeks the benefits of a permanent alliance while preserving the freedom of a companionate marriage. Again the legislation includes the statement of the right of the Congress to call the whole thing off by concurrent resolution.

My trip to Europe and the study I have undertaken in connection with my work on the Foreign Affairs Committee leads me to think that there are a number of steps which we must take at once. These steps point in the direction we should go, and give an indication at least of the kind of positive foreign policy we require.

1. Tactically we must think in short terms and be ready for quick shifts of position and changes of technique, but we must not let these characteristics, appropriate to the tactics of the situation affect our thinking in relation to general strategy. America must insure that any permanent preponderance of power, when realized, shall be on the side with which America is alined. To this end America must be willing to pledge the same steadfastness of policy and action, that it expects from its friends. These considerations are basic to any success we may achieve in general strategy. We cannot fully realize that if we continue the shallow pretense of facing the world a year at a time. The national mind must be made up. We must recognize that there are a number of cherished ideas which must be branded as illusions. We must recognize that the most dangerous illusion of our present situation is the one that tells us that short-term and short-run investments pay higher dividends than long term securities.

2. The Marshall plan and the military assistance program must be formulated and enacted on a long range basis. It is impractical and wasteful to think we can organize the economic and military life of many nations on a year to year basis. If after our careful and considered judgment the actions taken by the recipient are against ours, and their long term interest, we should impose conditions. These conditions should not be based on folklore but on a tough appraisal of the facts and required results.

3. Western Germany must be brought into a strong council of Europe and must not be permitted to make independent unilateral decisions. The Ruhr Valley should not be returned to the cartelists who so successfully stifled trade before the war and so successfully aided Hitler's rise to power. Western Germany must sit among democratic nations and must have her decisions checked and double checked by those who have been her victims in two wars. But it must be recognized that England cannot continue her policy of commonwealth isolation. She must be a part of the Council of Europe. Without England a strong council would be unworkable, and unnecessarily expensive to the United States. It would also give an unregenerated Germany independent power.

4. President Truman's proposal to aid in the reconstruction of depressed areas throughout the world should be implemented by Congress. If we allow vast numbers of people to starve, we are not only immoral, we are also inviting Russia to go in as their saviors. In addition, we are keeping alive by our own inaction situations which can only breed revolution and unrest. With atomic bombs in Russia and the possibility of atomic war hanging over our heads, such a course is suicidal. Also, we are, by inaction, restricting our markets and refusing to build a firm foundation for internal and world prosperity.

5. We should give governmental guaranties to businessmen who will enter the world with their risk capital. When I introduced the Ribicoff amendment to the ECA Act of 1949, I did so because I felt that no American businessman should be asked to take the nonbusiness political risks which investments abroad now entail, I still believe it, and I am happy to see that ECA officials and most all foreign experts are now in accord. We need investment in Europe, and we can get it only if there is some provision for converting earnings into dollars and guaranties against extraordinary political risks. Insofar as our Government insures this portion of the burden it eliminates to such an extent taxpayers' dollars. Private enterprise is needed—needed very badly as a cooperating part of our foreign program.

6. We should reexamine the immigration policies in the contemporary world. You will never solve the Italian and German problem until you solve the problem of their excess populations. Somehow a way must be found to resettle millions of people in other parts of the world. There are huge territories potentially rich in resources and presently unpopulated. Colonizing these areas could be dovetailed with President Truman's point 4. We cannot intelligently consider this problem without also a thorough study of our own capacity to absorb new immigrants and give them a chance for a decent life.

7. We must encourage multilateral and reciprocal trade. Our tariff structure must be reexamined over a period of time. We must recognize that Europe, which desperately needs dollars, can't earn them if they are not allowed into our market places. Trade is a two-way street. We either buy from them or continue to give them the large sum of free dollars to buy from us.

8. A Marshall plan for the Far East should be formulated with the non-Communist Asiatic peoples. We should encourage the welfare, economic strengthening and nationalistic strivings of the vast millions who heretofore have been mere pawns in an exploiting imperialism now dead.

9. The United Nations should be aided and encouraged by us as a very real instrument for preserving the peace. It should be strengthened. We are surely on the road to disaster if we allow the UN to perish. In spite of its ineffectiveness in the present East-West controversy, it is the only public forum for debate on world issues. As a mediating agency it did wonders in the dispute between Israel and the Arabs. In countless ways it is now breaking down the barriers which separate men and cause nations to resort to war. Its decisive activity in world affairs is, I am sure the fervent hope of all of us. The UN cannot be strong unless you and I seize each opportunity to aid it and understand it.

10. The American people shou'd be directly and consistently in favor of world federalism. Today world federation is a dream, but like all good dreams it helps us see the direction we should take when specific issues present themselves. We want to move toward an association of peoples, federally united in the common cause of decent living for all. By being in favor of world federation, by understanding it, by seeing its vision, we set our minds and hearts on an ultimate goal that will furnish some pattern for our work for peace. We should not be deluded into thinking that we can gain the goal easily or in a short time. But hard or long as the road may be, it is certainly the one we should travel.

11. Finally, I suggest that we do all in our power to strengthen our atomic production and defenses. All of us abhor the economic wastefulness of an arms race. Paradoxical as it may seem to many, a strong American Military Establishment is today our best safeguard against war. A democratic nation does not, and our history proves it, engage in imperialistic warfare. We don't want colonies, we don't want subjected people, we don't want to control the world. We want other peoples to be independent, prosperous, and peaceful. If we can attain that, we will be satisfied with our leadership. Consequently, a strong Military Establishment serves only two purposes in peacetime: (1) it deters other nations from starting a shooting war, since they know that the United States is well prepared to defend itself; and (2) it provides us with the means for staying in existence if another nation should attack.

I am convinced that these steps will lead us in the direction of a positive foreign policy which will result in peace rather than war. They are all expensive. They will all take your time and mine. The preservation of western civilization is worth it. I am sure that my children and the children they will someday have are worth it. And I am further sure that you and I live in a Nation that will forthrightly accept the responsibility that history has thrust upon us.

[From the Hartford Courant of November 29, 1949]

MR. RIBICOFF REPORTS

Representative A. A. RIBICOFF has taken his courage in his hands. Fresh from a trip to Europe, in which he is interested because of his post on the House Foreign Affairs Committe, he spoke in West Hartford last night before the Foreign Policy Association and the League of Women Voters. What he said will hardly be popular. Many persons have become irked at and skeptical about the Marshall plan and other forms of aid. It is this, apparently, that leads Mr. RIBICOFF to say that the American people are less prepared for the truth about Europe now than in the recent past. In any case he insists that we face the facts, and act accordingly.

One fact Mr. RIBICOFF stresses is that we cannot export American democracy to the Continent. Self-government by the people as individuals thrives only where it takes root spontaneously. Again, Mr. RIBICOFF made a point noted by many another observer able to penetrate beyond the gay spots and the scenery abroad, namely that free enterprise

as we know it simply does not exist in Europe today. Nor is it "a live option." You have either the cartels that helped bring on two world wars, or you try something else. American individual business enterprise also cannot be exported and imposed. So "we are going to have to live with a socialized Europe, and we might as well face it now."

Mr. RIBICOFF points to Britain as an example of the rest of Europe. "England came out of World War II with a heroic record for fighting totalitarianism, a terrific war debt, and one of the lowest standards of living in Europe." Wars have sucked much of the old vitality out of Europe, and that is the chief source of the trouble. This leads Mr. RIBICOFF to his real argument, which is that we are involved in Europe up to our necks with no hope of escape. To think we can debate whether or not to help Europe is an illusion. Even if we do nothing we shall lead Europe. Hence we shall lead it either "into the death trap of Communist dictatorship, or * * * into a tolerantly well-ordered and tolerantly free society." And this is going to cost us time, effort, and money.

On this foundation Mr. RIBICOFF proposes several concrete steps. Instead of legislating from year to year, he wants us to formulate an enduring, long-term policy that will be as fixed as that of Great Britain when it led the world during the ninteenth century. The Marshall plan and military aid, Mr. RIBICOFF insists, cannot end next year, nor even in the supposed target date of 1952.

All this is controversial. But it will bear some thinking over. It is well to have Mr. RIBICOFF urge us to do so. It is, in fact, a challenge that should come not from an individual Representative, but from the President and his administration. Perhaps Mr. Truman finds Mr. RIBICOFF's conclusions politically unpopular. But they may not turn out to be so in the end. If a political figure speaks in accents that the people recognize as the truth, there is usually a response.

[From the Hartford Times of November 29, 1949]

IT'S A GOOD SYSTEM

Through the cooperation of the West Hartford League of Women Voters and the Hartford Foreign Policy Association, several hundred persons last night were privileged to hear Congressman ABRAHAM A. RIBICOFF in a demonstration of representative government at its best.

Mr. RIBICOFF has just returned from a survey of the principal countries of Europe where he went as a member of the Committee on Foreign Affairs. His talk last night was a report to his constituents on his experiences, his interviews with top-rank leaders, his personal observations, and most important of all, his conclusions as to what the United States ought to do to develop a positive and long-term foreign policy. He spoke with engaging frankness, deep sincerity, and such evidences of a practical loyalty to American ideals as to make his address a vital occasion in realistic civics.

It was about a year ago that the voters of the First District decided to send Mr. RIBICOFF to Congress. He was a good choice then, but his talk last night showed that during the past 12 months he has grown to meet his greater responsibilities and opportunities. It is gratifying to know that this district is through him rendering real service in the constructive handling of large affairs in Washington. But it is no less satisfactory to have our Representative return from time to time and pay us the compliment of such a straightforward presentation of personal views and such a challenge to continued service in the advancement of American ideals as Mr. RIBICOFF brought home last night. It is evident that he has not become lost in the petty affairs that are supposed to endear a Congressman to his electorate and assure his reelection. As our Representative he has come to grips with large issues. As a dutiful public servant he had come home to tell us how this situation appears to him. It was an example of how our system works at its best.

Mr. Speaker, the following are a series of articles distributed throughout the United States by the North American Newspaper Alliance:

ENGLAND

England's problem is a world problem, perhaps even more so than they realize. Ever since the United States fought its war against England we have used England as a buffer against European dangers. England has been a kind of financial and political balance wheel which kept the Europe of the nineteenth century in a semblance of order. To be sure, there have been lapses and serious mistakes on her part. However, for a century the British have stabilized Europe through diplomacy. Today this stabilizing force is gone.

Many of Britain's present difficulties can be traced back to the First World War. Britain came out of the First World War with an extremely heavy load of internal debt. Her export markets were sadly shrunken and some of her most important nineteenth century customers had been forced by the war to become increasingly self-sufficient. The industrialization of the rest of the world had proceeded at a rapid pace and the small island economy was no longer as important as it had once been.

It must be remembered that England is the least self-sufficient of all the great nations. Dependent on overseas supplies, she imports approximately 50 percent of her food and about 80 percent of her raw materials. The entire industrial structure of the country is inevitably organized for export trade. When export markets shrink as they did following the First World War, England is faced with the real possibility of economic death.

The menace, however, was not nearly as great between the two wars as it is today. Although England's troubles began in 1914, she went into the Second World War with overseas investments which were valued at about $16,000,000,000 and which provided her with a net income of about $800,000,000. When this interest on investments was added to the earnings made in banking, shipping, and insurance, it left a sizable amount which was just about sufficient to absorb the losses incurred by shrunken industrial markets.

But the Second World War wiped out Britain's overseas assets, raised the shipping tonnage of the United States and other countries, and generally curtailed the number of services England could sell to the outside world. All her dollar-earning assets were taken from her people and used up for war material. As a consequence, England came out of the war a debtor rather than a creditor nation.

England's industrial plant is today more obsolete than it was when she was losing her markets before the war. Her industry has been badly managed since the close of the nineteenth century. Britain has no antitrust laws and, consequently, price fixing was and is a common practice. Business management was lead by stuffed-shirt directorates, with the emphasis being on social standing and cultural background. Nepotism was rife, with a hostility toward research. There was a dread of change and the worship of status quo.

On the worker's side there has been, since the First World War, a steady growth of restrictive practices designed to make a job last as long as possible, to keep in employment as many workers as possible. Any outside observer could have seen and certainly many did see that both management and labor were heading for disaster.

This negative approach on the part of both management and labor assumed that demand throughout the world was limited and that productive capacity should be related to demand. They seem to have lost the idea that demand can be increased by lowering prices. In the end, Britain turned out to be a high-cost producer with a low standard of living.

This is not to say that there is no real fight left in the British. It should be remembered that in the past year alone they have boosted productivity by 4 percent. The total industrial production of Britain is 31 percent higher than it was in 1938. Imports are down 18 percent and exports are up 56 percent. This is a record of national effort and sacrifice which is certainly not equalled by the United States or any other world power.

Those Americans who find it politically advantageous to point to England's troubles and say they all result from the policies of the labor government, engage in a dangerous falsification. The labor government came to power in 1945. England's troubles began many years earlier. Her social services are financed out of taxes raised at home, and Marshall plan dollars are not used for these purposes. It should be remembered that England is long on sterling and short on dollars. The dollars are used for food and raw material.

The serious question is what England must do now. First, she must reestablish her productive capacity and shift even more from a domestic to an export economy. She must reestablish and increase her productive capacity. This will require greater individual effort from each and every person, labor and management alike. Industry which is satisfied to do business in the sterling market only will have to be given incentives to change over to the dollar-earning market. This may well lead to the allocation of both labor and materials to such industries willing to make the change-over.

Currently she must have United States help if we expect England to return as a stabilizing factor in Europe. In so doing we not only help her, but we get an effective ally in the world today. England, however, should show in return a sincere and cooperative spirit, looking toward the economic and political integration of Europe. While this won't happen tomorrow, it will never be accomplished if the will to do so is lacking.

The United States, on the other hand, is not going to be able to keep on exporting and not importing. Trade is a two-way street. We either reexamine our tariff structure, which denies the English manufacturer competitive entry into this country, or we continue to give them the money to buy from us.

Twisting the lion's tail for local political advantage in this country must be replaced by a policy of broad understanding and the realization that England can still be a helpmate in a balanced world rather than a financial burden.

LABOR

There is very little constructive social thinking among the trade unionists of Europe. Some years ago all trade unionists were concerned to map out a plan for the future that would directly relate to the building up of the worker's economic position. Before Russia became a problem in a political sense, the trade-unions of Europe were filled with theoretical Marxists. These Marxists were not tied to any special political party nor were they particularly interested in furthering the imperialistic aims of Russia. Rather they used Marxism as a frame of reference and as a mode of interpretation.

The Communists today are no longer theoretical Marxists. They are totally unconcerned with the bettering of working conditions and their primary aim is to help Russia in whatever they can. World revolution then is more important than full stomachs and safe working conditions.

The non-Communist trade-union people of today are confused and fearful lest they fall into some Communist trap. They spend the greatest portion of their time fighting Communists for control of the unions. They have few economists and social scientists who advise them, and the ones that they do have are certainly not the best available.

As a consequence, the Communist unions in Europe are well-disciplined agents of Russian foreign policy and the non-Communist unions lack discipline and express the general confusion in the minds of European peoples.

All except the Communist unions are financially weak. Members do not have money enough to pay substantial dues with frozen wage scales (at rates equivalent to about $15 a week in United States dollars) and there is little possibility for a successful strike. Communists unions in both Italy and France are currently getting money from the outside and are using it for propaganda against the west and for fomenting possible internal revolution.

French trade unionists are baffled by the United States labor movement. For years now they have been educated to understand politics in terms of class lines. The two-party system in America where both parties include conservatives and liberals is almost incomprehensible. The lack of definite party responsibility in the United States also leads to their misunderstanding of us. Although the French unionists recognize that American labor is largely in the camp of the Democratic Party, they have no clear idea of how labor's influence is felt in the Democratic Party, nor do they have a very certain impression that labor is an important political force.

The syndicalist tradition in France makes open alinement with political parties impossible for the non-Communist unions. They do little or nothing to help the party select candidates or formulate party platforms. After the platforms and candidates have been designated most of the unions publish a paper indicating which parts of the party platforms and which candidates seem to them the most nearly in accord with their own aims. There is no feverish activity in the labor movement around election time and mostly labor's influence in Government is exerted through conversation and conference.

I asked innumerable labor leaders in all parts of Europe about the possibility of a labor party. In each case I was told that the trade unionists themselves do not want a political party but that they may be forced into organizing one if the established parties continue to disregard their interests.

All in all, the European labor movement presents a contrasting picture to that found in the United States. Here our unions spend a great deal of time thinking through the problems not only of their own unions but the total economy. European unionists, on the other hand, spend most of their time fighting either the Communists or the non-Communists. I got no clear impression from anyone in the labor movement regarding a well thought out plan for the future and a program of economic reconstruction.

It must be clearly understood by Americans that communism works primarily through labor unions and intellectuals. The European unions have a far better record than the European intellectuals. Most of the important unions have, like their brothers in the United States, taken a firm stand that communism means the end of the benefits trade unionism tries to achieve. Many European intellectuals are much less sure.

Through the excellent and knowing staff of labor experts from the ECA and the State Department, the non-Communist trade unions are being brought into closer cooperation with western policy makers. Through this cooperation, our efforts to reconstruct the economic life of Europe is made more realistic and more universal.

If it had not been for the Marshall plan, European labor would today be completely hopeless. The unions, without the Marshall plan, would long ago have been forced to the Communist position. Communists can offer nothing but Russian type slavery; the non-Communist union leaders can point to cooperation with ECA and the actual arrival of food and industrial equipment.

A conversation with Luigi Morelli, secretary for Union Activities, Free Italian General Confederation of Workers, had the following questions and answers on the Marshall plan:

"Mr. RIBICOFF. What does your union think of the Marshall plan?

"Mr. MORELLI. Our union is grateful to the American people for what they have done and for what the American workers have contributed in the form of taxes to this plan. Italian workers feel closer to the American workers because of this. I can also say this: I took a stand in favor of the Marshall plan before the Italian elections. I took this open stand at the mass meeting in the Piazza del Duomo in Milan when Louis Saillant, French Communist, secretary of the World Federation of Trade Unions, came out against the Marshall plan, together with Di Vittorio.

"Mr. RIBICOFF. What do you think would have happened in Italy without the Marshall plan?

"Mr. MORELLI. First, we wouldn't have been able to make the come-back materially that we have made; second, the standard of living of the Italian workers would be about 50 percent of what it is today; and third, politically, we would have more Communists, and possibly a Communist government."

These questions were asked in all of the western countries, and the answers were almost identical in every case.

The American people should not lose the interest and enthusiasm of the European workers. They are, through their unions, one of the most effective checks on Communist expansion.

CATHOLIC CHURCH

The Catholic Church is the most ancient single institution in Europe. It has seen many governments rise and many kings, dictators, presidents and premiers fall. To visit the Vatican is to wander back in time and have the whole range of western history pass in review.

The historic durability of the Roman Catholic Church was even more apparent in the attitudes and ideas expressed by the Pope. Pius XII, as the Popes before, takes a long view of history. He sees this present struggle with communism as the fourteenth century saw their struggle with Islam. Eventually, he is sure, the right side will be the victor. Yet, the present day church, as the church of the past, is charged with a responsibility to help bring about the victory.

One of the more memorable parts of my trip was the private audience with Pope Pius XII. Scheduled to last one-half hour, it extended for 57 minutes. As I entered his private library, he was seated behind his desk. Going to his right we shook hands, American style. Seventy-four years of age, with a frail physical constitution, the Pope has clear twinkling eyes and is unusually alert and keen. His grasp of world affairs is truly remarkable. The Pope speaks English and knows the United States. We discussed many international problems touching on the welfare of mankind, the cause of peace and human solidarity. He showed a sustained interest in peace, justice, freedom and the dignity of the individual.

Since the earliest days of Christianity, the church at Rome has been a potent political force. Rome picked up the pieces of the disintegration of the ancient Roman empire; the church pulled civilization out of the mire of the Dark Ages; and today the Vatican is faced with its most difficult political challenge—the defeat of Russian communism.

The present-day problem is couched in different terms and set in a different world. The world is no longer Europe and the Mediterranean—it is a total globe. Roman catholicism is no longer a highly centralized, closely knit and geographically localized institution. Today it is spread over the world. It has far-flung outposts in the Far East, Africa, South America, and the United States.

The terms of today's fight are different also. In the past, catholicism has fought paganisms and other religions which claim to understand God in a different fashion. Now, catholicism is fighting a gigantic, imperialistic, secular religion which knows no God. In fact, this secular religion claims that all religions which speak of God are "opiates of the people"—man's worst luxury.

Pope Pius XII and the other Vatican officials recognize that communism is a religion. They know that a person cannot declare absolute allegiance to the state, while at the same time serve the Roman Church. It is impossible for the church to admit that the state has absolute control, usurping the authority of God.

The soul of European man is, therefore, the prize for which Russia and the Catholic Church struggle. If Russia should win, the Vatican knows that a whole new generation of Europeans will be raised as Communists, not as Christians. If the Church should win, she will win in concert with the western democracies, and freedom of religion will be a practiced fact.

Roman catholicism works in a number of ways to achieve victory in its struggle. She offers herself as a point of resistance in the iron-curtain countries, even to the extent of having top church officials jailed and tortured; she works through trade unions to teach the lie of communism and the utter falsity of its economic claims; she answers the theoretical charges made by Marxist philosophers and points out in simple language how illogical and false are their claims; finally, the Catholic Church provides a strong bond of union among its 400,000,000 church members spread throughout the world.

But the Catholic Church is more than a powerful political foe of communism. In the parishes throughout Europe and the rest of the world, Catholic worship and moral teaching is helping to heal the wounds left by depression and war. Without fanfare, local priests daily perform their services to man, helping along with other spiritual leaders to build the kind of lives that will some day make possible a decent world.

Europe needs the services of their spiritual leaders—Catholic, Protestant, and Jewish—in this day more than at any other time in history. As far as I could judge, the leadership of all religious traditions are actively fulfilling their trust.

GERMANY

The American people have never had a thought-out policy with regard to Germany. When we established General Clay as the Military Governor of western Germany, we gave him no policy; we simply allowed him to play by ear. Congress never legislated on Germany. What policy we had that came out of Congress came through the Appropriations Committee. Clay as a consequence had only one real political responsibility, and that was a dollars and cents one.

General Clay, therefore, felt that he was doing his job adequately as long as it was being done as cheaply as possible.

In addition to this negative emphasis is the fact that the Army was running Germany. When an army runs anything, it sits on it. The strength of any soldier is in his ability to guard the state and to make real political decisions possible; but his job is to set the conditions for political decisions, not to make them. From the earliest times both the strength and the weakness of the soldier has been his limited frame of reference. He has never been a diplomat in any over-all sense.

General Clay's administration of Germany was a soldier's administration. As a soldier he did an excellent job; he wasn't expected to exercise political vision.

German recovery has been rapid and, as one would expect, efficient. It must be remembered that Germany is the industrial heart of Europe and the Ruhr Valley is the industrial heart of Germany. Russian actions with regard to the Berlin blockade and the general German problem are only understood as one recognizes that the clue to Europe is Germany.

The clue to Germany is the Ruhr Valley. If this highly industrialized section of Europe is turned over to the western German people, without effective strings attached, England, France, Belgium, Holland, and the rest of the sovereign states of western Europe have a right to be fearful. German industrialists and cartelists have been outstandingly responsible for two of the most horrible wars in history. They could not have had those wars had it not been for the Ruhr Valley.

Russia knows full well that the greatest propaganda weapon they can have is the reestablishment of German industrialism and German control of the Ruhr. What we have done about Germany is to really close our eyes to the problem. We have sent well-meaning people with well-meaning books to Germany and then asked the Germans why they did not want to become like the United States. German conditions and traditions are so different as to make this a foolish vision. We learned after the First World War when we tried to impose the Weimar constitution on Germany that democracy grows out of the spiritual resources of the people and is never imposed from the top. We know this now, but we still go on in a kind of simple way to ask these people if they will not really be good fellows and act like Americans.

The German problem is, therefore, twofold. On the one hand, it is a long, long process of education and realinement of values. On the other hand it is finding some workable way to use this tremendous industrial potential of the Ruhr as a means of peace rather than as a means of war.

I am frank to say that the solution to the total problem of Germany is complicated and not immediately apparent. Just as many other observers, I recognize that our diplomacy has been bad and that we should have substituted civilian control for the military some years ago. This does not mean, of course, that we should have pulled our Army out, but it does mean that we should have established a civilian policy over the Army at an early stage.

Whether we like it or not, Germany is going to be the center of power in Europe. We can lose this center of power if we do not begin today requiring of our Government and the governments of other western democracies hard practical thought. The other problems of Europe fade into insignificance when we realize that if Germany becomes strong again she can retreat to the old Bismarckian policy of pitting the east against the west. We should not be deceived; she will play footsie with Russia while using our resources for her recovery.

Germany must be made a part of a solid group of western democratic nations. She must never again be allowed to rebuild her industry for the purpose of war, and she must never again be permitted a chance to engage in imperialist expansion. The only way to insure the peaceful future of Germany is to make her a part of a strong, peaceful union.

I am particularly distressed to see that Britain is not aware that she must be an active partner in western union. She is still clinging to her traditional policy of commonwealth isolation. As long as she does, there is no hope of solving the German problem. The western European nations, Germany among them, cannot be economically or politically stable without the British. The prosperity of Europe, the health of Germany, and, in a large measure, the peace of the world depends upon an effective council of Europe. Such a council can only be effective with the full cooperation of a strong Britain.

If the British can be persuaded to change their minds, the talk of making Germany a neutral buffer state between east and west will vanish. And it should vanish. In Europe today, it is impossible to be neutral between communism and democracy—between peace and war—between security and insecurity. The British should know this; certainly the Americans are coming to know it.

One thing is absolutely certain. The American people cannot allow the soft sentimentality of the 1920's to guide the German policy in the 1950's. If Britain does not go into a strong western union, then the United States must. We cannot afford to leave a weak council of Europe with Germany in a position to rise again as an independent power capable of starting another war. All important decisions to be made by the Germans should be made in open meeting with strong democratic nations sitting on either side of her.

Germany, in the very nature of the case, cannot be neutral. We must have her positively seated in a strong western democratic bloc, with strong democratic nations determining the course of action.

PROTESTANT CHURCH

The Protestant Church leaders in Europe are trying to rediscover the specific mission for Europe in today's world. They recognize that the old bonds of unity in Europe are dead. The two world wars have destroyed the ancient bonds which bound the peoples of Europe together and now, if Europe is to be regenerated, something new must take the place of the old.

The Reverend W. A. Visser 'T Hooft said: "None of the old forces can do the trick. Roman Catholicism has thought too much in terms of the maintenance of its institutional life and has been too reactionary; Protestantism too divided and too abstractly spiritual; liberalism too superficial and too individualistic; scientific rationalism too bloodless; socialism too opportunistic; nationalism too destructive. And the classes are equally played out—above all the bourgeoisie with its eternal pursuit of false securities but also the labor class with its understandable but nevertheless sterile resentments."

Visser 'T Hooft's observations deal primarily with the institutions of Europe. His hope and the hope of other Protestant leaders in Europe is that there will be some kind of poltical unity which will emphasize the freedom of individual consciousness. The World Council of Churches in Geneva, of which Visser 'T Hooft is general secretary, is an anti-Fascist and anti-Communist force. In keeping with the Protestant tradition, they are little concerned with the differences of institutions as such and much more concerned with the development of individualism.

What they see as a goal is a kind of classless individualism which will allow very few economic privileges but a great deal of individual freedom in speech and worship.

In talking with various Protestant leaders it became clear that what they wanted the United States to do more than anything was to persuade Europe into union and perhaps make political union a condition for further aid from the United States. In asking for such a union they place very little emphasis upon specifically religious institutions which might be a part of it. By and large, they do not want established churches paid by the state. They would rather see a separation of church and state which will make it possible for them to give denominational expression to Christianity. If religious freedom is not a part of the new political union, Protestant leaders feel that the foundation of real liberty will be missing.

Protestant thought and action in the political real is less spectacular than that of the Catholic Church but is just as real. It is, of course, just as impossible to be a thorough-going Communist and remain a Protestant as it is to remain a Catholic.

I got the distinct impression that Protestant leadership was of a high quality and that if they are given the proper kind of assistance from the United States and from the American churches, their movement toward unity and their political consciousness would play an increasingly important role in the life of Europe.

But the Protestants have certain special problems which make their future difficult. In some iron-curtain countries the memory of the Reformation and the Hapsburg rule is still strong. This memory makes it almost impossible for Protestants and Catholics to unite against their common enemy. Although this fear and distrust is not confined to the Russian countries, the western churches are much less bound by tradition.

Western European Protestantism, as distinguished from eastern Protestantism, is more vital and more active in political affairs. Protestant pastors, like Catholic priests, offer themselves as organizers for anti-Communist resistance. In western Europe, Protestant, Catholic, and Jewish leaders continue to show their people what the alternatives are in the present situation. They know that religion in all its traditional manifestations is up against its most impressive challenge.

The German Lutheran Church has, it seems, learned a lesson from the experience under Hitler. For a long period, the German Lutherans said that they could not in all conscience criticize the state, except as the state interfered with worship. Hitler showed them that a state can be demoniac and utilimately the cause of man's spiritual death.

Now they recognize the same demoniac character in Russian communism. They know that unless tyranny, in whatever form, is defeated man will never have the chance or the strength to freely worship God.

Throughout western protestantism there is a real concern for a greater unity among the European countries. The nation is, after all, only a means by which man has tried to perfect his life and achieve justice. Many Protestant leaders think that nationalism has served its purpose and should now be discarded.

What should take the place of nationalism is not clearly seen. The Protestant leaders have no blueprint, but they do have a faith that somehow, somewhere, the proper answer will be found.

GENERAL

Europe will never again have the political and economic balance which was hers during the nineteenth century. The past few years have seen the disappearance, as such, of two military and naval powers, Germany and Japan, and the eclipse of a third, Italy. It has witnessed the serious economic and military depletion of two western powers, England and France. The recovery of their former strength is by no means assured. It has seen the thrusting of Soviet power into central Europe, and, for a year, to the Adriatic. Further, the Politburo has extended its orbit into vast portions of eastern Asia.

In the same period, the United States has involuntarily emerged into the preeminent position of power among western nations. This preeminence is inherent and cannot be adbicated. It is doubtful that history gives us a precise parallel of such a shift in the power situation in so short a period. Such shifts in power do not lend themselves to fast balance. The adjustment is necessarily prolonged over many decades. The economic and security problems of Europe—and this Nation—will not be over in a year or in 25 years. They will continue to challenge our wisest thoughts and best efforts for many years to come. But our thinking will not be wise nor our striving adequate if we cling to the illusion that the situation is a transient one or that we can turn our backs upon it any time we wish and, at most, in just a few years.

What the United States wants for Europe is not that it be a colonial possession of ours but rather that it be an independent association of nations living in peace and harmony with each other, and with us. What Russia wants is that Europe become a colony of the Kremlin. By so doing, Europe would be able to produce for the Russian people and Europeans would live in a slave-labor camp. It would further provide Russia with the opportunity for jumping to the Western Hemisphere and ultimately bringing to fruition the Communist dream of world revolution and domination. Without Europe, Russia is contained. With Europe, Russia will be able to gain absolute hegemony over the peoples of this planet. The European peoples themselves have a vague recognition that this is the case. They don't want to go to Russia, but they are not quite sure that the United States has the plan or the understanding necessary for their salvation.

The constant debate we conduct with ourselves—whether or not to participate in the affairs of Europe—is only a dilemma of the mind. In the real situation, there is no choice, no place else to go. We are not willing to submit to failure as a power and to abdicate the leadership which has been thrust upon us. The difficulty is that in keeping alive the illusion that we might do so we reduce the effectiveness of our efforts in world leadership.

We still like to woo constancy with philandering words. In enacting the European recovery program we reserve our position not only with respect to the sequel, but also during the term of the program itself. Thus we make the leadership effective for only a year at a time, and each spring Congress renews the debate not only as to the amount to be spent in the ensuing year, but also upon the question of whether the program is to be continued or to be summarily dropped. Moreover, the relevant legislation reserves the right of the Congress to back out and call off the program by concurrent resolution at any moment it may choose to do so. Likewise with the mutual defense assistance program. This is supposed to supply the sinew of a solemn, permanent alliance, and yet the legislation is enacted for only a year at a time. Our Nation thus seeks the benefits of a permanent alliance while preserving the freedom of a companionate marriage. Again the legislation includes the statement of the right of Congress to call the whole thing off by concurrent resolution.

In a sense, this is the result of our structure of government. In the United States it is necessary for us to elect Congressmen every 2 years, Presidents every 4 years, and Senators every 6 years. It is certainly true that anyone may run for these offices, against any particular point in our previous foreign policy. The Congress, which must be elected every 2 years, must defend its actions before its constituency. If their actions have not met with approval, the voters will send a man with a different viewpoint to Washington. As a consequence, no foreign policy can actually be formulated, at least in terms of appropriations, for an extended period of time.

This situation in American democracy places the major responsibility on the voter. The American voter must be fully aware of what he is voting for when any party presents a program or a candidate. If the voters do not understand America's position in the world today, they will not be adequately prepared to exercise their franchise in an intelligent fashion.

The voter, who for us is the ultimate formulator of foreign policy, must recognize that our stake in Europe is a long-term and an expensive one. Western civilization requires our leadership, and leadership has never been cheap. No person or nation has been a leader without paying heavily in time and money. So I would urge that we not delude ourselves into thinking that we have only an emergency and short-term problem.

Along with the recognition of an expensive and long-term future, the American people must be aware of the necessity for constancy and consistency in foreign policy. We cannot afford to allow isolationist rabble rousers to lull us to sleep and make us think that our frontier is the Missouri River. No voter who is realistically facing the world of fact will be misled, and it is part of our responsibility as citizens of this Nation and the world to make sure that all the facts are known and well understood.

The national mind must be made up. We must recognize that there are a number of cherished ideas which must be branded as illusions. We must recognize that the most dangerous illusion of our present situation is the one that tells us that short-term and short-run investments pay higher dividends than long-term securities. The American people must be willing to pledge the same steadfastness of policy and concern that it expects from its friends. We cannot afford the luxury of constant shifts and changes of mind. I do not think we will change our mind once we realize the new and different character of today's world.

Commodore Everett B. Drew

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. MULTER. Mr. Speaker, not many of us have the time or the opportunity to become fully acquainted with the activities of many valuable groups and organizations which play a vital role in our country, or with the people who devote their time and energy to make these groups function successfully. One of these groups is the Coast Guard Auxiliary, which is the civilian arm of the oldest military service in the United States.

It is my privilege to be a member of the Coast Guard Auxiliary in the Third Coast Guard District in Brooklyn, which is headed by Commodore Everett B. Drew, a friend of mine of long standing. He may be a commodore without a boat of his own, but he heads an organization which boasts a fleet of 1,206 vessels of various sizes and a membership of 3,032 men. The growth and importance of this auxiliary should be an encouragement to similar groups throughout the country and to the Coast Guard in general.

Mr. Speaker, the following article about Commander Drew appeared in the Brooklyn Eagle of November 20, 1949, entitled "Yep, He's a Commodore With No Boat of His Own":

BROOKLYN'S MAN-OF-THE-WEEK—YEP, HE'S A COMMODORE WITH NO BOAT OF HIS OWN

(By Paul Blauvelt)

You've probably heard of the admiral who didn't have a navy. Brooklyn now has the nearest thing to him—a commodore who doesn't have a boat of his own.

Brooklyn's commodore does have a fleet, however, for he's head of an organization of 3,032 men who operate 1,206 vessels ranging from 16-foot runabouts and sailboats to 100-foot yachts.

He's Everett B. Drew, of 314 Stratford Road, just elected commodore of the Coast Guard Auxiliary in the third Coast Guard district. The auxiliary is a strictly civilian arm of the oldest military service in the country, made up of boating enthusiasts who occupy a sort of middle ground between the ranks of the Sunday motorboater and the enlisted forces of the Coast Guard.

The commodore, in fact, has never owned a boat, which may seem rather strange for some one selected by power boat enthusiasts to be their boss. But he's not shy on experience on the water, for he comes of a farm-bred but water-adopting family.

His father, Reuben, who lives at the Stratford Road address and, although in his seventies, is still an active harbor pilot, was born on a farm in North Carolina. He tired of the life, however, and came to Brooklyn to start the Red Hook Towing Co., which sold out many years ago to the Dalzell Towing Co. Later he ran a shipyard in New Baltimore, some 100 miles up the Hudson, but he sold that, too, to come back to piloting.

For many years he was skipper of the old *North Star*, popular fishing boat, and then retired for a time. The *North Star* several years ago became the *Traveller* and was put in the round-Manhattan tourist service. And who commands her? Captain Drew, of course.

It was all this water life of the elder Drew that got the new commodore interested in boating. He spent many a day on the old Red Hook towboats—they're never called tugs in marine circles—and later aboard the *North Star*.

"Actually, I never had to buy a boat," he explained. "I got more water experience with my dad than I ever would have in my own boat. And I still think he's the best pilot in the city."

Strangely enough in this strange half-land, half-water existence, the commodore now spends far more time on land then he ever did before. At least 3 nights a week are spent attending meetings and working on the 60-page manual of standards for the auxiliary which he is compiling—the first

such attempt to gather into on authoritative publication all the best in training procedures worked out by various flotillas and divisions in the district.

The auxiliary, little known among strict landlubbers, is rapidly becoming widely known among boating men, although it really dates only from 1939, when it was established as the Coast Guard Reserve. It functioned for 2 years and then became known as the auxiliary when a formal military Reserve was set up.

Thus, the Coast Guard now has three units—the Regular Guard, with men serving enlistments at full pay; the Reserve, with enlistees being paid only when on temporary service, and the auxiliary, composed of private boat owners who use their own craft, on their own time, and pay their own expenses to help out the Guard.

The commodore is sort of a liaison man between the wholly civilian auxiliary and the Regular Guard, passing on down to the various units Coast Guard calls for assistance.

What does the auxiliary do, and why do the members without any hope of financial compensation, devote their time, equipment, and personal funds to the various duties they assume?

"Our aim," says the commodore, "is the protection of the last outpost of an unregimented tribe."

More seriously, he explains that the auxiliary works "to avoid the headaches of strict Government supervision over boating in general."

By educating the casual boat owner in safe operating methods and by establishing ever higher standards of operation and maintenance of private power boats, he says, "We're hoping to keep the boating enthusiast free of unnecessary supervision, letting him show he is a responsible individual on his own."

The auxiliary is, in actuality, a collection of small units. The flotilla is the basic one, composed of at least 10 boats, planes or radio outfits in any combination. There are a number of private planes and a score or more of mobile short-wave transmitters listed as available in the district.

A division is the intermediate unit. It consists of two or more flotillas and covers a large area. For instance, Commodore Drew in 1947 became captain of the Rockaway Inlet division, which takes in all of Brooklyn's water front and Jamaica Bay. It had nine flotillas of varying sizes then; he consolidated them into two big ones, with a total membership of 176 men, about half of whom own boats.

The auxiliary, by the way, is not only a refuge for rugged individualists—it's one of the few remaining sanctuaries for males only.

Commodore Drew, for all practical purposes, is a native of Brooklyn. He was born in Bath, N. Y., in 1905, but he arrived there only because his mother went back to the old homestead just for the occasion. He was promptly brought back to Brooklyn—to Red Hook, where his parents lived for many years.

He went to Public Schools 142, 32, and 6, and Stuyvesant High School in Manhattan, then the only technical high school in the city. He also went to Virginia Polytechnic Institute with the intention of becoming a mechanical engineer. He never worked at it, however. Now he's a representative of the Photostat Corp., selling and installing equipment.

At Stuyvesant High he became coxswain of an eight-oared crew that, in 1922, set an all-time record for a mile on the Harlem River—4 minutes 29 seconds. His athletic operations being confined to playing coxswain, he was dubbed "Rowboat" Drew.

The name has stuck with him through the years. Come to think of it, it rather fits a commodore who doesn't have a boat.

British Oil Policy—Day of Reckoning

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. PATMAN. Mr. Speaker, Mr. Amon G. Carter, president and publisher of the Fort Worth Star-Telegram, has for many years followed a middle-of-the-road position through his editorial columns on the problems of the petroleum industry and particularly the operations of that industry in the State of Texas.

The Star-Telegram issue of December 30, 1949, has an editorial entitled "Day of Reckoning" which contains some very significant comments on present Government policies of assisting British oil interests to the detriment of American interests doing business in world markets and the resultant effects on the domestic industry. Under leave to extend my remarks, I am inserting this editorial:

DAY OF RECKONING

The United States Government has informed Great Britain of its concern over the announced British intention of drastically curtailing oil imports from dollar areas in 1950. The effect of this cut-back will be to contract sharply the market for American oil in the United Kingdom.

The concern being shown by the American Government is over a condition which it has helped to create and which it should have been able to foresee. Through increases made since the war in British petroleum production and refining capacity, and with continued gasoline rationing, Britain will be faced next year with an oil surplus. The curtailment of purchases of American oil, when Britain has more than enough oil of its own, is a natural decision.

The short-sightedness of the United States Government lies in the fact that it has assisted, through the use of Economic Cooperation Administrtation funds, in building up British capacity to a state of surplus. Only recently the ECA approved an allocation of $17,293,000 for two refineries which would increase British capacity by 94,100 barrels a day.

Now the expansion of the productive ability in western Europe is a sound aim of the European recovery program to which this country is committed. But it is hardly sound policy to increase productive facilities for any product to the point where they exceed actual or potential market demand.

The inevitable result of this mistaken policy, as reflected in the curb of oil imports into Britain, threatens to have a profound effect upon Texas and upon the domestic petroleum industry of the State and Nation. Most of the American oil sold in Britain comes from the Middle East. Blocking of the British outlet for Middle East production may mean an increase in the already heavy flood of foreign oil coming into the United States. With no other market, such an increase in United States oil imports, in fact, seems certain if the British order stands.

The inflow of oil from abroad already has caused the pinching back of domestic production. In Texas it has brought repeated reductions in the maximum allowable production of oil, which is one of the State's foremost industries and the most important source of State revenues.

The Government's concern over the British development seems to center largely upon its effect upon oil production by American companies in the Middle East and other overseas areas, which some Washington officials view as vital to this country's preparedness for war. These official appear totally unaware that the gradual destruction of the domestic oil industry, which would be accelerated by a further increase in oil imports to supplant native petroleum production, would constitute an even greater impairment of our defensive strength in case of war.

Surface Healthier Than Depths

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. BURDICK. Mr. Speaker, in the new brands of food for human consumption now flooding the markets, where chemicals take the place of vitamins in flour and by substituting chemicals for milk and lard, I think the hands of the Pure Food and Drug Administration should be sustained by appropriations that will safeguard the people of this country. To give just a glimpse of what is going on I desire to submit herewith an article by J. Richard Feeley published in New Physical Culture in the issue of January 1950:

SURFACE HEALTHIER THAN DEPTHS—BEWARE OF MINERAL OILS AND CHEMICAL FOOD SUBSTITUTES FROM THE BOWELS OF THE EARTH

(By J. Richard Feeley)

The people of the world are using mineral oils, and consuming foods which contain chemicals, derived from minerals, and derivatives of natural gas. Some cancer researchers suspect that some of them may produce cancer. It is possible that they may produce other diseases.

Chemical-oil-gas-fertilizers and insecticides are used on land upon which our cattle feed. They are also used on crops which are later consumed by humans.

It is not known, especially over a long period of years, what effect these mineral oils, chemicals, and gases may have on the human body. I believe that since we live on top of the earth, foods, etc., from the top of the earth, or nearer the top, are best for the human body. I believe that foods and products from down deep in the earth are detrimental to the human body.

With this thought in mind, I have contacted hundreds of people in all walks of life from top personalities of prominence right down to my wonderful neighbors in Amesbury, Mass. As a promoter of health, I have no strings attached. Many researchers have their hands tied by reason of receiving directly or indirectly financial assistance for research from large corporations or organizations which are interested in products for exploitation.

From the many letters I have received it is clear that the matter of chemicals in foods is just being investigated by researchers. But I maintain that common sense tells us that when nutritious items in foods are replaced by chemicals, that the human body over a period of years is bound to be affected. And these chemicals may slowly poison the human race. They were invented by the I. G. Farben trust in Germany during the last war because of food shortages. Some people think that these chemicals caused the sadism and hatred which made Nazis worse than beasts. It long has been a prediction that chemicals can make men into

animals. It was a chemical which was supposed to turn the charming Dr. Jekyll into the brutal Mr. Hyde.

After the war these chemical food substitutes were taken over by the United States Alien Property Custodian with permission given for American manufacture based on Nazi formulas. And American firms are now inventing new food chemicals until there are now about 300 used in foods consumed by Americans. The United States Pure Food and Drug Administration seems to need more money and expanded facilities to cope with the situation adequately.

There should be pure food and drug laws requiring manufacturers to indicate to the consumer just what the product contains. Many scientists say that coal, coal tar, and natural gas derivatives will ultimately supplant the cow. Scientists in Germany are making butter out of petroleum, coal, and natural gas.

Bread is supposed to be the staff of life. The B–1 is taken out of the wheat and sold on the market as a vitamin. Some of the bread made now has a chemical made from natural gas to supplant lard, and another chemical to supplant milk. These chemicals are put into foods because they appeal to the taste, sight, and smell. The matter of toxation or nutrition is not considered at all. Nothing matters to these synthetic food manufacturers other than the god of gold * * * that is my opinion.

Of course, the big argument is that flour cannot be kept from spoiling after 30 days from milling, so in order to make it a nonperishable product they take the life out of it by removing the germ. Then they try to replace that with chemical substitutes and claim the bread has been made richer than before. But man has never yet improved on nature, and never will. Whole grains should be kept in communities for monthly milling and sale within a month. Then people will not be robbed of natural nourishment that bread affords. Bread is no longer the staff of life—much of it is now the stuff of death—that is, devitalized bread of white flour and chemical substitutes.

Panama Sea Level Canal—An Engineer's Day Dream and Giant Bonanza for Machinery Manufacturers

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. RICH. Mr. Speaker, during the last session of Congress, I included in an extension of my remarks in the CONGRESSIONAL RECORD of September 26, 1949, an instructive article under the title "Panama Canal—Stop, Look, and Listen!"

Another illuminating paper on that subject was published in the Reader's Forum of the Sandusky Register-Star-News of November 11, 1949, in the form of a letter to the editor by the Honorable William L. Fiesinger, formerly a distinguished Member of Congress from Ohio.

In his statement Judge Fiesinger corrects some of the most obvious fallacies and misconceptions that characterize so much of the public discussions of the Isthmian questions.

The full text of Judge Fiesinger's paper, under leave accorded, is included for the information of Congress:

THE PANAMA CANAL

EDITOR, REGISTER-STAR-NEWS:

For several years I have been intensely interested in the Panama Canal, especially since there has been talk of rebuilding the present canal, or building what is called a sea-level canal. In his article in your paper of October 18, 1949, Columnist Ray Tucker adverts to the subject in connection, he says, with our failure to implement an agreement for rearming of Latin-American nations. In his article Mr. Tucker says:

"In view of Russia's expected progress in making atomic bombs, the major and immediate need is a new sea-level canal across the Isthmus of Panama, probably in Nicaragua.

"The present waterway, which enables our warships to slip from the Atlantic to the Pacific, or vice versa, as circumstances dictated, is too vulnerable to ordinary or atomic bombing. Indeed, our 45,000-ton aircraft carriers cannot negotiate it now."

I think that statement should not go unchallenged for the reason that it affects a vital interest of all our people, and to treat the subject intelligently they should be informed of the following facts:

First. There is a definite proposal to rebuild the present canal conceived by Capt. Miles Duval, United States Navy, retired, called the Terminal Lake Plan, which would permit 45,000-ton aircraft carriers, as well as the largest battleships to conveniently and safely negotiate passage from the Atlantic to the Pacific and vice versa.

Second. The claim that a lock canal is more vulnerable to atomic bombs than a so-called sea-level canal has been definitely exploded by all responsible experts. Either type of canal is subject to be put out of commission by atomic bombs.

Third. The original conception of the Frenchman De Lesseps was a sea-level canal, but as matters at Panama really got under way, the French engineer Godin de Lepinay recognized that the idea of a sea-level waterway was impossible of fulfillment because the Canal must cross mountainous jungle country in one of the world's heaviest rainfall areas featured by turbulent rivers. Of course, that is just as true today, and is supported by every one of the American engineers still living who worked on the Canal.

Fourth. The cost of rebuilding the present Canal to permit ships of any size extant today to freely and safely negotiate would, it has been reliably estimated, cost less than $2,000,000,000, whereas a so-called sea-level canal would cost at least $6,000,000,000 and at that cost would only be an experiment.

It seems to me that a so-called sea-level canal is just another daydream of the spenders in Washington to saddle more taxes and debt on the American people goaded by the makers of machinery and equipment, who would have a bonanza in selling their product.

Finally, Mr. Tucker speaks of a sea-level canal across the Isthmus of Panama probably in Nicaragua. It seems to me that this is highly impractical, if not impossible, for the canal across Nicaragua would require draining of Lake Nicaragua which is 105 feet above sea level and has a water area of approximately 3,000 square miles.

I say let us stick to what we now have, and have had for approximately 40 years, and improve the same. I have several times indicated to Congressman WEICHEL where I stand and the reasons why.

W. L. FIESINGER.

Mr. Speaker, I am informed that the cost of the canal is as follows for study:

Sea level: $6,000,000,000 to $10,000,000,000, or repair present Canal for $130,000,000.

Lake canal: $435,000,000 to $600,000,000 is advocated by all the eminent engineers who participated in building the present Canal and know its problems.

Nicaragua canal is unnecessary, more costly, and less desirable, besides requiring duplicate defense installations.

Pensions

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am inserting at this point two editorials, one entitled "Pensions and Inflation" and the other "Who Pays for Pensions." Both are timely, and I commend them to the attention of the Members of the House:

PENSIONS AND INFLATION

Bernard M. Baruch, discussing old-age pensions, does us all a service in stressing how inflation may defeat the best conceived plans for a comfortable old age. The "elder statesman" rightly says:

"Anything that saps the value of savings—and inflation is the worst single threat—is the enemy of the aged and of those who expect to grow old."

He believes that inflation must be licked and our price structure stabilized before there can be any permanent security for any of us.

Mr. Baruch here has in mind, for example, the man who retired, perhaps 10 years ago, at 65. He had created for himself through his savings an annuity paying $100 a month, ample in 1939 to maintain him in simple comfort. Everybody knows that that man has had several times in the last few years to lower his living standards as his $100 became worth less and less in terms of his needs.

Mr. Baruch also has in mind the man who is trying today to build for himself security in the future when he can no longer work. He can save more now, perhaps, than he could a few years ago, because he is saving 60-cent dollars. But what will he do if, when he retires, those dollars he saved have only a 30-cent purchasing power?

There are those who believe that it makes little difference how much a dollar will buy, so long as wages are increased to meet price increases. Mr. Baruch shows how wrong these people are. Part of what we earn today must be put away to take care of us in the future—by our own direct savings or by the accumulations we make for Federal old-age benefits.

WHO PAYS FOR PENSIONS?

Senator TAFT points to the fact that it would cost the people of this country $12,000,000,000 a year to give every worker on retirement the type of pension now set up for the Nation's steelworkers. If such a pension system were set up on an actuarial reserve basis, he points out, the pension

funds would have to own nearly all the country's property.

This is something for us all to think about, because the money for pensions will in the final analysis have to come from raised prices for the things we buy and from taxes. For the most part, those who work will have to support those who don't.

There are several factors in the situation which deserve emphasis. In the first place, the percentage of the aged in the population is constantly growing. In the second place, people begin work at a constantly higher age. In the third place, workers are producing fewer and fewer hours a week, as well as fewer days in a year.

The net result is to throw an increasing burden on a decreasing work span. Where a man used to work for nearly 60 years of his life, the average now is closer to 45. In that period he must produce enough to support himself, his children in school, and his elders in retirement. It is only because his productivity per hour has increased so markedly (through the use of power machinery), that he has been able to carry the load so far. It will be only through a further increase in productivity that the Nation can further expand educational opportunities, raise the level of living of the aged and, along with all this, perhaps also decrease still more the hours and years of labor.

Christian Churches Against FEPC

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. GOSSETT. Mr. Speaker, a letter received by me from the American Council of Christian Churches of California relative to FEPC legislation is so good that I feel it should be made a part of the permanent record.

To my mind it is unthinkable that an intelligent, democratic society would tolerate such unwise, totalitarian interference with their inalienable rights as is proposed by those advocating FEPC legislation.

We should commend the Los Angeles church for its letter of January 1, which follows:

AMERICAN COUNCIL OF CHRISTIAN CHURCHES OF CALIFORNIA,
CIVIL AFFAIRS COMMITTEE,
Los Angeles, Calif., January 1, 1950.

Hon. ED GOSSETT,
House Office Building,
Washington, D. C.

DEAR SIR: Doubtless there will be FEPC legislation brought before the Congress this session.

We have consistently opposed this type of legislation, and we still do.

FEPC legislation would rob the employer of the right to choose whom he would have work for him. This right was upheld by Jesus Christ when He approvingly quoted the employer as saying, "Is it not lawful for me to do what I will with mine own?" (Matthew 20:15). An employer does have the God-given right to choose whom he will to work for him. There is a kind of discrimination that is not wrong.

We realize that there is a kind of discrimination that is wrong. We hold no brief for the one who hates another or for one who discriminates solely because of the color of skin. However, we are convinced that this discrimination is not as prevalent as some of our liberal friends would have us believe. We attended a meeting sponsored by an organization that was pushing FEPC and at which representatives of other allied groups were present. A call was made for any authentic cases of discrimination that could be brought before the California legislative body that was considering their bill. Among all the organizations represented (all of which were left-wing groups), only two individuals were found in the ranks of these groups in all of the Los Angeles area who would go before a legislative hearing and testify that they had been discriminated against. Surely this does not indicate a very serious situation.

FEPC, if adopted, would act as an effective extension of the police state. To set up a Government agency as the arbiter of employment in private business is to add one more control to the already burdensome load which is being borne by the private-enterprise system. This private-enterprise system, which in our modern world is so distinctively American, is the only economic system which is stamped with the approval of the word of God, and that private-enterprise system is the economic system which has made our Nation great.

We cannot correct discrimination against employees by establishing discrimination against employers. FEPC would only tend to increase tensions between classes and groups and could really benefit only those who desire to sow discord and confusion among our people. In this connection it is interesting to note that the Communist Party is always one of the very active proponents of FEPC legislation. They must have some stake in it.

Sincerely,

G. M. LANE, *Chairman.*

Taxes That Are Paid by the Average Man

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the demagogue would have the public believe that the big fellow will pay the bills for most of the public-aid programs now being advocated. I am extending my remarks to include an editorial entitled "The Little Fellow's Tax Share."

THE LITTLE FELLOW'S TAX SHARE

If it is the little fellow who gets Government benefits, it is also the little fellow who, more than anybody else, pays the bills.

That was one of the themes of James F. Byrnes in a recent Biloxi (Miss.) speech. Byrnes, who was one of the architects of the New Deal and more recently a member of President Truman's Cabinet, says the United States has become a spendthrift state where "the people have been misled into regarding the Treasury as a Christmas tree, with the President and Members of Congress playing the role of Santa Claus."

The administration, he said, has boasted of what it has done for the little fellow but nobody has been stressing what "big government is doing to the little fellow."

Mr. Byrnes has a point there.

The little fellow today, as always, is paying his full share of taxes. Federal, State, and local governments all rely on him for a considerable part of their revenue. He pays relatively little directly and consciously, but he pays a lot indirectly and unconsciously.

The little man smokes, travels, goes to the theater and has a car. The Federal Government taxes him for all these things. In Wisconsin, the State government also taxes his cigarettes and his gasoline.

The little man's wife uses cosmetics, has furs and jewelry, buys electric-light bulbs and chats over the telephone. The Federal Government makes all these things more expensive through excises.

The little man's family likes a nice house. The local governments and the State tax him for the privilege. He sees this tax and he squawks. The hidden taxes, which are really bigger, he does not see.

But the little man's contribution to government does not stop with direct and more or less hidden taxes. In many cases, his biggest contribution of all comes in taxes levied on the corporations which make the goods he buys.

Government today is getting billions of dollars from the little fellow by the simple device of soaking business. The party leaders know very well that corporations can of themselves pay no taxes. The money they use for taxes they must get from the people who buy what the corporations have to sell. Business taxes are reflected in the prices we pay for what we need. But business taxes are safe for the politicians, because the little fellow has never yet realized that he pays a disproportionate part of the bill.

The fact is that the little fellow is now paying a larger part of the cost of government than ever. It is a thing he should bear in mind when he applauds some new and perhaps unnecessary benefit. It is a thing he should think of increasingly as government costs rise.

Flying Fryers Wing Way to Alaskan Tables

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. TRIMBLE. Mr. Speaker, the poultry industry is one of the leading industries of our section of Arkansas. One of the greatest boosters for that industry is C. Jimmie Carter, president of the Rogers Airport. He never lets an opportunity pass to boost the industry.

Therefore, it was not surprising that when it was necessary to get some fryers to Alaska, he volunteered to take the first lap in the transporting of these chickens. I would like to insert a news item by Dave Miller which appeared in the Tulsa Tribune of November 30, 1949, which indicates the everyday, never-say-die spirit of Jimmie Carter and the poultry boys of northwest Arkansas:

FLYING FRYERS WING WAY TO ALASKAN TABLES

(By Dave Miller)

From Arkansas to Alaska is a long haul to satisfy a craving for fried chicken, but that's the distance several thousand Arkansas fryers will travel before they find their way to some sourdough's table.

Today marked the beginning of a 1-year program in which chickens from the Arkansas Quality poultry farm at Springdale, Ark., will be flown to Anchorage.

The first 1,500-pound load of frozen fowl was flown from Rogers to Tulsa this morning where it was loaded on an airline cargo craft for the flight to the west coast. From there the chicken goes to Seattle, and then on to Anchorage.

Present at the Tulsa municipal airport this morning to witness the loading were E. T. Schmidt, manager of the poultry farm; C. Jimmie Carter, president of the Rogers airport; and Frank Rust, president, and Jay Frizzo, pilot for Rusty Air Service, which flew the chicken to Tulsa.

The chicken-by-air plan was arranged when a restaurant owner from Anchorage heard of the famous northwest Arkansas chickens. He signed a contract which called for a weekly shipment of about 1,000 birds averaging one and one-half pounds each.

The chickens are quick-frozen at Springdale and shipped to Rogers. Rust takes over from there and flies the shipment to Tulsa in his twin Cassna. In addition to flying frozen birds, Rust and his pilots annually fly more than 4,000,000 1-day-old chicks to Rogers.

The chickens left the Tulsa airport late this morning and will be in Anchorage Thursday noon. There they will be thawed and served to Alaskans at the rate of $4.50 for half a chicken.

"This isn't just a promotion stunt," said Carter. "We're proud of the chickens we raise around Rogers. Restaurants all over the country advertise Arkansas chickens, and now Alaskans will have a chance to see how good they are."

In addition to being president of the Rogers airport and a poultryman himself, Carter is one of the main forces behind an annual breakfast flight in which small plane pilots from all over the country fly to Rogers for a big breakfast of bacon and eggs, laid, of course, by northwest Arkansas hens.

The West Will Help

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. MURDOCK. Mr. Speaker, as chairman of the Irrigation and Reclamation Subcommittee of the Committee on Public Lands, I have been greatly interested in the critical water problem that has developed in the humid and populous eastern part of the country.

In the West, where water is ever scant, planning for meeting water needs is as much a part of the growth as the roads over which people immigrate. I agree with William E. Warne, Assistant Secretary of the Interior and long an expert in western water programs, who recently said, "It is about time for areas of eastern United States to begin longer-range planning for water development."

We of the West are thoroughly sympathetic with those who are now facing water shortages or the prospect of them. There is much experience in the arid region of the country that may be useful, but we also need to break much new ground. I have introduced new legislation toward that end.

I call attention to the report in the January 6 issue of Water Resources Review of the Geological Survey, Department of the Interior, on the New York City water shortage. It is as follows:

Since May 1943 New York City has used water at a greater rate than the total dependable yield of its several sources of supply. The consumption in recent years has been averaging 1,200,000,000 gallons per day, compared to a dependable yield of 1,045,000,000 gallons per day reported by the city of New York. The good fortune of above-normal run-off into its reservoirs prevented a shortage from developing earlier, but that condition and the associated avoidance of an accounting accentuated the difficulty because water demands have continued to increase meanwhile. This year a drought of moderate intensity has led to nearly serious consequences for New York City.

Run-off in the source areas of the New York City water supplies averaged about twice normal in the 3-month period December 1948 to February 1949. As a result, storage in reservoirs was well above normal at the end of February, and was approximately normal at the end of May. The total winter recharge to the reservoirs was about 90,000,000,000 gallons. The draft on storage from June 1 to December 1, 1949, was 159,000,000,000,000 gallons, equivalent to 870,000,000 gallons daily, about three-fourths of the water used by the city. Normally only about one-third of the water used during this period is obtained by draft on storage, the remainder coming from the summer and fall stream flow and from wells in southern Nassau County.

The reason for this abnormal draft was the dry period that began in June 1949, and the high rate of use. Run-off into the reservoirs during the 6-month period June to November averaged about 50 percent of normal, nearly setting a new low record. Lower flows for this period were recorded in 1909 and 1914. However, total run-off for the past water year was not particular low. Much lower flows were experienced without major difficulty as recently as 1941 and 1944, when the use of water was only about 80 percent of the current rate. If the rate of use that existed only as recently as 1944 had prevailed in 1949, the draft on storage probably would have been only about 100,000,000,000 gallons, leaving sufficient reserves to avoid critical shortages despite the drought.

The reservoirs now contain about 90,000,000,000 gallons, about 35 percent of capacity, equivalent to about 70 days' supply at the present rate of use. The normal increment in storage during the winter-spring period of high run-off is 60,000,000,000 gallons. Increments of twice this amount have occurred during past replenishment periods with abundant run-off, as in 1947 when the reservoirs were filled to capacity. However, owing to the depleted condition of the reservoirs, this abnormal recharge would not raise the contents to their normal volume of 242,000,000,000 gallons next spring. The dry period has also resulted in the depletion of soil moisture and ground water. These have first call on any rain and snow melt, ahead of the New York reservoirs.

The outlook, therefore, is that stream flow this winter will be lower than usual unless precipitation is far above the amount needed to satisfy the prior demands of Nature. The prospects are that continued care in the use of water will be necessary in New York until new supplies now being developed in the Delaware Basin can be added to the city's dependable sources. Heavy pumping of ground water in southern Nassau County to supplement the Croton up-State supplies has lowered the water table in the pumped areas to record low levels, and salt-water encroachment may result if pumping is continued.

Despite recurrent statements that our streams are drying up, the accompanying graphs of such long-term stream-flow records as are available in the Catskill Mountain region show no persistent downward trend, except for a slight apparent decline in flow of Schoharie Creek (one of the water sources of New York City). There have been large fluctuations in flow from year to year, characteristic of rivers everywhere, but the flows during the past decade in general have not been greatly different from those during the first decade of the century when records of flow were started. Discharge of Schoharie Creek during the second half of the 42-year period of record, however, averaged 90 percent of that during the first 21 years. None of the streams shown are materially affected by regulation or diversion.

The situation in New York City and in metropolitan New Jersey is largely the consequence of an acceleration in the mounting use of water that began during the war and has continued with undiminished rate since. Critical conditions portend wherever total use exceeds the dependable yield of the available supplies. Overdrafts are reported in a score of important areas throughout the country, mainly with respect to ground water, but some surface-water overdrafts are reported also. In certain communities the demand is exceeding the dependable supply. Although generally the problems are engineering and economic rather than ones of actual deficiency of water, as well as being largely localized in nature, and although there is no cause for undue alarm, the situation must not be ignored and requires prompt steps to obtain a Nation-wide appraisal of our water resources and of the expected future demands.

The Home-Rule Bill Should Be Enacted Into Law

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. BURDICK. Mr. Speaker, I have signed discharge petition No. 19. This petition will give this House an opportunity to vote on home-rule legislation for the District of Columbia. As you all know, this legislation passed the Senate last May. It is a measure that has been endorsed and enthusiastically supported by both major parties. It is nonpartisan measure which will relieve the Congress of its city council duties for the District of Columbia and will also bring the rights of citizenship to the disenfranchised residents of this community. I would like to take this opportunity to urge all of my colleagues to sign this discharge petition as soon as possible in order that this legislation may have its hearing before us.

I have a letter from the District League of Women Voters enclosing a copy of the President's letter to Speaker RAYBURN, which I would like to insert in the RECORD. The letter strongly urges that this

bill be enacted into law during this session:

LEAGUE OF WOMEN VOTERS
OF THE DISTRICT OF COLUMBIA,
Washington, D. C., January 6, 1950.

Hon. USHER L. BURDICK,
House of Representatives,
Washington, D. C.

DEAR MR. BURDICK: The President has called for home rule for the district of Columbia in his message to Congress. We therefore thought it timely to send you a copy of the President's statement of last July which amplifies his views on this important legislation.

We urge you to sign the discharge petition, No. 19, in order to give the House of Representatives an opportunity to vote on this measure.

Very truly yours,
GRACE H. BEATTY
(Mrs. Donald C. Beatty),
President.

(The following letter was sent by the President to the Honorable SAM RAYBURN, Speaker, House of Representatives:)

JULY 25, 1949.

MY DEAR MR. SPEAKER: On May 31, 1949, the Senate passed, without a dissenting vote, S. 1527, a bill to give home rule to the people of the District of Columbia. A subcommittee of the House Committee on the District of Columbia is now holding hearings on this legislation. I am writing to you to express my hope that the House will complete legislative action on a home rule bill and that it will be sent to me to sign into law before this session of the Eighty-first Congress adjourns.

As passed by the Senate, the bill has three major purposes: (1) to relieve the Congress as much as possible of the burden of District of Columbia affairs, without surrendering its constitutional powers; (2) to create a representative local government for the District of Columbia chosen by the qualified electors; and (3) to provide an efficient and economical government for the District of Columbia.

I am very much in favor of all of these objectives.

It is little short of fantastic that the Congress of the United States should—as it now does—devote a substantial percentage of its time to acting as a city council for the District of Columbia. During the past 2 years, during which it was confronted with many major problems of national and international importance, the Congress has had to find time to deal with such District matters as parking lots, the regulation of barbers, the removal of street obstructions, and the establishment of a Metropolitan Police Force band, to name only a few.

The people of the District of Columbia should not be placed in a different status from that of the people of all other American cities and almost all democratic capitals of the world insofar as local self-government is concerned. In my message to Congress transmitting the budget for the fiscal year 1947, I said:

"The District of Columbia, because of its special relation to the Federal Government, has been treated since 1800 as a dependent area. We should move toward a greater measure of local self-government consistent with the constitutional status of the District. We should take adequate steps to assure that citizens of the United States are not denied their franchise merely because they reside at the Nation's Capital."

It was not the intention of the architects of our Constitution to deprive the District of Columbia of home rule. Writing on this subject in the Federalist, James Madison said that the inhabitants of the District "will have * * * their choice in the election of the government which is to exercise authority over them" and that "a municipal legislature for local purposes, derived from their own suffrages, will of course be allowed them."

The establishment of a well-organized and efficient governmental system in the District of Columbia is a desirable adjunct to the successful operation of the home-rule principle. The present organization of the District government is complicated and administratively cumbersome. I am strongly in favor of better organization and greater efficiency throughout the executive branch. The District of Columbia government should not be an exception carved out from the general rule.

There is nothing partisan about this proposal. The platforms of both major parties urge home rule for the District. The bill which passed the Senate unanimously, received the support of both Republican and Democratic Members of that body. I am sure that the great majority of the people of Washington want home rule. I am equally sure that they ought to have it without further delay. I hope that the House will not adjourn this session without completing action on this important measure.

Very sincerely yours,
HARRY S. TRUMAN.

Good Will Makes Good Sense

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. MULTER. Mr. Speaker, never before in world history was there greater need for human understanding, good will, and lasting peace than in the present postwar critical period. It is bad enough that mankind is rent asunder by conflicting ideologies and by false prophets interested in creating greater chaos in order to exploit their own selfish interests.

It is worse, however, when these false prophets and hatemongers in our own country spread doctrines of bigotry and hatred which serve only to undermine the unity of our people at a time when such unity is urgently needed for our very survival. There is no need for me to name names; we all know who these preachers of hatred and violence are.

Unfortunately, we sometimes pay undeserved attention to the demagogue while overlooking those who continue to fight for the highest American ideals. They are the true patriots of modern America. One of the finest and most loyal sons of modern America is the present national commander of the American Legion, George N. Craig.

In a recent speech, Commander Craig has shown that he possesses an excellent understanding and grasp of American ideals and some of the problems facing this country today. I believe the address which he made on Sunday, November 13, 1949, before the Joint Defense Appeal Conference in Detroit deserves wider attention. I set it forth in full as follows:

My fellow Americans, in a world which is shuddering under the tragic implications of its first wide open atomic armament race, mankind today faces a critical and an urgent choice.

We of this planet must learn to live together or perish. There is only one way to live together and that is by the Golden Rule. That means doing to others as we would have them do unto us.

The two major religions of the western word, Judaism and Christianity, have for centuries preached the formula for good-will living which is "Thou shalt love thy neighbor as thyself."

Students of history agree that democracy was envisioned in religious terms long before it assumed a political terminology. Actually our American democracy was the first real political expression of the ideals of Judeo-Christianity.

Here in America the century-long teachings of religions have borne their greatest fruit. Our founding fathers built this Nation on the religious concept of the Fatherhood of God. They got that concept out of the Old Testament from the mouth of the prophet who said, "Hath we not one Father? Hath not one God created us?"

On that divine belief they developed the ideals of the brotherhood of mankind and of the intrinsic dignity and value of every human life. They drew on a religious tenet for their first political axiom which became the cornerstone of their Declaration of Indepence in these words:

"Man is endowed by his Creator with certain inalienable rights. Among these are life, liberty, and the pursuit of happiness. To secure these rights governments are instituted among men."

These God-given rights of men were the key to the first promising solution to the problems of minorities. We recognized them politically first here in America. We established a government based upon a written Constitution and Bill of Rights to safeguard those rights.

As a result, America, the melting pot of the world's races, nationalities, and creeds, today represents mankind's greatest progress to date in the art of living together. This progress is our best authority for our leadership in the eleventh-hour effort to build a brave new world in which all nations can live in enduring peace and good will.

We have a solemn responsibility today of trying to teach the world that good will makes good sense.

We must succeed in this or face a world Armageddon. Man has conquered distance and finally pried from nature the secret of the incredible power of atomic fission. Now our social controls must match our mechanical skills. If we fail, then we face the physical destruction of a large portion of mankind and a return to the jungle by the broken and dazed survivors.

Our best propaganda today is the example we furnish to the rest of the world. We must demonstrate in our domestic life that we can live by the tenets of the rights of man. The way in which we meet the problems of our minority groups has a far-reaching influence. Every gain in human insight and in social justice in America today is a world gain, any set-back is a world loss.

We can be proud that in its every heroic moment our Nation has faced danger with complete national unity. We had that unity in the days when we fought to win a war. We need it today in the fight to win the peace.

Our national unity today is the target of well-financed, large-scale, and cunning campaigns to arouse and to aggravate racial, religious, and ethnic bigotry and tensions. The enemies of America are practicing the age-old strategy against us of "divide and conquer."

The fondest aim of communism today is to divide us by pitting class against class,

race against race, and creed against creed. They seek to exploit and magnify every difference, every prejudice, and every real or fancied slight.

Even worse than this Communist scum are those who seek to spread hatred and dissension for personal gain.

These peddlers of mental poisons must be stopped.

The controlling of group prejudices calls for a devoted united effort by all responsible citizens and organizations. It is because the American Legion is deeply concerned in doing its part in fighting intolerance, prejudice, and bigotry that I am happy to be speaking before this meeting of the Joint Defense Appeal. The American Legion wants to cooperate closely with the Anti-Defamation League of the B'nai B'rith, the American Jewish Committee, and every other loyal organization in promoting American ideals through the teaching of good will, tolerance, justice, and harmony.

Eleven times have national conventions of the American Legion taken vigorous stands against hatemongering in any form in our land. In recent months, I am proud to say, the American Legion has taken a leading role in the South in the moral condemnation and in legislative action designed to smash the Ku Klux Klan for once and for all time.

At its recent Thirty-first National Convention in Philadelphia, the American Legion adopted a number of vigorous Americanism resolutions. They are indicative of our policies in promoting good human relations among all Americans. One was a resolution which branded as a menace to our liberties any individual, group, or organization which fosters racial, religious, or class strife among our people.

In another resolution the American Legion urged the abolishment of racial and religious discrimination in education. It condemns all discrimination in education opportunity and declared that the only democratic basis for selection is scholastic qualification. We of the American Legion believe that every American citizen should enjoy equality of opportunity in education, regardless of color, religious belief or national origin.

The American Legion since 1946 by national convention action has opposed any type of discrimination for jobs because of race, creed, color, national origin, or religion.

At our recent Philadelphia convention, the American Legion endorsed in principle two resolutions on genocide. In this we followed the United Nations approval of the Genocide Convention. I want to advise you that the American Legion has from the beginning been one of the strongest supporters of the United Nations. The American Legion was the first large organization to urge the strengthening of the United Nations Charter. We propose that the veto power be abolished in all matters involving aggression, that there be effective international control of scientific weapons and that an adequate international police force be set up. We are backing the Marshall plan, the North Atlantic Pact and we are urging our Government to lend its immediate aid in forming a similar defense pact among the freedom-seeking nations in the Pacific and Far Eastern area.

Your organizations have contributed much to the cause of overcoming religious and racial animosities. One of your distinguished members, Judge Joseph M. Proskauer, is the author of a pledge for American unity to which the American Legion can subscribe wholeheartedly. It is only fitting that I should quote it:

"I will spread no rumor and no slander against any sect.

"I will never try to indict a whole people by reason of the delinquency of any member.

"I will daily deal with every man in business, in social, and in political relations, only on the basis of his true individual worth.

"In my daily conduct I will consecrate myself, hour by hour, to the achievement of the highest ideal of the dignity of mankind, human equality, human fellowship, and human brotherhood."

This is a golden blueprint for every-day living in a democracy. It is a basis on which all men of good will can make their personal influence count for tolerance and brotherhood.

There are no short cuts to honest human relations. "Every day in every way" applies here more truly than in any other aspect of human endeavors. Democracy is a way of life to be lived and experienced in hundreds of little routine situations day in and day out. We have a workable pattern. We have gone a long way under it. We must keep going forward. We must keep implementing our positive programs for better human relations.

Here in America our vital job is to teach true democracy by making it work so successfully that all other people will be sold on its advantages.

As the foremost champions of democracy we must put our whole moral weight into the condemnation of the abrogation of human rights anywhere in the world. Several weeks ago President Truman spoke at the dedication of the new United Nations headquarters in New York City. He said, and I quote, "The United Nations has learned that disregard of human rights is the beginning of tyranny and, too often, the beginning of war."

Then he spoke the words which underlie many of the reasons for this meeting here in Detroit today, "We believe strongly that the attainment of basic civil and political rights for men and women everywhere—without regard to race, language, or color—is essential to the peace we are seeking. The minds of men must be free from artificial and arbitrary restraints in order that they may seek the truth and apply their intelligence in the making of a better world."

The American Legion subscribes fully to this philosophy. So, I know, do the organizations represented here by the Joint Defense Appeal. Our methods for organization differ but our motives and purposes in promoting good human relations among all people are the same.

Americans of Jewish faith have filled enviable roles in all American wars. Their record in military service in World War II is outstanding. Although the Jewish people form only 3.33 percent of our population, the percentage of the members of the Hebrew faith in our armed forces was 4.23. More than 550,000 wore the uniform of Uncle Sam and 11,000 of them were killed and 40,000 were wounded. A total of 52,000 Jewish GI's won decorations, citations, and awards for distinguished gallantry and service.

The American Legion is proud to have veterans of Jewish faith in its ranks. They have never found any discrimination against them in the American Legion and never will. Today you will find Jewish Legionnaires, just as you will find those of Catholic and Protestant faiths, in our national offices, on our national staffs, on our national executive committee, on our national commissions, serving as State commanders and adjutants and filling every kind of responsible position on the district, county and post levels. We have had as many as four rabbis in one year serving as our State chaplains. Two rabbis were candidates for national chaplain at our recent national convention.

Veterans perhaps are in a best position to combat bigotry that is based on racial, religious and class prejudices. Men who have faced death together on the field of battle know that in the final showdown it isn't a man's color, place of birth, political belief or church affiliation that counts—it is only his courage to fight to the death, if need be, in defense of God and country.

Our form of government, our way of life and our society are based upon a belief in an Almighty God. Our basic creed is one of good will and love. It was on the basis of love for freedom that the first Americans were able to unite on this continent. Because of that love we have been able, here in America, to overcome the ancient European heritage of feuds and hatreds and build a great new nation. We must never acquire the ability to hate. We must rebuke and check those who would seek to turn one American against another. Every group must muzzle its own fools. Not a single one of us has a right to look down upon another as inferior to what he is himself. We are all brothers and sisters wandering through life to the same end.

That end is that every American today owes his best in creating conditions of life at home which will enable all to develop their noblest and purest instincts, their talents and their gifts. We can do this if we approach this task with a spirit of charity that will recognize there is good in every American and this element of good is the mighty bond of our national unity.

With the atomic bomb suspended today over all mankind, we Americans must be the first to see the truth that man is not doomed to futility and violence if he will but turn to the good sense that lies in good will.

"There is a destiny which makes us brothers
None goes his way alone:
All that we send into the lives of others
Comes back into our own."

United States Leadership in the Americas

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Friday, January 13 (legislative day of Wednesday, January 4), 1950

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "United States Leadership in the Americas," delivered today by Hon. Edward G. Miller, Jr., Assistant Secretary of State for Inter-American Affairs, before the Rotary Club of Charleston, W. Va.

I am informed by the Public Printer that the manuscript is estimated to make two and a third pages of the RECORD, at a cost of $191.34.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I deeply appreciate the privilege of being with you here today. I feel at home in the friendly atmosphere of Charleston, which has been my sister's home since she married and settled here over 21 years ago. I have been well treated here each time that I have come to visit and it is always an exciting experience to see the great industrial activity of the Kanawha Valley.

West Virginia plays an important role in the National Capital today. Your distinguished Senators, KILGORE and NEELY, are

well known for their efforts to keep our economy sound and steady, and thus to frustrate the dearest wish of our enemies abroad who so earnestly keep hoping that we will return to a policy of boom and bust. Another great legislator from this State, the Honorable JOHN KEE, of Bluefield, as chairman of the House Foreign Affairs Committee, performed great services in guiding through the last session of Congress the heaviest program of legislation in the foreign field that we have ever seen. Our dynamic Secretary of Defense, the Honorable Louis Johnson, of Clarksburg, is attacking with courage and decision problems of exceptional difficulty. Fortunately very effective working relations exist between his organization and the Department of State.

Before speaking of matters within my particular sphere of activity, I might begin with a few words about a general impression that has been made on me since my return to Washington 6 months ago.

The problems with which we deal today in the State Department, in the Department of Defense, in the Treasury Department and, especially in the White House and in the Congress, are so vast and so complex that they tend to surpass the power of human comprehension. It requires humility and patience to deal with these problems—as it does in the case of the people of the country to have to live with them. Above all, it requires the discipline of learning that to some problems there may not be any present solutions whatever—that our aim must be simply to bear them, not only during 1950, but perhaps for our entire lifetimes, until in the slow unfolding of history conditions change and solutions appear. This is a galling concept to Americans, who are accustomed to confronting problems and disposing of them in short order. Our natural tendency when we think of Russian-American relations, for example, is to say that the present state of affairs is intolerable and that we must do something about it. This tendency leads some of us to urge desperate measures upon our Government. Others of us think in broad and copious terms about sitting around a conference table and fixing everything up then and there, so that we can go home and never again have any worries.

All this is wishful thinking and cannot lead to real accomplishment. This Nation was not made great through panaceas but through patience and hard work. Nor is there any reason why war is inevitable in the world today. Let us put no faith in those who say that our system and the Soviet system cannot coexist in this world without war. As Secretary Acheson said to a group of us in Washington recently, good and evil have always coexisted in this world and always will. We have, therefore, had to face up to the necessity of assuming leadership in the free world. We have had to pick up the vast burden of this responsibility, without any assurance that we can lay the burden down again tomorrow.

One aspect of this new responsibility is the tremendous weight of work that is placed upon our Congress. The terrific load that is borne by the individual Members of Congress can hardly be appreciated unless you have been close to it. Senators and Representatives are among the most overworked people in the world today, and I regret that we in the Department of State cannot do more to make things easier for them. Much of the burden they have to bear takes the form of foreign problems that we put before them. For example, the Committee on Foreign Affairs of the House of Representatives during the last session considered 50 bills and joint resolutions of which 29 were favorably reported and 24 were passed by the House. The Foreign Relations Committee of the Senate in addition acted upon some 10 treaties including the North Atlantic Pact. To put the problem in another way, 48 percent of the bills introduced in the first session of the Eighty-first Congress had to do with foreign relations or had an important bearing thereon.

Nor can we blink at the fact that our present programs in the foreign field are enormously expensive. One of the most sensible pieces of legislation ever passed was the law which repealed the exemption of Federal employees from United States income taxes. Let me assure you that we think hard every time we send up to Congress a bill involving new appropriations. As taxpayers ourselves, we know how the impact is felt. It is our objective to keep the cost of our foreign programs to a minimum. Yet we must recognize that the extent of our responsibility in the world is very great, and unwise economies would involve us in risks that could prove far more costly.

Our immediate objective in the world today is to weld together a group of free nations for the common purpose of creating conditions in which, as President Truman said last week, "Men may live in dignity, perform useful work, serve their communities, and worship God as they see fit." This, briefly, is our foreign policy. Our effort to repair the damage which the last war brought to Europe is an important expression of this policy. It has been expensive. It still is expensive. But the problem of European recovery affects every other problem with which we deal—foreign and domestic. While we have already done much in Europe, economic recovery is not facilitated by the continuing threat of evil which looms on the eastern horizon. We have not made the sacrifices of the past few years, however, in order to surrender all their fruits and beat a retreat. Though we still have a long way to go, having once taken up the challenge, we must follow through and persevere in meeting it.

The part of the world with which I am directly concerned is in the Western Hemisphere. The American Republics are sorely beset today by economic and social problems of their own. The great productive possibilities of these countries remain in large degree unrealized. There is, however, in this part of the world as in no other a real opportunity to work forward toward the democratic ideal. We have no iron curtain to divide us. We were spared the direct destruction of two wars. In short we do not have the same kind of road blocks to progress in this hemisphere as we confront elsewhere.

How is it, then, it may be asked, that we read so frequently of revolution and dictatorships in Latin America? Are our friends and allies to the south really making progress? Are they putting to good use the unexampled opportunity for freedom and democracy that the free world now enjoys?

The answer is quite frankly that the record could be better. There have been too many instances in which democracies have been subverted and the popular will thwarted. Such circumstances, where they exist, do not breed confidence. They do not make for enthusiastic collaboration on our part with the countries where they occur—if for no other reason than that our citizens would not favor it. On the other hand, before passing judgment on the situation as a whole, it is necessary to look at the evolution of Latin-American democracy in the long perspective of history.

Some of the American Republics are still relatively new and unpracticed in the ways of democracy. Their political instability and their failures may be in the historic view manifestations of the impact of new ideas upon social structures which had remained static for generations. I believe that on balance they are making progress in the direction of democracy. This becomes evident if we are willing to look at the good as well as the bad—at the positive as well as the negative. The democratic picture in Latin America today is brighter than it was 20 years ago, and a great deal brighter than at the beginning of the century.

One of the paradoxical signs of how democracy is growing in the hemisphere is the sense of shock and dismay that we all feel nowadays when any American republic suffers a set-back through the revolutionary overthrow of a constitutional government. What was accepted as commonplace and hardly worthy of comment a generation ago is conspicuous today. It can no longer be taken idly for granted in the light of the mobilization of sentiment for better government which exists throughout the hemisphere today.

We, the United States, have set the example and taken the lead in this democratic drive, although we are by no means the only good example that the hemisphere has to offer. More than anything else, however, the spectacle of our own thriving democracy has made subservience to dictators more and more intolerable to our neighbors in the south. Likewise, the standard of living that we have achieved in the United States under the regime of liberalism has aroused our neighbors against the grinding poverty that was once regarded as the common man's inescapable lot. In this sense we are, by our very example, responsible for much of the political ferment that marks the Latin-American scene today. If this is true, we may at least reflect that this kind of ferment has often in history marked a transition to better things. That ferment is also a great deal better than the stability of death which has been clamped onto the peoples of eastern Europe. It is certainly better than the compulsory political inactivity and lack of change which characterized many of the more enduring Latin-American dictatorships of the past.

As long as democracy continues to grow and thrive in our country it will grow, however erratically, in the other American countries. It could fail among them eventually only through failure here—and that is part of the international responsibility we bear. I do not believe, however, that there is going to be any failure here.

Our policy in Latin America, as in other areas, is one of positive cooperation for the realization of our democratic objectives. In terms of brass tacks, we are engaged with the other American countries in a variety of operating projects for economic and social development.

Now let me mention some examples.

It may seem far from this valley of the Kanawha River to the valley of the Sao Francisco River in Brazil, over 4,000 miles away. The difference between the two valleys, in the relative degree of their development, accentuates the effect of distance. Here you people have developed a degree of industrial activity and a utilization of your natural resources as intensive as any in the world. In the Sao Francisco Valley relatively little development of that sort has occurred. Yet, though the stages of development are so different and the distance so great, what happens in the Sao Francisco Valley in the next 10 years will affect in some measure the people of this valley in West Virginia.

There is today new energy and new vision in the leaders of Brazil. They want to put to better use the great natural resources of their country. As in many other Latin-American countries, however, they lack the capital funds and technical resources to achieve their goals expeditiously by their own energy alone. Therefore, and with our own self-interest in view, we are helping Brazil in a variety of ways to achieve these goals.

Last year our Government sent the so-called Abbink Mission to Brazil to help the Brazilians determine the measures which should be taken to promote the development of their country. The International Bank for Reconstruction and Development, of which, as you know, the United States is the principal stockholder and which is now perhaps a major source of foreign financing for Brazil, has also recently made a survey of the country to see how the bank's resources can best be used to advance Brazil's development. The bank also sent an engineer to Brazil specifically to look into the financial aspects of the Sao Francisco hydroelectric project. The bank's decision on the financing of that project is expected soon.

As we in the State Department see it there are certain types of projects which when soundly conceived may appropriately be financed through loans of public funds. The International Bank has already made one very large loan to a private company in Brazil precisely for the purpose of hydroelectric development.

These public loans, however, have private investment and private enterprise in view. A significant consideration regarding the feasibility of the Sao Francisco project is whether private industries will be attracted to the valley by the availability of power. There are believed to be heavy phosphate deposits in the general area which might be processed to help supply Brazil's great need for fertilizers. These in turn could help restore to fertility some of the worn-out coffee lands in southern Brazil, about which we have been hearing so much since the recent rise in coffee prices. Hydroelectric power might thus bring about the beginning of a chemical industry in the valley, which would in turn give rise to other industries. We have seen just that sort of thing happen in the Rio Doce Valley of Brazil, where important development has occurred just in the last 5 years, largely in consequence of the financing of certain basic projects by the Export-Import Bank, and incidentally because of assistance by our Institute of Inter-American Affairs in the improvement of health conditions. Tremendous impetus to Brazil's economy has also been provided by the construction of the great Volta Redonda steel mill with the help of funds from the Export-Import Bank.

We feel that the complementary industries must, in general, be financed by the investment of private funds. It is only through providing opportunities for private capital that sound economic development can be achieved. We in this country have, ourselves, never hesitated to welcome foreign capital. Even in recent years, since we attained a high degree of industrialization, foreign private capital has made great contributions to our development of new industries, notably in the field of chemicals and synthetic textiles. Our total national wealth and earning power has been substantially increased in consequence. We feel that in the same way much can be done by private capital in Latin America. We also believe, however, that the governments of our sister republics must determine for themselves whether and under what conditions they want private capital to work for them. If they do want it and will create the right conditions, they will find it available.

Our Congress now has before it two specific pieces of legislation that are closely related to our program of cooperation with the other American republics. The first would authorize a large increase in our present technical assistance to all foreign countries, including the Latin American. This technical assistance, in addition to taking the form of such undertakings as the Abbink Mission, is designed to help in the development and application of particular skills to the basic fields of agriculture, industry, education, and health.

Economic and social development cannot be brought about only through large-scale projects such as hydroelectric plants and steel mills. There are a great many smaller and less spectacular projects to be undertaken. You in West Virginia, for example, have had a great deal of experience with the control of silicosis. In Peru, silicosis has ravaged mines for generations. Now our Institute of Inter-American Affairs is working with the Peruvian Government on a modest but highly successful industrial hygiene program—the first of its kind in that country. At the same time, the Institute's agricultural mission is working with Peruvian farmers to help improve the breeds of corn, which are the same today as in the far-off days of the Incas. Other experts of the Institute, working with local experts in the highlands of Bolivia, have been teaching the Indians methods of animal culture by which they can improve their pitifully degenerated herds of sheep. I could cite hundreds of such examples of how our technical assistance is at work throughout Latin America. Although each project is small in itself, the aggregate is of tremendous significance in helping to increase productivity and the general welfare of the continent.

These programs of cooperation go beyond governments. They reach down to the people in the towns and villages, and on the farms. Country people in South America who have never before seen one of our citizens are thus brought into first-hand contact with our democracy in action. Nor do these programs involve a large outlay of money—in fact, the outlay is remarkably small by contrast with the results achieved. We hope, however, that the Congress will now authorize an expansion of these activities so that we may step up our whole policy of cooperation along these lines.

The second legislative proposal before our Congress is that the Export-Import Bank be authorized to use part of the funds it now has available to guarantee investors against certain risks peculiar to private investment abroad. Most important is the risk that dollars may not be available for the conversion of profits earned in foreign currencies. This is a new type of venture, and much experimentation will be called for before it is put into general practice. One of the greatest deterrents to private investment abroad today, however, is the scarcity of dollars to provide for remittances of earnings. The proposed guaranty system is designed to overcome this obstacle. Naturally, care will have to be taken that guaranteed investments will not receive preferential treatment over other American investments. I am confident that the Export-Import Bank, one of the most efficient agencies of our Government, will administer this new authority, if granted, with the same regard for established American businesses that it has always shown.

Now you have undoubtedly recognized that the two legislative proposals I have described to you are parts of the program outlined last year in point 4 of President Truman's inaugural address, which is designed to stimulate the development of underdeveloped parts of the world. This program is not a program of charity. The mood of our country today would not sanction any such thing. Rather the program is designed to serve our national interest by strengthening our friends, restoring stability, and creating a more prosperous world. Through it we and the United Nations are directly attacking the obstacles that stand in the way of democracy's growth.

Related to the point 4 legislation is another proposal, namely, that the Charter of the International Trade Organization be approved by Congress this session. We are already participating in the International Bank, the Monetary Fund, the Food and Agriculture Organization, and a number of other international agencies which are already active in their respective fields. The International Trade Organization will cover the vital field of international trade. In participating in it, we would be paving the road for liberalized foreign-trade practices among all countries—an objective entirely in keeping with point 4.

I have no doubt that the point 4 policy will take its place beside the Truman doctrine, the Marshall plan, and the North Atlantic Pact as a historic contribution of President Truman's administration to world order. There are certain fundamental differences, however. Point 4 is not an emergency program or, like the Marshall plan, a temporary device to repair the damage of war. It represents, rather, a permanent measure of reinforcement. It is part of the enduring system of give and take by which our civilization will have to make progress if it makes progress at all. It is in fact a common undertaking in which each country is expected to contribute according to its means. Even the most underdeveloped countries cannot play a passive role. Assistance to any country would be wasted except as it was associated with vigorous steps toward development conducted by that country under its own steam.

This point 4 policy also differs from some of our big emergency programs in that it will not involve any great new outlay of public funds on our part. The International Bank and the Export-Import Bank already have adequate funds to take care of justifiable demands for development loans for some time to come. The lion's share of technical assistance, we expect, will come from private enterprise in connection with private investment.

It has been said that the foreign policy of the United States, as reflected in such programs as the Marshall plan and point 4, is the only foreign policy in the world which is truly revolutionary. We can be proud that, instead of being the slavish followers of old and outworn imperialistic traditions, we are the pioneers and prime builders of a new and positive tradition.

This imposes on us in the State Department the added duty to see to it that we keep our policies vigorous and dynamic. We must never let ourselves be smug and satisfied about our present policies. There will always be room for improvement. This is one reason why next Monday I am going to Habana to meet with our Ambassadors in the Middle American area for a complete review of our methods and procedures. A similar conference will be held in Rio in March with our Ambassadors in South America. We believe that in this way we can keep ourselves alert and looking forward.

I have one final word, which bears on the role of Rotary in making our foreign policy effective. In this country, as is not the case in dictatorships, the people have the final say in the development of foreign policy. Today, far more than ever before, our people are taking this responsibility seriously and making up their own minds about the issues involved. Such organizations as Rotary are prime instruments for giving form and expression to this sense of responsibility. We in the State Department look to you, as well as to our great free press, for democratic guidance.

I will go further and say that Rotary is itself involved in the actual conduct of our foreign relations. For our foreign relations, unlike those of some other countries, are not confined to contacts between arbitrary and all-powerful governments. They embrace

direct relations and interchanges among groups of citizens among the peoples themselves. In every capital of the Americas, from here to the southern tip of South America, you will find Rotary organized and playing an important, constructive role in local affairs. This sort of thing is an indispensable part of our good-neighbor policy, which rests upon the support of a myriad of commercial, personal and cultural contacts, between individuals and groups, back and forth across the international borders. I hope you will consider it no presumption on my part to say, therefore, that you in Rotary and we in the State Department are partners in a common enterprise. Let us see to it that our enterprise is successful.

Should Senate Remove Restrictions on Oleomargarine?

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, January 13 (legislative day of Wednesday, January 4), 1950

Mr. WILEY. Mr. President, it was my privilege on January 10 to debate over America's Town Meeting of the Air, with the distinguished Senator from Arkansas [Mr. FULBRIGHT], the question, Should the Senate remove restrictions on oleomargarine? At that time the Senator and I were privileged to make 4-minute talks before engaging in the answering of questions. I ask that a copy of my 4-minute address be printed in the Appendix of the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

Friends, remember that, contrary to the impression you may have gotten from my genial Arkansas friend, we are all agreed that Federal taxes on oleo should be repealed.

In fact, we ask the oleo group: If you are so interested in the consumer's problems, why don't you agree (as we have) to simultaneous repeal of hundreds of other nuisance excise taxes on baby lotions, on cosmetics, admissions, phone calls, etc.?

Folks, the Oleo Trust is not interested in the consumer. It poured out millions in false propaganda so as to confuse the issue about taxes. Now, it comes into the open and says it wants to swindle the yellow color of butter and deceive the consumer. I say that if the 26 huge oleo corporations rob the natural trade-mark of butter—its yellow color—they will be violating every American principle—fair prices, fair play, fair business, and good health.

Senator FULBRIGHT says that if oleo robs butter's yellow color—that's just competition. Well, friends, if you tried to imitate the color of cabs of the Yellow Cab Co. on your own cabs, you'd be thrown into jail. If you stole the name of Mr. Denny's great radio program, he'd have the right to stop you.

So, friends, in all fairness, we're urging a substitute dairy amendment which will protect the yellow color of butter in interstate commerce.

This amendment will assure fair prices for the consumer. It will help assure inexpensive prices for vitamin-rich milk, butter, cheese, beef, yes, even oleo. Folks, remember, you won't, unfortunately, get fair prices if the oleo monopoly swindles the yellow color of butter and drives it from the market. Why? Because, then, the oleo trust will skyrocket the oleo price as it pleases.

Here is a second point, friends. We want fair play for the consumer. We don't want the consumer to be tricked into buying something other than what he or she wants. When the housewife orders beef from the butcher, she doesn't want to be cheated by getting horse meat. When she orders butter, she doesn't want to be cheated with oleo which has been concocted to resemble butter. I could cite hundreds of instances in restaurants and markets where you—the public—have been cheated and deceived into getting oleo when you thought you were getting butter.

A third point, my friends. We want fair business treatment for the Nation's great dairy industry—an industry of 2,250,000 honest, hard-working farmers in 48 States of the Union. Remember, folks, your income, your prosperity depends in part on the economic well-being of the vital dairy segment of America.

Fourth and last, we want good health for our population. As you so well know, youngsters and adults need wholesome, nutritious dairy foods. Folks, you won't be able to get those healthful foods if the oleo monopoly stabs the dairy industry in the back. If that happens, milk production will drop by a third. There'll be less milk for your children, for adults, for anyone. And it will be at higher prices because of the cutting down of dairy herds. The farmer won't profit; he'll be getting it in the neck. Only the Oleo Trust will profit.

Remember, folks, under the amendment I'm suggesting, the consumer could buy either uncolored oleo or colored oleo (that is, colored oleo, assuming his own State allows the manufacture of yellow oleo).

On the other hand, suppose the consumer buys uncolored oleo (either through preference or through a requirement of his own State law), then what? Then the consumer can easily color the oleo according to his desire in his or her own kitchen in 120 seconds.

The few seconds required to color oleo yellow in the kitchen may spell the difference between adequate supplies of milk and cheese at fair prices or a terrible shortage of these vital dairy foods in your home.

You, my friends, have a right to free choice between butter and oleo, both tax-free and both without restrictions on grocery men. So let oleo and butter be sold on their own merits, in fair competition, with their own different color. And don't let anyone kid you that cottonseed oil or soybean oil is yellow, it definitely is not.

You don't want to be swindled with horse meat when you order beef. You want to be treated fairly, and that's all I'm seeking tonight. Fair play, not oleo fraud; fair prices, not monopoly prices; fair business and protection of the good health of our youngsters and adults. Thank you.

RFC's New Place in the Midcentury

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Friday, January 13 (legislative day of Wednesday, January 4), 1950

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from the Louisville Courier-Journal, entitled "RFC's New Place in the Midcentury."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RFC'S NEW PLACE IN THE MIDCENTURY

Senator FULBRIGHT's suggestion for a review of activities of the Reconstruction Finance Corporation has merit. Since the RFC was created in 1932 to save weakened banks and railroads in a time of national crisis it has performed an enormous task.

Its activities broadened to such a point that after 8 years the collateral on its loans included fox farms, hotels, whole towns, farmers' mules, and drainage projects. The Treasury paid out $500,000,000 for its capitalization. After operating under Jesse Jones through a period of terrible depression it proved that Government can be competent in business and its financial soundness was established beyond question.

The RFC served impressively during World War II, that other national emergency, to finance industries vital to national security. It is Senator FULBRIGHT's contention, however, that since then the RFC has tended more to make loans to big corporations than to small.

The cases of the Kaiser-Frazer and Lustron loans come immediately to mind, of course. In the case of the former, Senator FULBRIGHT maintains that the RFC's $44,500,000 loan was outside the province of the Corporation's proper activities. In the case of Lustron, the first loans were probably desirable from a standpoint of national interest, being designed to stimulate mass production of a low-cost house at a time when the housing shortage was most acute. Unfortunately it has not been possible to create Lustron houses at what could rightly be called a production-line rate. Neither has it been possible to bring their cost down to justify the tag of low-priced.

Senator FULBRIGHT has specifically mentioned, besides the Kaiser-Frazer loan, RFC financing of the bankrupt Waltham Watch Co. and the Southern Plywood Co. Both loans were granted on grounds of preventing unemployment, which, as Senator FULBRIGHT has remarked, is not now a national problem of critical proportions.

The point is not that the country could do without the RFC. It is generally accepted as one of the most valuable stabilizers of United States economy. However it does seem time for a review of the place of RFC in an economy which has changed radically from the days of the depression, and again from those of World War II.

The Chinese Situation as I Saw It

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Friday, January 13 (legislative day of Wednesday, January 4), 1950

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a memorandum of explanation, dated December 28, 1949, written by Roger D. Lapham, former mayor of San Francisco, representative of the ECA in China. It is a memorandum bringing up to date a speech which he made, entitled "The Chinese Situa-

tion as I Saw It," which was placed in the body of the RECORD by the junior Senator from Oregon [Mr. MORSE], on October 19, 1949, at page 15037 of the RECORD. I ask unanimous consent to have the memorandum inserted, particularly because of its concluding paragraph.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

SAN FRANCISCO, CALIF., *December 28, 1949.*

MEMORANDUM OF EXPLANATION

On September 8, 1949, I spoke before the Commonwealth Club of Northern California, at San Francisco, on the subject, the Chinese Situation as I Saw It. This talk, prepared for a radio rebroadcast and necessarily limited as to time, described the activities of the ECA mission to China during the year ending June 1949. I pointed out the difficulties faced by the mission, expressed some personal opinions as to the shortcomings of the Nationalist Government, and ended by making certain recommendations. These were:

1. Continue American private business with the Chinese as far as it may be possible, in such a way as not to enhance to any dangerous degree the very limited war potential of the country.

2. Extend all possible help to American endowed enterprises—educational, medical, and missionary—efforts being made to promote the continuation of the private support which these enterprises have received in the past.

3. Keep open our embassy and consulates in China, staffing them with the ablest personnel procurable, in order that we may pit our best capacities against the serious problems still to be faced.

4. The only practical way to keep the door open, as well as to listen and observe what goes on behind the bamboo curtain, is to accept the fact that we may soon have to recognize in such areas as they control, the Communist Government, as the de facto Government, and be prepared to recognize it whether we like it or not.

Almost 4 months have passed since my talk was made; and today, the question of recognizing the Chinese Communists is becoming more and more debated. I have been asked what reasons prompted my recommendations; and this memorandum is written to explain the reasons why I think it is in the best interests of the United States to prepare, in the near future, to recognize the Chinese Communists, not only as the de facto government but very likely as the de jure one.

While 4 months ago, the Communists had not secured control of as much of the mainland of China as they have today, it was apparent then that, barring unforeseen miracles, what has happened, would happen. The collapse of the Kuomintang government both on the military and the economic fronts has been a continuing and an accelerating one. The strategic islands of Formosa (Taiwan) and Hainan still remain under Nationalist control; but there is good reason to believe—again barring unforeseen miracles, as well as possible but not probable affirmative action by the United States—that these two islands will fall to the Communists in the not too distant future. It seems plain that the Chinese Communist objective is to drive Chiang and the Kuomintang Party off all Chinese soil; and that every effort will be exerted to accomplish that objective as soon as possible. Before I made my definite recommendations last September, I considered certain alternatives:

(A) A vigorous and continued opposition to the Chinese Communist regime by the United States. Such a policy I assumed would require our support of any acceptable Chinese anti-Communist opposition both by military and economic means. At this late date it is plain that economic means would have to be subordinated to military means. This policy then would require active and open military support to what remains of the Nationalist Government; or failing that, support of some other Chinese group as yet unknown, which might be encouraged to resist the Communists. It is plain that any anti-Communist military resistance would not only have to be supported by arms and ammunition supplied by the United States but also would require direct military supervision by the United States along strategic as well as tactical lines. Few competent observers now believe that Chiang and what remains of the Kuomintang Party could accomplish anything even with our military support and supervision. Chiang has lost the confidence of his people, due to his recent failure as a military commander as well as his inability to prevent a collapse on the economic front. Without going into great detail, one thing stands out—the Nationalist military forces, ground troops, Navy, and Air Force, have been defeated by the Chinese Communists who, at the outset had fewer troops, were not as well equipped, and who had no air force or navy. This defeat can be attributed to an obstinate leader, unwilling to delegate authority, and giving preference to favorites rather than seeking the most competent assistance. I am convinced that it would be a down-the-rat-hole policy to even consider backing Chiang's leadership.

Nor can I believe trying now to find some untried or unknown leadership is either practical or feasible. Therefore, I give up the idea of vigorous and tenacious opposition to the Chinese Communist regime by backing Chiang, or anyone else, with military or economic aid.

(B) The next alternative might be classified as abandonment. Pull out of China altogether and close down what remains of our embassy and consular staffs. Then impose an economic blocade and leave those Americans still in China, whether businessmen, teachers, missionaries (medical or otherwise) to shift for themselves as best they can. This policy would be one of pulling down the iron curtain, ourselves; giving notice to the world, as well as to the many Chinese friends of the United States, that we are through. It can be argued that letting the Chinese Communists stew in their own juice might eventually result in their complete collapse; that somehow or other the great mass of the Chinese people would finally turn on their Communist leaders and, through a series of revolutions, throw them out. That may be—but I do not think so. Pulling down the iron curtain, ourselves, would give a free field to Moscow to use, unopposed, all the influence it could bring to bear to keep China in the Russian orbit. I don't like the idea of running away, nor can I believe temporary abandonment would create the situation hoped for. Therefore I discard that policy.

(C) Another alternative advanced is to let things drift as they are. Don't impose an economic or diplomatic blockade. The Chinese Communists will need to trade with the United States and other western powers—so let our businessmen as well as our missionaries and others interested in the welfare of the Chinese people do what they can without any assistance from Washington. It is hard to advocate a drifting, do-nothing policy of this kind—particularly as there is every evidence that Great Britain and other members of her Commonwealth are considering the affirmative action of recognition. It would appear the longer we follow a drifting policy, the harder it will be for the few Americans left in China to keep going.

Instinctively I react against the negative approach. It usually gets one nowhere. I cannot believe a drifting, stalling policy is the right one to follow.

By elimination then, what other policy can we consider?

First, let us pause for an over-all look around. In my opinion, the world today faces an underlying struggle between the type of government offered by the totalitarian Russian Politburo and the democracies of the United States and other western countries. I define democracy as self-government under law—the right of a people to choose its own form of government under free elections, and to change that form of government if the people so desire—whether the trend be toward state socialism or capitalism.

Under Moscow rule, the people are the absolute servants of the state—a state controlled by a dictator or a group of dictators. The people of those countries are allowed no freedom of movement, can read or listen only to what their leaders prescribe and have no opportunity to judge for themselves. It has become increasingly plain, mainly through Russia's actions in the United Nations, that you cannot reach an agreement with that government and count on observance. The teachings of Lenin clearly demonstrate that any means are justified by the end and the end is to impose Russia's will on all of us.

The only threat, military or otherwise, to our national security today is the Moscow Politburo. Our objective is, and must be, to contain the spread of Moscow influence whether it be in western Europe, the Far East, or any other part of the world. We hope, if we play our cards right, to avoid a hot war; but we have pretty well accepted the fact today that, to avoid a hot war, we must fight a cold war.

I believe that cold war can best be waged by ideas—trying to convince other peoples by what we say and do that they would be better off under self-government by law, than by following the Moscow pattern. That policy cannot be effectively carried out by statements from Washington or by Voice of America broadcasts. We must have Americans on the spot, willing and able to counteract the Moscow idealogies.

How best can this be accomplished in China?

If we are anxious to keep in China the few Americans who now remain there, whether businessmen or welfare people, we must not withdraw our diplomatic representatives. But how can our representatives do anything to help those few Americans unless we are ready to recognize and deal with the government in control, whether we like that type of government or not? Some argue that it is useless even to try to deal with the Chinese Communists because we know they won't carry out any understandings reached. That may be—but how are we to prove it unless we try it out?

Are we to assume that what has happened in eastern Europe is certain to be repeated in China? On the surface, I admit that the odds are all against us—the statements of Mao Tse-tung, the treatment of Consul General Ward—all point to impossibilities.

But remember that we have taken part recently in a Chinese civil war. We have supplied military and economic aid to an incompetent Nationalist Government which has lost out on all fronts. The Communists can rightly claim that we only delayed the collapse of this incompetent government.

When you have lost out by trying one means, why not try another? To date Moscow has played its cards well. So far it has not taken part, at least in the front lines, in the Chinese civil war.

But the big $64 question—which won't be answered this year or next year, and perhaps for many years—is whether or not, eventually, the Chinese Communist leadership is going to turn more Nationalist than Moscow-dominated?

If Russia attempts to impose more directly its will and control, perhaps the antiforeign feeling always prevalent in China may well be turned against Russia, rather than against us. So much depends upon how we play our cards as well as how well Russia plays hers.

Considering the various alternatives, I came to a definite conclusion: The best chance of restraining the spread of Moscow influence in China is to recognize the Chinese Communist regime. It appears to me that is the best practical method left today to accomplish our objective.

I cannot go along with those who think it is wrong in principle to even try to deal with the Chinese Communists on the assumption they are 100 percent followers of the Moscow Politburo and will remain followers indefinitely. Time only will prove or disprove that assumption.

In reaching this conclusion I have not overlooked what adverse psychological reactions it may have in such countries as Japan, the Philippines, and other nations in the Asian sphere. Many will take it as an about-face as well as implying approval of a type of government rather than a mere recognition of a government which controls.

The Chinese Communist victory is not a coup d'état. It is the outcome of a long civil war, in the closing years of which the United States backed the incompetent losers.

We have observed in Asia and elsewhere the rising urge of different peoples to run their own show, and in China the resentment of the treatment dealt out in past years by western nations which sought and acquired, by force majeur, concessions and extraterritorial privileges. Recognition now might be considered as an admission on our part that henceforth we will stand aside and not take part in a civil war as we have recently in China.

We can and should insist on the open-door policy in Asia. We should expect that China will accord no special, nor any greater, privileges to any one nation than to another.

I realize that so long as the Nationalist Government controls Formosa it will be difficult to accord recognition to the Chinese Communists on the mainland. The China Aid Act of April 1948 is still on the books, and that act provides aid only for the Nationalist Government.

If, as has been suggested, Washington takes affirmative action to make certain that the government of Formosa remains one friendly to the United States, then we face a very delicate situation. Any decision with respect to such affirmative action on Formosa can be dealt with only at the highest levels in Washington and with every consideration given as to the effect of such action on the over-all conflict between Russia and those nations which oppose the spread of Politburo power, and further consideration must be given to the effect such affirmative action might have on countries such as India, which is not anxious to take sides as between Moscow and the western democracies.

I am strongly opposed to any affirmative action on Formosa that would permit the use of that island as a base for military operations against the Communists on the mainland. The objective should be to make Formosa the Switzerland of the Pacific—a country to be governed for the benefit of the native Formosans and not to be maintained as the last Nationalist stronghold.

ROGER D. LAPHAM.

Blame for Vincennes Flood Conditions

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, January 13 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Blame for Vincennes Flood Conditions," by Dan Kidney, published in the Indianapolis Times of January 11, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Dan Kidney)

WASHINGTON, January 11.—Senator HOMER E. CAPEHART, Republican, of Indiana, told the Senate today that President Truman is to blame for the Wabash River flood conditions at Vincennes.

"His rule not to make any appropriations for new projects prevented the Vincennes flood wall from being included in the budget," Senator CAPEHART said.

"It is erroneous to say that Army engineers have not approved the project. I was with Col. J. L. Persons of the engineers in Vincennes 2 months ago and he said the $40,000 we appropriated for plans last session resulted in drawings for the project that are complete and ready for construction."

PLANS CAMPAIGN

"I intend to get $400,000 for the Vincennes flood wall this session, or conduct a filibuster against all the flood-control projects which the President has approved.

"It is outrageous that this administration can spend billions helping Europe and we cannot get such a sum to save Vincennes from a flood. It is a small outlay compared with the cost of bringing in a thousand troops there in 1943 and again today."

Community Chatter

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, January 13 (legislative day of Wednesday, January 4), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Community Chatter," which appeared in the January 10 issue of the Nebraska City News-Press. I call attention to the fact that the editor of the paper is a former Member of the House of Representatives. The editorial itself carries the initials of his son, Mr. Arthur R. Sweet.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMMUNITY CHATTER

Brother Truman, in one of his congressional election-year messages, spoke about real wages. He said before many years, the average American family will receive $12,000 in real wages.

What are real wages?

Does Mr. Truman believe that within a few years the $3,000-a-year man as of now will have four times his present buying power? If so, the man's real wages will have increased four times.

Probably what Mr. Truman meant was that when and if the average American family receives $12,000 in wages, it will cost $12,000 then for what $3,000 will buy now. Wages will have gone up, but buying power will have remained the same.

This is fine, except for a few little items:

The man with $12,000 in life insurance now will find its value diminished to $3,000 under the Truman no-poverty scheme of things.

And the $25 savings bond purchased during the war will be worth just $6.25 in real purchasing power when it is redeemed in the $12,000-per-year era.

The no-poverty era will be fine—probably—except for people with savings, annuities, pensions, fixed-value investments, and the like.

These people will realize, without studying text books, that inflation has caught up with them.

If what Truman says is true—and no one can foretell the future with certainty—the best investments will be those which fluctuate with the inflationary trend.

Of course this must be remembered, too: All fluctuations aren't upward. Sometimes values come down.

Everything, that is, except the Truman tax schedule.

A. R. S.

Money, Inflation, and Socialism

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Friday, January 13 (legislative day of Wednesday, January 4), 1950

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Money, Inflation, and Socialism," which appeared on January 10 in the Seattle Post-Intelligencer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MONEY, INFLATION, AND SOCIALISM

Gold, in the long experience of the ages, is the best kind of money that can be contrived.

Every other kind of money has genuine value and validity only to the extent that it is related to gold.

In the modern era the usefulness of gold as money was augmented by the auxiliary device of paper money which was redeemable in gold and was therefore the equivalent of gold.

Under this arrangement, a government issuing and guaranteeing the paper money for which the gold was security served as the custodian but not the actual owner of the gold.

The real owners were the holders of the gold-redeemable paper against which the gold had been pledged.

And the gold could lie in safekeeping while the paper passed around in circulation as currency.

Thus, redeemable printed currency was like warehouse certificates denoting title to merchandise.

It was not necessary to move the goods—or the gold—in order to change the ownership.

At the same time, the issuance of certificates—or currency—was necessarily limited by the amount of gold available for redemptive purposes.

This prevented demoralizing monetary inflation.

Likewise, public expenditures and public debt were similarly restricted, which served as a brake on credit inflation in all banking operations.

And, since all transactions had to be liquidated eventually with money, and the money had to be either gold itself or else redeemable in gold, the system was accurately known as the gold standard.

Gold, with not very many variations, was the fixed common denominator of all values and of all currencies.

Now, among its other excellences, the gold standard tended to prevent frauds; and frauds can be perpetrated by governments as well as by individuals.

Frauds committed by individuals are punishable by statute.

Government, however, is not only the source of legal currency: it is also the fountain of statutory power.

Consequently, by illicit use of power, government could subvert the gold standard.

Government could substitute deficit financing for balanced budgets.

Government could replace fiat money for redeemable currency—even in the payment of its own obligations.

And the Government of the United States did these immoral things in 1933.

It confiscated all the monetary gold in the country, and devalued the dollar, thereby reducing the worth of pensions and insurance policies by nearly 50 percent.

It took over the Federal Reserve System—that is, the national banks—as a tool and agent of the Treasury.

Thereafter, the Government could "borrow" in multibillion-dollar installments on the "security" of its own debt and monetize the debts—part of which emerges from the banks in the form of fiat currency but the bulk of which comprises the basis for credit inflation, making itself evident in low interest rates or cheap money, in excessive check-book money and in swollen bank reserves.

These manipulations liberated the Government from dependence on taxes.

They made inflation the Federal fiscal policy.

As a result, the supply of currency in circulation has increased from $8,000,000,000 to $20,000,000,000; the volume of bank credit—about $30,000,000,000 in 1933—now exceeds $100,000,000,000; and the national debt—less than $20,000,000,000 in 1933—had mounted to $40,000,000,000 before the war, and is now more than a quarter of a trillion dollars.

Of course, much of the pyramidal debt and pervading inflation have been due to the war.

And the effect of this has been to obscure the truth.

For the truth is that inflation became the New Deal's policy before the war and has remained the New Deal's policy since the war.

The methods pursued originated in European socialism and in the new economics sponsored by the late Lord Keynes and were imported here to socialize America.

The theory is to be found in the Marxist gospel of Lenin, who taught that the surest way to socialize an industrial society is to debauch its currency.

Without inflation, the New Deal could not undertake the fantastic schemes of its socialist welfare state—and without inflation it could find no excuse for undertaking them.

But inflation—either by means of managed currency or deficit financing—is an illusion for which the people must pay.

They must pay in labor and production without corresponding progress and prosperity, if not in industrial stagnation and degraded standards of living.

And with $24,000,000,000 worth of idle gold in the United States, available for a return to the honest gold standard, there is a remedy at hand.

Our Dangerous Foreign Policy

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, January 13 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Wish-Washing United States to War," published in the Indianapolis Star of January 8, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WISH-WASHING UNITED STATES TO WAR

With his eyes glued on the fall elections, President Truman is wish-washing this country into certain war with Russia. By a weak and vacillating foreign policy he is following in the footsteps of Woodrow Wilson and Franklin D. Roosevelt. He deliberately is building up an argument for the fall elections that will enable him to go to the people with the phony slogan, "I kept you out of war."

By ditching China and refusing to defend our position in the Orient, President Truman is step by step giving the Russians every reason to believe that we are a weak and wish-wash people who are afraid to assert our rights or to prove our strength. That same sort of wish-washing in foreign policy got the United States into World War I. It also was responsible for getting us into World War II. Neither war settled anything, neither accomplished anything for the American people.

Let's look at the record of how bad leadership got us into two world wars, the same sort of bad leadership that right now is leading us into another great conflict:

From 1914 to 1916 Woodrow Wilson wished and washed back and forth until the Germans were convinced we wouldn't fight. Wilson won reelection in 1916 on the sole issue that he "kept us out of war." Within 4 months after that election we were in World War I up to our necks.

From 1935 to 1940 President Franklin D. Roosevelt did nothing to persuade Hitler or the Japs that we would defend ourselves. He deliberately encouraged trade with both the Germans and the Japs. Finally, in 1939, he made the greatest speech of his life at Chicago in which he warned all nations that the United States would tolerate no aggression in the Western Hemisphere. But 2 months later he entirely repudiated his Chicago speech because his New Deal pals convinced him he could win the 1940 election on the slogan of "keeping us our of war." He went to the people with the repeated promise that "not a single American boy will ever be sent abroad to fight a foreign foe." A year later we were at war. But all that time Roosevelt was secretly conspiring with Churchill and had committed the United States to join in the war. He was so determined to save the British Empire and be glorified in the role of a great war President that he deceived the people with ruthlessly false promises in 1940 in order to gain his reelection.

The same thing is happening again. Dean Acheson is writing his pinky-wink protests to Hungary, Poland, Red China, and other Russian satellite countries in the same vein as the infamous "may I not" notes of Woodrow Wilson's prewar diplomacy. President Truman abandons China, deserts Formosa, slaps his Joint Chiefs of Staff in the face, and ignores the advice of Gen. Douglas MacArthur, the one man in all the world whose counsel should be followed at this time.

Had Woodrow Wilson taken a firm stand and revealed the strength of the United States to the Kaiser in 1915, we never would have been pulled into World War I. Had Franklin Roosevelt really desired to keep us out of war, he could have made known our strength to Hitler, and the outcome would have been a death struggle between Hitler and Stalin instead of the useless conflict in which we gained nothing and settled nothing. This is not opinion. This is history.

This is no time for soft words, either at home or abroad. The American people will be embroiled in another war just as surely as we were drawn into two previous wars unless we speak up with tremendous vigor now. Russia must be told in the only language she understands—the language of prepared strength—that we will not tolerate another international bully in the world. Russia will never go to war against us if we call her bluff now and call it in measures she understands.

President Truman's policy in the Orient may be good election-year propaganda, but it leads straight to war as the same policy did in 1916 and 1940. The pinky-wink notes and double-talk diplomacy of Truman's foreign policy add only dangerous fuel to certain war.

There is only one sure way to avoid war with Russia, and that is to make her understand now before it is too late that we have no fear of her or any other foe.

The Radio Program Assault and Flattery

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, January 13 (legislative day of Wednesday, January 4), 1950

Mr. MORSE. Mr. President, there is a program being broadcast in Washington under the title of "Assault and Flattery" over radio station WCFM, which may not have come to the attention of Senators but which is fast gaining attention and growing in popularity. It is conducted by the well-known radio commentator B. S. Bercovici. On this program, Assault and Flattery, Mr. Bercovici, instead of reviewing latest news or claiming the dubious distinction of receiving direct wires from the Kremlin or exclusive stories from the White House, it prefers to comment on what other radio personalities or programs discuss with the view to revealing the

other side of important controversies which touch on current issues.

On Sunday, January 1, Mr. Bercovici, in his program, Assault and Flattery, brought to the attention of the public a condition prevailing on the radio which ought to cause some alarm in the ranks of progressive Americans who, in these days of strife between the forces of darkness and the struggles of democracy, face the duty to emphasize the truth not only that men are created equal but that all men must be treated with equality.

I think Mr. Bercovici ought to be commended for his constructive work.

I ask unanimous consent that his broadcast of January 7, 1950, be printed in the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

It has been said that no work of art worthy of attention can escape being a work of propaganda, the minute you open your mouth to say something, the minute you dip your brush in the paint you become an agent of some propaganda. That is especially evident in the theatrical field, of which radio entertainment is an integral or a component part. Radio programs can be divided into a few categories; such as programs of pure entertainment and programs of information and enlightenment. The programs of information, to which radio comments and forums belong, have a definite and well-defined aim. Those who conduct them or participate in them expound their personal theories and convictions on a variety of subjects from football to the United Nations. Their aims are not concealed. You listen to them if you are so inclined, you agree with them if you think they are propounding ideas to which you are ready to subscribe, or you disagree with them. In short, they do not take you unawares. Then there are programs of supposedly pure entertainment, whose aim is to make you laugh or cry, or excite you with their bloodcurdling situations. You suspect nothing. Jack Benny, for example, is expected to be funny; you anticipate members of his cast are going to rib him for boasting about women; you know his reputation for being stingy is going to be emphasized, and while this gag is by now worn thin, you wonder when the writers are going to dig up some new and untried situations to show that Jack Benny can be funny without being a miser. Or you listen to Edgar Bergen and his Charlie McCarthy, who try desperately to make you laugh also with Bergen's stinginess—the same gimmick. The fun they dispense is innocent. For every radio comedian from Jack Benny to Al Jolson and back has been characterized as being a tightwad. The writers in their boundless wisdom seem to have tapped a source of comedy never exploited quite that way prior to the advent of radio. It has become a bore, but you hope someday another set of radio writers bent on being original will discover a technique to squeeze laughs out of spendthrifts.

But there is a type of comedy on the air which, while it does not specifically aim at distilling opinions out of situations and dialogue, nevertheless, diffuses a set of opinions which must not be ignored. One such outstanding program is Amos and Andy. It is funny most of the time, but not so funny that it fails to alarm. To begin, the spotlight is played on characters—the script is written around characters rather than around incidents, and what characters.

The Kingfish is a slippery, dishonest, conniving, for the most part, unintelligent person, since his schemes never reach fruition; heartless in all dealings, selfish in his dealings even with his best friends, a miserable husband, a social failure in a community where everybody seems to know him, and, generally speaking, a louse of the first magnitude. This is the Kingfish, the chief character in a program intended to amuse. But the program, I am afraid, does more than amuse. Among uninformed and biased elements, the program is apt to leave a lasting impression that the Kingfish is typical. And because the program is apt to do just that, we are faced with the problem of a program the aim of which is to entertain, but which, without knowing it, and perhaps without malice aforethought, becomes an organ of propagating a rather dangerous idea—that men of Kingfish's stripe are typical.

This would not necessarily be so if other characters in the program were given better credentials before they are launched into the world of radio listeners. So, let's look at the other characters in the program Amos and Andy. Andy Brown, a shiftless ne'er-do-well, who hasn't done a lick of work since he was created by his author, a kind of acceptable bum—and very often he is called a bum right in the script—ignorant to the nth degree, a malaprop, just as the Kingfish is a malaprop, stupid enough to be bamboozled even by his best friend who is no mental giant either, untouched by the niceties of civilization into which he has been launched, without pity, good natured, which in his case is not a virtue since it is obvious that he is too dumb to be anything else; gullible and unwashed. One script—the one broadcast last Sunday night—had Andy Brown say that the New York authorities can by no stretch of the imagination blame him for the shortage of water, so that added to his other vices, we were subtly permitted to discover that he has also escaped the civilized habit of bathing. This is the character of secondary importance in the program Amos and Andy, which is supposed to amuse and entertain us. Then there is Shorty, the barber; a stuttering imbecile who is never able to form an intelligent and intelligible sentence; to whom the Kingfish often goes for advice when he is deep in the trouble caused by his own cunning and idiotic dishonesty, but who never is able to produce sound and proper advice. The script presumes him to possess inherent common sense, yet it always robs him of the opportunity to be the sage he is supposed to be.

Then there is the lawyer—a shyster of the first water—whose legal advice is always on the periphery of the law and always on the shady side of professional honesty. Then you have the fifth character of importance, Sapphire, Kingfish's wife, a shrew with whom no man in his right senses could live in marital bliss for more than a week—ugly, demanding, shrill, and, generally speaking, a female monstrosity. There are others, neither of whom to my recollection are worth the powder to blow them up with. Here and there new characters are introduced, stimulating a hope in the minds of fair-minded listeners that he or she would bring into the script a ray of sunshine. But the hope is blasted the minute these new characters are launched. For example, there is the creature who came all the way from Texas to marry in response to a newspaper advertisement. She discovers the man she has set her heart on is the Kingfish himself, who already has a wife. But the Kingfish knows she has a few hundred dollars, so arrangements are cooked up by which the 250-pound monster is to go through a mock marriage, with Andy, the idiot, playing proxy. Nothing is too difficult or fantastic for the Kingfish if he can get his paws on a few hundred dollars. Well, the story says that Andy fell into a trap—the trap, of course, laid by his very best friend. The ceremony is about to reach a legal climax when Andy realizes that he is going to be married for good, so he escapes. The predatory female, knowing her rights, organizes a veritable manhunt, but does the Kingfish feel the pangs of remorse for having betrayed his friend, Andy, or for having attempted to swindle a total stranger? Nothing of the sort. Instead of feeling contrite, the Kingfish proceeds to paint a glowing picture of marital bliss with this monster and almost traps Andy into accepting his fate.

The stories vary, but the theme never does, nor for that matter does the nature or the quality of the moral derelicts. There is, however, one character with whom the average person would shake hands without fear of being contaminated: that is Amos, but the amazing thing about it is that Amos of late has had so little to do or say on the program that he has become a character of little or no effect on the story itself. Whatever Amos is or does is not of recent planning. Whatever he is, we remember from the days when he and Andy were close pals and carried the program alone. We remember him to be a hard-working lad, responsible, law abiding, a good husband, and a loving father—never venturing into shady schemes, never trying to get rich quick by puerile and idiotic schemes, the way Andy and the Kingfish do. But Amos is practically a stranger on his own program. Last Sunday's program gave him no more than a 2-minute opportunity to make his presence known. Amos so far as I have been able to detect, is the only decent human on that program.

Yet, his decency is not highlighted to a sufficient extent to make an impression on the audience. Now the trouble with this program is not so much that it is a theatrical dump heap of mora' and social lepers, but that all its characters are Negroes. As I pointed out a few minutes ago, among uninformed elements, among biased people in centers where whites are eager and ready to believe that Negroes are inferior to whites, this program is just what the doctor ordered. There is the danger that these characters may be accepted as typical Negroes, and don't tell me that's not possible or probable.

True, anybody with a grain of sense knows that the Kingfish is not a typical Negro person, or that Negroes are shifty and lazy and unwilling to work, or that they are imbeciles like Shorty the barber, or shysters like the lawyer in the show. But anybody with a grain of sense also knows that there are among us far too many who are ready to accept the characterization as a typical one. And it is in this that you find the unwitting and unplanned propaganda that is apt to cause a lot of damage among the uninformed and the prejudiced. Because of these factors the program, in my judgment, ceases to be funny. It is in fact tragic. But since no criticism is accepted without some constructive contribution, I would suggest the best and perhaps only way to take the curse off the program is to inject into it a few worthy characters, honest, attractive men and women, hard-working people, God-fearing and church-going, men and women of Amos' type and quality, of whom there are among our Negro citizens an abundance equal in ratio to that of white citizens. Why the writers and the producers of this program never thought of it, or why in their fairness, they did not think this necessary, is difficult to understand. They must know that millions listen to their program and that many among those millions are apt to distill from the program unfair, untrue, and dangerous conclusions. This must be done, especially in these days when all or most of us talk glibly about democracy.

Now to tally the score: I have assaulted the program Amos and Andy for the reasons I expounded. No flattery tonight. It's been nice talking with you and until we meet again next Sunday at the same time, let us hope the assault will be received in the spirit of good sportsmanship.

Civil Rights Program—The FEPC in New York—Its Failure in Washington—White Americans Betrayed

---

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. RANKIN. Mr. Speaker, attempts are being made to ram down the throats of the American people the so-called civil-rights program, including the FEPC—the most dangerous piece of communistic legislation with which this Nation has ever been threatened. It would not be adopted in a single State in this Nation, if the people of that State were permitted to vote on it.

CALIFORNIA

They put it on the ballot in California a few years ago, and it was defeated by a clear majority in every single individual county in California.

The same thing would happen again, not only in California but in every State.

Remember, this FEPC program was promulgated by Joe Stalin in 1920, and it is being pushed in this country by practically every Communist-front organization in the country.

PENNSYLVANIA

They have tried to ram it through two different legislatures in Pennsylvania. Somebody sent every member of that body a copy of my speech on the subject, which I am inserting as a part of these remarks, and they killed it as dead as Hector; and if the people of Pennsylvania themselves had been permitted to vote on it, they would have killed it even deader. Because they know that behind it is a communistic design to wreck not only every business in Pennsylvania but to subordinate them to alien control.

It would do the same thing to every other State in the Union.

MICHIGAN

They tried to ram it through the Legislature of Michigan. But the intelligent members of the Michigan Legislature were smart enough to refer it to a vote of the people, and the supreme court of that great Commonwealth declared the referendum illegal or unconstitutional, which ended it so far as Michigan was concerned.

I dare say that if the people of Michigan had been permitted to vote on this monstrosity they would have killed it even deader than they did in California.

ILLINOIS

They tried to force it through the Legislature of Illinois, and failed. If they had referred it to a vote of the people of Illinois, it probably would have been snowed under overwhelmingly in every single county in Illinois.

OHIO

They tried to force it through the Legislature of Ohio twice, and failed both times—one time, I understand, they had a Republican legislature and the other time a Democratic legislature. I dare say that if they had referred it to a vote of the people of Ohio it would not have carried in 1 precinct out of 10.

MINNESOTA

They tried to shove it through the Legislature of Minnesota at the last session, and failed miserably, because the people of Minnesota are beginning to realize what this communistic monstrosity would mean in paralyzing their industries and creating confusion all over the State.

COLORADO

They tried to shove it through the Legislature of Colorado at the last session, and failed, because the members of the legislature of that great State realized the communistic imports of this vicious measure.

Now they come and attempt to shove it through the Congress of the United States without consulting the people whose rights they are attempting to destroy.

NEW YORK

You remember a few years ago when it was forced through the Legislature of New York Mr. Dewey signed it with 22 pens. I said then that "All the perfumes of Arabia would not sweeten his little hand."

It is simply harassing many businessmen in New York out of business.

In other States where it has been adopted, it is hanging like the sword of Damocles over every businessman in the State, with the result that industries are moving out of the area.

Under permission granted to me to extend my remarks in the RECORD, I am inserting at this point excerpts from two speeches I made in the House on this subject.

In discussing this matter in the House on February 13, 1947, I exposed the vicious regulations which had been adopted under this crazy legislation in the State of New York.

I said:

Here are the regulations, or rulings, issued by the State of New York. They are headed: "State of New York Executive Department. State commission against discrimination. Rulings."

Here are some of the things you cannot do under the law of New York:

UNLAWFUL EMPLOYMENT PRACTICES BEFORE HIRING ANYBODY

Those words are written in capitals. Here is the first unlawful practice:

"Inquiry into the original name of the applicant for employment, whose name has been changed by court proceedings or otherwise."

If you inquire as to his name or what his name used to be you violate the law. You commit an unlawful practice. For instance, take this man who writes for PM, who calls himself I. F. Stone. His name was Isadore Feinstein, as Cordell Hull once pointed out. Suppose he comes to you asking for employment and you ask him that question. Then you will have committed an unlawful act.

Here is the next one:

"It would be unlawful practice to make inquiry into the birthplace of the applicant for employment, the birthplace of his parents, spouse, or other close relative."

How would you like that in Iowa, Illinois, Texas, or Nebraska? In California I know you do not like it, because you have just voted on it.

Here is the next unlawful practice:

"Requirement that the applicant for employment produce a birth certificate or baptismal certificate."

That would be an unlawful practice under this FEPC Act in New York.

I was surprised to see Governor Dewey get his mustache in the vinegar on this proposition. I do not see how he is ever going to get loose from it.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MASON. What about this requirement during the war that every person employed in certain industries had to prove that he was born here before he could get a job?

Mr. RANKIN. Certainly. If we had had this law all over the country then, the Japs would have had a spy at the elbow of every man in a key position; so would the Germans, and so would every other enemy country.

I thank the gentleman from Illinois for his timely suggestion.

It is an unlawful practice in New York under this law, to make inquiry into the religious denomination of an applicant for employment, his religious affiliations, his church, parish pastor, or religious holidays observed. Inquiry into whether an applicant for employment is an atheist.

Inquiry into whether an applicant for employment is an atheist is forbidden, although you may be publishing literature for the Methodist Church, the Baptist Church, or any other denomination.

Another thing, an applicant for employment—and I am reading from the rules laid down by this Commission:

"An applicant for employment may not be told that this is a Catholic, Protestant, or Jewish organization."

In other words, if you are in the business of publishing religious literature you cannot even give him that information under this law which the gentleman from Illinois [Mr. Dirksen] now proposes for the whole country, including Illinois.

Here is another unlawful practice:

"An applicant for employment may not be told that the following holidays will be observed by the firm and no others, naming the holidays; e. g., Decoration Day and July the Fourth, etc."

You cannot tell them under the laws, rulings, and regulations of the State of New York that they may observe the Fourth of July.

Here is another unlawful practice:

"An applicant for employment may not be told that employees are required to work Rosh Hashana and Yom Kippur."

Frankly, I did not know there were any such days until the last few years.

Another thing, it is an unlawful practice under this New York law to make "inquiry into the complexion of an applicant for employment."

Inquire into his complexion and you are likely to get yourself tangled up with the law of the State of New York.

Here is another unlawful practice:

"Requirement that an applicant for employment annex a photograph."

That would be an unlawful employment practice. You are not supposed to know how he looks.

Remember, this is not in Russia, but in New York.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MASON. And yet the State Department in order to grant a visa requires a photograph of the person to be presented with his application.

Mr. RANKIN. Certainly, and they ought to do so. Much as I respect the distinguished gentleman from Illinois [Mr. MASON], I certainly would not want to employ him unless I knew how he looked. If I had never seen him, I would certainly want to see his picture.

Here is another unlawful practice:

"Inquiry whether an applicant for employment is a naturalized or native-born citizen; the date when the applicant acquired citizenship; whether the applicant's parents or spouse are naturalized or native-born citizens of the United States; the date when such parents or spouse acquired citizenship."

You cannot inquire into these questions under this FEPC law in New York.

Here is another unlawful practice:

"Requirement that an applicant for employment produce his naturalization papers or first papers."

He may lie to you and tell you that he is a naturalized citizen, but you cannot ask to see his papers.

Another unlawful practice in New York is to "inquire into the lineage of an applicant for employment, his ancestry, or national origin."

You remember a few years ago the Dallas News inserted an advertisement for a colored janitor, and this FEPC outfit down the street, ordered them to take it out, said it was an unlawful practice.

One member of this FEPC outfit here in Washington went into the office of Swift & Co. in Chicago. This FEPC man asked them: "How many Negroes do you have on your board of directors?"

The answer was "None."

Then the FEPC man asked him: "Why haven't you?"

That was the FEPC down here in Washington a few years ago before it died because a few radicals could not browbeat Congress into perpetuating it.

But it is now in force in the State of New York.

Here is another unlawful practice under the New York law:

"Inquiry into the location of places of business of relatives of an applicant for employment."

It is an unlawful practice to make "inquiry into the place of residence of the parents, spouse, or other close relatives of an applicant for employment."

I am reading from the records at Albany.

Here is another unlawful practice:

"Inquiry into the maiden name of the wife of a male applicant for employment and/or inquiry into the maiden name of the mother of a male or female applicant for employment."

The other day we had the Eislers down here. One of them has been shown to be representing the Comintern, according to his sister's testimony. He has a brother out in California, who seems to be poisoning the public mind through the moving-picture industry. He tries to defend his brother and refers to this woman as "my former sister." If you wanted to employ any of them and check the name of at least one of them as given here, you could not inquire into those names at all—if you are trying to do business in the State of New York, even though one of them has a half-dozen aliases. You could not even ask where they came from or when they got here or when they changed their names.

Here is another unlawful practice, in New York:

"Inquiry into the general military experience of an applicant for employment."

I wish every ex-serviceman could read that, and the next one.

Here it is. It is an unlawful practice to make "inquiry into the whereabouts of an applicant for employment during the First World War; i. e., during the period from 1914 to 1919."

In other words, inquiry as to his whereabouts in the period from 1914 to 1919 is forbidden as an unlawful practice in the State of New York.

Is that what you want in Colorado? Is that what you want in Massachusetts?

Mr. GIFFORD. We have it.

Mr. RANKIN. Get rid of it, and we will help you.

Is that what you want in Kansas, in Ohio, and in other States?

Let your States vote on it. Michigan is going to vote on it right away. If you will tell the people of Michigan the whole truth, let them know the whole truth about this monstrosity, I will guarantee you they will beat it worse than they did in California.

Here is another unlawful practice:

"Inquiry into the organizations of which an applicant for employment is a member, including organizations the name or character of which indicates the religion, race, or national origin of its members."

I presume, if they should ask me if I am a member of the Masonic lodge, I could have them jerked up and brought before this inquisition board or probably prosecuted at various places throughout the country.

Mr. Speaker, I am not criticizing the people of New York. I have long since learned in going from one State to another that real Americans are about the same everywhere. I believe if they had a vote on it, the people of New York would beat it, just as they did in California.

They are having a vote on it in Michigan because a little minority group has been attempting to browbeat the Legislature of Michigan into passing it. I dare say when it goes on the ballot in Michigan and the people of Michigan understand what it means they will defeat it more thoroughly than they did in California. The same thing would happen in probably every other State in the Union.

Mr. AUGUST H. ANDRESEN. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Minnesota.

Mr. AUGUST H. ANDRESEN. Will the gentleman tell us what the penalties are in New York?

Mr. RANKIN. In addition to being harassed to death with orders and directives to cease, desist, rehire, and so forth, there is a punishment provided of "imprisonment in a penitentiary or county jail for not more than 1 year or by fine of not more than $500, or by both."

Mr. GIFFORD. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Massachusetts.

Mr. GIFFORD. I want to remind the gentleman that we have that law in Massachusetts.

Mr. RANKIN. I was afraid of that.

Mr. GIFFORD. I was thoroughly amazed when I looked into it. I had not learned what the rules were. But, perhaps we carried it too far. I am so sorry, and I have been, and I am not in favor of this, I can assure the gentleman.

Mr. RANKIN. I know the gentleman is not, and I am sure the people of Massachusetts would not favor it if they had a vote on it.

Mr. GIFFORD. Employers always inquire and must know whether you come from a respectable family or not. They are so careful. Perhaps they overdid it. But I think a man ought to be able to find out whether he came from a respectable family.

Mr. RANKIN. There are a great many questions that should be asked which are forbidden under this law.

Mr. Speaker, in order to give the new Members an idea of what a mess this FEPC was here in Washington during its existence under Executive order, I insert a speech I made on this subject in 1945.

It reads as follows:

"FEPC A BETRAYAL OF WHITE AMERICANS

"(Speech of Hon. JOHN E. RANKIN, of Mississippi, in the House of Representatives, Thursday, July 12, 1945)

"Mr. RANKIN. Mr. Chairman, the passage of a law at this time legalizing this so-called FEPC would be a betrayal of the white people of the country. If every individual in the United States could understand just what it means, there would be such a roar of protest coming from every State in this Union that it would never see the light of day.

"If every Member of Congress would screw his courage to the sticking place and vote his convictions on this so-called FEPC, it would not get 50 votes out of the entire membership of 435.

"It is a most dangerous and brazen attempt to fasten upon the white people of America the worst system of control by alien or minority racial groups that has been known since the crucifixion.

"When I read the names of the personnel of this outfit you will understand what I mean.

"To sanctify this organization by law would give the lie to everything we have told our American boys they were fighting for. Instead of coming back to liberty, freedom, and democracy, they would find themselves sold into this bondage, herded, humiliated, and regimented by alien influences directed by a foreign comintern representing the deadly doctrine of Karl Marx that is based upon hatred for Christianity and for everything that is based on Christian principles.

"It is a manifestation in legislative form of that infidelity that has closed thousands of Christian churches in Europe and has been responsible for the murder of untold millions of Christian human beings.

"This measure is not directed altogether at the white people of the South. If it were, you folks in the North would not have so much ground for alarm. We in the South know how to combat subversive elements. As Henry Grady once said, we wrested the South from such domination 'when Federal drum beats rolled nearer and Federal bayonets hedged closer to the ballot box of the South than it ever will again in this Republic.'

"But you people in the North have not had that training, and this FEPC is likely to bring grief, strife, hatred, race riots, and chaos in your northern cities if this vicious agency is perpetuated and sanctioned by your votes.

"Do not forget that the returning servicemen know what this thing means, and they are going to call you to account next year—beginning with the primary. They are not going to wait until the general election.

"Do not forget that every businessman, every farmer, every professional man, and every other independent individual whose blood glows with the instinct of American liberty, is going to join these men, and those other patriotic forces that are fighting to save American institutions for which these

boys have been fighting and dying upon every battlefield in the world.

"If every man and every woman in the United States could just read the list of individuals that compose the personnel of this crazy FEPC, and its subdivisions throughout the country, I dare say there would not be enough of you left who vote for it, even if nominated in the primaries next year, to form a corporal's guard.

"For your information, and for the information of the American people generally I am going to read you the official personnel as it exists today. Remember, this list is taken from the official record. This is the group that wants to nose into and control every business in the United States. Remember, they can search the files and records of every business establishment in America where some disgruntled individual is willing to trump up a charge of discrimination. They can drag them all over the country and try them, and in that way destroy any ordinary business concern.

"The next thing they are going to try to do is get control of your schools and force their communistic henchmen into the schools and teach your children their subversive doctrines.

"Read these lists carefully, which, as I said, are taken from the official records here in Washington, and you will see that not 1 out of 10 on these rolls is a white gentile American.

"Committee on Fair Employment Practice, Washington, D. C., Office of the Chairman

Incumbent	Title	Race	Salary
Ross, Malcolm	Chairman	White	$8,000
Johnson, George M.	Deputy Chairman.	Colored	8,000
Hubbard, Maceo	Hearings examiner.	do	5,600
Bloch, Emanuel	do	White	5,600
Copper, Evelyn	do	do	5,600
Berking, Max	Assistant to Chairman.	do	3,800
Alexander, Dorothy	Secretary to Chairman.	Colored	2,600
Clifton, J. Jeanne	Secretary to Deputy.	do	2,000
Brooks, Mary	Clerk-stenographer.	do	1,800
Banting, Myra	do	White	1,800

"You will note that in this office of the chairman, consisting of 10 people, there are 5 Negroes and 5 white people, most of whom have foreign names. One of the whites is a stenographer, who receives the smallest salary of anyone on the list.

"Remember that the members of this group preside over the destiny of every business enterprise in America and are using their assumed powers to harass white Americans out of business.

"This is the organization Members of Congress are being asked to perpetuate by the passage of this bill.

"FIELD OPERATIONS

"Here is the Division of Field Operations:

"Field operations

Incumbent	Title	Race	Salary
Maslow, Will	Chief	White	$6,500
Mitchell, Clarence	Principal fair-practice examiner.	Colored	5,600
Davidson, Eugene	do	do	5,600
Beall, W. Hayes	Senior fair-practice examiner.	White	4,600
Mercer, Inez	Fair-practice examiner.	do	3,800
Rogers, Eleanor	Clerk-stenographer.	Colored	1,800
Saito, Otome	do	Japanese-American.	1,800
Thompson, Mildred	do	Colored	1,800
Cornick, Emma	do	do	1,620

"You will note that it consists of nine people—five Negroes, one Japanese, and three others—two of whom have records of affiliations with Communist-front organizations, according to the reports of the Dies committee.

"Imagine this group going about over the country riding herd on the white American businessmen of the Nation, telling them whom they shall employ, whom they shall promote, and with whom they may associate.

"It would be interesting, and probably enlightening, to check up on these people and see how many of them are native-born Americans.

"Members of Congress had better do this now, before they get caught in this trap, because this question of un-American activities is going to be an issue in every congressional district next year, beginning with the primaries.

"The people are not going to wait until the general election for someone who holds a commission as a result of the pernicious activities of Sidney Hillman and his gang to wrap the party cloak about him and shout to the people of his district that 'I am a Republican' or 'I am a Democrat.'

"More than 2,000,000 young men have already been discharged in this war, and they are organizing now to try to save America for Americans. They are going to read your records, and they are likely to ask you some very embarrassing questions when you get home.

"REVIEW AND ANALYSIS DIVISION

"Now look at this list and see who reviews all these records of racial discrimination when they come to Washington, and you will understand how the editor of the Dallas News felt and how other white gentiles feel, including Cecil B. DeMille, the great American movie producer, when they are harassed out of business.

"Here is the list:

"Review and Analysis Division

Incumbent	Title	Race	Salary
Davis, John A	Chief	Colored	$5,600
Lawson, Marjorie	Research analyst.	do	3,800
Golightly, Cornelius	Compliance analyst.	do	3,200
Hemphill, India	do	do	2,600
Coan, Carol	do	White	2,600
Davis, Joy P	do	Colored	2,600
Hoffman, Celia	Clerk-stenographer.	White	1,800
Spaulding, Joan	do	Colored	1,800

"You will note that it consists of six Negroes and two white people, one of whom is named Carol Coan and the other Celia Hoffman, a white stenographer receiving the lowest salary on the list.

"Now, if you sign the petition to bring out this bill or vote for this monstrosity, do not forget that when you get home those white American businessmen who help to sustain this Nation in time of peace and whose sons are fighting its battles in time of war are going to want to ask you some questions that you may not be able to answer.

"LEGAL DIVISION

"But if you want a real laugh, look at this Legal Division:

"Legal Division

Incumbent	Title	Race	Salary
Reaves, Frank D	Attorney	Colored	$4,600
Stickgold, Simon	do	White	4,600
Gordon, Jernevive	Clerk-stenographer.	Colored	1,800

"You will note that this so-called 'legal division' consists of two Negroes and a Simon Stickgold.

"INFORMATION DIVISION

"Now we come to the Information Division. If you want information about this outfit, write to this Division:

"Information Division

Incumbent	Title	Race	Salary
Bourne, St. Clair	Information specialist.	Colored	$3,800
Whiting, Margaret	Clerk-stenographer.	do	1,800

"You will note that it consists of two Negroes, one registered as an information specialist and the other as a clerk-stenographer.

"BUDGET AND ADMINISTRATION

"Now we come to the Budget and Administration Division. This Division not only makes up the budget but administers the regulations. Here is the list:

"Budget and Administration

Incumbent	Title	Race	Salary
Jones, Theodore	Chief	Colored	$5,600
Jeter, Sinclair	Assistant administrative officer.	do	3,200
Baker, Vivian D	Clerk-stenographer.	do	2,000
Jackson, Bosales A	Clerk-typist	do	1,620
Paynter, Minnie A	do	do	1,620
Hollomon, Irving	Clerk	do	1,440
Selby, Ralph R	Chief, fiscal	do	2,600
Ross, Sylvia B	Voucher auditor	do	2,000
Nelson, Otelia	Accounting clerk	do	1,620
Carpenter, Elizabeth	do	do	1,620
Brent, Pearl T	do	do	1,620

"This outfit, which is composed of 11 Negroes and no whites at all, not only makes up the budget for financing this aggregation, but it seems to have the power of administration. I hope you will read this list to your white businessmen, farmers, and ex-servicemen at home when you get back and ask for renomination in the primaries next year.

"MAIL AND FILES DIVISION

"Now here are the ones that have control of the mails and filing system:

"Mail and Files

Incumbent	Title	Race	Salary
Douglas, Lela	Chief, Mail and Files.	Colored	$2,000
Welch, Selena	Docket clerk	do	1,800
Gamble, Jessie	File clerk	do	1,620
Phillips, Rose	do	do	1,440
Reed, Charles	Messenger	do	1,380
Mitchell, Regina	File clerk	do	1,440

"You will note that this division is composed entirely of Negroes—six Negroes, and no whites at all. I wonder why they discriminated against the white race in setting up these two powerful branches of this most dangerous agency?

"REGIONAL OFFICE, NEW YORK

"Now, let us turn to the regional offices and see who is going to harass the business people back in the States. Here is the list for the State of New York:

"Regional office, New York

Incumbent	Title	Race	Salary
Lawson, Edward H.	Regional director.	Colored	$5,600
Jones, Madison S	Fair-practice examiner.	do	3,800
Jones, Robert G	do	do	3,800
Donovan, Daniel R	do	White	3,800
Irish, Miriam	Clerk-stenographer.	Colored	2,000
Asepha, Tillie	do	White	1,620
Schwartz, Sonia	do	do	1,620

"This is the list that is going to help Governor Dewey harass the white American businessman of the Empire State. You will note that it is composed of four Negroes and three white people. Please read the names of the three white people and see if you can figure out their antecedents.

"Businessmen of New York are going to have a hard time after this war without having all this communistic conglomeration to deal with, to say nothing of the one which Governor Dewey and his political henchmen have now heaped upon them.

"REGIONAL OFFICE, PHILADELPHIA

"Now, let us turn to Philadelphia, the birthplace of the Constitution—the City of Brotherly Love. At the risk of causing glorious old Benjamin Franklin to turn over in his grave, I read you the list:

"Regional office, Philadelphia

Incumbent	Title	Race	Salary
Fleming, G. James	Regional director.	Colored	$5,600
Greenblatt, Mildred.	Fair-practice examiner.	White	3,800
Manly, Milo A	do	Colored	3,800
Risk, Samuel R	do	White	3,800
Grinnage, Willard	do	Colored	3,200
Gorgas, Helen	Clerk-stenographer.	do	1,800
Klinger, Karyl	do	White	1,800
Brown, Grayce	do	Colored	1,440

"You will note that it is composed of eight individuals—five Negroes and three whites, Mildred Greenblatt, Samuel R. Risk, and Karyl Klinger.

"Don't you know there will be some brotherly love when that crowd gets going on the businessmen of the Philadelphia area?

"REGIONAL OFFICE, WASHINGTON, D. C.

"Now here is the regional office in Washington, D. C., the National Capital, where there has been so much persecution of white gentiles in the last few years. Here is the list:

"Regional office, Washington, D. C.

Incumbent	Title	Race	Salary
Evans, Joseph	Regional director.	Colored	$5,600
Houston, Theophilus.	Fair-practice examiner.	do	3,200
Kahn, Alice	do	White	2,600
Chisolm, Ruby	Clerk-stenographer.	Colored	1,800
Urback, Dorothy	do	do	1,620

"You will note it consists of four Negroes and Alice Kahn. Just what chance a white gentile will have with this group is entirely problematical, to say the least of it.

"REGIONAL OFFICE, CLEVELAND

"Now, let us move out where the West begins and take a look. Here is the list in the Cleveland regional office:

"Regional office, Cleveland

Incumbent	Title	Race	Salary
McKnight, William.	Regional director.	Colored	$4,600
Abbott, Olcott R	Fair-practice examiner.	White	3,800
Glore, Lethia	do	Colored	3,200
Kelley, Berniza	Clerk-stenographer.	do	1,620
Wasem, Edna	do	White	1,800

"You will note that this group is composed of three Negroes and two whites, Olcott R. Abbott and Edna Wasem.

"Don't you know the white people of Cleveland will enjoy being dominated by them?

"CINCINNATI REGIONAL OFFICE

"Cincinnati seems to be largely under the jurisdiction of the Cleveland office since it only has two people:

"Cincinnati

Incumbent	Title	Race	Salary
James, Harold	Fair-practice examiner.	White	$4,600
	Clerk-stenographer.		1,800

"DETROIT REGIONAL OFFICE

"Now, let us move on to Detroit, Mich. Here is the regional office for Detroit:

"Detroit

Incumbent	Title	Race	Salary
Swan, Edward	Examiner in charge.	Colored	$4,600
Sese, Doris K	Clerk-stenographer.	Japanese-American.	1,620

"You will note that it is composed of one Negro and one Japanese. I know the businessmen of Detroit are grateful for this consideration.

"I should like to hear some of the comments they will make to you gentlemen from Detroit when you get home next summer if you support this vicious measure.

"REGIONAL OFFICE, CHICAGO

"Here is a list of the regional office in the Windy City:

"Regional office, Chicago

Incumbent	Title	Race	Salary
Henderson, Elner	Regional director.	Colored	$5,600
Gibson, Harry H. C.	Fair-practice examiner.	do	3,800
Schultz, Joy	do	White	3,800
Williams, Le Roy	do	Colored	3,200
Zeidman, Penny	Clerk-stenographer.	White	1,800
Ingram, Marguerite S.	do	Colored	1,620

"You will note it is composed of four Negroes, Joy Shultz, and Penny Zeidman. I am told that a representative of this group went into the office of Swift & Co. and asked how many Negro members they had on their board of directors. The answer was, "We have no Negro members on our board of directors." Then the question came back, "Why haven't you?" This just shows what this supergovernmental set-up is driving at. They want to communize America and destroy everything which our glorious ancestors have left us and for which our boys are now fighting and dying all over the world.

"REGIONAL OFFICE, ATLANTA

"Here is a list of the Atlanta office:

"Regional office, Atlanta

Incumbent	Title	Race	Salary
Dodge, Witherspoon.	Regional director.	White	$4,600
Hope, John	Fair-practice examiner.	Colored	3,800
McKay, George D	do	White	3,200
Chubb, Sally	Clerk-stenographer.	do	2,000
Ingram, Thelma	do	Colored	1,800

"You will note that it consists of two Negroes and three whites; the most important post in this office, that of examiner, is held by a Negro. I wonder how the people of Georgia enjoy the domination of this group. I may have more to say about them later.

"REGIONAL OFFICE, KANSAS CITY

"Here is the list of the Kansas City office:

"Regional office, Kansas City

Incumbent	Title	Race	Salary
Hoglund, Roy A	Regional director.	White	$5,600
Ormabee, Eugene	Fair-practice examiner.	do	3,800
Jones, Mildred	Clerk-stenographer.	Colored	1,620
Schlien, Helene G	do	White	1,620

"You will note that this office force consists of three whites and one Negro. You can read the list of whites yourself and then judge how many of them really represent the people of that area.

"ST. LOUIS REGIONAL OFFICE

"Here is the list of the regional office personnel at St. Louis:

"St. Louis

Incumbent	Title	Race	Salary
Theodore Brown	Examiner in charge.	Colored	$3,800
Morris Levine	Examiner	White	3,200
Armatha Jackson	Clerk-stenographer.	Colored	1,620

"You will notice that it consists of two Negroes and Morris Levine. Just how they came to select these particular individuals to preside over the destiny of the white businessmen of the great State of Missouri I cannot understand.

"REGIONAL OFFICE, DALLAS, TEX.

"The members of the regional office at Dallas are as follows:

"Regional office, Dallas

Incumbent	Title	Race	Salary
Castenada, Carlos	Regional director.	White	$4,600
(Vacancy)	Fair-practice examiner.		3,200
Gutleben, Willetta	Clerk-stenographer.	White	1,800

"You will note there is one vacancy. Last year that position was held by a Negro, namely, Roy V. Williams. The other two members, Carlos Castenada, the regional director, and Willetta Gutleben seem to be in charge of the office at the present time. This is the regional office that attacked the Dallas News last year for carrying an advertisement for a Negro janitor. This fellow Castenada, the director, held the same position that he holds now. If this set-up is made permanent, then I presume the rest of the white American businessmen in Texas may expect to be harassed just as the Dallas News was.

"REGIONAL OFFICE, NEW ORLEANS

"The regional office at New Orleans consists of the following members:

"Regional office, New Orleans

Incumbent	Title	Race	Salary
Ellinger, W. Don	Regional director.	White	$3,800
Morton, James H	Fair-practice examiner.	Colored	3,200
Ronning, Evelyn	Clerk-stenographer.	White	1,800

"You will note that there are two whites and one Negro in this office. As the Negro is the fair-practice examiner, just what the decent people of Louisiana may expect at the hands of this outfit is something to contemplate.

"REGIONAL OFFICE, SAN FRANCISCO

"The San Francisco office consists of the following individuals:

"Regional office, San Francisco

Incumbent	Title	Race	Salary
Kingman, Harry L.	Regional director.	White	$5,600
Rutledge, Edward	Fair-practice examiner.	do	4,600
Ross, Bernard	do	do	3,800
Seymour, Virginia	Administrative assistant.	do	2,000
Marzen, Jewel	Clerk-stenographer.	do	1,800

"This is the only office we have found yet that consists entirely of white (?) people. Just what the background of each one of them is I am unable to say.

"LOS ANGELES REGIONAL OFFICE

"The Los Angeles regional office consists of the following:

"Los Angeles

Incumbent	Title	Race	Salary
Hunt, A. Bruce	Hearings examiner.	White	$5,600
Brown, Robert E.	Fair-practice examiner.	Colored	3,600
Lopez, Ignacio	do	White	3,800
Vetter, Vera G.	Clerk-stenographer.	do	1,800
Lerna, Marie	do	do	1,620

"You will note that there are four whites and one Negro in this office, the Negro being the fair-practice examiner. I do not know what consideration the white businessmen of the Los Angeles area are receiving at the hands of this group, but from what I can hear there is considerable gnashing of teeth over the situation.

"Mr. Chairman, this FEPC is a supergovernment of commissars, with more power for evil than any other agency that has ever been created in this country. If Congress should ratify it and make it the law of the land, then we will have sacrificed and destroyed that sacred freedom for which our brave men are now fighting and dying on every battle front in the world.

"We have no right to pass such a drastic, revolutionary measure that literally changes our way of life, as well as our form of government, while these boys are away from home in uniform, fighting to sustain American institutions.

"As I said before, we are going to carry this battle against such un-American activities into every congressional district in the United States next year, in the primary, so that no one can crawl behind the party cloak and claim immunity at the hands of any segment of our people.

"This is a battle for the survival of free constitutional government, for the survival of the American way of life, for the survival of free enterprise, for the survival of American liberty itself.

"It is a battle to save America for Americans."

Pensions and General Welfare

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from one of my constituents, Mr. E. B. Clark, of Portland, Oreg.:

PENSIONS AND GENERAL WELFARE

Reference is made to the heading "Old-age pension plan maneuvered to stir excitement," on page 11 of the Oregon Journal, November 25, 1949, from Washington, D. C. This article shows without doubt that the question of pensions has been the subject of much diversified thinking by not only legislators but by all peoples, and is a subject of much concern. A workable and adequate pension plan is much desired and very necessary, that will cover everybody.

It is suggested, therefore, that a national nonpyramidal retail sales-tax plan of 5 percent be established, for minimum cost of living, of $75 per month, with practically no exemptions, for all retired at age 65, or earlier when physically handicapped and health conditions makes retirement necessary, including everybody, both rich and poor. To this should be added funds from all estates left without wills or heirs, plus opportunity for the philanthropic-minded to add large or small amounts thereto, in their wills, also interest on monthly balances at the highest Government rates paid for money. Under such a system, all would pay, and therefore all should participate in the same payments at age 65.

It is understood that over half the States now have adopted retail sales-tax systems of 3 percent and under (mostly under), which are very popular, but inadequate, which could be eliminated if the higher rate were made universal, and pensioners could live in any State desired without question.

The retail sales tax is probably the fairest of all taxation systems and most economical to administer, and by making payments low enough, yet adequate for minimum cost of living, no requirement to expend full amount each month would be necessary.

If such a pension bill were enacted by the Congress, the minimum cost of living would be provided for everyone at 65, to which all would contribute at the same percentage rate, and the same monthly payments would be distributed to all pensioners entitled thereto, which, no doubt, would eliminate depressions and unemployment, as everybody would either have a job or a check each month to cover actual living costs.

Employers and workmen of all classes could then provide, as they might severally determine, such additional private pension systems as desired, through unions, civil service, associations of all kinds, etc., for the basic uniform pension would have already been adopted. It would not necessarily interfere with present private systems and service pensions.

When the constantly accumulating general-welfare fund exceeded the need for pensions, allocations should be made therefrom to the present fast-growing voluntary-contributing Blue Cross group system for hospitalization and medical and dental care and other such State and local groups now sponsored and administered by the medical profession, for the constant and gradual enlargement of that valuable service, making it all-inclusive for pensioners and others whose modest incomes are insufficient to join the groups voluntarily.

Such a universal pension system, operating free from politics, with an immense fund constantly revolving, would have far-reaching and beneficial results in stabilizing our whole economic system, and would free us entirely from fear and want, and change our thinking to peace and plenty, giving the world a practical example of what can be done under free enterprise.

E. B. CLARK.

Statement on Behalf of United States Wine Industry

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Philo Biane, Fruit Industries, Ltd., San Francisco, Calif., on behalf of the United States Wine Industry:

STATEMENT BEFORE THE SENATE INTERSTATE AND FOREIGN COMMERCE COMMITTEE ON S. 1847, JANUARY 12, 1950

My name is Philo Biane, in charge of wine production at Fruit Industries, Ltd., whose main offices are at 900 Minnesota Street, San Francisco, Calif.

Fruit Industries, Ltd., is a substantial grower cooperative producing wine from the grapes of approximately 1,200 growers in California and is a member of the Wine Institute. Originally Mr. Walter Taylor, manager of our firm, and chairman of the board of the Wine Institute, the trade association for the California wineries, had hoped to be able to appear before you but was unable to make the trip east at this time. I am, therefore, appearing in his place.

I am appearing not only on behalf of the Wine Institute and all the California wineries, but also on behalf of the 18 other wine associations making up the Wine Conference of America which represents practically the entire trade in American and imported wines in the United States.

When hearings on advertising were held before this committee on April 1948 on S. 265, a substantial amount of testimony was introduced on behalf of the United States wine industry which appears at pages 92–119 and 205–208 of the printed transcript. Consequently, in this appearance we do not wish to burden the committee by repeating too much of the data we submitted at that time and would appreciate permission to incorporate the 1948 testimony by reference without reprinting it in this record. We hope, however, the 1948 testimony will receive the committee's full consideration.

Briefly summarized, the 1948 testimony established in detail the following points:

1. Advertising by the wine industry has, with rare exceptions, been dignified and in good taste so that there is no justification

whatsoever for punitive legislation in this field.

2. The majority of families throughout the United States enjoy the use of wine as an accompaniment to food or as a moderate beverage for special occasions, and wine advertising has been primarily directed to this group of consumers to better acquaint them with the proper and moderate uses of our products.

3. The suppression by law of truthful information to the consumer on the proper and moderate uses of wine would not be in the public interest but would, on the contrary, actually foster the abuse rather than the proper use of our products.

4. Restrictive legislation in this field would, without any real justification whatever, ruin thousands of grape growers and wine producers distributed through 13 States, destroy millions of dollars worth of permanent vineyard investments, and adversely affect the employment and livelihood of many people—a body blow to an industry that, since national prohibition, has rapidly reestablished itself as a major factor in our agricultural economy.

We do not intend to burden the committee with any further discussion of the 1948 testimony because it has already been printed and also because no one, to our knowledge, has seriously attempted to controvert the points we established.

We have always felt that our advertising has been in good taste and generally acceptable to the public, and the 1948 hearings tended to confirm us in this view.

Our trade, however, has always recognized its advertising responsibilities, and after the 1948 hearings we voluntarily reviewed our advertising and analyzed it for any criticisms that might be directed at it. We also reviewed much of the proposed advertising that had been suggested but had never actually been printed. We found that in a number of instances proposed, unpublished advertising did not meet the canons of good taste generally accepted in our trade. We believe this was due to the fact that, after the war, many of the advertising agency personnel were new to the business. As a result, it quite frequently happened that advertising themes very common for many commodities distributed in the United States were being copied in the preparation of our wine advertising. There was nothing illegal about these themes or these advertising techniques, but they were quite at variance with what we had been doing and with what the wine industry as a whole felt was desirable.

We, therefore, thought that some statement should be made outlining the objectives of wine advertising which could be used as a guide for merchandisers and their advertising agencies and also by the printing and lithographic trades. Our view was that where advertising might be considered in questionable taste, its final publication was likely to be due largely to the fact that money had been invested in its preparation. We felt practically all difficulties resulting from poor taste could be avoided if some guide to proper preparation were furnished.

The preparation of this guide was done by the 19 associations forming the Wine Conference of America. We first met with Deputy Commissioner Mealey, of the Alcohol Tax Unit, who was of great assistance to us, particularly in furnishing samples of proposed, unpublished advertising and by making available the technical advice of his advertising staff. Further conferences were held within the various trade groups and with advertising experts. Finally, on April 8, 1949, the Wine Conference issued the document entitled "Statement of Principles for Advertising in the Wine Industry." This statement was subscribed to, through these 19 associations, by practically the entire wine trade in the United States.

This advertising code has been furnished to all individual members of these associations for redistribution to their sales personnel and to their advertising agencies. The Better Business Bureau has included it in its "Do's and Don'ts for Advertising." It has been made available to all Federal and State control agencies.

The code has received commendation wherever it has been distributed and, more important, it has accomplished the purposes for which it was designed. Since its adoption was voluntary, this may seem strange. Actually, it is not. Existing basic Federal and State laws dealing with advertising are stringent. Enforcement officials are in constant contact with industry members and their advertising agencies. Through the operation of the Federal and State licensing systems, the industry is highly integrated not only at the producer level, but also down through the wholesaling and retailing levels. Our industry trade associations are active in assisting their members in preparing public relations programs. On the whole, it would be more than surprising if the advertising code did not work.

We feel very strongly that no additional law is necessary or even desirable. The combination of basic law coupled with voluntary group action is becoming more and more common. In medieval times no one questioned the royal right to regulate the personal habits of the subject, and much of this concept passed into statutory law during the Reformation and during the earlier history of this country. But we believe almost everyone nowadays realizes not only the undesirability but also the basic unfairness of trying to use the criminal law to govern human conduct in phases of activity which are not even remotely criminal in the minds of most men.

What constitutes good taste, good manners, and just plain common sense in dealing with your neighbors, is really the only thing that is being discussed before this committee. Habits, customs, and basic thinking differ widely among our large population, both geographically and at various economic levels. Again, we believe it is basically unsound to use criminal law in dealing with activity in any field such as this where there is no question of deception or fraud—matters which are already fully and stringently covered by Federal and State law. This view of ours has been expressed by many eminent jurists, and we think it was aptly put by William Howard Taft before the Pennsylvania Bar Association in 1906 (12 Rep. Pa. Bar Ass'n 239, 240–245), when he gave his view of the function of law in part as follows:

"It is to offer equal opportunities for the improvement of the people rather than to command it by positive law, to be enforced by threatened or actual punishment. It is to furnish the means of maintaining justice, and then to let individualism have its sway in working out character and in adding to the sum of human happiness. The theory that by legislation the State can successfully command people to be righteous in the higher sense is at the bottom of much unsuccessful and obsolete legislation that stands as a monument to the obstacle that hearts overflowing with enthusiastic love for their race but without practical judgment have offered to real progress."

With the permission of the committee, I would like to introduce at this point the wine industry's Statement of Principles already mentioned, and which we think reflects in principle the line of thought just referred to.

On the first page of this advertising code there are three paragraphs explaining its purposes.

Then follow nine basic points covering good labeling and advertising of wine. The first eight points deal with the subject matter of good advertising regardless of media. The ninth point deals with advertising media themselves. This advertising code is attached as an appendix to my statement and I will not read it in full unless the committee desires me to do so.

In considering section 9 of the code dealing with advertising media, serious consideration was given to the use of radio and television. Since radio and television are generally accepted media for the transmission of information, including advertising, we believe their use is perfectly proper for the transmission of information on wine. We realize that certain types of radio and television commercials, based on the technique of the old-time circus barker, are obnoxious to a great many people regardless of the commodity advertised. We, therefore, provide in our code that the same good taste shall apply to these media as to others; namely that the advertiser shall avoid irritating the sensitivities of the normal consuming public and that commercials should be so prepared as to promote the proper and temperate use for which wine is intended, not to suggest that wine should be used for any but temperate purposes and not to bring wine into disrepute with the consuming public.

With the proper type of program we feel that we can contribute to the information and pleasure of the normal consuming public. In the last few months we have been experimenting with the visual system of giving information that television affords. The industry, through the Wine Advisory Board of the State of California, has sponsored cooking demonstrations showing the use of wine in the kitchen and at the table as a proper accompaniment to food. This program has appeared between 8:30 and 9 in the evening in the northeastern area of the United States and it has been highly appreciated by the many householders who really want to know how to cook with wine and enjoy it with their meals.

As to radio advertising by individual companies, I think there is one popular misconception about radio and radio advertising that should be mentioned. When commercial radio first started there were relatively few stations. Receiving sets were bought on their ability to get distance. Today, however, the situation has radically changed. The number of AM stations has more than doubled compared with before the war, and with the addition of FM and television stations, the total number of broadcasting outlets has tripled compared with prewar. Listening has become local and highly selective. Residents of the Washington area, for instance, normally listen only to Washington stations and rarely to stations as close as Baltimore. Programs prepared in Baltimore are prepared for the Baltimore listening area and not for the listeners in Washington who listen to the Washington stations. Furthermore, the increase in number of broadcasting outlets has resulted in a very substantial increase in the variety of programs available even within any given listening area and listeners can and do select the programs which meet their individual tastes. The fact that broadcasting has become local and selective as to audiences means that the advertiser today can and does select the marketing area in which he wishes to make a particular kind of advertising appeal and that he also selects the particular audience in that area whom he wishes to reach. In other words, it is perfectly possible for any member of the wine industry to handle radio and television in such a way as to be in conformity with the customs and habits of the people in any particular marketing area and to give those people who would normally be interested in wine the information they desire. Consequently, we feel that radio and television have a perfectly proper place in

the advertising of our products and should not be discriminated against by legislative action.

We feel very strongly that there is no need for further legislation. We believe we have demonstrated that it is perfectly possible to cover questions of good manners and good taste by voluntary group action. Further, we should like to reiterate our previous statement that the passage of S. 1847, or of any bills of a similar nature, would have the effect of suppressing desirable information concerning the proper and temperate uses of wine with the consequent effect of leading to the abuse of wine rather than to its proper use.

One last thing. This is not stated by way of complaint, because we recognize that some people have a different attitude toward alcoholic beverages than do most of the people in this country, and also that they have a right to their views. Nevertheless, this is the third hearing on this subject that has been held in the past 4 years and the proposals that have been made for legislative action all tend toward the destruction of the grape-growing industry in the United States. This is serious business for us. The retail value of our product is in the neighborhood of $500,000,000, yet the total advertising bill for our industry is only about $5,000,000. Five hundred million dollars implies a lot in the livelihood of about 300,000 retail establishments, 6,000 wholesale establishments, and almost 1,000 wineries located in 13 States.

Grape growing is one of the most important agricultural industries in the country. In California, which produces 85 percent of the wine consumed in the United States, wine provides an outlet for approximately one-half the total crop. This involves over one-half million acres of vineyard furnishing a livelihood for 50,000 farmers in that State.

The wine industry is a substantial part of the agricultural economy of the United States, and we believe we have just as much right to furnish truthful information about our products to those of the public who want to use them as any other industry in the United States. We believe that our conduct in this respect has standards as high as those of any other industry, perhaps a great deal higher than those for some commodities which are not under discussion here today.

May I here repeat in substance what I have already said—wine remains a natural product and a recognized part of the diet of most civilized men. We have no desire to, nor have we ever sought to force the use of our product on anyone. But the wine industry of this country, on whose behalf I appear today, feels its right to continue the normal and natural pursuit of its business should not be obstructed by the wholly unjustifiable types of legislation that have been proposed to this committee.

We think we have done a good job in an admittedly controversial field. We should like to continue as we have been doing. We hope that the Congress will not take any action that would jeopardize an industry which, despite the havoc created by national prohibition, has rapidly established the United States as one of the major wine producing countries in the world with products that are a credit to it.

STATEMENT OF PRINCIPLES FOR ADVERTISING IN THE WINE INDUSTRY ISSUED APRIL 8, 1949, BY THE WINE CONFERENCE OF AMERICA

The purposes of this statement of principles are:

To maintain a high degree of public respect for wine as a temperate mealtime beverage used primarily in the home; to promote the uses for which wine is most particularly suited; and to present wine as an accompaniment to food, as an appetizer, as an appropriate and moderate beverage for social occasions and as a contribution to gracious American family and social living.

To furnish a guide of traditionally proper practices so as to obviate any usages in labeling and advertising that would injure the public's respect for the industry and its products.

To furnish a positive declaration of the industry's right to advertise and promote wine and its uses along traditional, ethical lines.

1. Good advertising and labeling of wine tend to promote the proper and temperate uses for which wine is intended; do not suggest that wine should be used for any but temperate purposes; and do not bring wine into disrepute with the consuming public.

2. Good advertising and labeling of wine include references in good taste to the generally accepted use of wine at neighborly and friendly gatherings, restaurant dining, weddings and anniversaries, and at festivities and celebrations such as Thanksgiving, Christmas, Easter, the New Year, Father's Day, and Independence Day, but do not associate wine or its use with days set aside to commemorate occasions of deep memorial significance such as Memorial Day and Armistice Day.

3. Good advertising and labeling of wine depict the proper and moderate use of wine on all family occasions including those when children are incidentally present, but do not permit pictorial representation of the consumption of wine by children, or illustrations or representations generally considered as appealing primarily to children, such as Santa Claus as historic fairy tale characters.

4. Good advertising and labeling of wine traditionally include the association of the product with friendly and recreational activities but do not suggest that wine is used by athletes as such nor allow any inference that the use of wine aids athletic prowess.

5. Good advertising and labeling of wine traditionally have included illustrations of the use of wine by the members of both sexes but do not permit any exploitation of the human form in an immodest, vulgar, or sensuous maner.

6. Good advertising and labeling of wine do not associate revered persons of public prominence, living or dead, with the brand or products of any company in such a manner as to imply the use or endorsement thereof. This does not require the abandonment or limitation of any brand names in use on the date of the adoption of this statement of principles.

7. Good advertising of wine brands traditionally utilizes endorsements and testimonials only from persons who have had actual experience in using or serving the product.

8. Good advertising and labeling of wine traditionally have included allusions to the historic development of the wine-growing industry in connection with the establishment of early religious communities, and allow the use of established and recognized illustrations, trademarks, brands, type designations, and names of recognized wine districts which may be associated with religious origins or development, but do not otherwise include, except for sacramental wines and the production for sale of brands of wine by religious orders or organizations, the association of any brand of wine or its use with contemporary religion.

9. Good advertising of wine includes the utilization of all types of advertising media, such as newspapers, magazines, radio, billboards, television, signs, displays, and other media customarily used by other industries. The choice of advertising media, insofar as practicable, should avoid irritating the sensitivities of the normal consuming public, e. g., it avoids advertising in those portions of publications designed primarily for children, and it avoids the use of sound trucks and skywriting.

The Wine Conference of America consists of the following associations of the wine industry: American Wine Association; Associated Vintners of the Middle West; Bottle Fermented Champagne Producers, Inc.; Council Bluffs Grape Growers Association; Finger Lakes Wine Growers Association; Maryland Institute of Wine and Spirits Distributors, Inc.; Michigan Wine Institute; National Association of Alcoholic Beverage Importers, Inc.; National Wine Association; Ohio Grape and Wine Producers Association; Ohio Grape Growers Institute; Ohio Wine Dealers Association; North Carolina Association for Wine Control; Texas Wine Association; Vermouth Institute; Washington Wine Council; Wine Association of Pennsylvania; Wine Distributors of Northern California; Wine Institute.

H. A. CADDOW,
Secretary.

Back to the Graveyard

EXTENSION OF REMARKS
OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of January 16, 1950:

BACK TO THE GRAVEYARD

Almost the last word spoken in the House of Representatives last year was a well-merited eulogy of Congressman EBERHARTER for having sponsored the notable reform which had enabled the House to function as a legislative body free from dictation. With the aid of a memorandum prepared by the Legislative Reference Service, Congressman HOLIFIELD pointed out that the curb Mr. EBERHARTER had designed for the Rules Committee had saved four bills, possibly five, from the committee's legislative graveyard. In the case of the anti-poll-tax and rivers and harbors bills, the sponsoring committee chairmen had gone to the floor after being denied a rule and induced the House to take the measures from the Rules Committee and pass them. The threat of using the new rule forced the balky Rules Committee into action on the slum-clearance and minimum-wage bills and probably on the vitally important social-security bill.

In spite of this clear-cut demonstration that the new 21-day rule is essential to prevent minority dictation in the House, the Rules Committee has voted 9 to 2 for restoration of its former arbitrary powers. It is not satisfied to serve the House as "traffic director," with limited powers to delay bills approved by the legislative committees. It seeks to regain the power of erecting impassable road blocks against any bill that its members do not like. That is a power which, of course, should not be entrusted to any lesser body than the House itself.

The argument always made for a dictatorial Rules Committee is that it is needed to save the House from passing unwise legislation. Such an argument carries a strong appeal. Many citizens will agree with the Rules Committee, for example, that the rivers and harbors bill taken out of its hands last year was a pork-barrel measure and that the anti-poll-tax bill, which it tried to defeat, is unconstitutional. This newspaper is unalterably opposed to pork-barrel and unconstitutional bills, but we do not believe that it is safe to entrust 12 Congressmen with the power to say what measures approved

by regular legislative committees are too unwise to be submitted to the House for a vote. That is not representative government but oligarchy.

There are other methods of preventing the House from stampeding for unsound vote-getting measures. For many years the House has been urged to set up an effective majority policy committee which, in consultation with the President and a similar committee in the Senate, would shape a legislative program each year and then make every effort to hold members of the majority party to that program. It is unquestionably true that strong leadership is needed in an unwieldy body such as the House. But let it be leadership through the formulation of party programs and use of the caucus to keep members in line with those programs if necessary. The responsibility for what the House does should rest squarely upon the party in control of it, and that party, of course, is answerable to the people. If it indulges in a spending debauch, the voters will know what to do about it.

But for the House to slip back into the undemocratic practice of blocking issues that a little handful of Members deems too hot to handle would be a tragic retrogression. Instead of authorizing the Rules Committee to squat athwart the legislative highway once more, we think the House ought to rebuke its rule makers for not maintaining a smooth and orderly flow of bills to the floor.

Best-Kept Secret—Hidden Federal Tax Load in United States

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John Beckley, from the Des Moines Sunday Register of December 18, 1949:

BEST-KEPT SECRET—HIDDEN FEDERAL TAX LOAD IN UNITED STATES

(By John Beckley)

Not one American in a hundred realizes that total tax collections now exceed the wartime peak. And not one in a thousand knows that hidden taxes—included in the price of everything he buys—will exceed $700 per family this year. In fact, the best-kept secret in the country today is the size of the tax load.

In 1945, when the United States was fighting a global war, with 11,000,000 men under arms, Federal, State, and local governments collected $52,500,000,000 in taxes. This year they are skimming off $55,000,000,000—25 percent of the national income, and more than the entire national income in 1932, 1933, or 1934.

To a modern Rip Van Winkle, rousing from a 20-year snooze, the sight of the Federal Government alone spending $43,500,000,000 a year would be unbelievable. In 1929 the total United States budget was about $3,000,000,000. The Government spent less than two-thirds of the personal income of the residents of California. Last year Federal expenditures were roughly equal to the entire income of all persons west of the Mississippi.

FROM 600,000 TO 2,000,000 EMPLOYEES

Twenty years ago the Federal Government had fewer than 600,000 civilian employees. Today more than 2,000,000 are on the pay roll. And to conduct its affairs the Government occupies 340,500,000 square feet of floor space—equal to 170 Empire State Buildings 102 stories tall.

To bankers and businessmen, Government spending figures conjure up pictures of national bankruptcy and the death of private enterprise. But the average citizen has no such fears.

Today there is a widespread belief that Government spending is essential to continued prosperity. Furthermore, people are in favor of spending money to promote the general welfare. And they are supremely confident that the United States is rich enough and powerful enough to finance any welfare program it sees fit to undertake.

But the most comforting thing is the belief that someone else is footing the bill—probably big business and people with big incomes. The average citizen still has no concept of the size of the hidden taxes he pays every day of his life.

TAXES PASSED ON TO THE CONSUMER

It is not suprising that we have little idea of what Government spending is actually costing us. Only half of the Federal Government's revenues and less than 10 percent of State and local receipts come from direct taxes on personal incomes. The rest comes mostly from taxes on business organizations.

And these taxes, in turn, are passed along to the consumer in the form of higher prices. As a result, for most people (those with incomes of $5,000 or less, which includes better than 9 out of every 10 taxpayers—the hidden tax burden is heavier than the income tax.

Tax snowball: Taxes accumulate all along the way from raw material to finished product on the store shelves. And at that point many States and cities add a retail sales tax. The Tax Foundation, a research organization which studies Government spending and taxes, has discovered 150 taxes levied on the manufacture and sale of a woman's hat, 116 taxes on a man's suit of clothes, 151 on a loaf of bread, and at least 100 on a dozen eggs.

There are about 11½ cents of taxes in the cost of a pack of cigarettes, $2.06 taxes on a $3.75 bottle of whisky, and $300 to $500 on a $2,000 car. That is one big reason, say auto makers, why a $1,000 car today is out of the question.

This year the average family will pay $69 in liquor taxes, $45 on tobacco, and $49 in the cost of gasoline. Property taxes—some paid directly, others indirectly in rents and prices—amount to $177 per family. Sales taxes will take another $48.

And corporation income taxes—which the consumer also pays in the form of higher prices—will take a whopping $317 out of the average family's purse.

Some economists do not believe that all business taxes, especially the corporation income tax, come out of the consumer's pocket. But the evidence is impressive. G. Sidney Houston, Minnesota banker, points out that in the 3 prosperous years 1927–29, net income after taxes of corporations which reported a profit amounted to 7.45 percent of gross income.

CORPORATION TAXES INCREASED 3½ TIMES

Since then there has been a three-and-a-half-fold jump in corporation income tax rates; hundreds of other business taxes have also been boosted. Yet in 1946, despite price control, profits after taxes were 6.89 percent of gross income. "It seems rather clear," says Houston, "that corporations did everything in their power to pass on to their customers practically all tax increases."

Last week Newsweek asked leading auto manufacturers a loaded question: "If corporation income taxes were reduced by one-half, would you cut the price of automobiles?" One corporation declined to answer, but from the others came a unanimous yes. Ernest Breech, Ford executive vice president and an old hand at cost accounting, reflected a typical businessman's viewpoint:

"Certainly they would cut prices. In the long run, every corporation must price its products so as to make a reasonable return after taxes in order to survive and grow. In the final analysis, income taxes are just as much a cost of doing business as pay roll."

And if a drop in corporate income taxes would bring a drop in auto prices, who, then, is bearing the cost of present taxes? The finger points directly at the consumer.

TAX FACTS OF LIFE

There is nothing vicious about this passing of taxes to the consumer. It is simply a fact of economic life. It must be recognized that business organizations, by their very nature, are merely tax collectors, not taxpayers. The cardinal rule of every business—the purpose of any profit-making organization—is to earn a fair return on the money invested.

To survive, it must pay its costs and have a fair profit left over. And taxes are just another item of cost. If income taxes take half of a corporation's profits, then it must set its prices high enough to earn twice as much before taxes in order to have the same return.

Death by taxes: If business could not pass taxes along to the consumer, the entire system would be automatically destroyed. In the case of many corporations, the total tax load already exceeds their total profits. Last year the giant American Telephone & Telegraph Co. paid $292,000,000 in taxes. Its profits after taxes amounted to $229,000,000. General Motors paid taxes of $694,000,000, compared with profits of $440,000,000.

If taxes on corporations were completely removed, State public-utility commissions would force A. T. & T. to reduce prices until its profits were probably not much greater than they are today. Public opinion and competition would cause GM to do the same.

If the present tax load were then reimposed—and could not be passed along to the consumer—profits would be completely wiped out.

INFLATION

Besides income taxes and hidden taxes, the average family bears still another cost of big government spending—inflation. During a depression, deficit spending does not necessarily cause higher prices. Some economists maintain it may actually cause more goods to be produced. But when production is running full blast, deficit spending merely increases the demand for a limited supply of goods. The $5,500,000,000 Federal deficit this year has forced everyone to pay higher prices. Inflation is a form of hidden taxation which is almost impossible to measure. Yet it is just as real as many other forms of taxation.

PROSPERITY UNDER A SMALL BUDGET

Is huge Government spending essential to prosperity? The idea that it is springs directly from our experience in the great depression of the thirties. We never did get rid of unemployment until the Government ripped its purse strings wide open to fight the Second World War.

Yet, somehow, in the 150 years preceding the thirties, we managed to prosper with very light taxes and a small Government budget.

And Government spending dropped from a wartime high of $99,000,000,000 in 1945 to $37,000,000,000 in 1948—a cut of nearly two-thirds—and we still enjoyed full employment. There is good reason to believe that we could cut it even farther with equally good results.

Some believe that we must support a certain number of people in the Government because there aren't enough jobs to go around. But the money the Government is now spending could easily be spent by the people from whom it is taken—by lower-income groups for milk, meat, and clothing; by

middle-income groups for homes, furnishings, insurance, and college educations; and by higher-income groups for investment in new tools for industry. Spent by individuals, the money would create productive jobs for those now on Government pay rolls.

MANY SMALL BUSINESSES HUNGRY FOR CAPITAL

Another hang-over from the thirties is the idea that big incomes must be taxed away or they will lie idle. At the time it might have been true, but today thousands of small businesses are hungry for capital. Big corporations which would like to sell stock to expand their operations cannot find enough buyers. And no kind of spending benefits the Nation more than spending which increases its ability to produce.

QUESTIONS

The objectives of Government spending are admirable, much of it is absolutely essential. But the people who foot the bill have a right to ask, Is the money being spent as efficiently and economically as possible?

We must spend huge sums for rearmament, but questions arise: Is the Army exercising reasonable care when it can locate only 16,000 of 25,000 tanks it supposedly had on hand at the end of the war? Is there any reason why, when the average stay for a tonsillectomy in a private hospital is 1.4 days, Army personnel on active duty should take 16.1 days?

And is it necessary that the Army put a simple order for buying onions through 288 separate steps, as discovered by an investigator for the house appropriations committee? Messengers handled the order 110 times in sending it through 18 subdivisions.

Aid to veterans is important, but should the Veterans Administration Insurance Service have a work load of only 450 policies per employee?

(That of private insurance-company employees is 1,762, 4 times as heavy.)

Ailing veterans need help, but how far should the Government go? Eighty-three out of every 100 veterans admitted to Government hospitals are suffering from ailments having no connection with war service.

The Government must keep records, but should it use 18,500,000 cubic feet of storage space—equivalent to six Pentagon buildings—to store records, especially when 35 percent of them are worthless? Should the State Department take as many as 35 steps to process a letter?

THIRTY DIFFERENT AGENCIES IN LOAN ACTIVITIES

Does the Government really need 30 different agencies engaged in making, guaranteeing, or insuring loans?

Does it require 75 different bureaus and agencies with a major interest in transportation problems, at least 15 dealing with public housing and no less than 65 engaged in statistical work?

The Hoover Commission, which studies the functioning of Federal Government, estimates that $3,000,000,000 to $5,000,000,000 a year could be saved simply through more efficient Government organization without eliminating any present functions.

WHO PAYS THE TAXES?

Can the average citizen shift much of his present and future tax load to someone else? The chances are relatively nil. The rich have already been soaked. And few people realize that less than 6 percent of the national income goes to people who make $25,000 a year or more.

The Joint Committee on Internal Revenue Taxation estimates that at a national personal-income level of $208,000,000,000 people with incomes of $50,000 a year or more get only $4,470,000,000. Sixty-two percent of this already goes into Federal income taxes, with State and local governments taking another slice. People with incomes between $25,000 and $50,000 a year get $5,000,000,000, with 38 percent going into Federal income taxes. With United States industry panting for more equity capital, heavier taxes on these groups will merely mean smaller production in the future. And the tax yield will be small.

Next month, when President Truman presents the budget to Congress, the average citizen might well scan it with one important question in mind: Who can spend this money to greater advantage, the Government or me?

Congress May Not Scratch Truman Program's Surface

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gould Lincoln, from the Washington Sunday Star of January 15, 1950:

CONGRESS MAY NOT SCRATCH TRUMAN PROGRAM'S SURFACE—EVEN PRESIDENT'S CAPITOL LIEUTENANTS SEE NO CHANCE OF PUTTING THROUGH LABOR, FARM, OR COMPULSORY HEALTH MEASURES

(By Gould Lincoln)

We have now seen everything. President Truman, in his state of the Union message to Congress, has added the last great group—business—to those whom he promises milk and honey—labor, farmers, and minority racial groups. In effect he told American businessmen that if they would go along with him and his program, their gains would be tremendous.

Mr. Truman pictured American production—and through production American wealth—in the year 2000 as four times as great as it is today. These gains, he told business, "cannot be achieved unless our businessmen maintain their spirit of initiative and enterprise and operate in a competitive economic system." He added that Government has its responsibility to help create the conditions necessary to permit growth. Foremost among these conditions, he said, is the need for a fair distribution of increasing prosperity among all the great groups of our population who help to bring it about. He mentioned business first in the prepared text of his message, but in delivering it, he shifted to labor, with business second and agriculture third.

The President went on: "Businessmen must continue to have the incentives necessary for investment and for the development of new lines of enterprise." Inferentially, he promised businessmen all of that—and incentives mean profits.

But in promising great things to business, Mr. Truman did not forget to renew and increase his pledges to labor, to farmers, to the racial groups—and, indeed, to everyone in the country. Included in his legislative program, as revealed in this message to Congress, are repeal of the Taft-Hartley labor law, enactment of the Brannan farm plan with its production payments to keep the prices of all agricultural products at high points, a Federal fair employment practices law, antilynching law, and anti-poll-tax law, and other civil-rights measures, and compulsory health insurance through which free medicine is to be handed out to everyone.

EXTREMELY HEAVY PROGRAM

Mr. Truman's program—as it relates to the domestic picture alone—is extremely heavy, so heavy that it is doubtful the Democratic Eighty-first Congress will even scratch its surface—although in 1948 Mr. Truman complained bitterly because the Republican Eightieth Congress wouldn't put it through in a 2 weeks' special session he called.

In the first place, the President's own leaders on Capitol Hill say they see no prospect of the passage, or even the consideration at this session, of labor legislation, the Brannan farm plan, or compulsory national health insurance. Here are three major measures—the very foundation stones of Mr. Truman's program—which have no chance of enactment. They will, it is now predicted by administration leaders, go into the congressional campaign as major issues in the hope that the Eighty-second Congress will look with more favor upon them than does the present Congress. The Truman Fair Dealers and their allies, the labor union leaders, will do their utmost to put across candidates for the House and Senate pledged to Taft-Hartley Act repeal? A tremendous amount of propaganda work for the Brannan plan is now being done by both proponents and opponents, and that is the case, too, with the Truman proposal for compulsory health insurance—called socialized medicine by its opponents.

What can Mr. Truman expect from the Eighty-first Congress? It is generally agreed that legislative action will be completed on the bill which passed the House during the last session extending the coverage of the Social Security Act and increasing benefits. The Senate Finance Committee is soon going to work on this measure. It may be the most important of the Presidential recommendations enacted into law before the session ends.

The President's huge budget recommendations, covering proposed expenditures for all Government activities during the fiscal year 1951, totaling $42,439,000,000, will be enacted, though probably with modifications. The House Appropriations Committee, under the leadership of Chairman CANNON, of Missouri, is already working to draft a single, omnibus appropriation bill, to take the place of the nine regular annual appropriation bills which have been the practice in the past. Mr. CANNON and Senator BYRD, of Virginia, champion of governmental economy, insist that it will be far easier to approach a balanced budget with a single appropriation bill.

LOGROLLING POSSIBLE

The administration is inclined to look with suspicion on anything approved by Senator BYRD (the President has said "there are too many Byrds in Congress"). Further, Mr. Truman's new budget is a big-spending budget and a big-spending budget can be cared for more readily in a series of appropriation bills, passed independently of each other. So you now find some of the administration leaders on Capitol Hill throwing cold water on the single appropriation bill idea—among them Speaker RAYBURN. They talk of the possibilities of logrolling when the measure reaches the Senate—although why the House should be innocent of such tactics is not explained. By logrolling is meant a practice—reprehensible in itself—whereby one group of Senators favoring certain appropriations will join with another group favoring other appropriations, both groups agreeing to support the other's pet projects. Of course, logrolling is possible, and has been engaged in, when there have been a series of separate appropriation bills. The single appropriation bill still offers much to those who desire economy because when it is drafted and laid before the public, the people as well as Congress itself, can see just what is proposed in the matter

of expenditures as compared to the revenues of the Government.

Appropriations promise to become a major battlefield in this session, particularly as the President has frankly admitted in his budget message that a deficit of more than $5,000,000,000 may be expected at the close of the fiscal year 1951, to be piled on top of another $5,000,000,000 at the close of the present fiscal year next June 30. The Republicans are bent on making this deficit spending a great issue in the coming political campaign.

Only the President's recommendations on tax legislation remain still undisclosed, to prevent a complete picture of the administration's financial program for the next year. Predictions are made, however, that reduction or repeal of many of the wartime excise taxes will be proposed by the President, and as an offset to such revenue reduction he will ask that Congress increase income-tax rates on upper-bracket incomes—from $6,000 upward—an increase in taxes on corporations.

TAX REPEAL DEMANDS

Whatever Mr. Truman may do or not do about excise taxes, the demand for repeal of these wartime burdens is strong both among Democrats and Republicans alike in Congress, and a bill will be pushed for action. Certainly if the President asks repeal, Congress will respond affirmatively. However, when it comes to increasing taxes on individual incomes and on business, the opposition in Congress will be material, so material that the odds are the President will not get any increases.

The huge deficits which the President himself says are to be expected this year and next will make chances extremely slim for new, costly projects in the President's program. It will make the voters look askance at proposals, like the Brannan plan and the compulsory health-insurance program. The first might take billions more in tax money, and the second will take billions more from the pay envelopes of everyone—and if that is not enough, still more tax money.

Congress, however, has plenty of time on its hands, and will have, during the next 2 months, while it is waiting for the omnibus appropriation bill. Here is an ideal opportunity for the administration to try to force one or more of the civil-rights bills through the Senate—over the expected southern filibuster. The House may take up soon, Speaker RAYBURN says, the Federal fair employment practices bill.

This is the measure most bitterly opposed by the southerners in Congress. Senator LUCAS, of Illinois, Democratic leader of the upper house, has promised, too, that he will bring an FEPC bill before the Senate and force a show-down on it. The days already are slipping by, however, with a long debate on the bill repealing the tax on oleomargarine. Senator LANGER, Republican, of North Dakota, has offered an FEPC amendmend to this bill, in an effort to kill the oleo bill.

Admittedly the FEPC bill is probably the most difficult of the civil-rights measures to get through the Senate—but it is the one which Mr. LUCAS and other administration leaders consider most potent as a vote winner in northern cities where there are great concentrations of minority racial groups. Republican senatorial floor leader, Senator WHERRY of Nebraska, has announced he will seek to have the antilynching bill substituted for the FEPC bill when Senator LUCAS moves to take up the latter. More political maneuvering which is not likely to advance civil-rights legislation.

OTHER OBJECTIVES

The President has asked Congress to extend the life of the Selective Service (draft) Act which is due to expire next June. This is a measure of national defense which should receive approval of Congress. The peacetime draft—even though it is not now being used—is not popular and there may be a real fight over it.

Mr. Truman has urged an extension, too, of the Rent Control Act. This will be the signal for another battle. Opponents say that this continued demand for rent control is just another proof the administration wishes to keep control of the people's affairs and the housing situation no longer requires rent control.

Among the other demands made by the President are the following: Federal assistance for housing for lower and middle-income groups, strengthening of the unemployment insurance law, Federal aid to education (a Senate bill has bogged down in the House Committee on Education and Labor), the St. Lawrence Seaway, a Columbia Valley Administration (comparable to the Tennessee Authority), statehood for Alaska and Hawaii and home rule for the District of Columbia.

Faced again by a strong anti-Fair Deal coalition of Republicans and Southern Democrats in Congress, the President has a tough 6 months ahead of him. And next November the Truman program must run the gantlet on election day.

Mysteries of Politics

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. DOYLE. Mr. Speaker, I am pleased to present for your reading and consideration a text of a column written by a very esteemed newspaper representative, Malcolm Epley, of the Long Beach Press-Telegram, January 10, 1950. Mr. Epley writes a column each day, which takes up a very valuable space one column wide and the full length of the page. It is widely read and said paper has a very wide circulation in my home city of Long Beach, Calif.

Mr. Epley's column on this date bears so directly upon what every Member of Congress has to face from time to time that I present it to you for your reading and consideration with a good deal of pleasure and satisfaction, as having come from a very wise and well-informed writer of my own home city. It follows:

BEACHCOMBING

(By Malcolm Epley)

One of the mysteries of politics is that there is nearly always a flock of candidates for every job. There is a deep-seated urge (to rule or to serve, or both) that prompts men and women to turn out for every opening from dog catcher to President, despite certain hazards and discouragements that they all must know about.

Of course, political-office holders have moments of triumph and power. To be sure, there are occasions when they receive cheers and bows and are pointed out as people of distinction if not honor.

But every politician knows that the cheers can turn to boos, that he who fawns over a public official one week may cuss him the next, that it is given to few to retire gracefully from office without the stigma of final rejection to spoil what should be pleasant memories.

He knows that hardly has the flush of an election triumph worn off before he has to start thinking about what can happen to him next time. He knows that overnight some development—possibly something he couldn't prevent—can shoot down his ascending star, yank a comfortable seat from under him, or snatch an unpunched meal ticket out of his hand.

In short, it's a rough business, and, as a citizen who knows we have to have candidates, I would hesitate to put down such a frank description if I thought it would scare anybody. But it won't.

We all know people who have vowed by all that's holy that they would never seek political office, but who, visited by a few delegations, or given an appointment, or otherwise treated to a smell of politics, became starry-eyed believers in their personal political destiny and never got over it.

We just couldn't have democracy if it wasn't that way.

And so, happily, right now people are coming out almost every day for the offices to be filled by the sovereign people at the 1950 elections. It's safe to say not a single job will go begging, and that in virtually all cases there'll be contests to excite interest and create suspense.

This is one of the most interesting periods of the political year. It is marked by considerable jockeying, by trial balloons, by tentative declarations, and conditional withdrawals.

It's all part of the game.

One example of preannouncement technique among hopeful politicians is to put out feelers in the shape of rumors that someone will run, and then feel for the public reaction.

It's easy to start a rumor. Just go down the street, or get a friend to do it, and mention the possibility that you might run for the office. Coming up the street on the other side, you'll probably hear it yourself.

Newsmen will usually oblige with a report that a candidate is considering running. That's fair enough, for it's true—he is considering it.

The prospective candidate can then keep his ear to the ground. If what he hears pleases him, he'll run. And if he really wants to run, the chances are he'll please pretty easily.

Announcements, of course, are virtually always preceded by the urgings of large numbers of citizens. They usually convey the picture of a shy and reluctant candidate virtually pushed into the political swimming hole by delegations of folks who just won't take no for an answer.

Little by little, as the deadline nears, the picture clears, and the public learns who is going to run against whom. Once the date passes when the last declaration can be made, the campaign gets under way.

That makes an equally interesting story, maybe worth some comment here later on. Meantime, consider, as they come out into the open, the courage and willingness for punishment of the good folks who run for office.

National Chaplain of the American Legion

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert a copy of my address in honor of the Reverend Edward J. Carney, O. S. A., on his recent election as national chaplain of the American Legion, which I de-

livered at the reception and dinner tendered by the American Legion and the citizens of Greater Lawrence, Mass., at Central Catholic High Auditorium, on Sunday, December 4, 1949, in behalf of Father Carney:

I bring to Father Carney the greetings of the people in the Seventh Massachusetts Congressional District.

This is his day.

And deservedly so.

I know that Father Carney's heart is full of joy at the honor conferred upon him. It is but natural for any man to feel a glow of pride in the recognition accorded him by the free choice of his fellow men. This is followed by an awareness of the responsibility that goes with such an honor.

In keeping with his own friendly personality and the obligations of his sacred profession. I am sure that Father Carney is deeply grateful for this chance to be of service on a national scale to the young men with whom he shared spiritual comradeship during the trying days of the late war.

But as chaplain of our largest veteran organization he knows that its prestige, influence, and policies are not limited to veterans alone.

In these days when so many nations have lost or are losing their freedoms, victims of their own carelessness, we in the United States should be proud that we have such a vigilant group as the members of the American Legion.

They understand that the dangers brought on through indifference must be overcome at a fearful cost. That is why the Legion campaigns for preparedness not only in the military sense but through its programs to develop greater opportunities for our young people and to acquaint all of us with the rights, duties, and blessings of our American citizenship.

These are practical and realistic steps to safeguard our precious heritage.

The Legion, however, is not satisfied with defensive measures.

The Maginot line of fortifications did not bring security for France. The iron curtain alone will not protect Communist Russia from its own mistakes. Neither a radar screen nor a veto in the United Nations Security Council will guarantee safety to any nation from fears, real or imagined.

A more positive approach is necessary in this one world.

There is a desperate longing for peace among the peoples of this earth. They watch, with growing apprehension, the increase of military power on the one hand and the efforts to build a world organization to outlaw war on the other hand. And they wonder which will win out.

It seems to me that man with his limitations is putting too much of his trust in material power for the answer to all of his problems.

He is forgetting the strength and wisdom that come from moral rearmament.

In the past the office of chaplain in our fraternal organizations has been largely ornamental, concerned with the impressive, although somewhat exclusive, rituals attending the installation of officers.

I am sure that Father Carney will not be content with such a limited role.

How could he with his youthful vigor, his sincere faith, and his knowledge of the power of the Spirit that has sustained and guided men when all else failed?

Already he has called upon his comrades to mobilize the resources of prayer in a brief period of contemplation at the middle of each busy day for divine guidance on those issues which trouble a world in ferment.

This is an inspiring suggestion which merits the support of all people both in and out of the Legion.

"In God we trust" was the dedication of our founding fathers as they pioneered in the establishment of a new society where all men would have equal opportunity. In too many instances, modern man has forgotten this ideal. It may well be that in an age blessed with material abundance he finds himself beset with so many problems because he has turned his back on God.

If Father Carney has anything to do with it, this dangerous trend will be reversed. The Legion and the Nation will benefit from the refreshing zeal and high purpose which he brings to his new position.

We have known him for many years as the beloved spiritual adviser to thousands of communicants in St. Mary's parish. We remember his eagerness to leave the safety and comfort of his assignment in order to share the dangers and to be of help to his boys in the combat area of the Pacific during the war.

We are happy for his sake at this opportunity for wider service which has come to him. We are proud that he has brought this honor to our city.

He is a credit to his church and to his country.

If there is any way in which the people of Lawrence can be of assistance to him as national chaplain of the Legion, he has only to ask and the response will be unanimous.

Such is our regard for a true man of God and a real buddy to thousands of veterans.

Will Congress Sell Out?

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jefferson Democrat, Brookville, Pa., of January 12, 1950:

WILL CONGRESS SELL OUT?

The new session of Congress may do much to decide whether we are to continue down the road that ends in statism and dictatorial government, or whether we are to reaffirm the principles and the ideals that made us a great, free, and prosperous people.

A determined effort is being made to fasten the welfare state idea upon the country. Congress will be asked to appropriate billions for cradle-to-the-grave security measures—all of which, of course, would be compulsory. The only logical reasoning behind proposals of this character is that the American people are no longer capable of taking care of themselves; that independence, thrift, self-reliance and pride are obsolete virtues, and that we must follow the example of near-bankrupt England and dictator-ridden Russia.

An equally determined effort will be made to extend Government ownership and domination of industry and enterprise. This naturally goes hand in hand with the welfare state—the cloth is cut from the same bolt. The principal target of Socialists is and has long been the light and power industry. Inasmuch as electricity enters into almost every industrial, domestic, and agricultural activity, political control of it would create, in effect if not in name, a monopoly over land, water, basic natural resources, and the instruments of production. The completed and proposed valley authorities are perfect examples of this.

It is also possible that an effort will be made to increase the tax rates—despite the fact that they are excessively heavy now, cut deep into the purchasing power of every individual, and make it difficult and in some cases impossible for enterprises to obtain the investment capital they need. That is particularly true of new and smaller companies.

The basic issue was well put by General Eisenhower when he said, "Government ownership or control of property is not to be decried principally because of the historic inefficiency of governmental management. * * * Its real threat rests in the fact that, if carried to the logical extreme, the final concentration of ownership in the hands of government gives to it, in all practical effects, absolute power over our lives." That fine statement should be on every Congressman's desk. We have come nearer than we realize to giving Government such power.

We Don't Quite Get It

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial from the State, a weekly magazine having a wide circulation in North Carolina and edited by Carl Goerch. This editorial, We Don't Quite Get It, attracted my attention as containing much food for thought. I agree with the contents of the editorial that some of the press and certain radio commentators are not making their full contribution toward world peace. The big black headlines and exciting words by press and radio convey war hysteria that is disturbing, to say the least.

The editorial follows:

WE DON'T QUITE GET IT

Among the newspapers received at our office are a few which seem determined to foster a stronger feeling of ill will between this country and Russia, Argentina, Spain, and other foreign nations.

Every piece of news which in any way can stir up this feeling is played up prominently and is supplemented by editorial comment.

We don't see any reason why this attitude should be carried out in such persistent fashion.

Is it the desire of some editors, radio commentators, and other individuals to try to bring about another war? Is that why this kind of policy is being pursued? Are they opposed—for some reason unknown to us—to trying to build up a spirit of good will and cooperation among nations?

Perhaps they are trying to warn us of dangers that lie ahead, but isn't our Government in a better position to warn us of those dangers rather than some individual who, after all is said and done, can have very little first-hand information on what is going on?

Why should our country be expected to go around with a chip on its shoulder so far as relationship with other nations is concerned?

Seems to us that it's about time to put a stop to this jingoism and start working on a plan that will really help to promote world peace.

We never can hope for world peace so long as we foster an attitude of distrust and suspicion.

Address of Vice President Alben W. Barkley at Testimonial Dinner for William M. Boyle, Jr., Chairman, Democratic National Committee

EXTENSION OF REMARKS
OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a speech by Vice President ALBEN W. BARKLEY at the testimonial dinner for William M. Boyle, Jr., chairman, Democratic National Committee, at Kansas City, Mo., on September 29, 1949.

The Vice President's speech is not only a testimonial to the Democratic Party; it is also a testimonial to Bill Boyle, who has done such an outstanding job as our national chairman. The tribute to Bill Boyle is highly deserved and it is my hope that his sagacity and wisdom will continue to shine in the years ahead. The difficult times in which we live have placed tremendous responsibilities into his hands but I know that he will do all that he possibly can to uphold the views and the objectives of President Truman and the Democratic Party.

The address by Vice President BARKLEY follows:

Mr. Chairman, Mr. President, other distinguished guests, and fellow Missourians. There has always been an inseparable bond—an unbreakable bond—that has bound together Kentucky and Missouri. Until about 40 years ago, nearly every Governor of this State was born in Kentucky and now we have a president of the United States who has in his veins, on both sides of his family, Kentucky blood.

I am happy to be here this evening to honor my friend and your friend, the chairman of the Democratic National Committee. I am glad to be here because his career in the political life of his State and city and the country is symbolic of the sort of democracy in which we believe and which we undertake to practice; that democracy which holds out to the humblest boy in every community and in every State the hope that from humble circumstances he may rise to distinction and usefulness, and it is a source of great pleasure to come to Kansas City and to Jackson County, the home of Bill Boyle and Harry S. Truman.

What sort of democracy is it that careers like these two symbolize in this country? Not the democracy of special privilege, not the democracy of exclusive rights, not the democracy of aristocracy—unless it be the aristocracy of character—but the sort of democracy that Thomas Jefferson believed in when he wrote in the first paragraph of the Declaration of Independence, "We hold these truths to be self-evident, that all men are created equal." The same sort of democracy that I might say Abraham Lincoln had in mind when he said at Gettysburg that we should have and preserve a government of and by and for the people. The same sort of democracy that Grover Cleveland visualized when he uttered that immortal sentence, "Public office is a public trust and not a private snap." The same sort of democracy which Woodrow Wilson undertook to blazon on the statutes of this Nation in his New Freedom; that Theodore Roosevelt called the Square Deal; that Franklin D. Roosevelt called the New Deal; and that Harry S. Truman calls a Fair Deal.

It is the sort of democracy that seeks to make the Government of the United States an agent and servant of the people; the sort of democracy that recognizes that as we have become more complex in our social and economic and political life—not only domestically but internationally—the Government of the United States and every political party that seeks to serve the people of the United States must be their agent, always alert, always progressive, always forward-looking—seeking not by whimsical exercise of power, but by the very democratic processes of civilization to make the Government of the United States the guide and friend and agent of the people of the United States to help solve their problems.

The people of this country do not look upon Uncle Sam as an old man off yonder in Washington, sitting astride the dome of the National Capitol, looking around with complacent self-satisfaction, drawing his salary and doing nothing; that is not the sort of democracy we believe in and that is not the sort of democracy the Democratic Party, from the days of Thomas Jefferson, has stood for and now stands for, in spite of all the criticism and all efforts to retard the progress of this great people which it represents.

We are being told now by the tree-sitters and hitching-posters that we are about to enter some chaotic, vague, inchoate existence called statism; that we are now heading toward the welfare state. Well, what of it? In the Preamble of the Constitution of the United States, giving the reasons why it was established, our forefathers said, "We, the people of the United States"—not we, the Senators; not we, the Congressmen; not we, the governors; not we, the mayors; not we, the sheriffs; not we, the county judges; not we, the Supreme Court, but we, the people of the United States "ordain and establish this Constitution in order to form a more perfect Union, establish justice, and promote the general welfare." That is what they said when the Constitution was adopted.

The Democratic Party, throughout all of its life, by every enactment of its history, has sought to promote the general welfare of the American people. Recently, we were told that we are now on the last mile toward collectivism in the United States. May I, with some propriety, inquire who set us on the first mile toward collectivism in the United States? What is a welfare state? What do they mean by statism? Where does individualism end and statism begin? Did individualism end and statism begin when back in the administration of Woodrow Wilson we passed a law providing for Federal aid to the States and counties in the construction of highways? Would any of those who are now complaining about the trend and course of our history rise in their places and recommend the repeal of Federal aid in the construction of highways? Does individualism end and statism begin when the Democratic Party, under the leadership of one of its greatest leaders in all of its history—Franklin Delano Roosevelt—passed a law providing for the guaranty of bank deposits, so that we no longer fear the closing of banks in this country? Does individualism end and statism begin when Congress under the Democratic administration passed a law declaring that flood control to protect our great cities and our farms and our people in the river valleys of this country is a national obligation, and providing over a long period of years for the effort to control flood waters coming down from a dozen States and damaging property and destroying lives?

We know that no county can do it; we know that no city can do it; we know that no State can do it; we know that only the United States Government can do it. I ask you whether statism begins and individualism ends when we seek to promote the general welfare of our country by protecting them against floods.

A few years ago, we awoke to discover that one-third of our soil had washed away down the rivers and into the oceans. We recognized that if our Nation should not become like China and India with three or four hundred million people and with our soil depleted, we must preserve the fertility of our land and restore that which had been wasted, and so in connection with our flood-control program we inaugurated soil conservation.

Did individualism end and statism begin when the Government of the United States under Democratic auspices provided flood control and soil conservation?

Did individualism end and statism begin when under the Democratic Party we provided for rural electrification all over this country so that today 5,000,000 farm houses and farms enjoy the boon of electric power and electric lights and the drudgery of housework has been lifted from the backs of millions of women?

Did individualism end and statism begin there? We know they could not do it. Only the Federal Government could do it.

Did individualism end and statism begin when under a great Democratic President and with a Democratic Congress we inaugurated social security, old-age pensions, unemployment insurance, and compensation?

Will some of these men who are now declaiming against what they call statism rise in their places and tell the people whether they propose to repeal these laws we enacted?

Did individualism end and statism begin when we passed the Home Owners' Loan Corporation Act that saved a million homes in the United States; when we passed the Farm Credit Act that saved a million farms in the United States; did individualism end and statism begin when we passed the Federal Housing Administration Act guaranteeing to banks the loans they made for the construction and reconstruction of houses in this country?

Did statism begin and individualism end when we inaugurated a great housing program in the United States in order that we might make some contribution to a wholesome situation where every child born involuntarily into this great Nation might have a chance for wholesome, healthy educational surroundings free from crime and disease, so that they might themselves help to elevate the standard of life in this country?

Let these men, to whom every tree frog is a roaring lion and every angle worm a spreading adder, tell the people in this country what is "statism" in regard to what we're talking about.

These are only a few of the examples that I have the time to give of what the Democratic Party has done and is doing.

We are not afraid of our record. We are not afraid of our proposals. We are not afraid of epithets, either. Thomas Jefferson was never afraid of an epithet. Samuel J. Tilden was never frightened by an epithet. Grover Cleveland was never frightened by an epithet. William J. Bryan was never frightened by an epithet. Franklin D. Roosevelt was never frightened by an epithet. Harry S. Truman isn't frightened by an epithet, and, if you want to know, I am not either.

The Democratic Party never has been and is not now and never will be frightened by an epithet that somebody applies to a great progressive program that it is seeking to inaugurate and to continue, and whenever those who are undertaking to destroy the confidence of the American people in these great enactments of which I have spoken, and many more that I might mention if I had the time.

I am reminded of a story of a preacher who one night preached a sermon on hellfire and damnation, and at the end of his sermon he said to his congregation, "My friends, if you die outside the church your soul will go to hell kerchug. And in that lake of fire and brimstone it'll burn and smoke and spew and fry and boil and sizzle forever and ever," and when he finished some old man with a bosom full of beard came up and he said to the parson, "Did I understand you to say that if I die outside the church my soul will go to hell kerchug? And in that lake of fire and brimstone it'll burn and smoke and spew and fry and boil and sizzle forever and ever?" "Well," the preacher said, "that is the doctrine." "Well," the old man said, "by the eternal God, the people won't stand for it."

Eighty-first Congress, First Session

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following radio address I delivered over WMEX, Boston, Mass., on Monday, November 28, 1949:

Once upon a time the story of your Congress, what it did or what it failed to do, was a far-away matter that seemed to have little bearing on your daily lives.

Today it is a real, true-life story—your story.

Because your Representatives at Washington vote the way you want them to vote.

Now, the people in any one congressional district are mainly concerned with protecting or advancing their interests.

However, there are hundreds of other districts which must also be considered.

Compromises are necessary to work out a program which tries to be fair to all, a program that will balance conflicting claims and promote the general welfare and security of our Nation.

No one district or group can ever expect to get all that it wants at the expense of others.

Compromise is therefore the workable formula that is responsible for our unity and our progress.

It is the major factor that must be kept in mind when we look at the record.

John Jones, who lives on the third floor of a tenement house with his wife and three small children and who works in the mill, may not understand that the business of the Congress is his business.

The vast programs designed by the Congress and the billions of dollars needed to carry them out may seem to be happening in another world apart from him.

He needs to know that the business of Congress affects him in a very personal way.

His job, his income, the prices he pays for his food, clothing, fuel, and shelter, to mention but a few, are influenced by the various laws which Congress passes.

Multiply the Joneses by the tens of millions of families in the United States and you have a huge program whose meaning is difficult for Jones to grasp.

But this is no excuse for shrugging his shoulders and then ignoring the business of Congress.

He is governed by it, in terms of dollars and cents.

With the growing power of Government it is important for him to keep tabs on it, and to check it when it threatens to go too far.

To neglect it is to neglect himself and his family.

That is why I want to outline the record of Congress from January to October, when it adjourned for the year.

We and one other nation are the leading world powers.

The two represent ways of life which are sharply opposed.

Those smaller countries who believe in freedom as we do were impoverished by the war.

They need help to recover.

That is one of the problems we have inherited as a leader.

We've got to lend a hand, at least temporarily, and that costs money.

Furthermore, until the United Nations can become an effective guarantor of the peace, common sense requires us to be strong in our own defense.

Otherwise, our rival might take it upon himself to attack us.

The temptation to conquer the United States, and thus control the world, would be too great if we became militarily weak.

Unfortunately, preparedness also costs money.

If we did not have to spend billions for this insurance, we would all have more money in our pockets.

But until we can become sure, really sure, that the UN can outlaw war we must spend for defense.

Although it hurts, it is certainly much—so much better—than the fate that would be ours as a conquered nation.

In fact, we would spend everything we had if need be to prevent that.

What has your Congress done this year in the field of international affairs and to promote national defense and internal security?

Happily, members of both parties have supported President Truman's program on these issues.

The Congress has authorized continuance of the Marshall plan that will help free peoples to help themselves and thus save themselves from communism.

We appropriated money to help Greece and Turkey and for the relief of occupied areas.

Through the North Atlantic Pact, we brought the western nations together and served notice that an attack on any one would be considered as an attack on all.

This was done within the rules of the United Nations and is intended to prevent war rather than provoke it.

An arms aid bill to give body to this declaration was also passed.

The Reciprocal Trade Agreements Act was restored and extended.

Those who voted for it claimed that it would stimulate the free flow of commerce among nations.

I opposed it because a flood of foreign textiles will depress employment and wages among the thousands of textile workers in my district.

I still believe that it will sell out some American industries in the home market just to help the export market of other industries, and I consider such an approach unfair and dangerous.

The subsequent devaluation of the British pound tends to confirm my fears.

In the area of national defense, this Congress passed an armed services unification bill which was long overdue.

Its purpose was to set up efficiency and reduce costs.

The charges and counter-charges which have since been aired, would seem to indicate that the United States Air Force, Army, Navy, and Marine Corps are mortal enemies bent on destroying one another.

This phase is regrettable, because it may give a false impression of weakness in certain foreign circles.

But, in the long run and in the democratic manner, I think that full publicity will be better than smouldering resentment.

The American people are getting the facts.

The pros and cons of the new role to which each service must adjust itself are being discussed in the open.

The inevitable result will be a clearing of the air leading to a genuine unification in which the duties and powers of each service will be spelled out definitely.

The morale of our airmen, soldiers, sailors, and marines, depends on adequate pay as well as other factors.

It was encouraging to them and to their families that this Congress gave them a pay raise.

For some it had been the first since 1908.

In this modern air age, our first line of defense must be in the sky.

Alert to this need, the Congress has authorized a far-flung system of radar warning and control facilities.

The Air Force is empowered to maintain 48 groups of planes.

Research in guided missiles and in every other technical possibility that is needed for defense has been adequately provided for.

We have authorized the construction of permanent military public works in Alaska and Okinawa. We have set up an experimental submarine program and have strengthened our Central Intelligence Agency.

It was on the President's domestic program that die-hard opposition developed.

Repeal of the Taft-Hartley Act was stymied and efforts to enact civil-rights legislation were halted by filibusters.

The House of Representatives late in this session did extend the coverage and increase the benefits of the social-security law.

I believe that the Senate will take similar action when Congress resumes its deliberations next January.

Waste and duplication would be fatal to any private business.

They are no less dangerous to the biggest business in the world—that of the Government of the United States.

During the emergency of the early 1930's, agency upon agency was created to deal with new and pressing problems.

That emergency and the emergency of war are past, now is the time for an overhaul.

There is no point in having a multiplicity of agencies stepping on each other's toes, smothering in red tape, and eating up an additional $3,000,000,000 of your money when a streamlined government could do the job better, quicker, and at less cost.

To unravel this situation, the Congress has authorized the President to reorganize the Executive departments in line with the Hoover Commission report.

Some progress has been made, but continued public interest is necessary if these healthy recommendations are to be put into practice completely.

This Congress increased salaries for Government workers from the President down to the letter carrier on your route.

It has liberalized disability compensation benefits for veterans.

In both cases, upward readjustments were necessary to bring them in line with the cost of living.

Support prices for farm products have been continued.

While on some commodities such as potatoes they are too high, I think that basically and with some modifications this policy has merit.

We cannot shut our eyes to the fact that if the farmer's income drops sharply, he cannot buy the products of our mills and factories.

Congress did not back up the members of the New England delegation in their demand that this area be included in public power development plans.

New England does not intend to be left in the wake of national progress.

The rent-control law was extended 15 months from March 31st, 1949, to protect tenants until such time as building catches up with demand.

Perhaps the outstanding achievement of this session was the passage of the Housing Act.

This is a Nation-wide program to eliminate our unsightly and dangerous slums and to provide public housing for our low-income families, many of whom now exist in deplorable accommodations.

It is now recognized that spending billions for national defense and aid to Europe will mean nothing if the morale of our own people suffers.

Every American must have a fair opportunity to earn a living and provide for his family with those decencies and comforts which are elemental in our prosperous Nation.

The dark, unsanitary, and rat-infested slums of our large cities, are no place to bring up children.

They must be replaced by clean, safe, and livable quarters in which the Americans of tomorrow will grow up strong, healthy, and with an invincible faith in the way of life which gives them opportunity.

This Congress was also concerned with the problem of underpaid workers.

To its credit, it passed the Fair Labor Standards Act of 1949, increasing with a few exceptions the minimum wage up to 75 cents an hour, thereby guaranteeing $30 a week pay for 40 hours of work.

The bill to provide Federal aid to education was defeated because it discriminated against private and parochial schools.

It is therefore possible that a bill to help all the school children of the United States, irrespective of their race, creed, or color, will be enacted in the second session.

I believe that the first session of the Eighty-first Congress did a fine job in the fields of international affairs, national defense, and internal security.

On the domestic front, its record was substantial.

During the coming months, before it resumes as the second session, you will have the chance to think over the unfinished business of Federal aid to education, stronger antimonopoly laws, and an expanded Social Security Act.

By doing so and communicating your opinions on these issues you will become part of that public opinion which we depend upon for guidance.

The second session of the Eighty-first Congress waits for you to speak.

Thank you for listening and good evening.

Prevent the Disease

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jefferson Democrat, Brookville, Pa., of January 5, 1950:

PREVENT THE DISEASE

The recent elections in New Zealand and Australia have a world-wide significance. In both cases, long-established Socialist governments were decisively defeated. In both cases, they were replaced by governments which pledged themselves to halt further socialization and encourage private enterprise and industry, to reduce taxes, and to relax some of the onerous restrictions on individual freedom of action which their predecessors had placed in effect.

It is true that the new governments cannot immediately restore free enterprise as we understand it. Socialism has progressed too far in those countries to make it possible to get rid of it easily. But the vote certainly proves that New Zealanders and Australians have grown sick of political control of their lives—and of paying the huge tax bills that make socialism inevitable. Press reports stress the fact that the voters had become disillusioned with supergovernment and with the welfare state.

It remains to be seen how successful Australia and New Zealand will be in breaking loose from the fetters that socialism placed upon them. At best it will be a long and grueling process. In this country, luckily, we can still save ourselves. The advocates of the welfare state are in full cry. So are those whose main ambition in life is to socialize such basic enterprises as the power industry. But they haven't reached their goal and we can still stop them. We can close the door on socialism, and once more affirm our belief that government is the servant of the people, not the master.

The record speaks for itself. It is easy enough to denounce capitalism—but the fact remains that capitalism has given more people more abundance than any other system ever devised, and it has protected and maintained our liberties at the same time. Socialism, on the other hand, has invariably lowered living standards, destroyed initiative and independence, and made everyone a ward of the state. In its most intense form, as in Russia and eastern Europe, it has turned whole nations into slave states.

The people of New Zealand and Australia have rejected socialism—but they will still be paying the price of it for years to come. The people of the United States can prevent the disease, instead of having to try to cure it later on.

American Employment Threatened by Unwise Trade Treaties

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. MACK of Washington. Mr. Speaker, I have introduced today in the House a bill to reestablish the peril-point principle in the making of reciprocal trade treaties.

I fear that unless this peril-point principle, which was repealed last year by the Eighty-first Congress, is restored that American unemployment will increase, our American tax receipts be greatly reduced and our entire domestic economy be greatly weakened.

Under present and proposed reciprocal trade treaties increased quantities of goods from many low-wage, low-living-standard foreign countries are being dumped into the United States. These products from low-wage countries are supplanting goods produced by American workers. As a result many American workers are losing their jobs.

No section of our Nation will suffer more than the Pacific coast from trade treaties entered into without full possession of all the facts about the probable impact of such treaties upon our domestic industries and domestic employment.

During the first 10 months of 1949, Canada shipped 1,058,000,000 feet of lumber into the United States. We probably will import even larger quantities of Canadian lumber in 1950.

Every 1,000 feet of Canadian lumber imported into the United States last year meant the loss of 1 day of work for some United States logger and another day of work for some United States lumber mill worker. With each 1,000 feet of lumber imported costing two United States workers, the loss of 1 day of work each, the importation of more than a billion feet of Canadian lumber meant that more than 8,000 United States lumber area workers lost 250 days or a year's work each last year.

The tragedy of this may not be apparent while lumber production is at a high level, but if lumber output ever declines it will be. Then, because our United States lumber workers cannot compete with the lower wages of Canada, it will be the logging camps and lumber mills of the United States which will be first to close. It will be the mills and camps in Canada that will continue to operate while our plants are down.

This has been illustrated time and time again in the past by the history of the shingle industry.

In the past, when the demand for shingles was heavy, the shingle workers of both the United States and Canada operated full time. However, with the first sign of a slowing down in the demand for shingles, it always was the shingle mills of the United States that were first to close. Often while shingle mills in the United States were closed, those in Canada operated full blast.

The Canadian shingle mills operated while shingle mills in the United States were idle because on any declining market the Canadians, due to their much lower wage rates, could undersell the shingle producers of the United States. By offering lower prices, the Canadian shingle mill operators took away the market from United States mills. The result was that our American shingle industry workers were idle.

The same thing can happen to the lumber industry, and to some extent, is even now occurring.

In British Columbia, the lumber mill worker gets a minimum wage of 95 cents an hour. A lumber industry worker in the United States is paid $1.45 an hour. This is a difference of 50 cents an hour and amounts to a difference of $4 a day in the wage paid lumber workers in Canada and in the Pacific Coast States of the United States.

Since it requires one logger and one millworker about 1 day to produce 1,000 feet of lumber this means a cost of $8 more per 1,000 feet to produce lumber in the United States than in Canada.

Canadian lumber operators also save on freight rates in transporting their

product to market. Canada has no 3-percent excise tax on freight shipments as does the United States. Also her stumpage costs are less.

If the market for lumber becomes highly competitive, as it some day surely will, the Canadians will have a price advantage that will give them a larger and larger share of our American lumber market.

That is something we can protect our lumber workers against if we will restore the peril-point principle to reciprocal-trade treaty making.

The peril-point regulation merely means that the Tariff Commission, which is a nonpartisan, nonpolitical board, shall make studies prior to the reduction of any tariff to determine how far a tariff can be reduced without imperiling an industry.

Surely this is a very small but justified protection for the operators and employees of any industry to ask of their Government. And why should not tariff treaties be so made as to prevent the weakening of any domestic industry? Unless our domestic industries remain strong and their employment is maintained at a high level, there can be no continued national prosperity in this country. Without that continued prosperity this Nation cannot support the many costly programs in which we are now engaged.

OUR FISHERIES THREATENED

But the lumber industry is not the only one that will be injured by too much free trade, and of treaties entered into with low-wage countries without most careful consideration of what effect these treaties may have on domestic employment and pay rolls.

Last year we imported 473,000,000 pounds of fish from low-wage foreign countries. This was 50 percent more fish by weight than we imported in 1947.

We were buying, last year, enormous quantities of crab from Japan, tuna from Japan and Peru, and bottom fish from Newfoundland. Most of this fish could just as well as not have been bought from American boats operated by United States fishermen. It could have been purchased just as well as not from United States canneries employing United States workers.

If we continue to give away our American fish markets to the operators of canneries and the fishermen of low-wage countries, the end result will be that the hundreds of millions our fishermen have invested in boats and fishing gear and in canneries will become largely worthless. We will receive less taxes from our cannery operators, fish buyers, and fishermen with which to finance our already unbalanced budget.

Prior to 1941 the Japanese supplied 85 percent of all the canned crab that was sold in the United States. Our American crab fishermen supplied only 15 percent of the canned crab sold in American stores and eating places.

When Japanese airmen blew their country out of the American crab market by their sneak attack on Pearl Harbor, Americans immediately began to build boats and to catch crab and to take over the crab business which the Japanese had lost. Many Americans invested their life savings in fishing boats and gear. Many of them went into debt to acquire boats.

If through unwise trade treaties negotiated without possession of all the facts as to how such crab imports may destroy the American crab fishing industry, the millions invested by small American fishermen in crabbing boats will be largely wiped out.

The same fate would befall those who have invested money in canneries to process crab and other sea foods.

FILBERT NUTS

In my district we have about 800 filbert-nut orchardists. It has taken them years to build up a profitable business.

A few years ago a 10-cent tariff on filbert nuts was reduced to 8 cents. Now there is talk of reducing that nut tariff to 4 cents.

If it is reduced, the result will be that our American market will be flooded with nuts from the low-living-standard nations of the Mediterranean countries. Many of the orchardists may be put out of business and the orchards they have devoted years to growing will be made far less valuable than these now are.

All my peril-point bill asks is that the operators and employees of every industry shall have a chance to be heard, a chance to state their case before any tariff treaty is entered into by the State Department.

The Tariff Commission is nonpolitical and nonpartisan. It is the body to conduct such hearings and make such studies as will insure the employees and operators of every industry just consideration before reciprocal trade treaties are entered into by the State Department.

This is to the interest of not only the employers and employees of all industries, but in the best interests of all the people of these United States. We must maintain a high state of employment if national prosperity is to be maintained at a high level. Unless it is maintained at a high level, there is no chance of ever obtaining a balanced budget.

I want the people of other countries to have full employment, but I am not willing to assure it by creating idleness and unemployment in our own country.

The First Amendment to the Constitution of the United States of America and the Separation of Church and State

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. O'SULLIVAN. Mr. Speaker, I received through the mail the other day, from the coordinating committee of lay activities, of the Archdiocese of Los Angeles, 674 West Twenty-third Street, Los Angeles, Calif., a small booklet in question-and-answer form, which set forth the view of the Roman Catholic Church with respect to the above-named subject.

I believe that the publication in the CONGRESSIONAL RECORD of not only this view but all other related views on this much-debated subject will do much to throw light upon this most controversial matter instead of heat, and help the people generally to form a more proper opinion in this matter.

The booklet is as follows:

THE FIRST AMENDMENT—AN INTERPRETATION OF THE FIRST AMENDMENT TO THE CONSTITUTION OF THE UNITED STATES WITH REGARD TO FREEDOM OF RELIGION

1. Is the expression "Separation of church and state" a part of the first amendment to the Constitution of the United States of America?

No. The first amendment reads:

"Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press, or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances."

2. What did the amendment mean by the "establishment of religion?"

In some of the countries from which the American colonists came, there was a state religion. This was called the established religion, as in England. An established religion was officially imposed upon the people; membership in it was required as a qualification for civil office, and other civic privileges.

An established religion always meant limitation of civil rights for those not professing the established religion. In 10 of the 13 American Colonies there was such an established religion. In none of these instances was this religion the Catholic religion.

Many of the residents of our colonies had come to America for the very purpose of avoiding the restrictions and burdens of such an imposed religion.

3. Are there any established religions in the world today?

The Lutheran Church is the established religion in the Scandinavian countries.

In England today the Anglican Church is the established religion. This was established by Henry the Eighth.

4. Has any State in the United States of America an established religion today?

No.

5. Does the Catholic Church today in any country possess the status of an established religion?

No. A few countries give it a preferred status, but grant religious freedom to all, and do not require membership in the Catholic Church as a condition for civil rights.

6. Did the founding fathers proclaim their conviction that belief and practice of religion was necessary for the preservation of democratic freedom?

Yes. In the very first paragraph of the Declaration of Independence the founding fathers proclaimed the supremacy of the laws of nature and of nature's god.

And they said: "We hold these truths to be self-evident that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

In the last sentence of that same memorable document we find these words: "And for the support of this declaration, with a firm reliance on the protection of divine providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

Therefore, the founding fathers believed sincerely in God, in the freedom of religion, and in aid to religion. They wished, however, that each be free in his worship of God.

That has been the American system and the reflection of the words of the well-known Northwest Ordinance which reads: "Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged." This was written in 1787, and was the utterance of the then Congress. It would indicate that to the minds of the founding fathers, schools were intended to be a positive means for the promotion of religion and morality as well as knowledge.

8. What is the origin of the phrase "separation of church and state"?

In a letter of Thomas Jefferson to the Baptists of Danbury, January 1, 1802, Jefferson said: "I contemplate with sovereign reverence that act of the whole American people which declared that their legislature should (then quoting from the first amendment) make no law respecting an establishment of religion, or prohibiting the free exercise thereof, thus building a wall of separation between church and state."

9. Is it to this quotation that reference was made in the recent decisions of the Supreme Court of the United States?

Yes; but without complete reference to the context. Its meaning was illogically extended, for, as Justice Reed aptly stated in his dissenting opinion, in the McCollum case, "a rule of law should not be drawn from a figure of speech."

10. What was the meaning of Jefferson in uttering this statement?

From the writings of Jefferson and Madison and others, and from a careful reading of this quotation, it is obvious that Jefferson meant by "separation of church and state," there should be no established state religion; that each would be free to practice religion as his conscience dictated; that there would be no monopoly by any one group.

Established church meant monopoly and persecution. The writers of the Constitution wished that the practice current in some colonies be not extended to the National Government. In other words they believed in freedom of religion. They also believed in the practice of religion.

According to James Madison, as recorded in I Annals of Congress, 730, the meaning of the words of the first amendment was "that Congress should not establish a religion and enforce the legal observation of it by law, or compel men to worship God in any manner contrary to their conscience."

Thomas Jefferson himself had this to say regarding the purpose of the first amendment: "It was not to be understood that instruction in religious opinion and duties was meant to be precluded by the public authorities, as indifferent to the interests of society. On the contrary, the relations which exist between man and his Maker, and the duties resulting from these relations are the most interesting and important to every human being, and the most incumbent on his study and investigation." (The Writings of Thomas Jefferson; Memorial Edition, 1904, p. 414.)

11. If "separation of church and state" means only opposition to an "established" religion, a state religion, what connection is there between the expression "separation of church and state" and Federal aid to education?

There is no connection. Both the Supreme Court and the opponents of participation in Federal aid to education by non-tax-supported schools have adopted the phrase as a slogan without full comprehension of its true meaning. The slogan "separation of church and state" today is used as a shibboleth. It was used by Jefferson merely as a figure of speech and definitely referred to his opposition to any federally established religion.

12. In the Eighty-first Congress there was presented a so-called Barden bill. What did that provide?

It provided payment of $300,000,000 to be made to the several States for aid to education in tax-supported schools only. Its provisions contained a prohibition against the allocation of any of this aid to benefit children who attended non-tax-supported schools.

13. Did the proponents of this bill favor this prohibition and give as their reason belief in "separation of church and state?"

Yes. Despite the fact that there is no connection between the two ideas.

14. Do they base this use of "separation of church and state" on the contention that such a meaning of that phrase was implied in the first amendment?

Yes, though without foundation as noted above.

15. Is there an organization known as Protestants and Other Americans United for Separation of Church and State?

Yes. It is more commonly known by its initials POAU.

16. Does this organization explain definitely what it means by "separation of church and state?"

No.

17. Is this organization opposed to the granting of auxiliary education aids, like bus rides, school lunches, and school health examinations to pupils who attend Catholic and other non-tax-supported schools?

Yes.

18. Is the argument of the POAU valid that these helps to non-tax-supported schools would constitute union of church and state?

It is not even a remotely valid deduction from either Jefferson's figure of speech, or from a study of the preliminary discussions of the first amendment or the amendment itself.

The fact that many non-Catholics disagree with the POAU's position is evidenced by statements such as these: "not only must we refuse to play upon our parishioners' fears, but we should set ourselves to help rid society of those pestiferous writers, secretaries, broadcasters, and agitators who make a living rousing the prejudices of people by stirring up their fears of other groups." (Protestantism, issued by the commission of courses of study, Methodist Church.)

19. What would seem to be the objective of the effort to confine aid in education to tax-supported schools?

Since religious instruction of any kind is not permitted in tax-supported schools, the objective of the POAU and its followers would seem to be the elimination of religion from all school education, as well as the elimination of non-tax-supported schools in which religion is taught, leaving only tax-supported schools in which parents could fulfill the obligations of compulsory education.

20. Would such compulsory education be a violation of the rights of parents?

Yes, it would be a violation of their natural and civil rights.

The Supreme Court of the United States in the Oregon School case decision of 1925, ruled as follows: "The fundamental theory of liberty upon which all governments in this Union repose excludes any general power of the State to standardize its children by forcing them to accept instruction from public teachers only. The child is not the mere creature of the State; those who nurture him and direct his destiny have the right coupled with the high duty, to recognize and prepare him for additional obligations."

21. Was it the intention of the founding fathers to eliminate religion from education and government?

First. Obviously it was their belief that religion should be a part of education, since all their schools were religious foundations and there were no public schools as they exist today.

Second. It was equally obvious that they did not wish to eliminate religion from the lives of the people or to eliminate basic religious principles from the foundations of government. They were opposed to a state religion that was obligatory.

22. Does the first amendment of the Constitution command that any Federal aid to education exclude from its benefits all children attending non-tax-supported schools?

No.

The present public-schools system did not originate until about the middle of the nineteenth century. Previously the direct aid to education from the Government was confined to the frontier and missionary and Indian schools.

At the time of the framing of the first amendment there was no contemplation of a system of tax-supported schools.

23. Why would any Federal legislation granting aid exclusively to children attending tax-supported schools be considered objectionable?

Because it is discriminatory and contrary to the American principles of equality.

24. Wherein is this discrimination?

Because legislation for public-school children exclusively provides that Federal funds be distributed to the respective States in accordance with the total number of children in each State. Such legislation would further prescribe that the State would then distribute this money only for the benefit of children attending tax-supported schools. By this provision only the children attending tax-supported schools would benefit by the appropriation while the money was distributed to the States on the basis of the total number of children in the State. Thus, the money would be allotted to children in non-tax-supported schools but not paid for them.

25. What was the reason for this distinction?

Largely because of an unwillingness to give any support of pupils attending Catholic parochial public schools and similar schools.

26. Since the Catholic population pays taxes for the support of public schools the same as the rest of the population, is it just that they should be discriminated against when public funds to which Catholics have contributed are expended for aids to education?

No, it is not just.

27. Since Catholic people pay taxes the same as others, and since some elect to send their children to parochial public schools in accordance with their rights under our Constitution, should they be discriminated against?

No.

28. In sending their children to Catholic public parochial schools are they not exercising a right of citizenship and a right under the natural law, as well as the law of the land?

They are. (See Oregon quotation above—No. 19.)

29. What would be a logical sequence to such discrimination and exclusion?

The purpose would seem to be to force all children to the tax-supported schools, and to make them compulsory and do away with schools that teach religion.

30. What is the difference between a tax-supported school and a non-tax-supported school?

The tax-supported school is directed and controlled by the State and local governments and no formal religious instruction is allowed in these schools. In fact, religious instruction of any kind is forbidden. The parochial public school follows the same curriculum in required subjects as laid down by the State or county educational department and meets, and sometimes excels, the scholastic standards of the tax-supported

schools. In addition, however, the parochial schools teach religion and discipline. The regular curriculum suffers in no way by the teaching of religion which has the place of a subject in the schedule.

31. Is this effort to exclude religious instruction in all education in accordance with our Constitution?

No. It would be a direct violation of religious freedom as granted in our Bill of Rights.

32. Why would that be so?

Because education is compulsory by State laws. If that education is demanded by law in schools where religion is forbidden to be taught, the rights of citizens are infringed upon. Religion is at least equal to any other subject of the curriculum.

33. Is Federal aid to education desirable?

In most of the States there is no need for such aid. In a few States there may be need of some aid. But in no case should such aid be given at the cost of discrimination. Discrimination is entirely un-American. The innovation of such an un-American practice would bring greater damage to our country than any lack of education that might come without Federal aid.

The New York Times issue of October 24 quoted Dr. Ernest C. Colwell, president of the University of Chicago, from an address he made on Tolerance and Godlessness. The Times article reads:

"One reason for the noncommittal attitude toward religion, Dr. Colwell continued, is 'the strange twist which has been given to the separation of church and state. What began as a repudiation of one established church supported by the state has become a ban upon religion in the activities of any state-supported institution,' he asserted.

"If the doctrine of 'tolerance' toward different faiths means the elimination of religion in the education of all citizens, then the state should 'seriously consider whether tolerance can conceivably be as important to the continued existence of the country as religious faith,' Dr. Colwell declared."

United Lodge 889, Order Sons of Italy

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following copy of the address I delivered on the occasion of the thirtieth anniversary of United Lodge 889, Order Sons of Italy, at the Oxford Club, Lynn, Mass., on January 8, 1950:

I am very happy to join with you on this happy occasion.

The thirtieth birthday of lodge 889 is the same number of years that we call a generation.

It was in this period, from 1920 to 1950, that Americans of Italian extraction made their greatest progress. By coincidence these were the years of crisis and change, when the peoples of this world were subjected to tests and trials such as no other generation in history has endured. Old empires disappeared. New nations were born. Some peoples instead of adjusting their lives to meet modern conditions, cut themselves off completely from their faith and culture and are now floundering in the strange, new world of their materialism where man has become just another "thing."

It was not so with the people of Italy, even though they had more difficult problems than other nations. There was art and culture and spirit in them, a rich heritage from past experience, which they would not sacrifice to the demands of economics. A system of land reform accompanied by scientific irrigation and conservation was necessary to make economics sustain human life and encourage human values. The Italian, with his fundamental love of home and family, did not propose to limit these in order to meet his material problems. Under a feudal system that failed to give him these opportunities, he was forced to emigrate.

He came to the United States in large numbers and here found the chance to develop his talents. And all of us are the beneficiaries of the contributions he is making to our way of life.

In the recent war, he gave his sons and daughters generously to the service of his adopted country. From Alaska to Iran and all around the globe they fought as Americans for those larger ideals which offer the best hope for this troubled world. By their loyalty and their heroism they demonstrated to others that we are not only strong in material things, but are creating a faith and confidence in one another without barriers of race or creed.

New American names are appearing in our business life and in the professions, pleasant names that add to the variety of American life. They are showing up among the public officials of our cities, States, and in the Federal Government. And with good reason. For the Italians have had a more extensive experience in the art of government than any other people. From the times of the Roman emperors through the city-states of the Renaissance down to the modern era they have lived under all conceivable forms of government. The most heartening lesson we can draw from this wealth of experience is that they have always thrown off the yoke of tyranny. For independence is a healthy characteristic of your people. You love life, you are neighborly, hospitable, and friendly, but you insist on doing your own thinking. That is good for you and good for the United States.

We live in an age where there is a dangerous trend toward concentration of power. We know that there are certain and necessary functions which only a central government can perform, but there is a limit to these. The problem for us is to determine where we should draw that line and say, "Thus far shall the Federal Government go, and no further." We cannot afford to drift into a situation where all local, State, or regional governments become the poor relatives of a master government at Washington. We want to do some things ourselves and not rely entirely upon others to do them for us.

We hear much these days about the dangers of monopoly and we should regulate it wherever it appears. But that places the responsibility and the initiative upon us to insist upon a proper share of control at the local level.

Now I believe in a social-security program that will cover all people and provide reasonable benefits. And I recognize the fact that only through the Federal Government can we set up such a Nation-wide program. Pensions for all the aged, within our capacity to provide such, is an objective for which I have consistently worked while a member of Congress and I will continue to do so as long as I have the privilege of being your Representative.

This does not mean, however, that I favor an extension of Federal controls without limit. Far from it. During the emergencies of depression and war we look to Washington for leadership in bold measures to meet such crises on a national scale. You and I were born in an age of transition. We have had to experiment in order to find answers to the serious problems we have faced. The Democratic Party has earned the confidence of the people because it has not hesitated to devise new instrumentalities within the Constitution to cope with these problems.

However, we do not expect that our children will live in an age of perpetual crisis. We believe that we are making progress toward the elimination of war and the elimination of economic insecurity. We foresee a future in which we will have helped to win the peace in which men can devote their talents to constructive purposes, free from the fears of our time.

The world of tomorrow will look different from the world of today. In many ways it will be different. But not at the expense of those precious freedoms guaranteed by our Constitution which inspired the remarkable progress we have made in our short history.

The Government did not boss this job. No one class among our people ordered it. If any group in our Nation attempts to set itself up as an arbitrary power, opposition can be found to checkmate it.

We believe in getting both sides of a story and arriving at a common area of understanding before we take action. You will find this at work in the Congress of the United States, where a Democratic majority initiates legislation and a Republican minority serves as a restraining influence. Both functions are necessary in a truly representative government, which stems from the people.

On the job, in business, throughout our educational system, and in every aspect of our lives as human beings no one person has a fixed priority over others. In the day-to-day circumstances of life there is constant opportunity for each person to learn, to better himself, and for us to become full-fledged personalities upon which a free society relies for intelligent and mature cooperation.

Even though such inventions as the airplane, the telephone, and television are bringing the people of this Nation closer together nothing can take the place of personal contacts for creating greater understanding.

Just as the unit of family life is the foundation of civilization the life of the community in which we live is the next area of importance, and we must not neglect it. I myself believe that we should develop our natural resources—like water power—for the benefit of people in the various regions of our country. But although the financial resources of the Federal Government are needed to act as a self-starter for such projects, the control and administration of such developments must be kept in the hands of the people who live in the respective river valleys.

We have come to the point where we must assume responsibility and not delegate it. The communities and the States have work to do, and they cannot shirk it. If the cities and States are permitted to collect some of the revenues now controlled by the Government at Washington they will be able to make improvements under the watchful eye and the immediate control of the people. In this way, the trend toward a massive, centralized government, remote from the average man, can be halted. And the individual will feel that government is still his servant and not in the process of becoming his master.

I congratulate you on calling yourselves the Sons of Italy. You have every right to take pride in that fact, as your fellow-Americans are proud of the contributions you are making to the stimulating variety of our Nation.

In this country we manufacture millions of automobiles every year that look very much alike, because the mass-production system is the only way we can produce them in quantity and at low cost. But we have no intention of standardizing our people. We

have learned that each race and creed can learn something from every other race and creed. It is in this interchange of values among its citizens that the United States is becoming the most vital and progressive Nation on earth and a model of human fellowship.

The individuality born of a long and splendid civilization is one of your greatest assets.

Through membership in the Sons of Italy you are preserving and extending that precious heritage.

This is encouraging to all Americans.

For belief in the dignity of the individual is the vigilant faith that will protect us from the encroachment of tyranny in any form.

I will rejoice with you on this thirtieth anniversary of United Lodge 889. And I wish for your organization an even greater future for years without end.

Taxes—The Lady Pays

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. MARTIN of Massachusetts. Mr. Speaker, David Camelon, writing in the American Weekly of January 15, has a very revealing article about the extent to which the American people are taxed. He explains in a very interesting manner that from the moment the people wake up, they are surrounded by taxes—taxes in everything they touch, in everything they look at. Some are so-called luxury taxes. Some are just plain nuisances. Mr. Camelon's article follows:

President Truman says he needs more taxes.

"Taxes?"

The lady shrugged her dainty shoulders in distaste. She wrinkled her pretty nose (pancake make-up tax, 20 percent) and repeated:

"Taxes? I don't worry about them. My husband pays them all."

Sister, how wrong can you be?

From the instant you woke up this morning, you were surrounded by taxes. Taxes in everything you touched. Taxes everywhere you looked. Dozens of taxes. Hundreds of them. Thousands.

Some were hidden taxes. Some were not so hidden. Some were "luxury" taxes. Some just plain nuisances. But whatever you call them—sister, you paid them. And you keep on paying—and so does your hubby.

Your day started when your alarm clock went off. (Price 96; tax $1.20.)

You yawned, stretched, and threw off the covers. (Sales taxes on them most places, of course.) You climbed out of bed. (Annual personal property tax, say, 75 cents.)

You looked at your husband (marriage license, $2) who was still gently snoring, and toddled into the kitchen. You flicked on the kitchen radio to get the news (electric current, tax 33 cents on a monthly bill of $10. Radio, cost $30, tax $1.80), and turned on the kitchen light. (Cost of bulb, 20 cents, tax 1 cent.)

Seven taxes—and you haven't even started breakfast.

But breakfast is coming—and so are the taxes. The Tax Foundation—a private research organization whose business is to figure such things out—has them listed for you.

You turn on the electric toaster (cost $16, tax 96 cents) and cut a few slices off a loaf of bread.

Let's stop a moment, and look at that loaf of bread. It doesn't seem big enough for them all—but the truth is that, without half trying, the Tax Foundation found at least 151 taxes hidden in it.

Tax Foundation took a loaf of bread sold by a grocer in Indianapolis. The grocer paid four Federal taxes—individual income tax, 15-percent telephone tax, 3 percent tax on transportation of property, and 20-percent tax on a safety deposit box. Not to mention taxes on light bulbs, refrigerators, and other equipment.

The baker who made the bread paid eight Federal taxes—corporation income tax, stamp tax on transfer of investments securities, telephone tax, telegram tax of 25 percent, transportation tax of 15 percent for salesmen and others on company business, transportation of property tax, safe deposit tax, 1-percent pay roll social security tax.

The baker and the grocer between them paid some 15 State taxes. The mill in Kansas City that made the flour paid seven Federal and eight Missouri State taxes. The railroad that hauled the flour to Indianapolis paid at least five Federal taxes, and State taxes in each State through which it passed—Missouri, Illinois, and Indiana.

The sugar came from a refining concern in New Orleans, which paid—but you get the idea.

So the bread (with the taxes) is in the toaster. The coffee goes on the gas stove (price, $190, tax $8.55) and the fruit juice comes out of the refrigerator (price $300, tax $13.50).

Time to scramble the eggs—and a hundred or so taxes along with them.

The Tax Foundation took an egg sold by a grocer on Pulaski Road in Chicago. The foundation found at least a hundred taxes inside its shell.

It started with the retailer. He accounted for 14 Federal, State, and local taxes. The trucker who delivered the egg to the grocer reckoned he paid 20. The wholesaler added about 17. Then there were the farmer, and the man he bought chicken feed from up in Minnesota, and all of those taxes enter indirectly into the price you paid for the egg.

Getting tired of taxes by now?

Shucks, sister, we've hardly started. Breakfast is barely over. The whole day is before you. You're going to pay, sister—you're going to pay.

Hubby's started for the train (15-percent tax on his ticket to the office). You light a cigarette (cost per pack, 8 cents; Federal tax, 7 cents; State taxes in addition) with a match (tax 5½ cents per thousand) and start to relax when a wail from junior reminds you that baby (birth registration, $1) has to be taken care of.

You talcum him (luxury tax 25 percent) and soothe his tender skin with baby oil (luxury tax again 20 percent). You wonder why such essentials for baby's health and well-being are called luxuries.

There's a shopping trip coming up. You get out the family car (cost $1,600, total taxes, $128, direct or indirect) and stop at the filling station for gas (national average State and Federal taxes, about 5.5 cents a gallon).

And you said you didn't worry about taxes?

This is going to be a special trip. The new fall suit you just have to have. And luxuries, the fur coat hubby at last consented to.

But first there are a few toilet articles you simply must get. Things like new shampoo oil; and shaving cream for hubby. Bath salts and foamy bubble bath. Face creams, lotions, and powders. The lipstick of that perfectly fascinating new shade. Rouge, cologne, a hair rinse, and that home permanent wave solution.

Sure, they're essentials to you. But you pay a luxury tax of 20 percent on all of them just the same.

Don't think that you'll escape those taxes by going to a beauty parlor. The law says that the proprietor of a beauty parlor is considered as buying those goods at retail, and must pay retail taxes on them—taxes, of course, which she considers as part of the cost of doing business, and passes on to you.

Now for that suit. The Tax Foundation found at least 116 taxes woven into hubby's suit—and yours won't be far from that. There's the retailer, and the manufacturer, the transportation of the suit, the railroad, the cotton grower, the wool grower, the weaver. * * *

You get tired of it, after a while. But the tax collector doesn't. Of course—you have to have a new hat to go with the suit. That's another 150 hidden taxes—so the Tax Foundation found out. It took an Easter bonnet sold in a New Canaan, Conn., store, and traced it back through its various processors.

It started with a ribbon maker in New Jersey, who paid a Federal corporation tax, and a Federal telephone tax, among many others.

Next your new fur coat.

No matter what the price, you pay a Federal excise tax of 20 percent. Then, of course, there are the taxes paid by the trapper, and the man who carried the fur to market, and the man who processed the furs, and the man who cut them, and the man who made them into a coat, and the man who carried the coat to a wholesaler, and the wholesaler, and the man who carried it to the retailer, and the retailer, and a few other people along the way.

The only one who doesn't seem to have paid a tax on it was the rabbit himself. But, of course, it was his skin.

Well, with a new suit and a new bonnet and a new coat, you've simply got to have some new jewelry. Dig up 20 percent again, sister.

Taxes on jewelry brought Uncle Sam $210,688,165 in the year ending June 30, 1949. Taxes on furs brought $61,946,247; taxes on cosmetics and toilet goods, $93,969,241; and taxes on luggage brought $82,607,133.

On the way home you remember to get a bottle of liquor for the party tonight. Uncle Sam gets an excise tax of $9 a gallon on distilled spirits; $2.25 a quart on bonded whiskey. On blended whiskey the gallonage taxes will run about $1.55 a fifth, plus another 5 cents as a tax on rectifiers who blend whiskey with grain neutrals spirits, and a cent for the stamp that tops the bottle.

State taxes will average about 29 cents a bottle—a total of $1.90 in Federal, State, and local taxes.

Regardless of that, hubby's ready for a nip when he comes home at the end of a hard day. This, it seems, is a red-letter day. He's been talking to the architect, about that new house you'd love to build.

Of course, there are a few taxes to think of—a thousand or more, of which the Tax Foundation has counted some 700, without doing much more than skimming the surface.

There's the bank, and the title insurance company, and the fire insurance company, and the builder, and the real-estate agent, and the architect.

All of them pay some, or all, of such Federal taxes as individual or corporate income taxes, stamp on security transfers, telephone and telegraph, taxes for the transportation of salesmen, officials, and such, taxes on the transportation of property, taxes on the lease of safe-deposit boxes, manufacturer's excise taxes, and pay-roll taxes.

They also pay some, or all, of such State taxes as corporation-organization fees, corporation-income tax, bank-income tax, insurance gross premiums tax, real-estate franchise tax, real-estate yearly dividends tax, unincorporated tax, motor-vehicle registration tax, mortgage tax, general property taxes, miscellaneous license taxes and inspection

fee, unemployment-compensation taxes, and such local taxes as property taxes and recording fees.

That's for the purchase, financing, and development of your home.

But that's only the beginning.

Involved in its construction are the subcontractor, dealers and jobbers, railroads that transport materials, and various manufacturers, including plumbing and heating, masonry, insulation, linoleum, roofing wallboard, electrical supplies and electrical fixtures, hardware, paint, steel, flooring, and millwork.

They each pay some, or all, of all the taxes we named above—and in a few cases some others. Then there are other manufacturers who supply the manufacturers who supplied material for your house. And they paid taxes.

True, most of those taxes are not charged directly to you. But they are part of the cost of doing business for the firms that contribute to your house. And, one way or the other, the bulk of them find their way into the total cost of your house.

Let's suppose the lady listened to her husband for a while, enumerating those taxes, her head in an increasing whirl. At last she interrupted:

"Darling," she said, "with all those taxes, we just can't afford a house. Let's just look for a new apartment where we won't have to pay them."

Sister, again, how wrong can you be?

Somebody had to build the apartment house. If it is a small house, up to six apartments, the list of taxes is roughly the same as those above. They became part of the cost of building the place.

And who pays many of them in the end?

The tenant, of course—through his monthly rents. That's true in a big multiapartment building, too. The details may change, but the taxes don't.

They go on forever.

Canadians pay taxes, too. But across the border in Canada the finance minister, D. C. Abbott, believes that taxes should cause as little harm and irritation as possible.

Midcentury Broadcast

EXTENSION OF REMARKS

OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a radio broadcast entitled "Midcentury" to which I listened—and I assume millions of others did—that seemed to me to be of great historic importance. This broadcast brought together on the Columbia Broadcasting System, Sunday, January 1, 1950, Columbia's foreign correspondents as well as three others who are presently broadcasting in the United States. It follows:

MIDCENTURY

(Foreign correspondents for the Columbia Broadcasting System, flown to New York from major outposts of the world, participated in a special 45-minute round-table titled "Midcentury," Sunday, January 1, 5–5:45 p. m., eastern standard time. Edward R. Murrow, who broadcasts nightly over CBS, was chairman. The foreign correspondents were: Howard K. Smith, CBS European chief; Bill Downs, CBS correspondent in Germany; David Schoenbrun, CBS correspondent in France; Winston Burdett, CBS correspondent in Italy; Bill Costello, CBS news chief in the Far East, Tokyo. For the domestic portion of the program the participants were Eric Sevareid, chief CBS Washington correspondent, and Larry Lesueur, CBS United Nations correspondent. Mr. Murrow led the correspondents in an informal discussion of the last 50 years and in an evaluation of prospective global trends in the next 50 years.)

Mr. MURROW. I should like some friends of mine to introduce themselves to you.

Mr. SMITH. I am Howard K. Smith, born and reared in New Orleans, La., but in Europe for the past decade, covering all points between Manchester, England, and Moscow, U. S. S. R., from Bergen, Norway, down to Belgrade in Yugoslavia. Present address: 84 Hallam Street, London, England.

Mr. SEVAREID. My name is Eric Sevareid, I grew up in North Dakota and Minnesota, worked in France, England, various war fronts, South America, and the Orient, and now make home and headquarters in Washington on the Potomac.

Mr. DOWNS. Bill Downs, home town, Kansas City, Kans. Assignments: London blitz, Moscow, D-day to Berlin, Japanese surrender, Tokyo and Far East, Bikini, Akron Soap-Box Derby, Detroit, Washington. Present address: 20 Lindenthaler Allee, American sector, Berlin.

Mr. SCHOENBRUN. I'm David Schoenbrun. That's an Austrian name, but I'm a native New Yorker, and I'm stationed in Paris. These past 6 years I've been overseas, reporting from Casablanca to Warsaw. It's good to be back home today.

Mr. BURDETT. I'm Winston Burdett. My home is Brattleboro, Vt. Present assignment and address: Rome, Italy, by way of the Balkans and the Middle East; India, Cairo, the desert campaign, north Africa, Anzio, the Fifth Army, and Washington, D. C.

Mr. COSTELLO. I'm Bill Costello. St. Paul is what Asiatics call my native place, but it's hard now to say just where my home town is. I started newspapering in Minneapolis, while still at the University of Minnesota. And since then my stops in newspaper and radio reporting have included Honolulu, Omaha, Chicago, Washington, and Los Angeles. While I'm roving through Asia, my mailing address is APO 500, Tokyo, Japan.

Mr. LESUEUR. I'm Larry Lesueur, the CBS United Nations correspondent. Born in New York, reared in the Midwest, the son and grandson of newspapermen. My first assignment was the Lindbergh case; reported the war from Dunkerque to Stalingrad; landed with the American troops on D-day. Since then it's been my duty and pleasure to cover the United Nations.

Mr. MURROW. It is our purpose to examine briefly this afternoon, without benefit of statistics, without nominating any men of the year or men of the half century, to examine briefly where we've been, in an effort to see where we're going. No man around this table was alive when the century began. All are reporters, historians of the moment. Let's first examine briefly a few of the great pivots on which history has turned in the past 50 years. What are the big footprints in our own history, Sevareid?

Mr. SEVAREID. Well, Ed, for Americans 1900 ended the age of the great barbecue, and 1950 begins the great age of anxiety. We conquered our continent, we saw our absolute physical security and, therefore, our political isolation disappear. We flirted with imperialism, gave it up because we really didn't care for it. We fought two World Wars, took the initiative for world government with the League, gave it up, took the initiative a second time, and now find ourselves, rather unwillingly, one of only two great powers in a bisected world. And upon our shoulders is the terrible responsibility of preserving the free civilization that western man has developed through laborious centuries. We may not succeed at that, but no one else can. In these 50 years we avowed the policy toward the Orient, restored a reasonable relationship with Latin America, and, finally, understood Europe as our indispensable bastion and partner, instead of a coming competitor.

We saw our broken South start to mend; we began to conserve our wasted natural resources; we saw the rise and decline of organized crime, the rise of organized labor; we saw government teach that preeminent rugged individualist, the farmer, to expect guaranties against failure. We built mammoth corporations protected by property laws that the founding fathers had intended for individuals and then tried, rather vainly, to break them up. We learned to produce goods magnificently, to share them out rather badly and thus failed to quiet our fears of unemployment. We saw the businessman decline as the idol of society and the power in politics and the partial decline, at least, of riches as our personal Holy Grail. Our art forms and literary language became American and not pseudo-European. We felt what the American way of life is, but found ourselves unable to really express it to others.

We believed in the eternity of our social ideals, but at the first warm breath of an alien philosophy many of us panicked, accused people without proof, hunted witches, and became political peeping Toms, until our native good sense rallied again.

All in all, Ed, I think we have used our new world power with uncertainty but with a gentleness which is without precedent in history.

Mr. MURROW. Howard Smith, could you sketch the big turnings in the road for Europe in the first half of the century?

Mr. SMITH. Well, the story of Europe these 50 years can be quickly told. Europe declined. After ruling the world with no competition for about 400 years and giving us our still-prevalent world culture, inventing modern industrialism and spreading it through the world, Europe's situation began to change radically around the year 1900. What caused the change, I believe, was two things: First, the social problems of industrial economy, like maldistribution of wealth, unemployment, and so on, caused the nations to divide within themselves. Second, the advance of science made Europe too small a space for thirty-odd-nation states to exist side by side, with no international order above them. In 1914 the frictions exploded in the first modern total war. The war, World War I, decided very little. It left the people disillusioned and defeatist in attitude, and it created the first Communist state, in Russia. Adolf Hitler was able to exploit both of those factors—the people's defeatism and their fear of communism—and he won his positions to launch World War II. By the skin of our teeth, we of the democracies won both world wars, but the cost was terrific to Europe. Once the seat of all the world powers, there is not a single big power left in western Europe. Communism has advanced to the verge of the west, fascism lies not very far at all below the surface.

The explosive problems that started it all are still there—the internal social problems, the international problem of some kind of world government. At mid-century, this is Europe's third, and probably last, chance to solve them.

Mr. MURROW. Well, most of us have ignored Asia in the past and most of us know that we can't do so in the future. Bill Costello knows more about that part of the world than any of the rest of us.

Mr. COSTELLO. Well, Ed, in these last 50 years Asia has roused itself like a sleeping giant and rubbed from its eyes the crusted

traditions of centuries. In the long view of history, the transformation has been so swift as to be magical. The first major turning point came in 1905, when Japan emerged as victor in the Russo-Japanese War. That victory had three vital consequences: First, it challenged the nineteenth-century myth of white supremacy and paved the way for the decline and fall of western imperialism, for it demonstrated that Asiatic guns were as good as or better than western guns; second, it planted the dream of Japanese imperialism as a bargain-counter substitute for European domination; third, it set fire to the tinderbox of native nationalism, to the struggle for self-respect, political independence, and freedom from economic exploitation.

In the years that followed we have seen the progressive evolution of these three trends. The Manchu dynasty of China collapsed in 1911 because it was too enfeebled, too morally bankrupt to fight for anything. The First World War weakened the economic power of the west and gave impetus to Japan's imperialist ambitions. In one long, difficult step, Asia then began the transition from the iron age to the machine age. In the midst of this struggle for power and wealth, imperialism suffered a mortal blow when in 1936 the United States Congress approved an act promising freedom to the Philippine Islands in 1946. That action raised the Nationalist hopes of millions in Asia. It focused the issue, and the Japanese answer was, first, the invasion of China, and, finally, the attack on Pearl Harbor. In the war that followed the imperialist cycle came to an end, both for Japan and for the European nations. There were quick grants of independence to the Philippines, India, Burma, and Indonesia. The unequal treaties were abolished in China. By coincidence, communism won acceptance in China as the only visible means of achieving order and stability. The immediate accent now is on freedom and self-government, and the ultimate target of every starving peasant is a better standard of living.

At the end of the half-century, Asia has come of age politically, has made a powerful assertion of national feeling. Now it embarks on the vastly more difficult task of preserving its personal liberties while the causes of economy security are being advanced.

Mr. MURROW. Perhaps one of the best ways of measuring our good fortune at this half-century is to examine what people in foreign lands regard as luxuries.

Mr. SMITH. Well, in Britain, darn near everything British-made is a luxury. Hats, textiles and, alas, Scotch whiskey are all for export only.

Mr. DOWNS. Well, in Germany, it's doorknobs with houses on the other end.

Mr. SCHOENBRUN. And in France, hot tap water or a cake of fat soap.

Mr. BURDETT. In Italy, an orange or a clean, unfrayed shirt. In the countryside, a luxury is an electric light, a telephone, a paved road.

Mr. COSTELLO. Don't think this is exaggeration, but for 1,000,000,000 people in Asia—that's half the world's population—anything more than a pound of rice a day borders on luxury.

Mr. LESUEUR. At the United Nations, I guess, the only luxury is just one kind word.

Mr. MURROW. Now there's a list of luxuries, which we in this country regard and accept as ordinary essentials. In a world with such vast economic and social inequalities, debate, decision and joint action is difficult, if not impossible. The major instrument through which nation speaks to nation was born with high hope and much publicity in San Francisco. The future of the United Nations is uncertain, but we may perhaps measure what it can do, by what it has done. Larry Lesueur has reported its doings from the beginning.

Mr. LESUEUR. Well, Ed, like the United Nations headquarters going up on New York's East River, peace can't be built in a day. Some of the sensational political squabbles at the United Nations have obscured its real achievements. We've heard a lot about the atomic energy control deadlock, the misuse of the veto, the disarmament impasse. It's too easy to remember the failures of the United Nations and to forget its successes. But remember, that when the Big Four couldn't decide what to do about the Italian colonies, they tossed it to the United Nations and that when the big powers were up a tree over Iran 3 years ago, the moral force of the United Nations, focused by the Security Council, culminated in a Russian withdrawal from Persia. It's true that the men of Israel forged their own state, but it was the United Nations that originally created it, and the war in the Middle East was kept from spreading.

The mediation of the UN helped contain the conflicts in the Balkans and Indonesia. The war is now over in Greece, and 75,000,000 people in Indonesia got their freedom this very week. I think it was the debates at the United Nations that unmasked the true nature of Russian propaganda. Those debates certainly helped to consolidate world public opinion. And while these discussions go on before the people of the world, in the background are the continuing efforts of the UN's specialized agencies. They're trying to get after the roots of war by making this a better world to live in. The World Health Organization is attacking scourges more deadly than even war: Malaria, tuberculosis, VD. The International Refugee Organization has already settled a million displaced persons. And the International Trade Organization is reducing trade barriers between nations. I think there's a common desire among the UN delegates not to disappoint the hopes of the ordinary men and women of the world. Of course, the UN can't settle problems like the division of Germany. That, the big powers have reserved for themselves.

Mr. MURROW. Or, Larry, it may be that the Germans themselves will decide which way they're going. How does it look from your post in Berlin, Downs?

Mr. DOWNS. Well, Murrow, I feel there's a distinct here-we-go-again atmosphere on this first day of the second half of the twentieth century. Many new things have been added politically and economically, but the problem that made Europe a battlefield shortly after the beginning of the century still exists. It is Germany and the 67,000,000 people who populate the heart of Europe. The German power potential that turned the continent into a battlefield the year I was born still exists. The revival of German power today once again is under consideration—not so much by the Germans this time, as by the super-nation groups now engaged in a cold war. The reason that no democratic internationalism, such as the United Nations, can solve the problem of their late unlamented enemy is that each of the two most powerful nation-states in the world is wooing Germany like a lovesick swain. Both Russia and the United States want to assure themselves that if Germany does not became an outright ally, at least the German economic and military power will not become a future enemy. This is the essence of the cold war in Germany. As you know, there are two Germanys, the West German Republic, based on Bonn and sponsored by the United States, Britain, and France; the East German State consists of the Soviet zone and is a Soviet satellite.

The Bonn government was chosen in free elections. The East German Government is the product of a Communist coup. But Germans are Germans before they're anything else. They are not Communists because the Kremlin says so; neither are they democrats—with a small "d"—just because we direct them to be democratic. The question of what happens in the world during the next 50 years will, to a large extent, fringe on what the German people will do when they eventually are united—as united they will be. Their spiritual home, their culture, and tradition are connected with the west, but their markets and their economy and their military opportunity will best serve them by joining with the east. Basically, the problem is: Will Germany finally follow the Red Star of the Kremlin or the freedom and promise of democracy? There are no answers apparent in Germany to these questions right now.

Mr. MURROW. Well, of course, it's not only in Germany where two philosophies, two ways of life are in conflict. In all nations, it seems to me, the fear of war, of the inevitability of conflict between these two great powers darkens men's minds. Do you think our policy of containment will work? Or, to put it another way, do you think war is inevitable? Smith?

Mr. SMITH. Well, I can't believe that war is inevitable. The cold war is a peculiar kind of conflict. Material interests are not directly involved. The Russians haven't got anything we want, and we haven't got anything the Russians can't do without. The conflict seems to me to be psychological, a matter of suspicions and ideologies. It seems to me that if there could be a period of mutual sufferance, on however vile terms, and the world could recover somewhat, ideologies might be confounded and suspicions could be dissolved. We can have a very long period of peace—for nothing breeds peace like peace.

Mr. MURROW. Sevareid?

Mr. SEVAREID. Well, nothing is inevitable, Ed. But I think war is likely as long as Russia remains a tight dictatorship. Russia's been a tyranny of sorts for centuries, but not always an aggressively expanding one and never before a mechanized one. I just don't see how you can teach people, teach generations of very tough people that destiny has called them to remake the world in their image, and then not expect them to try to act according to their religion.

Mr. MURROW. Do you think war is inevitable, Downs?

Mr. DOWNS. Nations don't make 12-inch guns to shoot quail. They don't drop bombs in mid-Pacific lagoons to kill fish. War is inevitable until the time comes when nations give up their sovereign right to make war and learn to settle their problems peacefully.

Mr. MURROW. What do you say, Schoenbrun?

Mr. SCHOENBRUN. I'd say that the only inevitability is hatred for the nation that starts the war or drops the first atom bomb. As for the war itself, the Communists say they'll never fight against the Soviet Union. The anti-Communists in Europe say they will fight, if war comes, but only if Americans are in the battle lines with them from the start. As for the French, they say, "no more liberations, thank you, or you'll be rescuing a corpse."

Mr. MURROW. What do you say about the inevitability of war, Burdett?

Mr. BURDETT. Ed, you asked if containment will work. I certainly don't think that war is inevitable, but I don't think either that containment alone is going to prevent it. A straight military policy, designed to contain Russia, seems to me a negative thing. It can produce two armed camps, two civilizations arrayed against each other. It can never produce two worlds capable of living confidently and peacefully together. Europeans know this. I think they will be made to feel much more secure and confident by a solid recovery of their economics than by

any military alliance we can possibly give them.

Mr. MURROW. How does it look from Asia, Costello?

Mr. COSTELLO. In Asia the cold war is on every tongue, but nowhere except perhaps Japan, did I find any eagerness to fight aggressively against the expansion of communism. For that reason, few Asiatics think war would be inevitable. On the other hand, Stalinism is not much better off than we are. In China and India especially, the Russians are regarded as uncouth upstarts. In the ethical and moral sphere, these people feel better qualified to be leaders than followers. If there is to be Titoism in Asia, it will be a moral rather than a military defiance of Moscow.

Mr. MURROW. Well, this is a matter on which you might have something to say, Lesueur.

Mr. LESUEUR. That word "inevitable" has me stumped. If we cut it down to the foreseeable future I think that a final conflict between the United States and Russia doesn't have to take place. I think that Russia prefers political expansion and that the interests of the United States are certainly based on peace. But limited clashes between small allies are not only inevitable, they've already occurred. I think it's a question of hoping for the best, while we keep our powder dry.

Mr. MURROW. Well, this is an area where there is obvious disagreement as you've heard. But we can at least agree that even if it isn't an enduring peace it has endured a great deal already and there is still room for reasonable men to hope. We are agreed that no one can predict with certainty what the Russians are going to do. So, let's examine for a minute the direction in which the non-Communist world is moving, right, left, or down the middle; what do you say, Schoenbrun?

Mr. SCHOENBRUN. I think to the right. The swing to socialism in Europe was sharply reversed in the last year. Socialists have been kicked out, sold out, bought out, or they've bowed out of governments throughout the west. In Belgium they're out of the government for the first time since the liberation. In Italy the Socialist Party divided itself like an amoeba—sterile cells warring on each other. In Germany a still strong Nazi undercurrent and an anti-Socialist majority.

And, in my own territory, France, I've watched the so-called third force—the democratic center—whittled away on both sides. The first half of this century looked for a moment like the golden age of socialism. Now it looks like the age of conflict—swirling tides running in all directions, and chances are that the currents of the next 50 years will depend on how the tides run in America and Asia, not Europe.

Mr. MURROW. Which way is the political tide running in Italy, Burdett?

Mr. BURDETT. In Italy there's a special phenomenon worth noting. At no time in this past half century has the Roman Catholic Church enjoyed such a florid period of prosperity and influence. This is not a religious phenomenon. It is not a spiritual revival. It is rather a sign of the remarkable political resurgence of catholicism. I think it's mainly due to the fact that after the wreck of fascism and the upheaval of war, the church emerged as the one intact and uncompromised symbol of stability and order. Conservatives rallied around it. Anxious people throughout western Europe turned toward Catholic leadership in their search for security. Right now in Italy the sharp political undercurrents are rightward. The left-running tide has ebbed. The floating mass of voters, the middle class, is again looking for security and right-wing leadership.

I think this is a deep trend, a long-term trend, and not a passing reaction.

Mr. MURROW. Costello, what would you say the general trend in politics is in Asia?

Mr. COSTELLO. Burdett's point raises an interesting contrast in Asia. People in the Orient are not drifting inexorably in any direction—either right or left. There's generally a sense of bewilderment and confusion. On the other hand Asia does have an asset which is conspicuously absent in Europe. There has been a kind of spiritual revival in this century. It's not in any sense a religious movement. It might be accurately compared with the humanist movement, which grew up in Europe during the latter Middle Ages. It consists mainly of a feeling of individual pride and self-respect. People no longer allow themselves to feel humiliated and degraded as the slavish property of some landlord or warlord or foreign overlord. The great symbol of their emancipation was Mahatma Gandhi, who emerged as the voice of Asia's conscience. Gandhi denounced the old moral law of fatalism and subservience, and, using nationalist feeling as a foundation, he created a new sense of personal worth and dignity, which today infuses the whole of Asia.

Mr. MURROW. Well, you fellows from overseas must remember that we have politics in this country too. Sevareid, what would you say the informed opinion is in Washington as to the direction in which we're going?

Mr. SEVAREID. My opinion, Ed—and I'm in Washington today—is that there are some basic differences. Europe, of course, had an old encrusted class society and we did not. We are now trying to level out our inequities, not by the Socialist means of state proprietorship, as in Europe, but developing a so-called welfare state and distributing benefits is not really socialism. It's hardly leftism or rightism. But we certainly have changed the function of our Government and our society. First, our Government was to stay aloof from the economic forces and preserve only civil freedoms, then it was to be a balance wheel preventing any economic forces from overwhelming others, now it's to provide benefits, not for classes, but for groups: farmers, labor, veterans, the aged, and so on. America's original motto was "Equality for all—special privilege for none." And now to try to preserve a rough kind of equality it is special privilege for all.

Mr. MURROW. I suppose it is true that the only people who complain about special privileges are those who haven't got them: and viewed from the outside, it seems to me that we in this country have more of them than anyone else.

How does this country look from the outside, anyway? All of you fellows have spent years abroad. Tell us how we are, as others see us, Mr. Smith?

Mr. SMITH. Well, the British have been the world's money lender long enough to know that nobody loves a money lender, and they should be sympathetic with us. But even the British can't suppress a natural resentment of accepting charity. It has been said, and, I think, truthfully, that if either of the British political parties campaigned in the British elections on a policy of twisting Uncle Sam's coattails that party would probably win the elections. It's just human nature, I fear, and the resentment won't end until Europe recovers and can play the role of equal trade partner with us, rather than that of a poor relation with his hand outstretched.

Mr. MURROW. How do we appear to the Germans, Mr. Downs?

Mr. DOWNS. How we look to the Germans depends on which side of the dividing line your particular German lives. In the west we have the position of a stern and wealthy grandfather, meting out punishment and rewards at the same time. Some western Germans say behind our backs that we're a little foolish for being so good to them; while in Communist Germany the flood of anti-western propaganda is beginning to have its effect. With little to counter the party line, we're coming more and more to be the capitalistic, monopolistic, war-mongering villains.

Mr. MURROW. How do we appear to the French, Mr. Schoenbrun?

Mr. SCHOENBRUN. Depends on which Frenchman is doing the looking. A French automobile manufacturer sees us as giants. But a Paris fashion magazine editor thinks we're a little flashy. Tens of thousands of French war orphans think that an American is Santa Claus. But to many a nervous French mother you're a trigger-tempered kid brother who may get the family into a brawl. We're stern uncles to French Government officials; we pay their debts but try to run their lives. We're loved and hated in France; feared and admired, sneered at, flattered, envied, but we're not ignored.

Mr. MURROW. And the Italians, Mr. Burdett, what do they think of us?

Mr. BURDETT. Italy and Europe, looking at America, not Americans, mind you, but America, is like a proud man who has suddenly developed an inferiority complex late in life. Psychologically, it is not easy at Europe's age to have to be grateful for charity, to see your position at the center of the world suddenly eclipsed and taken over by a newcomer. Europeans are painfully conscious that they cannot get along without us and that there's very little they can really do to help us, even though we call them our allies. So they are irritated by this unpleasant sense of dependence. I think there's only one solution to the dilemma. There'll be a healthy mental balance again when Europe feels she's once more carrying her own weight in the world, even though she cannot hope again to lead it.

Mr. MURROW. And what sort of view do the Asiatics take of us, Costello?

Mr. COSTELLO. Well, Murrow, it's my impression that Asiatics treat Americans sometimes with exaggerated courtesy because we have both money and military power. That doesn't mean they like us as a nation or that they respect our leadership and our morality. Many of them are frankly suspicious even when they ask our help. They think of us as being potentially the authors of a new twentieth-century imperialism. They resent our ignorance about far-eastern history and culture and civilization. They don't like our brusque and sometimes patronizing attitude. We need to send Asia a lot of students as well as money if we want to build a permanent reservoir of good will.

Mr. MURROW. Of course, there's a number of foreigners in this country who are getting a rather closer look at us; those who are stationed at the United Nations. What do they think of us Lesueur?

Mr. LESUEUR. Well, as you say, the United Nations has 59 members. Some of them look upon us as imperialists, others as their protectors. None of them likes to be pushed around. But all of them regard us with respect. And no one will deny that the United States is the strongest influence in the UN, and that influence is constantly increasing.

No discussions can take place in a vacuum. The very physical presence of the United Nations in New York has made a tremendous impact on these representatives from all the corners of the earth. The one time everyone listens is when the delegate of the United States speaks. He reflects the power, the prestige, and the money of the strongest nation on earth. I won't say that every decision goes in the direction that we want it to. Far from it. But when the chips are down there are mighty few things that the United States can't get done at the UN if it really wants them.

Mr. MURROW. Let's pursue this matter of the United Nations for a moment. Of course, it wasn't set up to make the peace, but rather to keep it. How's it doing, Smith?

Mr. SMITH. Contrary to most people, I have been greatly encouraged by the UN this last year and mainly by one incident. When it became a question of Yugoslavia getting a seat on the Security Council all the skepticism and cynicism about the uselessness of the UN suddenly dissolved and the powers fought tooth and nail over that seat. I believe that the UN can develop into something like the world's conscience, if not the world's government.

Mr. MURROW. What do you say, Sevareid?

Mr. SEVAREID. Ed, as you said, the United Nations was not designed to make the peace after this war; it was designed to keep it once it was made.

So perhaps the UN hasn't really yet had its chance and won't until the powers do make the peace. But, anyway, I have doubts about the UN, unless by some magic it gets real enforcement powers. It's caught between two great eras, the rise of the era of passionate nationalism in the east and the decline of that era in the west. This is one world all right, but only in space; it's two worlds in time.

Mr. MURROW. What do the Germans think of the UN, Downs?

Mr. DOWNS. One might say, Murrow, that the Germans have a kind of cynical respect for the United Nations organization. They're interested in joining. But they remember Versailles and they see the east-west struggle outside the UN as the real fight and one that the UN seems powerless to settle. I stick to my original contention that the UN or any other international organization will have little real effectiveness until the nations' states are willing to give up those parts of their sovereignty to settle their problems by war.

Mr. MURROW. How do the French feel about the UN, Schoenbrun?

Mr. SCHOENBRUN. Two out of three Frenchmen always say "no" to anything. It's essentially a negative country. But on the UN France is positive; support is strong. There's also a big following for world government movements there and lots of friends of world citizen Gary Davis. Frenchmen are often cynical and pessimistic. But the United Nations still looks like an ideal that even a cynic can buy.

Mr. MURROW. Burdett, how does it look to the Italians?

Mr. BURDETT. The Italians have centuries of power politics behind them. They take what I'd call a dispassionate and utterly disenchanted European view of the UN, namely, that the UN is a collection of sovereign nations that can do no more than mirror the world pattern of power politics. It can do the job if the nations which have the power are able, ready, and willing to make it work. And Italians are only too acutely aware that the nations in question are just two.

Mr. MURROW. What's the view of the UN in Asia, Costello?

Mr. COSTELLO. Well, Murrow, it's a little ironic that the United Nations achieved one of its outstanding successes in settling the Indonesian problems as Larry Lesueur pointed out a moment ago. It's ironic because most Asiatics appear to give the UN very little thought. Each country, each locality is too preoccupied with its own renaissance to concern itself with distant international maneuverings. There's a tendency to oversimplify all their foreign problems by looking primarily to the United States for help and guidance. One prominent Indian statesman admitted to me frankly that it is the United States which is preparing the world for eventual world government.

Mr. MURROW. Larry Lesueur, you spend most of your time out at the United Nations. Do you want to add anything to what you said earlier on the subject?

Mr. LESUEUR. Well, I think your original question was "Can the UN do the job?" Ed, and I wish I could answer that one with a simple "yes," but I can't. The United Nations cannot accomplish more than the member states put into it. It can't provide military security for the world, but it can and it does provide moral authority. Its great strength lies in its ability to focus world public opinion. I can say this, that if the UN fails and the world goes up in flames, the first thing the survivors will do is form another United Nations. Men just can't live without hope.

Mr. MURROW. Certainly no one can deny to the UN its record of achievement in settling disputes of a minor nature, or its usefulness as a meeting ground for conversations between the major powers. But it's also true that the major powers are attempting to use it as they did the League of Nations for the promotion of their own national interests. The fact is that in a power world the United Nations itself is sadly lacking in power. But it remains the most massive achievement in international organization in the first half of this century.

Well, fellows, let's stop talking about nations and organizations and juggling hemispheres. I'd like to put a very simple question to all of you. You've flown here from a half a dozen different capitals a total distance of about 22,000 miles, just for this program. Tomorrow you'll all be flying back. We have enough time left for each of you to take just half a minute to say just anything you feel like saying. Smith?

Mr. SMITH. One thing has struck me in my reporting in Europe since the war. Almost every time I start tracing some individual European problem to the possible source of remedy, the road leads almost every time not to some place in Europe but to the U. S. A.

It's clear to me that the fate of the world in the next half century will be decided nowhere but here and with the American people and their wisdom or—God save us—their lack of it.

Mr. MURROW. What do you want to say in 30 seconds, Sevareid?

Mr. SEVAREID. I agree with Howard Smith. It's up to America to demonstrate that men can remain free and secure in a mechanized society. But, we can't prove it to others till we prove it first to ourselves. We tend to forget our own ideals. But the tough thing is that there is a basic conflict within those ideals, the conflict between our drive for equality and personal freedom on the one side, our drive for personal aggrandizement on the other. And I think, Ed, that half the world is waiting to see if we can fit them together.

Mr. MURROW. Now, Bill Downs.

Mr. DOWNS. Well, during the past 10 years that I've been a foreign correspondent, the events that stick in my mind are those that make me ashamed. I was ashamed for being fat when a hungry woman in Amsterdam was so overcome by a can of beans that I'd given her that she cried. In Moscow, I was ashamed at being powerless when one of my friends was shipped to Siberia by the secret police just because he was my friend. In America, I've been ashamed of the color of my white skin when encountering racial prejudice.

On D-day when I saw the crumpled body of a young kid that could have been your brother, I was ashamed in a way to be still alive. During the next half century, the part that I'll live through, I'd like to see this kind of shame abolished from the earth.

Mr. MURROW. Schoenbrun?

Mr. SCHOENBRUN. It struck me that we Americans have one characteristic that distinguishes us from all other nations. We want to be loved. We're not content just to have allies, they've also got to be pals, buddies, with a Presidential system just like ours and perhaps a dash of ketchup on their hamburgers. We seem to wear our hearts on our sleeves and we're easily hurt. Maybe the trouble is that our pocketbooks are as open as our hearts and we're secretly afraid that we're loved only for our money. I wish we'd grow a thicker skin in the next 50 years.

Mr. MURROW. Now 30 seconds for you, Burdett.

Mr. BURDETT. Well, I think, Murrow, that this problem of western Europe, which is now ours, is the problem of an insecure civilization. It seems to me that one main reason why Russian pressure seems so formidable and threatening is that the old society of the west is so unsure of itself. If that is so, then our task is enormous.

We can never accomplish it by a purely negative policy dedicated to the idea that everything anti-Russian is good. We can only do it by helping to build a new society, by giving the west a new sense of independent strength, of help, of permanence. By helping Europe to create conditions, the moral and social conditions, for a stable democracy and so for an abiding faith in democracy.

Mr. MURROW. Now, a half minute for you, Bill Costello.

Mr. COSTELLO. I'd say this, gentlemen: Asia today is a keg of dynamite with a lighted fuse and most Americans just don't realize it. We've got to revise our thinking. The old legend of the white man's burden in Asia has been tossed into the limbo of history. The people of Asia today want partnership not patronage. They're willing to buy and sell. But they won't be bought and sold. They don't even want to be dominated by their own governments. They feel just as the Americans do—that people are more important than institutions. In this next half century we've got to extend something more than just material aid. They'd like our money, yes, but they insist on having our respect.

Mr. MURROW. Now, a half-minute for Larry Lesueur.

Mr. LESUEUR. I guess, Ed Murrow, that my chief concern is that the question of war and peace must dominate the rest of our lives. There'll be some very dangerous periods ahead, especially after Stalin dies. A new and insecure Russian leader could plunge that country into war in an effort to preserve his power. On the other hand, the whole Communist movement may break up within the next 50 years. Look at Tito. I think our best hope lies in patience and the cultivation of allies and that one of our great problems will be to erase feelings of racial superiority between ourselves and those allies of another color.

Mr. MURROW. Gentlemen, it occurs to me to suggest that a great deal of sense was talked in those 20-second efforts you just made. And it seems to me, listening to this conversation, that there's been a theme running through this whole discussion—and it is that the last 50 years is a record of unceasing conflict between the individual and the state. When dictators have risen to power, it has happened because the individual has abdicated his political and economic rights and assigned his responsibility as a citizen and as a human being to an individual or to a political party. When dictators have been overthrown, it has been the result of the determination of people to retain or to regain that freedom.

We seem to be agreed that the struggle will continue in all of its various forms. The search for security, both national security and individual security, will continue and it'll be intensified. It seems to me that this discussion has demonstrated beyond doubt that what we in this county do—that is, what our Government does—will determine as never before the fate of civilization. The time when we could separate domestic and foreign issues has passed. Whether we like it or not, the awesome responsibility of the leadership of the free world has been thrust

upon us; we didn't seek it. We have come into our full inheritance at an early age, but youth has never been acceptable as an excuse for failure. We in this country are the fortunate few who live in a generous, bountiful and capacious land. We are, as you have heard, viewed abroad with a mixture of fear and admiration. But it seems to me that, having regard to our history, our heritage, and our strength, we can afford to greet the unknown with a cheer. And, fortunately, there is 10 seconds left, which gives me the opportunity of wishing all of you fellows much luck, good journey, and good news.

It Is Now or Never if We Are To Stop Spending

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. MACK of Washington. Mr. Speaker, only in 2 years out of the last twenty has the budget of the United States been in balance. Heavy deficits have occurred in all eighteen of the remaining years.

Our national debt as a result of this deficit spending has climbed from sixteen billions in 1930 to a total of two hundred and fifty-seven billions today.

In his most recent message the President proposed to continue this deficit spending during the next few years. It is my conviction that if we cannot balance the Federal budget now when employment and national income are at a high level we never will balance it.

Under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Aberdeen Daily World, one of the leading newspapers of the State of Washington, because it expresses ideas that completely agree with my own:

DEBT COST HEAVY

President Truman's idea that we can go $10,600,000,000 deeper into debt this year and next as a temporary matter and then straighten things out in the following few years so that the budget will be balanced and there will be no need for further debt is puzzling. It is just as puzzling that he figures the interest on the national debt, increased under his program by $10,600,000,000 will be less in 1951 than it is this year. And it takes 13 cents of each tax dollar to pay the interest now. That is only 1 cent less than goes to the veterans. It is 2 cents more than goes to international aid, and more than twice as much as the 6 cents going to age pensions, health, and social welfare. How in the name of common sense and arithmetic you are going to add $10,600,000,000 to the national debt and at the same time reduce the interest, only an Einstein, operating under a relativity-gravitational theory, which no one understands, can explain.

Nor are additions to the national debt temporary. Only twice in the last 20 years—in 1947 and 1948—has the Government lived within its means, and in all that time the debt has mounted from sixteen billion in 1930 to a wartime peak of two hundred and seventy-eight billion. It dropped to about two hundred and fifty billion after the war but it is climbing again and will reach two hundred and fifty-eight billion by the end of next June. There is nothing temporary about that. Nor will there be anything temporary about an additional five billion, five hundred million in the fiscal year ending in June 1951.

The people ought not to allow themselves to be deceived in this matter. The huge public debt is a burden. It took five billion, four hundred million to pay the interest on the debt last year. If the country had been out of debt, that sum could have been devoted to other public services or the budget could have been brought into balance, including all the things the President proposes, without incurring more debt.

A nation, like an individual is better off without debt. And certainly there is no sense in going deeper into debt in a period of the highest national income in history. That is the time to pay the country's bills, not add to them. Not even politics can justify the President's deficit spending.

California Community Plans Disaster Relief

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. DOYLE. Mr. Speaker, in the great Eighteenth Congressional District of my native State of California is situated the important community of Lynwood. I have now received from the town's newspaper, the Lynwood Tribune, a copy of paper dated September 22, 1949, the headlines of which say, "First disaster demonstration in Nation."

With a great deal of pride, Mr. Speaker and my colleagues, I call to your attention that this demonstration is the first reported mutual-aid demonstration of the United States by a community with all agencies coordinated, with every organized unit in the city mobilized as it would have to be in case of some disaster. The outline, as reported by this splendid newspaper, is herewith printed. I know it will prove very valuable to other communities in the Nation. I congratulate this thriving, prosperous, and important community on taking the initiative in doing this.

The article referred to follows:

FIRST DISASTER DEMONSTRATION IN NATION—DISASTER GROUP READY FOR DEMONSTRATION ON D-DAY, SEPTEMBER 29, AT 6 P. M.—COMMANDER BRUNER ANNOUNCES CHIEFS IN ALL DEPARTMENTS, FUNCTIONS; MANPOWER, EQUIPMENT PREPARED FOR EXHIBITION

The first mutual-aid demonstration in the United States for relief of a community, with all agencies coordinated, will be conducted in Lynwood at the city park, zero hour 6 p. m. on Thursday, September 29. Personnel of all divisions will be called at a prearranged signal. Practically every organized unit in Lynwood will be mobilized for the demonstration which will combine the highest degree of communications, technical and professional aid with that of heavy duty. Lynwood, foremost in this movement in California has already enacted its ordinance governing this unusual, emergency organization and appointments were confirmed by appointment of the city council Tuesday night.

Vice commander is Art J. Smith, Lynwood veteran, active in the former servicemen's affairs through the American Legion. Other personnel chiefs are named in the following, which includes functions of all divisions, including that of executive officer which is vested in Police Chief Paul W. Kerr, whose facilities in this office have been made available to the disaster council:

LAW AND ORDER

Paul W. Kerr, chief.

Lieut. Claire Dedrick, first assistant.

Lieut. R. Y. O'Shaughnessy, second assistant.

Lieut. W. W. Fuller, third assistant.

Functions: Secure compliance with law and ordinances of the State, county, and city; guarding all facilities within said city; prevent all types of looting; generally assist all law enforcement agencies.

Duties: It shall be the duty of this division to enforce all laws of the State, county, and city for preservation of life and property, and to maintain peace and order.

Contributing organizations: Regular police officers; police reserves; police air squadron. L. A. Co. sheriff's office, humane society; mutual aid. Service clubs (Rotary, Kiwanis, Lions, Exchange, Optimist, Knights of Columbus, etc.). Reserve units (California National Guard, U. S. Naval Reserve, U. S. Army Recruitment Service, Sea Scouts), American Legion; VFW.

FIRE DIVISION

Earl Gallaher, chief.

Functions: To maintain fire-fighting equipment and forces to meet any emergencies.

Duties: To fight fires, rescue persons, administer first aid, save property. Instruct residents regarding fire prevention and defense methods for individual citizen. To instruct in the methods of detecting fires and precautions to be observed in reducing fire hazards.

Contributing organizations: Regular firemen; reserve firemen; first-aid units; rescue squads. Service clubs (Rotary, Kiwanis, Lions, Exchange, Optimist, Knights of Columbus, etc.).

MEDICAL DIVISION

A. J. Frishman, M. D., chief.

Function: To mobilize, organize, and direct the medical, dental, hospital, and first-aid activities.

Duties: Maintain up-to-date lists of names, addresses, and telephone numbers of physicians, dentists, nurses, in key positions, for immediate assignments.

Survey anticipated needs, outline duties, and planning for assignment of medical, nursing, and auxiliary personnel to shelters, emergency medical stations, hospitals, ambulances, morgues, immunization clinics, and public health nursing home visitation.

Contributing organizations and equipment: Red Cross, ambulances, Humane Society, first-aid units, canteens, emergency-aid centers.

Personnel: Medical, dental, and hospital groups; private health agencies and institutions; nursing groups; local druggists, and druggist associations; sanitary engineers from city and county health departments.

Service clubs (Rotary, Kiwanis, Lions, Exchange, Optimist, KC, etc.).

PUBLIC WORKS DIVISION

A. J. Bateman, chief.

Functions: To maintain public utilities, to keep all routes in disaster planning open for use, and assist in phases of utilities services.

Duties: To repair and maintain public utilities, repair roads, to restore normal flow of traffic as rapidly as possible, coordinate health

activities and medical services where needed in this division.

Contributing organizations: All publicly owned equipment. All privately owned equipment.

Personnel: City employees, American Legion, VFW, private contractors.

UTILITIES DIVISION

Charles Burke, chief.

Functions: To maintain the operations of all utilities throughout the city, and coordinate disaster planning of each utility services.

Duties: Duties will follow that which is described in the disaster manual of each utility company.

Contributing organizations: Privately owned utilities companies.

TRANSPORTATION DIVISION

Charles Sheaffer, chief.

Functions: To provide and maintain all necessary transportation and vehicle communication services.

Duties: Plan in advances for coordination and mobilization of available facilities so that it will be prepared to function promptly and efficiently in time of disaster.

Survey all transportation resources and obtain pledges of voluntary cooperation from organizations and individuals whose facilities would be essential in the event of disaster.

Contributing organizations: Equipment; auto dealers; taxicabs; busses; auto club, Southern California; truck companies.

Personnel: American Legion, American Legion Auxiliary; VFW and Auxiliary; service clubs (Rotary, Kiwanis, Lions, Exchange, KC, etc.).

COMMUNICATIONS DIVISION

C. L. Blodsoe, chief.

Functions: To provide and maintain all voluntary communications services. To coordinate this service with existing governmental services.

Duties: Perform messenger service for all units of disaster council, operating various systems of communication including wire and radio communication facilities.

Plan in advance for coordinator and mobilization of available facilities so that it will be prepared to function promptly, and efficiently in time of disaster, obtaining pledges of voluntary cooperation from organizations, and individuals whose facilities or services would be essential in time of disaster.

Contributing organizations: Equipment, privately owned.

Personnel: Sons of Legion, VFW, women's club, junior women's club, Boy Scouts, Girl Scouts, coordinating council, 4-H Club.

PERSONNEL AND RECRUITMENT

Executive officer, chief.

Functions: Assist in volunteer planning by establishing a personnel list for all units of disaster council.

Duties: Assist in volunteer office, record keeping, clerical assistance, interviewing and campaigning for recruitment of volunteers.

Contributing organizations: American Legion and auxiliary; VFW and auxiliary; Sons of Legion, Boy Scouts, Girl Scouts, 4-H Club; service clubs (Rotary, Kiwanis, Lions, Exchange, Optimist, KC, etc.); coordinating council; PTA's.

AMERICAN RED CROSS

Mrs. Frances Killingsworth, chief.

See Red Cross Plan.

FOOD DIVISION

Phil Harris, chief.

Functions: To obtain, prepare, and serve food. To receive and dispense donated food.

Duties: Work in close cooperation with survey, medical, housing, and registration and information divisions. Arrange with housing divisions for buildings to be used as mass feeding centers and food depots. Work out arrangements to obtain food supplies at any time during day or night.

Make inventory of local and nearby sources of food supplies and information as to approximate quantities usually carried in stock. Inventory and arrange for immediate availability of equipment and facilities necessary for operations of canteens and feeding stations.

Contact restaurant owners and arrange for their places to be used for feeding should need arise.

Develop system of meal tickets and pattern menus.

Contributing organizations, equipment: Large markets, small markets, food warehouses.

Personnel: American Legion and Auxiliary, VFW and Auxiliary, Sons of Legion, Boy Scouts, Girl Scouts, 4-H Club, service clubs (Rotary, Kiwanis, Lions, Exchange, Optimist, KC, etc.).

HOUSING DIVISION

Herman Yaffe, chief.

Functions: To obtain and provide housing facilities for disaster sufferers, unable to provide shelter through their own resources.

To set up and operate refugee centers.

To set up and operate child-care centers.

To provide necessary tents, cots, blankets, and other equipment where needed.

To arrange to obtain necessary space for disaster headquarters, warehouse, food and clothing depots, canteens, and emergency hospitals.

Duties: Make survey and arrange for available housing facilities including city auditoriums, schools, churches, motels, vacant houses, lodge halls, armories, hotels, rooming houses. The sanitary, cooking, and fire hazard of each shall be considered and lighting and safe drinking water.

Contributing organizations: High school, elementary school, lodge halls, churches.

Personnel: PTA's, American Legion and Auxiliary, VFW and Auxiliary, chamber of commerce, post office employees, building contractors association, churches, real estate association, Boy Scouts, Girl Scouts, women's club, junior and senior, Sons of Legion, 4-H Club, service clubs (Rotary, Kiwanis, Lions, Exchange, Optimist, KC, etc.).

CLOTHING DIVISION

Louis Murray, chief.

Functions: To obtain through channels new clothing for disaster sufferers during emergency period. To receive and care for donated clothing.

Duties: To determine, prior to emergencies, what clothing supplies are available through local sources.

Make plans with local merchants.

Contributing organizations and equipment: Retail stores, wholesale warehouses, charitable institutions.

Personnel: PTA's, American Legion and Auxiliary, VFW and Auxiliary, chamber of commerce, post office employees, building contractors association, churches, real estate association, Boy Scouts, Girl Scouts, women's club, junior and senior, Sons of Legion, 4-H club, service clubs (Rotary, Kiwanis, Lions, Exchange, Optimist, KC, etc.).

REGISTRATION AND PUBLIC INFORMATION

Larry Hall, chief.

See personnel and recruitment plans.

CHURCHES AND CHAPLAINS

Rev. Ed. B. Wykoff, chief.

Chaplains, administering to the religious and spiritual needs of persons suffering from the effects of disaster.

YOUTH SERVICES UNIT

Arnold J. Robles, chief.

Assist in programs of youth organizations which are organized and directed toward the promotion of disaster preparedness programs including training thereof.

Mr. Speaker, and then, on Friday, September 30, 1949, the same Lynwood Tribune in big headlines stated, "Disaster relief preparations complete," and therein followed the itemized list of preparation. Without a doubt, this list will prove very valuable to other communities in the Nation.

The matter follows:

DISASTER RELIEF PREPARATIONS COMPLETE—SIRENS WILL ANNOUNCE ZERO HOUR, ALL GROUPS CALLED TO PARK AREAS—COMMANDER PRUNER AND CHIEFS READY. PUBLIC INVITED. CITY PARK WILL BE SCENE OF EXHIBITION THURSDAY NIGHT

Sirens will announce the zero hour, 6 p. m.

Go to Lynwood City Park in an orderly manner.

Assignments to groups on the ball diamond will be made and groups directed by officers of the Lynwood Police Department and of the reserves, who are participating.

Heavy equipment has been assigned to places on the outer perimeter of the park.

Lighter equipment will be placed inside the park.

Field kitchens will be set up in the regular manner.

Specially designated places are reserved for medical groups who will be directed by chiefs and police.

The field is reserved for participants in the disaster demonstration. The stands are open to spectators.

Several unusual features will be exhibited as surprise numbers in the plan for relief of disaster victims and evacuation.

Orders will come through the commander, executive officer, and division chiefs.

While facilities of the police and fire department of the city will be represented and available at the disaster demonstration, protection for homes is assured with officers and firemen on duty, according to Chiefs Kerr and Gallaher.

Public-utilities stand-bys are available on call for emergencies, Chief Carley Burke announced.

Commander P. L. Bruner, Jr., will send a radio message to Gov. Earl Warren. The message and answer will be broadcast at the park where public address facilities will be available.

All Lynwood is invited to the city park Thursday night for the disaster demonstration.

Problem No. 1, Dr. A. J. Frishman said at the Monday discussion, is "hysteria," and care of those who may be suffering from shock. There victims are cared for much in the same manner as neighbors who take over when somebody is in distress, at time of an accident. Their reassurance and a medical sedative takes care of numerous in this condition and leaves medics free to attend more seriously injured persons who must be brought to some central point for attention, leaving maximum of the medic's time for attention to the greatest number. Sixty percent treated in this manner may go on their way. In this the Red Cross and auxiliaries assist and of course the nearest hospital is available for this function, the doctor said.

Lynwood folks who called the police station on the night of the recent 'quake shock were excited and pointed in their questioning but not hysterical, according to desk dispatcher, Russ Bell, who was on the desk. Bell said he was fully occupied for 20 minutes answering calls but that once folks were satisfied there was no great damage and no probable imminent danger, the calls ceased. He gave them what information was available at the time.

According to Police Chief Paul W. Kerr the reaction indicates that great numbers of people are schooled in these matters

through past experiences and may be expected to respond in a cooperative manner in event of disaster emergency call.

The Aero Squadron, southern California's first unit of this kind outside the sheriff's flyers, with flight surgeon and planes available, according to Chief Bill Dalton will be divided into groups of three and four. I will keep contact with the grounds forces by short wave radio.

Trained technicians and nurses will be available through the Red Cross group. Station wagons will be available for the Red Cross, also nursing chairmen and staff assistants.

Police direction will be through the Reserves and the regular force, with assistance from the veteran groups, the Legion, VFW, etc.

Acheson Acts as Expert on United States Defense

REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. HALE. Mr. Speaker, what could be more touching than the surprise, as reported in yesterday's papers, of Mr. W. Walton Butterworth, Assistant Secretary of State for Far Eastern Affairs, over the bad manners exhibited by the Communists in seizing our consulate in Peiping? Is he going to be surprised every time a consulate is seized by the Communists or a consul imprisoned? Perhaps sometime the State Department will learn that Communists do not respect rights or diplomatic immunities, unless it happens to serve their purpose, and that in this respect an Asiatic Communist is no better than a European Communist. At the present time, the State Department is quite incapable of facing any of the consequences of its own conduct.

Mr. Speaker, in this morning's paper, the Philadelphia Inquirer, there is an article by Ivan H. Peterman, Acheson Acts as Expert on United States Defense, and I ask unanimous consent to incorporate this article in my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Maine?

There was no objection.

The article is as follows:

ACHESON ACTS AS EXPERT ON UNITED STATES DEFENSE

(By Ivan H. Peterman)

It is rare for one man, however clever and accomplished in worldly affairs, to assume in one office the philosophic robes of a Confucius, and the strategic pose of a Napoleon, but such today is the simultaneous effort of Dean Gooderham Acheson, United States Secretary of State.

After several depressing days in Washington, D. C., your correspondent has discovered that not only has the Acheson view that we can do nothing whatever about China, or even more vital portions of Asia, been imposed upon the Truman administration, but the director of America's worst diplomatic bunglers in the history of this Republic seems also to be the authority for our security and defense.

Where are the military experts? What has happened to Louis Johnson, and his generals, his airmen, and admirals?

Apparently the row in the President's Cabinet drove the Nation's defenders to the hills, so that as we sat listening to Acheson's stream of defeatism in the National Press Club last week, the few recognized authorities on strategy and defense were such as retired Gen. Toohey Spaatz. The active brass from Army, Navy, and Air seem still in a unification haze, too dumbstruck to carry their cries to Congress. Acheson dismisses Formosa as unimportant, is seconded by Truman—and except for General MacArthur's far-off protest, there isn't a significant rebuttal in all the Nation.

Additionally disturbing is the fact that Acheson's glib words seem to have charmed all but a few Republicans, who are now dismissed from the debate not because they are unqualified but because they lost the election in 1948.

Any pretense at bipartisan foreign policy is, of course, gone. Although experienced Washington observers claim 90 percent of the row over Formosa is politics, Mr. Acheson's own revelations that Russia is hogging up China—Mongolia gone, Manchuria almost, Sinkiang going, and Tibet on deck—would suggest that a certain aspect must be international and real. But you'd never guess it in Washington. Nobody seems disturbed. Not even the newspapermen.

In one of the most contradictory utterances a Secretary of State ever uttered, Mr. Acheson pleaded with press and public not to expect too much logic or consistency. He pointed out that Asiatics were a mixed bag, must be treated in different ways—therefore Uncle Sam will proceed not to treat with them at all, but await their separate pleasures. Meanwhile, wringing his hands at the aggressive, well-designed, and entirely rapacious and plundering success of Soviet Russia.

I came away convinced of these things:

1. The United States declines to take any responsibility, however manifold and atrocious our mistakes that helped Chiang Kai-shek's government down the toboggan.

2. The Truman administration refuses to make any positive policy or declarations for the Far East, and intends to let everything drift.

3. Under the Acheson pro-Communist spell, the regime of Mao-Tse-tung will be recognized in the not-distant future, and Formosa will be tossed in as a bonus.

4. We are following the disasterous British line in China, which is appeasement in its greasiest form—predicated not on honor, or good faith with past allies (Chiang and the Nationalists), but is strictly trying to save investments, prolong trade, and salvage unsalvageable Hong Kong.

5. Our so-called Far East policy is now being molded by the same little group that advised the Nationalists into the ashcan, and blue printed the Stilwell fiasco and all our mistakes since then.

6. The State Department's justification for its calculated risk on China is the hope that Mao-Tse-tung will become another Tito. That, of course, will depend on whether he ever gets home from Moscow. He is now well overdue as the Kremlin plots and pressures for the usual one-way deal.

7. The recent shipments of tanks, vehicles, and munitions from Philadelphia mean nothing at all. Acheson said so. "Part of previous commitments, a private matter, pay no heed," was his summation. But all will fall to the Reds, who, once Chiang's last stand is liquidated, will have that much more United States equipment to threaten Burma, Malaya, Indochina, and India.

Opposition of the American Council of Christian Churches of California to the FEPC Proposal

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I submit herewith a letter from Mr. G. M. Lane, chairman of the American Council of Christian Churches of California. This letter is very significant in that it does not come from some southerner.

The council places the emphasis where it should be—the danger of regimentation of our people and the tendency toward a police State.

Mr. Speaker, as one who believes in the Jeffersonian principle—that that people is best governed who is least governed—I would be opposed to this vicious proposal or regimentation of our people if there were not a Negro in my State, and I should like to call the attention of the other Members of Congress and the people of the country generally to the fact that this proposal would mean, if enacted into law, the regimentation of businessmen, both large and small, in California and in New York and all other States, as well as in Mississippi. The letter from Mr. Lane is as follows:

AMERICAN COUNCIL OF CHRISTIAN CHURCHES OF CALIFORNIA,
CIVIL AFFAIRS COMMITTEE,
Los Angeles, Calif., January 1, 1950.

The Honorable WILLIAM MEYERS COLMER,
House Office Building,
Washington, D. C.

DEAR SIR: Doubtless there will be FEPC legislation brought before the Congress this session.

We have consistently opposed this type of legislation and we still do.

FEPC legislation would rob the employer of the right to choose whom he would to work for him. This right was upheld by Jesus Christ when He approvingly quoted the employer as saying, "Is it not lawful for me to do what I will with mine own?" (Matthew 20: 15). An employer does have the God-given right to choose whom he will to work for him. There is a kind of discrimination that is not wrong.

We realize that there is a kind of discrimination that is wrong. We had no brief for the one who hates another or for one who discriminates solely because of the color of skin. However, we are convinced that this discrimination is not as prevalent as some of our liberal friends would have us believe. We attended a meeting sponsored by an organization that was pushing FEPC and at which representatives of other allied groups were present. A call was made for any authentic cases of discriminatibn that could be brought before the California legislatve body that was considering their bill. Among all the organizations represented (all of which were left-wing groups) only two individuals were found in the ranks of these groups in all of the Los Angeles area who would go before a legislative hearing and testify that they had been discriminated against. Surely this does not indicate a very serious situation.

FEPC, if adopted, would act as an effective extension of the police state. To set up a Government agency as the arbiter of employment in private business is to add one more control to the already burdensome load which is being borne by the private enterprise system. This private enterprise system, which is our modern world is so distinctively American, is the only economic system which is stamped with the approval of the word of God. And that private enterprise system is the economic system which has made our Nation great.

We cannot correct discrimination against employees by establishing discrimination employers. FEPC would only tend to increase tensions between classes and groups and could really benefit only those who desire to sow discord and confusion among our people. In this connection it is interesting to note that the Communist Party is always one of the very active proponents of FEPC legislation. They must have some stake in it.

Sincerely,

G. M. LANE, *Chairman.*

Less Regimentation

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Newport News in Oregon entitled "Less Regimentation" which merits the attention of those interested in farm price-support legislation:

LESS REGIMENTATION

Our farm price-support program needs overhauling and the Brannan plan is not the solution.

The Brannan plan is an improvement over our present policy in that it provides for disposal of surpluses to the advantage of the consumer instead of storage for ultimate dumping or spoilage. But it fails in the element of control of surplus production in that it must resort to a quota system, regimentation, the process of a police state.

Here is how the problem can be solved.

Consider a farm product; for example, wheat. Determine the average market price of wheat for the past 5 years. Promise the farmer a minimum of 80 percent of this 5-year average. If the price drops below this promised minimum, pay the farmer a subsidy equal to the difference between this minimum and the market price received for the wheat.

This plan could be used on any commodity, a few or all. Five years as the period for which the average should be taken may not be right. Maybe it should be 10, maybe 3. The 80 percent could be 90; maybe 70. These are details that would be determined after more detailed investigation.

This plan is economically sound. It provides for the disposal of surpluses to the benefit of the consumer. In times of rising stable prices it costs the taxpayer nothing. When prices drop, tax money will have to be used to pay the farmer's subsidy, but this will not be burdensome to the consumer, for he will also buy his commodities at lower prices.

Supply and demand, not regimentation, will control production.

Each year's minimum price would be announced before planting time, so the farmer could adjust acreage accordingly. If prices continue to drop, the promised minimum would also gradually come down. The marginal producer would then shift to some other product. If there were no other product for him to shift to, his land should probably be taken out of production as submarginal.

The plan allows the economic law of supply and demand to operate with a minimum of artificial interference. But farmers would be protected against the hardships of sudden price drops.

Keep the System That Works

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. SADLAK. Mr. Speaker, "Keep the System That Works" is the title of a most interesting editorial in the Bridgeport (Conn.) Post of January 11, 1950. The editorial is in large measure a result of the comments on the President's message made by my friend and colleague the gentleman from the Fourth District of Connecticut [Mr. LODGE] and an endorsement of his views in contrast to the recommendations of the President in these particulars.

Under leave to extend my remarks, the editorial follows:

KEEP THE SYSTEM THAT WORKS

Congressman JOHN DAVIS LODGE, of this district, in a statement commenting on President Truman's message to Congress, points out that many of the acts of Congress (or failures to act, such as failure to repeal the Taft-Hartley law) for which the President strongly condemned the Republicans by inference, were supported by an overwhelming majority of the members of his own party in Congress. In other words, the Democratic President and the Democratic Members of Congress seem to be headed in opposite directions.

But we would particularly call attention to Congressman LODGE's criticism of the Oscar Ewing free medical-service plan because we believe this a matter which will come up for increasing attention in the near future and the public certainly needs to be informed about it. Said Congressman LODGE:

"He (the President) apparently favors the Oscar Ewing health plan which would deprive the American people of their choice of a doctor, lower the standards of the medical profession and generally encourage malingering."

If the experience of England is going to be any guide to us in the matter, that is exactly what would happen. There is probably no greater misuse of the English language than the attempt to call such plans free medical service. Every wage earner will pay for his medical services through pay-roll taxes, the difference being that while he still pays the bill, he no longer has his choice of the doctor. This Nation now has the most expensive medical service and the widest hospitalization and the most free clinics of all kinds of any nation on earth, or historically, any nation past or present. Allowing for the sake of argument that one-eighth of the people do not get all the medical service which they might well use or that some of them do not get any at all (and we think that even this figure is exaggerated) the immediate effect of the Oscar Ewing plan would be to reduce the medical service now enjoyed by the other seven-eighths of the population.

How much smarter it would be to improve our present system by extending it to the remote corners, the sparsely settled districts, or the mountain vastnesses where medical service is now scanty because of the sheer physical difficulty of rendering it. Why scrap the system which has produced the highest health standards in favor of something which we know, from the experience of other nations, will only give us something markedly inferior?

Why we should turn to those nations whose standards are already inferior to our own, and import their ideas to replace our more successful ones, is a mystery which can be explained in only one way, and that is, that a politician will resort to anything in order to create a glossy-looking issue.

What Does a Credit Man Think About Today?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by M. S. Szymczak, member, Board of Governors of the Federal Reserve System, before the Midwest conference of the Robert Morris Associates, Chicago, Ill., December 9, 1949:

WHAT DOES A CREDIT MAN THINK ABOUT TODAY?

One thing I'm not going to do is try to tell you how to run your business. Capable credit men need no such advice—and the others wouldn't take it anyway. A good credit man knows the many elements to be considered in granting a loan and he knows that he cannot afford to overlook any one of them in reaching his decision. Something of little importance today may, because of rapid economic and other changes, be of first importance tomorrow.

You members of the Robert Morris Associates are well aware of the need for evidence of the borrower's integrity, for assurance that the money he borrows will be employed for provident and productive purposes, and for reasonable certainty that the loan can and will be repaid upon the terms and conditions granted. You know that your advice and counsel must accompany many loans if the credit is to be used to best advantage. You are aware of the dangers of relying too heavily on the continued success of any one industry or enterprise, and of the need for diversification in your lending activities. In short, you know the many angles to this business of lending other peoples' money to other people, and you are endeavoring to consider all of them in an effort to protect your depositors, to provide a fair return on the investment of your stockholders, and to assure the maximum sound productive use of credit in your community.

It is not my purpose this evening to review the many detailed considerations that enter into the granting of a loan. Rather, as a native of this city and former associate of yours, I should like to discuss some of the broader problems of national and international credit policy with which I have been conversant for the past 16 years. In today's world, the conduct of economic affairs at home and abroad is greatly influenced by considerations of social responsibility. In the interest of the greatest good for the greatest number we as a Nation have set

ourselves the task of maintaining high employment, stable values, and a rising standard of living.

The attainment of these national economic objectives, in view of the growing complexity of our economy, gives rise to many perplexing problems. Considering the essential role of credit in our highly specialized system of producing and distributing goods and services, it is not surprising that these problems are a matter of concern to each and every credit man in our country.

The Robert Morris Associates deserve high praise for publicizing the essentials of constructive credit policies and for encouraging and facilitating the exchange of information and ideas among credit men. The associates' financial statement studies, which are continually being enlarged and refined, have provided members with standards of comparison that are extremely useful in analyzing and evaluating particular loan applications, and in detecting changes in business financial structure. Through its monthly bulletin and meetings such as this, the Robert Morris Associates are encouraging that sort of thoughtful analysis essential to a sound solution of our many problems and to the realization of our economic goals.

THE ROLE OF CREDIT AND CREDIT INSTITUTIONS

We all know that an adequate supply of credit at the right place, the right time, the right cost, and the right repayment terms is essential to the smooth functioning of our economy. There is hardly an individual, a businessman, a municipal or State government, or a national government that doesn't need credit from time to time. In order to meet these varied needs for credit, different types of lending and investment institutions have been developed. Some, like the commercial bank, evolved in response to a need for short-term business credit; others, such as the savings and loan association, were created for the purpose of supplying special types of longer-term credit. Still others, such as mutual savings banks and insurance companies, have, in recent years, turned to lending and investing funds normally supplied by commercial banks. The commercial bank, however, is still preeminent in the field of shorter-term credit. It must, because of the high proportion of its demand to its total liabilities, concentrate on shorter-term credit. In contrast, life insurance companies, the majority of whose obligations represent lifetime contracts with policyholders, and mutual savings banks, which hold peoples' savings, are able to extend credit for longer periods through the purchase of long-term bonds, obligations secured by real estate, and other investments of a long-term nature.

While the demand character of much of their deposit liability largely restricts commercial banks to short-term lending, member banks can, if confronted with unforeseen deposit withdrawals, obtain funds from their reserve banks. In its capacity of lender of last resort, the Federal Reserve System has introduced a much greater degree of flexibility into commercial bank lending than previously existed. In this respect, the powers of the System were broadly expanded in 1935. Banks can now grant loans without fear that tomorrow or the day after they may be forced to liquidate them on short notice in order to meet depositors' demands. On the other hand, we recognize that certain types of credit extension are not for commercial banks—among them, purchase and lease of business properties and investment in equity shares. In other words, the role of the commercial bank should continue to be largely that of provider of short- and medium-term credit to business corporations, unincorporated enterprises, farmers, consumers, home owners, and all levels of government.

In this connection, I should like to say a word about public lending institutions that provide emergency financial assistance to banks and business. I think most credit men would agree that Government competition in the field of direct lending is undesirable if private lending institutions can provide the amounts and types of credit needed. On the other hand, I think we should have some public credit agency or agencies available on a stand-by basis to render assistance in periods of financial stress—at least until such time as the commercial lending institutions are able to cope with any conceivable situation. In addition, there may be some remaining gaps in our present structure of financing agencies—for example, agencies that would provide long-term debt capital to small enterprises. Such gaps may have to be filled by new types of private or public financial institutions.

Whether the potential expansion of Government lending agencies poses any serious competitive threat for private credit institutions will depend, in my opinion, on our success in minimizing or eliminating cyclical expansion and contraction of business activity and credit and in filling any gaps with appropriate private lending institutions wherever possible.

The dual responsibility of the commercial banker on the one hand to protect the interests of his depositors and stockholders, and on the other hand to expedite the production of essential goods and services by granting credit, is a difficult one. The desire to protect depositors may cause individual bankers to change their credit policies at the first signs of financial stress. The over-all effect of such action, by sharply curtailing or even liquidating credit lines, might seriously impede economic activity and hurt all bank depositors. Individual bankers might find it difficult to continue grantng credit freely when competitors are calling in their weaker loans and tightening up their credit terms.

The only real solution to this problem lies in the prevention, by means of over-all credit and monetary action, and other public and private means too numerous to mention on this occasion, of any economic development that might lead to sharp retrenchment and liquidation of credit.

ROLE OF THE FEDERAL RESERVE SYSTEM

The Federal Reserve System, as the central monetary and credit authority, is charged with responsibility for regulating the overall supply, availability, and cost of money with a view to contributing to the maintenance of high levels of employment, stable values, and a rising standard of living.

In an effort to meet its responsibilities the System takes positive action to curb or to encourage credit expansion, as circumstances require. It operates by using either quantitative or selective instruments, or both. Quantitative instruments, such as changing the required reserves of member banks or open market purchases or sales of Government securities, increase or decrease the reserve base for credit extension but leave to the individual bank the decision as to the type or types of credit that should be expanded or contracted. Selective credit instruments, such as margin requirements for the purchase or carrying of listed stocks or emergency regulation of consumer installment credit, apply to a particuluar type of credit, but impose no direct limit on the total amount of credit outstanding.

Generally speaking, action taken by the Federal Reserve System to influence the expansion or contraction of credit has the primary effect of suggesting rather than requiring certain responses on the part of individual lenders. This is particularly true in time of economic recession when the Federal Reserve can enlarge the basis for credit expansion, but is powerless to force additional credit into business and trade channels. The latter can be done only by aggressive response on the part of individual banks in extending credit and by willingness on the part of businessmen and others to utilize credit in expanding their operations. To make this possible both public and private policies should inspire confidence on the part of businessmen, bankers, and the general public.

In influencing credit policies in an effort to contribute to monetary and economic stability the Federal Reserve System must act in the public interest. Oftentimes such actions are unpopular, especially among the banking fraternity. Sometimes central banking officials resign, voluntarily or otherwise, because of the unpopularity of their actions. This is particularly true in periods of inflation, when most people do not want to see business activity curtailed. However, as recently demonstrated in a number of western European countries, the need for drastic action to insure monetary stability does arise and the results of such action are beneficial. In the end most groups recognize the wisdom of action which they at first opposed.

In the final analysis, the major contribution of the System to the smooth functioning of our economy lies in its early detection of undesirable economic trends and prompt action to guide commercial credit policy away from paths that may lead to serious inflation or deflation. Without the understanding and cooperation of the entire banking system and the public much of the effectiveness of Federal Reserve action is lost.

The organization of the Federal Reserve System, with its 12 regional banks and their 24 branches, provides grass-roots information on what our leaders in the fields of agriculture, industry, commerce, and banking are doing and planning. In a similar manner, the System obtains first-hand information about economic developments in foreign countries and in the field of international trade and finance through its membership in the National Advisory Council and from various Federal Reserve and other Government missions and representatives abroad. Much of this information is relayed to credit men through the publications of the System so that individual lending policies may be reviewed in relation to national and worldwide economic developments.

THE CURRENT BUSINESS SITUATION AND OUTLOOK

In the first place, as you know, determination of appropriate credit policies depends in part on our longer-range economic objectives. But it depends also on the present and probable future course of business activity. Between November 1948 and July 1949 industrial production, as measured by the Federal Reserve index, declined roughly 17 percent; during the same period, wholesale prices, as measured by the all-commodity index, dropped 6 percent and business inventory holdings declined 5 percent. These declines in industrial activity and prices, together with smaller business credit demands on banks and other lending institutions, prompted several monetary and credit actions by the Federal Reserve System during the spring and summer of 1949. Down payment and repayment requirements on consumer installment loans were gradually moderated prior to the termination of Regulation W. Margin requirements on stock-exchange loans were decreased substantially, successive reductions in reserve requirements of member banks were instituted, and a policy of flexibility in open-market operations to permit freer play of general credit forces in the determination of market rates and yields was adopted.

The moderate recession in business activity that we experienced during the first half of this year probably reflected inventory and price readjustments, rather than any basic difficulties. Whether the recovery that began this summer may lead to further inflationary pressure or will be replaced by a resumption of the earlier downward readjustment is now a subject of considerable discussion.

Among the various aspects of the present situation that suggest continued high levels

of business activity, one of the most significant is the record level of construction activity. In a recent joint report, the Department of Commerce and Department of Labor estimated that the total value of new construction put in place during 1949 would exceed $19,000,000,000, or slightly more than the 1948 total of $18,800,000,000. Moreover, these same sources predicted that the total of new construction expenditures in 1950 will equal that of 1949.

Consumer expenditures on goods and services of all types were still running at an annual rate of $179,000,000,000 a year in the third quarter of 1949—less than 2 percent under the peak annual rate reached in the fourth quarter of 1948. Moreover, recent Federal Reserve Board surveys have revealed the existence of continued large-scale demands on the part of individuals for automobiles, houses, and other durable goods. Not only is the demand great, but individuals have cash or other liquid assets, or are able to borrow, to finance purchases of these goods. National service life insurance premium refunds during the winter and spring of 1950 are counted upon to bolster consumer demand, while continued large-scale Government expenditures will sustain a demand for many types of goods and services. The over-all financial position of business is sound, despite a substantial increase in busines indebtednes during the past few years. In general, the supply of credit is large and elastic and the cost, both of short- and long-term credit, relatively low. Furthermore there is a marked absence of speculative excess, such as we had in the late twenties, while the great strength of the banking system enables it to deal effectively with any sort of economic development one might reasonably expect at this time.

At the same time, we should not overlook the fact that we have gone a long way toward satisfying the immediate postwar demands for industrial plant and equipment, business inventories, and consumers' goods. Business expenditures on new plant and equipment, which reached a peak of $5,400,000,000 in the fourth quarter of 1948, are estimated at $4,300,000,000 for the fourth quarter of 1949—a decline of about 20 percent. Business inventories, which expanded by $28,000,000,000 between December 1945 and December 1948, have since declined by roughly $4,000,000,000. Wholesale prices have continued to fall and at the end of October were about 8 percent below their level of a year ago. While industrial production has picked up since July, and is admittedly being held back by recent work stoppages in the coal and steel industries, the current level is still some 12 percent below the level reached in the same month last year.

Moreover, there is some possibility that business expenditures on new plant and equipment will continue to decline, and that further increases in business inventory holdings will be relatively small. Bumper crops in many lines of agricultural production foreshadow continued downward pressure on farm prices and incomes. It is evident to you, I am sure, that we are still confronted with marked price disparities, such as aluminum versus copper, synthetic fabric versus cotton and wool cloth, and lumber versus other buildings materials. For example, the price of lumber is still over three times its 1939 average, as compared with a current average price of building materials (excluding lumber) that is somewhat less than twice the 1939 level. More liberal pension-fund provisions, of the type recently negotiated in the steel industry, together with postwar wage increases in most lines of industry and trade, and the high cost of postwar additions to plant and equipment, have saddled many business concerns with relatively large and inflexible cost structures which may seriously impede price reductions that might be needed if demand should start to fall off.

All things considered, the credit man is faced with the rather formidable fact that the present balance between further inflation and deflation is a delicate one, which could easily be upset by expansion in Government expenditures and deficit financing on the one hand, or by any pronounced curtailment of consumer or business demand on the other. Such a situation calls for lending policies that will permit utilization of credit for continued production of goods and services, and at the same time will not encourage premature exhaustion of consumer demand. Later in my talk I shall mention several types of lending activity which credit men are watching closely in view of recent economic developments.

RECENT ECONOMIC DEVELOPMENTS ABROAD

If I learned anything in my several assignments abroad, it is the fact that time has long since passed when we could isolate our domestic economy from that of the rest of the world, particularly from the effects of economic developments in the western European countries. Immediate postwar European demand for food and manufactured products of various types provided a large export market for whatever could be spared in meeting our domestic requirements. At the same time, and especially as ECA aid became available, European countries began to rebuild their factories, reestablish their raw material supply lines, and resume production of manufactured goods. In order to attract private capital to their industries and place their own economies on a sound footing, most of the western European countries introduced drastic currency reforms for the purpose of stabilizing prices and money values.

Once the European countries succeeded in establishing some measure of internal stability, their next step on the road to economic recovery was to rebuild their export trade, particularly to this hemisphere. Devaluation of their currencies in relation to the dollar has had the effect of lowering the price of European goods in the American market and enabling European countries to sell more in this country. At the same time, it has raised the prices of our goods in foreign markets and curtailed their consumption to some extent. All these changes are no doubt reflected in your thinking and planning.

It is most important to us that the progress toward general economic stability, in which most countries of the world have participated, should continue. While United States aid has been essential to the progress that many foreign countries have made since the end of the war, I am confident that the contemplated gradual reduction in the amount of such aid will not interrupt nor delay such progress. However, this does mean that if foreign countries are to continue buying goods which they need from the United States, they must be able to expand sales of such of their goods as have a market in this country. To spend dollars here they must first earn dollars, directly or indirectly, and with much of their international transport, financial, and other dollar producing services destroyed or disrupted by the war, more emphasis must be placed on the sale of goods in the world market.

In this connection, the credit man today asks questions about the value of the dollar, not only from our own domestic viewpoint, but in relation to the currencies of other countries. Recently you have been hearing many rumors about devaluing the dollar in terms of the price of gold. Devaluation of foreign currencies was a necessary step toward trade expansion and recovery; undoing its effects by devaluing the dollar would have just the opposite consequences. Nor would dollar devaluation aid our domestic situation one iota. On the contrary, it would add to any inflationary tendencies that exist. There is no shortage of credit or gold reserves in this country, and an increase in the dollar price of gold, even if the legal obstacles to such action could be overcome, would merely mean an indiscriminate subsidy to domestic and foreign gold producers.

FINANCIAL DEVELOPMENT OF CURRENT SIGNIFICANCE

Thus far, we have been talking about some of the broader aspects of the domestic and international economic scene that have a bearing on credit policies. Now, let's take a look at a few of the more specific problems in the field of credit and commercial banking that are of interest to the credit man today.

Installment credit: Since June of this year, the amount of consumer installment credit outstanding has increased by nearly $1,000,000,000. Some thought is being given by the lending officer to the implication of too rapid an expansion of such credit at this time. Many people buy certain large items of furniture and major household appliances only once in their lifetime. To a certain extent, the same is true in the case of automobiles. Once immediate demands are fulfilled, they may recur only after the lapse of considerable time. Moreover, the use of installment credit enables people to buy now and pay for purchases out of future income. If we encourage too widespread a use of installment credit at a time when cash demands of consumers are high, we may exhaust not only the present market but a good part of the potential market of the future. The results of doing so should be perfectly obvious—sales of automobiles and other consumer goods may suddenly fall off and unemployment may ensue, while a larger proportion of the reduced income available would go to pay for goods purchased last year or the year before.

No credit man is in a position to say who shall or shall not buy with installment credit, provided the borrower can establish his credit worthiness. On the other hand, he can influence the use of installment credit by maintaining prudent down payment and amortization requirements.

Real estate credit: My comments with respect to installment credit are equally true of real estate credit. During the 4 years 1946–49 home mortgage debt alone has increased by an estimated net amount of some $17,000,000,000. In part, your concern is that the volume of debt incurred may be so large as to threaten a serious credit liquidation. In part, it is that the ability of individuals to purchase housing with the aid of mortgage credit is being exhausted so rapidly that the remaining demand will not be adequate to insure continued high levels of employment in the building and building-materials industries. Again, the banker cannot deny credit to credit-worthy borrowers. He can, however, require conservative owner equities and repayment provisions in times of abnormally high demand, and relax his requirements somewhat when the demand begins to slacken. These are powerful measures of influence, and I am certain that bankers want, in their own as well as in the general interest, to make them as effective as possible.

Term loans: Term loans are often employed by the borrower in the purchase of machinery, equipment, and other more or less fixed capital items, and are repaid out of future earnings. In recent years the well-informed credit man is making term loans with caution, for three reasons: First, construction and machinery and equipment costs are well above prewar levels and there is a good chance that such fixed assets may prove to be overvalued in the long run.

Second, there is always some uncertainty about the profitability of future business operations. Third, the situation with respect to business expenditures on machinery and equipment is somewhat analogous to purchasing of automobiles and housing by individuals—some restraint in the use of credit during boom times should be encouraged.

From time to time questions arise as to the feasibility of developing a formula, or of devising definitions and limits for the guidance of banks in determining what proportion of their assets may properly be invested in term loans. Such an undertaking would have little chance of success. In the first place, the diversity of type, purpose, and conditions of such loans makes satisfactory definition practically impossible. In the second place, the appropriate position for an individual lending institution can only be determined after careful analysis and consideration of the character and volatility of its liabilities, its relative capital position, and the probable credit demands to which it may be subject. The determination of an optimum amount of term loans involves problems similar to those in selecting an investment portfolio, and no rule of thumb applicable to all banks would appear to be practicable.

CONCLUSION

It is evident, therefore, that the time-honored distinction between the trees and the forest is equally true of credit. The individual credit man is primarily and rightfully concerned with the welfare of the individual trees; the central credit authority is charged with responsibility for promoting the welfare of the forest. While the interests of the two may appear to conflict in specific situations, the thoughtful credit man realizes that there are no fundamental differences in their ultimate objectives.

It is further evident that certain types of credit, notably consumer installment and home mortgage, have increased substantialy in recent years. In the interest of minimizing their inflationary pressure, spreading demand for automobiles, housing, and other consumer goods over a longer period of time and protecting loan portfolios against subsequent deterioration in value, credit men are examining down-payment and repayment provisions with particular care.

As we know, change has always been characteristic of human behavior, whether it be social, political, or economic. The principal difference in the economic changes that occur now and those of a hundred years ago is that present changes occur more rapidly and affect a much greater number of economic activities. No able credit man can isolate himself from change nor prevent it by ignoring it. On the contrary, he deems it his responsibility to maintain that prudent flexibility of thought and action that welcomes the opportunities for constructive service afforded by change. His is not a dull and routine duty. It is full of constant interest, not only in loans and lending policies but also in broader economic developments.

Indefensible Retreat

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Ludwell Denny:

INDEFENSIBLE RETREAT
(By Ludwell Denny)

Secretary of State Acheson's tardy triple effort to stop growing criticism of the administration's far eastern policy—or lack of policy—has failed. His rapid-succession appearances before the two congressional foreign committees, and the National Press Club have raised more questions than he answered.

His failure is due both to faulty tactics and to the essential weakness of his position.

He seems to assume he is confronted merely by a partisan Republican maneuver, which he can counter with a combination of lofty sentiment and ridicule. This would not be effective if only GOP politicians were involved. It is even less effective when the administration is disregarding responsible military advice and challenging nonpartisan public opinion of considerable size, as is now the case.

But the best possible defense of the administration position could not make it a strong one. That is because it is negative. It represents retreat. The Secretary's reasons why China could not be saved, and why Formosa should not be aided, might be somewhat more plausible if the administration offered a vigorous, positive policy against Red advances elsewhere in Asia. There is no such policy.

That is what worries so many generals and admirals. That is what troubles many newspapers and citizens who have no partisan Republican ax to grind. Formosa is only a symbol of the much wider issue. But it is an exceedingly important one since Manchuria and China proper, which were the tests 2 years ago and last year, are gone.

Where is the stand to be made? We have retreated from Korea, where we had a direct United Nations responsibility. There is no policy to give effective aid to threatened Indochina and Burma, if indeed our help would be acceptable there. Where then?

The administration is right when it says the United States should not precipitate war, should not make imperialist claims, and should not send American troops to put down independence movements. But American military occupation is not proposed—only a naval patrol or military advisers. That would entail much less risks than we are taking in many other places.

As for the rights of colonial peoples and the functions of the UN, with which the Administration is properly concerned, its argument boomerangs in the case of Formosa. Legally the Formosans are wards of the victorious powers which liberated them from Japan, until their fate is decided by a Jap peace treaty.

Although President Roosevelt promised them to China, neither they nor Congress nor the UN were consulted. The Administration would be more convincing if it were proposing temporary UN protection of Formosa, rather than inviting Red conquest by its do-nothing policy.

Altoona Chamber of Commerce Has Done Much for the City of Altoona

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. VAN ZANDT. Mr. Speaker, Altoona, Pa., is the proud possessor of the largest railroad shops in the world which are owned and operated by the Pennsylvania Railroad.

Regardless of the many thousands employed in the Pennsylvania Railroad shops unemployment from time to time presents a disturbing problem and menaces the economy of the community.

Altoona has a wide-awake group of businessmen who through the Altoona Chamber of Commerce have given their effort and money to strengthen the economy of the community by expanding its industries and attracting new ones.

The Altoona Chamber of Commerce, speaking for the businessmen of Altoona, enjoyed a successful year in 1949 due to the untiring efforts of Mr. George C. Kelchner, Jr., president, and Mr. G. Stanley Ruth as secretary.

The following report contained in the Altoona Chamber of Commerce News Bulletin gives a detailed story of the Chamber's activities during 1949.

The report is as follows:

THE CHAMBER OF COMMERCE AT WORK IN 1949

The year 1949 has recorded many worthwhile accomplishments sponsored by the chamber of commerce for the city of Altoona. Many hours and days of time and money were expended to promote the general welfare of those projects which make for a better community.

Foremost in line of time expended and results achieved has been the subject of industrial expansion. Since the need for increased and diversified pay rolls is Altoona's first problem, the chamber of commerce has been devoting most of its time in this direction. Although results appear to be small, the fact is that the one new plant built by the chamber's financing vehicle, Altoona Enterprises, Inc., has increased the city's pay roll income by about $850,000 annually.

In order to establish greater continuity in this work, the industrial committee of the chamber under the direction of M. A. Miller, announced an ambitious plan known as the "Altoona industrial pay-roll insurance plan." Organization of the various committees is now in progress and it will consume much time and effort over the next 90 days.

Of course many of the other phases of chamber of commerce work have also gone ahead. Retailing has taken up the second largest phase of time and effort with a well-rounded program of its own.

Other subjects which will be explained in a bit more detail include agriculture, tax-study work, better-business-bureau work, airport development, fire prevention, publicity, and varied phases of daily office assistance.

We wish to take this opportunity to thank all those officers, directors, committee chairmen, and members for their time and contribution given to the various projects under consideration.

We owe a deep vote of thanks to the Altoona Mirror, the Altoona Tribune, and the radio stations, WFBG, WJSW, WRTA, and WVAM for their valuable assistance in publicizing the chamber activities consistently. Without their splendid assistance and cooperation, the work of the chamber would be extremely difficult.

We sincerely trust that the chamber of commerce through its program of work can continue to serve the civic, industrial, commercial, and general welfare of the city of Altoona. We hope that 1950 will afford an opportunity for many, many more people to work through this community channel for the building of a bigger and better city. With proper assistance and support, the chamber of commerce has the resources and access to any and all problems affecting every phase of community life. Its more than 100 years

of experiences in 3,000 communities in America are available to us. You have our promise of continued support for those community subjects which must be worked out to the mutual advantage of everyone in Altoona.

INDUSTRIAL

Early in January 1949 the total financing cost of the Butterick Co. project was squared away with the Prudential Insurance Co. by Altoona Enterprises. The total cost was $453,879.95. Local participation in this project amounted to $95,327.97.

In the meantime monthly installments have been paid on this total amount covering principal and interest at the rate of 4 percent. Principal payments started as of August 1948.

Early in 1949 negotiations were started with the Mylish, Mann & Drucker Shirt people for the construction of their 50,000-square-foot building. Ground breaking ceremonies took place for this building April 27, 1949, and the building was sufficiently completed to permit the company to start operation September 1.

In the meantime other industrial projects were under negotiation but were unable to reach a conclusion as yet.

The accomplishments of the local industrial program were high-lighted in Commonwealth of Pennsylvania, Department of Commerce page ads which appeared in United States News, Business Week, Chicago Journal of Commerce, Wall Street Journal, Herald Tribune. Copies of this publicity, together with an industrial prospectus prepared by the committee, were placed in the hands of more than 1,000 industrial firms during the forepart of 1949.

The industrial committee held several meetings to discuss ways and means of offsetting the Pennsylvania Railroad lay-offs in 1949. It was during these meetings that the germ was created for the present pay-roll insurance program.

It might be mentioned here that the increased postal receipts at the Altoona post office from the two industries established here in the last 2 years added more than $100,000 annually to their receipts, placing the office in a higher salary bracket and caused the office to employ a number of additional men.

The $1,000,000 industrial insurance plan was formulated by the industrial committee to provide more continuity and effectiveness for industrial expansion. The plan was announced to the public December 23, 1949. The program provides for the raising of $1,000,000 over a 5-year period and to be used as a revolving fund handled by a board of trustees.

It provides for the employment of a full-time industrial engineer who will work as an Altoona ambassador and will work toward the enlargement and promotion of local industries as well as prospective industries, in addition to the acquisition of new industries and the development of Altoona as a distribution center.

Although the direct effort will be made to all business groups in the city for raising of this fund, the door will always be open to everyone for participation through financial assistance or working assistance. The plan calls for the organization of each of 100 business and professional groups who in turn will be charged with the responsibility of raising their own quota. The work of organizing these groups alone will take much time and effort, but it is believed that the experience will prove valuable in clarifying many of the frequently discussed criticisms that seem to linger in the minds of so many.

In any event, this project will consume the largest portion of the chamber's time and effort in 1950.

RETAILING

The retail division is operating in its second year under the new annual budget financing program. This program has met with success and satisfaction among its members. The program carried out the usual sales promotional events such as dollar days, Altoona day, Pennsylvania week and the large-scale Christmas program.

The division set up a better business committee to call attention to undesirable methods of merchandising and advertising.

The solicitation control inaugurated 2 years ago is evidently working with increased success. Literally scores of unnecessary solicitation efforts have been discarded during 1949. Several of the stores claim that this procedure has saved them many times the annual budget allocation for the retail division. It is hoped that everyone will continue to refer all solicitation subjects to the chamber office for approval of the committee.

The division appointed a parking committee to study the problem of our parking-lot situation. This committee, chaired by J. E. Holtzinger, will be coming forth with an effective report in the near future.

The Christmas program started November 25 with a huge Santa Claus parade made up of many local objects which were to be simulated in toys. The parade drew the largest crowd that was ever witnessed at this annual event. One of the reasons for this was the fact that it was held in the morning.

The street decorations were erected as usual and although they are now 3 years old, they still are considered to be outstanding in cities of this size.

AGRICULTURE

The agricultural committee, chaired by W. S. Truby, staged a farm products show at the Jaffa Mosque in conjunction with the Altoona centennial celebration. Although this event met with a fair degree of success, it was considered inadvisable to stage a show of this kind in August.

The most successful agricultural event was the eleventh annual 4–H baby beef club show and sale held at the Frankstown Armory, October 19, 1949, where 49 animals were exhibited at the show. There were 14 meat buyers, which was twice the number to participate in the purchasing of these animals in former years.

The steers brought a good average price and the event was extremely well attended. Thanks for the impetus this year must go to Ted Holtzinger who brought about increased publicity efforts.

INTEREST IN MUNICIPAL AFFAIRS

The chamber has been active in keeping in touch with the new tax program in Altoona, both prior to the establishment of the business privilege taxes and their operation since enactment.

On January 10, 1949, the chamber called a membership meeting on the subject of local taxes at which time the local ordinances were explained and discussed by Leslie Reese and Dr. Kurtzman of the Pennsylvania Economy League. The Blair County branch of the Pennsylvania Economic League was introduced to the business people of Altoona by a special tax committee of the retail division in the fall of 1948.

AVIATION

The inauguration of regular commercial airline service at the Blair Country airport, March 28, 1949, marked an epoc in local transportation history. Since its inauguration, the All American Aviation Co., has been doing a favorable business. In fact their volume thus far is on a par with several of the other top cities on the route.

The chamber of commerce has maintained a constant interest in this subject for the past 18 years and it is of interest that they participate in the program through a membership on the Blair County Airport Commission.

OFFICE ROUTINE

The daily business done by telephone and personal calls at the office by members and others seeking every kind of community information actually absorbs a very large portion of time.

Increased activity has been noted in this direction during the past year when the office was designated last June by the United States Department of Commerce as a cooperating regional office. This means that all of the varied types of foreign and domestic information pamphlets, booklets, and magazines are supplied for the general information of business firms in the area.

In November 1949, the Altoona Chamber of Commerce Office was designated to receive invitations to bid on Government orders from the various procurement offices. This is in line with the fact that Altoona has been designated as a critical area having more than 12 percent of its total industrial employment unemployed.

A number of local firms have been applying for this work and on several instances, contracts were awarded to local people.

The chamber has increased its information service through the acquisition of several other business directories such as the Rand McNally Service, Thomas' Register in addition to the many out-of-town telephone and city directories.

FIRE PREVENTION

Fire prevention work in 1949 was carried out by a special committee under the chairmanship of Robert McDowell. This committee worked in cooperation with the city fire department and carried out a complete promotional program in all of the usual phases with the schools, service clubs, churches, and throughout the retail district.

This is a project carried out for the ultimate purpose of reducing fire losses and eventually reducing insurance premiums.

"INDUSTRIAL ALTOONA"

Shortly after the chamber of commerce moved its offices to the Penelec Building, July 15, 1949, a Penelec window was assigned to it for the purpose of displaying our local industries one at a time, twice each month.

This has been carried through regularly since that time. Each time the pertinent facts about the company are given on separate information cards such as the average annual pay roll, the number of employees, where the products are sold, together with a display of the products manufactured.

During Pennsylvania Week radio station WRTA offered to implement the program by high lighting an industry each week on a 15-minute radio broadcast. These broadcasts are tape-recorded Friday afternoon in the plant. Bill Clear MC's the program with a running description of what he sees as he travels with his roving mike through the plant. The program is then rebroadcast each Sunday at 12:15 p. m.

On November 14, the Altoona Mirror volunteered to cooperate with this community industrial education program by sending a reporter and a photographer into the plant to interview the management and employees and to run the human interest story each Saturday.

This public relations project has been developing a great deal of community interest as well as building employee morale in the industries. Thousands of people are learning for the first time what is being made in Altoona and that job opportunities here are not as scarce as they are sometimes led to believe.

It is not intended that this subject be confined strictly to basic industries, but to include all of those business and service establishments that contribute to the community basic income.

Civilian Control or Militarism?

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. COLE of New York. Mr. Speaker, there recently appeared in an issue of the United States News, an editorial introducing a complete reproduction of a report by the Committee for Economic Development entitled "Civilian Control or Militarism?" Because of the outstanding reputation and achievements of the members of the Research and Policy Committee of the CED and because of the timeliness of the matter which is discussed, I feel it is of widespread national interest and should be available to every citizen for calm consideration. Therefore, I am asking that it be included as an extension of my remarks.

The editorial and report are as follows:

WHERE IS THE COMMANDER IN CHIEF?

(By David Lawrence)

America's defenses are in a sorry state.

Billions are being spent in the name of defense but the American people are being deceived by an official propaganda of canned speeches and statements into believing that national security is being attained.

When a committee of America's most enlightened businessmen, speaking through a staff of educators and qualified observers of governmental functions, issues a comprehensive report calling attention to neglect and failure, it is time for the American people to become concerned.

As a service to the public, the text of the report of this group, known as the Committee for Economic Development, is printed in full on the pages immediately following this editorial.

The CED already has played a vital part in the formation of American opinion on questions of national and international importance. It has always taken a progressive view. It is liberal in its outlook. It is concerned with human rights as well as property rights. Until he came to the Government recently, Paul Hoffman was the head of this organization.

What the new report says should be read by every Member of Congress, because it is that body which has the final responsibility for our defenses. America has not yet succumbed to the general staff concept of militarism originated by the Germans and now the undercover objective of the military autocrats at the Pentagon.

The CED particularly stresses the tendency today to build up a military dictatorship. It doesn't call names or become a party to the tragic differences that have arisen at the top levels in Washington between the armed services. But it does pointedly call attention to palpable weaknesses in the structure and the threat to individual freedoms.

Loss of freedoms: Unlike many reports of criticism, the CED proposes solutions. It strikes at the heart of the issue—the lack of civilian control and the manner in which military bureaucracy has taken over in Washington. It emphasizes the loss of freedoms—the censorship, the suppression, the interference with individual liberties. It might well have added that the recent purges and the vindictiveness with which some personnel policies are administered in the armed services smack more of the methods of the Nazis and the Stalinites than it does of free America.

The report doesn't, of course, cover all the ground. Members of Congress who have ventured to go contrary to some of the demands of the military bureaucrats have actually been threatened with opposition at the polls by veterans' groups controlled in the Pentagon. The pressure to sway the Armed Services Committees of Congress is extraordinary.

One-man control: But with keen insight, the CED points at the root of the trouble—the tendency to let one bureaucrat control everything. In the passion for unification one man—the Secretary of Defense—has been given dictatorial powers, with virtually no checks and balances. If he falls under the influence of the military bureaucrats, there is no effective way to overcome his mistakes or for the public even to know about them.

So the CED suggests that there be added to the National Security Council three full-time civilian members without other governmental responsibilities. It further recommends that one of these members be made responsible for a more effective flow to the public of information relating to national security, and that one be made responsible for reviewing the effect of security measures on individual liberties and advising the President thereon.

It was also recommended that the role of the National Security Resources Board be clarified and developed and that a full-time Chairman of the Board be promptly appointed.

Other recommendations of the CED are that within the Department of Defense there be a strong civilian staff independent of control by the military services to aid in developing and evaluating defense policy and that a Committee on National Security be established in each House of Congress, representing all committees of each House whose jurisdiction covers a significant part of the field.

Most of all, the CED stresses the importance of constant attention by the Nation to the security program in its relation to individual liberties and our free economy.

But as one reads the report, these vital questions come to mind: What has the Commander in Chief been doing? Who has been pulling the wool over his eyes? Does he know what is really going on in the defense set-up? Why has the situation been allowed to reach the state of inefficiency and scandalous confusion that now exists? Where is the Commander in Chief?

CIVILIAN CONTROL OR MILITARISM?—A STATEMENT ON NATIONAL POLICY BY THE RESEARCH AND POLICY COMMITTEE OF THE COMMITTEE FOR ECONOMIC DEVELOPMENT

I. THE THREATS TO OUR NATIONAL SECURITY AND INDIVIDUAL FREEDOM

1. We live in a world of insecurity, in a critical period which may last a generation

Since the surrender of Germany and Japan 4 years ago, there has been no peace. Peace conferences end in deadlock; peace treaties remain unsigned. The institutions of world government are unproved and indecisive. New weapons of destruction dominate the headlines.

The coalition that won the war has broken up; former allies have divided into hostile camps. The former enemy presents an uncertain problem. Arms expenditures do not fall to expected levels and the atom bomb seems to be no longer an American secret. A disturbing sense of insecurity is everywhere. This is cold war.

The fear of war may dominate our lives for a generation. The imminent threat of war will rise and fall; we may face alternating periods of optimism and pessimism, but the threat may last for decades. We must assume that war is not inevitable but we must also assume that there is little prospect of genuine peace in the near future. Large-scale measures for national security seem necessary for years to come.

2. We are now faced with entirely new problems

Changes in the world distribution of power, added to revolutionary developments in military weapons, have fundamentally changed the character of our security problem.

Historically, we have been slow to fight and quick to disarm. We have opposed large standing armies. We have opposed economic controls for military purposes except in a shooting war. We have opposed peacetime censorship.

Our past defense policy has been successful in large part because of our distance from potential aggressors. Our allies have had the strength to hold off the enemy while we rearmed. But, in today's era of atomic bombs, of planes faster than sound, of electronics, and of germ warfare, distance loses much of its value as a defensive barrier. Potential allies are no longer in a position to insure us time for rearmament. Possible aggressors can act swiftly, secretly, and with the cooperation of individuals within our borders. In such aggression, the great manufacturing, supply, and operating bases in America seem the natural targets of first attack.

For the first time in our history, we, in effect, share a common border with powerful potential enemies.

3. Today's conditions necessitate a major security program

In this new situation we Americans are painfully learning that our security program cannot be kept to a minor budget or to an incidental effect on our peacetime lives. While we continuously exert every effort to prevent war, at the same time we must be prepared to fight at a moment's notice.

On military defense alone we are now spending over $14,000,000,000 a year, fifteen times as much as before the last war. In addition, billions of dollars are to be spent on the rearming of other nations.

But our security program is only partly a matter of rearmament. The European recovery program on which we spent over $4,000,000,000 in fiscal 1949 is in large part a security measure. So also are such projects as atomic energy, our foreign broadcasts, and the conduct of much of our diplomacy in incoming intelligence.

Estimates of the cost for rearmament and other forms of security expenditure at home and abroad during the next few years amount to $20,000,000,000 or more as an annual minimum. This is nearly a tenth of our national production. It is truly a tremendous expenditure of national resources.

The security program affects our lives in still other ways. It is reflected in peacetime Selective Service. It is reflected in the loyalty investigations. It is reflected in high and still higher taxes and their effect on our behavior. It is reflected in censorship over scientific and technical information. It is reflected in the confusion of citizens unable to evaluate national policy because of limited knowledge and information.

The security program is a necessary and, at the same time, a dangerous force in our society.

4. Our security program threatens our individual freedoms

Though adequate security is essential to protect our freedoms, the program aimed at security raises new threats to our freedoms and to our way of life. Under it there has been a great increase in the role of the military in our Government, a great increase in bureaucracy, and expanding dominance of Government over industry and in increasing interference with individual freedoms.

Much of this is inevitable. When we increase our military defenses we necessarily increase the role of the military in our Government. When we increase the share of our resources devoted to armament, we unavoidably enlarge the scope of Government in industry, in politics, in science and education, and in every sphere of life.

We have already given up important freedoms without adequate challenge. Freedoms unexercised may be freedoms forfeited.

This trend, particularly if coupled with fear and hysteria or with complacency and ignorance, may produce policies which, in the name of security, endanger essential liberties. Security measures, uncurbed by the requirements of freedom, can undermine our free institutions. Public apathy and the pressure for security can lead us along a dangerous road—a road that ends in what has aptly been called a garrison-police state.

In a garrison-police state, the soldier and political policeman rise to power while the institutions of civilian society and of freedom shrink. In the name of security, channels of public information dry up; the press becomes a mere purveyor of official hand-outs. Cut off from significant information, editors, commentators, and group leaders become less accurate in their judgments. The process of public discussion atrophies. Political parties decline. The power of Congress dwindles. Administration by civilians shrinks, relative to administration in uniform. The courts weaken. Cut off from information, the power of the citizen fades. Local plans are subordinated to central purposes. The free market is constricted. Labor is hedged in by special regulations. Consumers find their range of choice reduced. Decisions come to be made by an all-powerful Government. All freedoms suffer.

5. We must seek both national security and individual freedom

National security means national freedom—freedom to determine our own national policies without external coercion. This is a basic national goal. Our system of individual freedoms—freedom of speech, freedom of opportunity, freedom of worship, and other freedoms—is an equally basic objective of national policy.

Yet neither national security nor individual freedom can be absolute. Both can be increased by improved efficiency and balance within the security program. But measures to increase one can operate to decrease the other. Where there is such conflict, the problem is to work out an acceptable balance. Just how much we allow security measures to impair freedom must depend on circumstances, and the relative risks to security on the one hand and to the survival of free institutions on the other.

In time of war, security takes temporary precedence over individual freedom. Restrictions of freedom are freely accepted when they seem necessary for national survival. The need for unity, swift action, and secrecy overrides normal resistance.

At the present time the balance must be weighted in the direction of freedom. Freedom itself contributes to security. Freedom of scientific inquiry contributes to the production of improved weapons. The maintenance of a free economy encourages the development of economic strength and the growth of a strong, self-reliant people. The maintenance of individual freedoms creates the greatest bulwark of our security—the energy and intelligence of freemen working together to build and to save their own and their country's freedom.

Even more important, freedom and the dignity of the individual are the very foundation of our society, and the ends for which we are striving. Without them security loses its purpose.

II. ON WHAT DOES OUR FREEDOM DEPEND?

Freedom depends on adequate security measures. But the security program threatens two major institutions on which our freedom depends: The traditional supremacy of the civilian over the military and our system of individual liberties. Herein lies the dilemma.

1. Civilian supremacy is essential to freedom

The men who drafted our Constitution provided that a civilian—the President—should be Commander in Chief of the armed forces. They insisted also on the civilian control represented by the authority of Congress and, beyond this, by the power of citizens to elect the Congress and the President. This civilian principle has been advanced in many other ways: by appointment of civilian Secretaries of the War and Navy (and now Defense) Departments, by civilian control of the War Production Board in World War II, by civilian control of the Atomic Energy Commission.

The purpose of this civilian control of the military is clear: (1) To protect free institutions; (2) to insure that military measures fit into the larger programs of national security and national policy of which the military is only a part, and (3) to promote efficiency in the Military Establishment itself.

There is today no direct challenge to the principle of civilian supremacy nor to the legal chain through which it can be exercised. But the magnitude and character of our security program make the effective exercise of civilian supremacy increasingly difficult and all the more necessary.

The Difficulties the President Faces in Exercising Civilian Supremacy

As Chief Executive and as Commander in Chief of the armed forces, the President is the constitutional manager of our security system. In the discharge of his responsibilities he must work through many agencies. The Department of Defense is responsible for the military aspects of security. The Department of State is responsible for developing and carrying out a foreign policy geared to our security. Many other agencies play important roles, among them the Atomic Energy Commission and the Economic Cooperation Administration.

To assist in coordinating the work of these many agencies, the President relies upon his Cabinet, upon a few immediate advisers, and upon such staff agencies as the Bureau of the Budget, the Council of Economic Advisers, the National Security Council, and the National Security Resources Board.

The complexity of our security organization suggests the magnitude of the burdens placed upon the President. He urgently needs an effective staff to provide him with a comprehensive and balanced review of the security program. For such review the President requires the efficient operation of the two top-level Cabinet committees, the National Security Council and the National Security Resources Board.

These two agencies, though not well known to the public, are potentially two of the most powerful and valuable agencies designed to assist the President on security matters. They were established by the National Security Act of 1947 (amended in 1949). The National Security Council was created to advise the President on the integration of domestic, foreign, and military policy. It now consists of:

The President, the Vice President, the Secretary of State, the Secretary of Defense, the Chairman of the National Security Resources Board.

The President may add additional members.

So far, the National Security Council has not fully lived up to its high potential though it has made important progress. It has been effective in dealing with certain emergency matters, has developed increased coordination between the State and Defense Departments (including the Central Intelligence Agency and the Joint Chiefs of Staff) and has made progress in developing defense policies. But it does not appear that it has yet formulated a comprehensive set of current and long-range security policies covering both foreign and domestic aspects of the problem. As a result, the President is seriously handicapped in carrying out his responsibility to recommend a balanced and comprehensive security program to the Congress and the people.

The National Security Resources Board, which also reports directly to the President, was created to advise the President on the coordination of military, industrial, and civilian mobilization. Under a civilian chairman, the Board consists of the Secretary of State, the Secretary of Treasury, the Secretary of Defense, the Secretary of Agriculture, the Secretary of Commerce, the Secretary of the Interior, and the Secretary of Labor.

The National Security Resources Board has not lived up to its potential. It was established to prepare a sound mobilization plan, to formulate stock-pile policy, to relate the demands of our security policies to national capacities and resources, and in general to survey the impact of security programs upon the economy in times of peace or war. It has been characterized by lack of clarity of purpose and by inability to establish satisfactory working relationships with other security agencies. Its failure to fulfill its purposes not only handicaps the National Security Council in its policy deliberations but further weakens the hand of the President.

The National Security Act also set up a new executive department of the Government, the Defense Department, under a Secretary of Defense, who is designated as the principal assistant to the President in all matters relating to the Department of Defense. The act also provided for the Joint Chiefs of Staff as principal military advisers to the President, to the Secretary of Defense, and to the National Security Council. The act further established a War Council to advise the Secretary of Defense on broad policy matters affecting the armed forces. It established a Munitions Board to deal with such matters as procurement and the military phases of industrial mobilization plans. It established a Research and Development Board to deal with scientific research. Finally it reconstituted the three military departments of Army, Navy, and Air Force.

The Difficulties the Congress Faces in Exercising Civilian Supremacy

The Congress also has encountered great difficulties in exercising its responsibilities for national security policy.

At least two-thirds of the committees of both Houses are concerned in one way or another with security policy. The Committees on Foreign Relations, Armed Services, and Appropriations are obviously concerned. But other standing committees such as Agriculture, Labor, and Finance also deal with aspects of security policy. And such joint committees as those on Atomic Energy, the Economic Report, and the Economic Recovery Program are likewise involved.

Problems come before Congress in piecemeal fashion. Present procedure exposes and irons out some inconsistencies. It eliminates some superfluous items and assures a certain degree of economy and efficiency. But no congressional agency is responsible for looking at all aspects of security policy with a view to inconsistencies, duplications, and oversights. Neither house has a committee structure designed to secure a balanced, comprehensive view of security policy as a whole.

The Legislative Reorganization Act of 1946 went far toward improving the organization of Congress. The number of committees was reduced. The burden upon the individual legislator was to some extent lightened. The standing committee structure of both Houses was made more nearly parallel with the structure of the executive branch. But there is as yet no agency in the Congress to parallel the National Security Council. Congress is not yet organized to deal with security problems on a broad and balanced basis.

The Difficulties the Citizen Faces in Exercising Civilian Supremacy

Under our form of government the final review of security measures—and in many cases their initiation—lies with the public. To carry out this responsibility, the citizens should have the advantage of an efficient organization of the legislative and executive branches of government. The present faulty organization produces needless public confusion as to security policy.

The citizen also needs much basic information he now lacks. The Government must withhold certain specific information in order to keep it from potential enemies. The problem is where to draw the line.

Recently the line has been drawn heavily on the side of secrecy. Our Government is following a much more comprehensive program of secrecy than in any previous period when we were not at war. Moreover, our people have been cut off from important information through censorship, both formal and informal, by foreign governments. To an unprecedented degree, the public is depending for its foreign intelligence upon what our own Government agencies decide to disclose.

Great danger is inherent in a poorly informed public. Even more important is the public apathy toward security policies due to lack of adequate and reliable information necessary for responsible discussion and judgment. An alert and well-informed citizenry is essential to the effective working of civilian supremacy on which our democratic processes depend.

Each of the links in the chain of civilian control, carrying through the President and Congress to the citizen, can and must be strengthened. Without effective civilian control there is danger that security policy will be made more and more by the military alone and in terms of the individual problems of military defense for which they are responsible rather than in the larger terms of security and freedom.

2. Maintenance of our system of individual liberties is essential to freedom

The requirements of security and the fear and hysteria generated by the threats to our security require constant vigilance to preserve our individual liberties.

We must deal vigorously and effectively with subversive activities. But we must also maintain the safeguards to individual liberty. A threat to our liberty arises when the loyalty of individual American citizens is called into question. First, the loyalty of Government employees is examined. Then investigations extend to the managers and employees of industries working on defense contracts. Suspicion readily spreads to scientists, educators, and students engaged in research. An atmosphere of suspicion favors the growth of political police. Agencies with power to investigate sometimes degenerate into organs of oppression and intimidation. Necessary investigations into loyalty can deteriorate into witch hunts which threaten the whole structure of individual freedom.

A more indirect threat to individual liberties comes when the security program endangers the free economy which underlies so much of our individual freedom. Under conditions characteristic of a free economy—free markets, individual initiative, and a minimum of direct Government control—our great power as a Nation has developed. Our society looks to individuals to make the multitude of decisions about production, consumption, and other elements of economic activity. We depend on the action and interaction of individuals and enterprises to produce a sound and expanding economy.

While this free economy is not perfect, it is the most flexible instrument yet devised to provide the individual citizen with maximum opportunity for the development of his capacities. This is a statement often made, but perhaps it cannot be repeated too often.

A security program of the present size threatens our free economy in three major ways: (1) By the burden of taxes on economic incentives; (2) by the control of business activity through Government contracts; and (3) by the likelihood of recurrent proposals to impose direct controls over economic activity, in the name of security.

1. The new billions in taxes weaken the incentive imperative to the successful working of our free economy. Heavy taxes can weaken the incentive to produce. They can stifle new enterprise and reduce our long-range ability to produce both guns and butter. Their burden will depend both on their amount and how they are collected.

2. The more that Government purchases dominate the market, the more businessmen become, in effect, hired administrators of Government contracts. The free market is thus narrowed. As Government purchases rise, the power of Government to use uneconomic means to control production is increased. Carried far enough, the expansion in Government purchasing can destroy a free economy.

3. The pressure for direct controls to strengthen the military program is great. In wartime this pressure is overwhelming. The drafting of manpower and industry, the allocation of strategic materials, price and wage controls, and a host of other direct controls have become a necessary part of modern warfare. In war, the survival of the society takes precedence over immediate maintenance of a free economy. But, now, the question of direct controls is quite a different matter. The preservation of the free economy becomes an essential objective. The use of such powers for security or other reasons would reduce the area in which free market forces were able to operate and, carried far enough, will undermine the free economy.

Security bought at the cost of destroying our system of individual liberties or our free economy would be self-defeating.

3. An adequate and balanced security program is essential to freedom

Though our freedom is threatened by our security program it would be threatened even more gravely without it. Freedom cannot survive in today's world without reasonably adequate security.

An adequate security program obviously requires a large military establishment. But it must also include such nonmilitary weapons as diplomacy, world information, economic aid, and an effective intelligence service.

Diplomacy is, in a sense, our first line of security. Effective diplomacy can help in preventing war and can strengthen our position in case of war. It can help build up a network of understanding among all nations willing to act together for peaceful purposes. It can hinder the building up of hostile combinations of nations. It can enhance the authority of international organizations.

The program for supplying information to other peoples through the Voice of America and kindred activities is also a major instrument of national security. News about America is a corrective to the one-sided reports that distort the image of our country in the minds of the leaders as well as the peoples of so many areas of the world. It is a realistic influence for peace. It keeps hope alive among the oppressed.

Nondemocracies are likely to underestimate the strength of democracy. They seldom understand that the seeming disorder of democracy is not chaos but only a type of order that differs from a chain of command. The Kaiser and Hitler both erred by greatly underrating the strength and determination of the United States. We do not want such errors again.

Less formalized means of communication are equally important. The representatives of American business going abroad exercises a vital influence on the thinking of key individuals in foreign countries. American scholars abroad can do much to correct the distorted picture of America that some foreign leaders and peoples have formed. Foreign scholars and students who come here speak with an even more powerful voice when they return home as experts on the United States. The treatment of news by the American press services, radio commentators, and news films can have a profound impact upon our security position abroad.

The European recovery program also contributes to security. It speeds recovery and economic development abroad by increasing production, and reducing impediments to trade and so strengthens our allies. It can strengthen the will among our friends abroad to cooperate for peace and security. This will would be weakened if America existed as an island of prosperity in a poverty-ridden world.

An integrated and effective incoming intelligence service is a basic part of an adequate security program. An accurate appraisal of how our friends and potential enemies think and feel toward Americans and what they are doing about it is essential if we are to time our policies and production programs to the needs of every situation. We need to know of specific weapon developments in other nations and of the strategic disposition of military forces. Knowledge of impending attack may mean the difference between victory and defeat. An intelligence service, properly organized and staffed, can be equal in value to many ships, tanks, and planes.

In the working out of an adequate security program, the chain of civilian control has a dominant role to play. The military, whether Army, Navy, or Air, are specialists. They are trained to be responsible for military matters but not for the broad questions of security policy and other elements of national policy. Such broad questions are necessarily a civilian responsibility.

Even in military matters, civilian leadership can be important. In 1940, public opinion was ahead of the official military and administrative opinion as to the country's capacity to produce and use planes. Similarly, civilian pressure has been a primary force toward unification of the armed forces. An effective civilian control can offset any tendency for the military to prepare to fight a possible war III with the weapons and strategy of War II.

A satisfactory balance and timing must be maintained between the different parts of the security program and between this program and other national programs if it is to be effective and not a greater threat to freedom than is necessary. At the present time, there is reason to believe that our security program is neither efficient nor in balance. There are evidences of low efficiency and, despite the Unification Act of 1947 and the changes effected in the summer of 1949, the Nation's defense forces are characterized by deep-seated service rivalries, by widespread conflict over basic strategic concepts and weapons, and by an alleged low state of morale in one of the services.

Furthermore, a balance must be kept between the security program and programs serving other objectives of national policy. In particular, welfare programs compete with the security program for funds. Yet welfare programs can contribute to security by reducing inequities in our system that provide effective ammunition for hostile propaganda.

In the development of the security program, a fine quality of judgment is required at all levels. Recommendations need to be made by the executive branch after balanced consideration of all aspects of national policy. Our lawmakers must keep America solvent as

to both ideals and resources. An informed public needs to remain alert to the dangers to both security and freedom.

III. RECOMMENDATIONS TOWARD IMPROVING OUR NATIONAL SECURITY AND PRESERVING OUR INDIVIDUAL FREEDOM

There can be no simple solution to the problems of security and freedom. We must look to time and the wisdom of public discussion to find the answers. But public wisdom cannot be brought to bear if the chain of civilian control is ineffective, if the basis for informed discussion is lacking, or if policy is approached in a piecemeal fashion.

The recommendations which follow offer only one step toward bringing public discussion to bear on these continuing problems. They are concerned almost entirely with organization and procedure. Their aim is to strengthen the machinery by which adequate and balanced discussion of security policy and its relation to freedom can be carried out at all levels. It is our belief that these recommendations, if put into effect, will lead to a powerful strengthening of both freedom and security. At the same time we realize that there may be alternative methods of organization and procedure which would be equally effective toward this end. Our basic concern is that there be effective control and that this lead to a balanced over-all review of security policies in order to provide adequate national security while preserving our individual freedom.

Toward more effective exercise of civilian supremacy

The strengthening of civilian control requires action at each level to aid the President, the Congress, and the individual citizen in the exercise of their respective responsibilities.

At the Executive Level

To aid the President in developing a balanced policy with respect to security and freedom, we recommend:

(1) That the National Security Council be developed as the principal executive agency on which the President relies for formulating and reviewing comprehensive and balanced security policies.

(2) That there be added to the Council three full-time civilian members without other governmental responsibilities.

The suggestion has been made that a new civilian commission on security policy and freedom be set up as a means for strengthening civilian control. We do not recommend this more drastic step at the present time. Rather than experiment with an entirely new agency, we favor assigning a broader role to the National Security Council in the hope that this more moderate proposal will serve the end of adequate civilian control. The Council is already established. Since about the time of the Greek crisis in 1947 it has met regularly, perhaps averaging a meeting a week. The statute under which it operates is phrased broadly enough to allow the Council to advise on all phases of national security, including its impact on individual freedom.

The Security Council (in cooperation with the National Security Resources Board, the Bureau of the Budget, the Council of Economic Advisers, and other appropriate agencies) should continuously take the long view of all of America's goals and commitments, our human and material resources, our rapidly changing technology, and the vital problem of timing. It should, on an objective basis, consider our security program with respect, for instance, to such basic and diverse questions as the utilization of island bases, new approaches to the stock piling of critical materials, the integration of foreign aid, lend-lease, and our own military program, the peacetime and wartime uses of atomic energy and other scientific developments, the impact of specific military programs upon our natural resources, the character of direct controls required, if any, and the general trends of our diplomacy. In addition to these examples of more obvious problems, the Council should concern itself with the psychological aspects of security, such as the reorientation of Germany and Japan with relation to democracy and the use of propaganda as a weapon. Finally, it should concern itself with the relation of all these security policies to the problem of freedom.

To help achieve a balanced and well-rounded security program, the three new full-time civilian members of the Council should be chosen for breadth of experience and outstanding judgment. They should be appointed by the President with the approval of the Senate and serve at the will of the President. They should have the standing of Cabinet officers and should attend Cabinet meetings at the discretion of the President. They should be kept free from all duties not directly related to the work of the Council. At present, the regular statutory members of the Council are already overburdened with great administrative responsibilities. The three additional members would be available for continuous top-level work on security problems.

One new member should become a general assistant to the Chairman. The other two members should be given special responsibility with respect to public information and individual liberties in addition to their regular duties. These responsibilities are indicated later in specific recommendations.

We further recommend:

3. That the role of the National Security Resources Board be clarified and developed.

4. That a full-time Chairman of the Board be promptly appointed.

The work of the National Security Resources Board is closely related to the over-all responsibility of the National Security Council. The Chairman of the Board is a member of the Council and should bring to bear in the Council's deliberations the views of a Board and staff concerned with the relationship of security needs to the Nation's economy. Only a full-time Chairman can perform this vital function. It is imperative that the President clarify the role of the Board and appoint a full-time Chairman who can concentrate his energies on the economic phases of our security problems.

Clarification of the role of the Board will involve consideration of its relations with other agencies such as the Department of Defense, and of its planning duties with respect to industrial mobilization, economic warfare, and stock piling.

We further recommend:

5. That within the Department of Defense there be a strong civilian staff independent of control by the military services to aid in developing and evaluating defense policy.

As far as the military aspects of the security program are concerned, the chain of civilian supremacy has to start in the Department of Defense. In order for civilian control to be effective and to make its contribution, civilians have to be in touch with the work where it is being done. For the Secretary of Defense to perform his civilian role he needs a strong civilian staff in close touch with the various aspects of defense policy as they are worked out.

We believe that with these five changes the President could exercise much more effectively his responsibilities in the chain of civilian direction.

At the Congressional Level

To strengthen the hand of Congress in achieving a proper balance of security and freedom, the Congress should take positive steps to coordinate the various aspects of security policy. To this end we recommend:

1. That a Committee on National Security be established in each House of Congress, representing all committees of each House whose jurisdiction covers a significant part of the field.

2. That as far as possible these Committees on National Security act together in the manner of a joint committee.

There are two clearly appropriate ways by which the Congress could provide itself with the means for viewing the security program as a whole. One is to create a Joint Committee on National Security. The other is to create a separate committee in each House. Both methods have advantages and disadvantages. We believe that on the whole the advantage lies in having two separate committees, particularly if some of the advantages of a joint committee can be obtained through joint meetings of the two committees and close collaboration by their staffs.

Each House would, of course, decide on the proper membership of its Committee on National Security. Presumably each committee would include members representing the standing committees chiefly responsible for security, including those for Armed Services, Foreign Relations, and Appropriations. Standing committees having to do with other significant parts of the total security program, such as Agriculture, Interstate and Foreign Commerce, Labor, and Banking and Currency should also be represented. This would assure direct acquaintance on the part of all the committees responsible for legislation on a significant part of the security program with the state of specific legislative proposals and the problems involved.

Adequate staffs would be essential for the successful operation of the Security Committees. They are needed to assemble and organize the material on the basis of which balanced policy can be made.

These securities committees would parallel at the Congressional level the activities of the National Security Council. They would be reviewing rather than hearing bodies. With the help of competent staffs, they should maintain a comprehensive and balanced picture of the security policies of the nation and their relation to freedom, enabling them to report to the other Members of Congress and to the public on the picture as a whole or on particular aspects as occasion arose. There should be close cooperation between the security committees of the two chambers, and with the National Security Council.

At the Public Level

To encourage and assist the citizens in exercising his responsibility for security policy, we recommend:

1. That one full-time civilian member of the National Security Council be made responsible for a more effective flow to the public of information relating to national security.

2. That the President devote a part of his annual message to the Congress and the public on the state of the Union to a discussion of the problems involved in the national security program and their relation to freedom.

3. That vigorous effort be made to stimulate discussion throughout the Nation on the problems of national security and their relation to freedom.

The assignment of one of the proposed full-time members of the National Security Council to be responsible for a more effective flow of information to the public would tend to counteract the present trend toward undue secrecy. This official should study all security regulations and recommend to the President changes designed to provide all possible access to information without sacrifice of basic security. He should examine the practical administration of security regulations with a view to creating an atmosphere favorable to legitimate disclosure. And he should constantly press for the release of information.

There is no more essential job to be done in America than to keep the sources of public opinion as free as possible from blocs and obstacles. The naming of a full-time member of the National Security Council to devote himself to this task would be a fitting recognition of its importance.

It will be necessary to keep security regulations under continual study to make sure that the curtain of secrecy is not drawn tighter than necessary. Some information must be withheld. But we believe that the regulations could be so drawn as to provide the citizen with much more information than he now receives.

More important than the letter of a regulation is the spirit in which it is administered. At present, there is one-sided emphasis upon the importance of secrecy in the indoctrination of officers, both military and nonmilitary. A Government official is rarely commended for disclosure. He may, however, be reprimanded or otherwise disciplined for "underclassification," that is, for failure to make material confidential or secret. Accumulations of overclassified material can be found in many offices. A better balance between secrecy and disclosure will give the citizen a sounder basis for exercising responsibility, without impairing the administration of security. Among the administrative practices to which attention needs to be paid is the custom of leaving classification in the hands of subordinates, especially clerks or secretaries. The resulting resistance to disclosure can be overcome only if there is positive pressure to release information.

The annual state of the Union message of the President has been throughout our history a vital means of providing Congress and the public with an over-all view of national policies and problems. Since it seems probable that the security-freedom problem will be a paramount issue for many years, it would be desirable that the President devote an important section of this message to the status of our security policies and their relation to freedom. This section could be based upon reports from the National Security Council and should be a comprehensive review of our security position and policies.

There is constant need for more intensive public discussion of the problems of security and freedom. Public opinion is not as effective as it should be so long as it depends largely on random exposure to news and comment. Unless there is a comprehensive framework of discussion, the public will be confused.

Various means are available for stimulating public discussion of security issues. Congressional hearings can act as a stimulus. The President's message on national security would provide a basis for discussion. News editors should invite discussion and radio time should be allocated to this purpose. Special forums throughout the Nation should be sponsored by universities, civic associations, and other groups of citizens. These activities should aim to clarify the goals of national-security policy and their relation to freedom, to review current trends affecting security and freedom, and to evaluate pending alternatives of policy.

Toward preserving our system of individual liberties

To strengthen the forces which operate to preserve our individual liberties, we recommend:

1. That one full-time civilian member of the National Security Council be made responsible for reviewing the effect of security measures on individual liberties and advising the President thereon.

2. That the section of the President's annual state of the union message devoted to the national security program (recommended above) include a review of the relation of the security program to individual liberties.

3. That the National Security Council, in reviewing the security program, give particular attention to the danger of undermining the free economy.

The preservation of individual liberties must rest primarily on an alert public opinion. By having a full-time civilian member of the National Security Council responsible for analyzing the effects of security policies and measures on our liberties the danger of unnecessary limitations on liberty can be reduced. These analyses can also provide the basis for the presidential review of the subject. Such periodic reports on the effects of the security program on liberties could greatly aid the public in exercising its responsibility for preserving liberty.

In appraising the threats of the security programs to the free economy, the National Security Council should give particular attention to the magnitude of the program both because of the resources it absorbs and the harmful effect on incentives which results from the heavy taxation necessary to support it. The Council should also give attention to the existing procurement machinery with the object of reducing to a minimum the danger of Government coercion of private business through contract controls and the danger of coercion of individuals through job assignments and similar restrictions. Finally, the Council should maintain a strong presumption against the use of direct controls to carry out a security program in a situation short of war, since direct controls tend to limit production, hold down the standard of living, and undermine the free economy on which so many of our freedoms depend.

Toward a more balanced and efficient security program

The recommendations made for preserving our freedom will also help to produce better balance and reduce waste in the security program. In particular, strengthening the Executive through broadening the role of the National Security Council and the National Security Resources Board, strengthening the Congress through the establishment of committees on national security, and strengthening the citizen in exercising his responsibilities will all help the development of effective security. Measures for preserving our individual liberties and for preserving incentives and maintaining freedom of markets can also contribute to security.

In addition, we recommend that both the executive and legislative branches of the Government conduct a continuing review of the security program to see—

1. That waste and inefficiency in security expenditure is kept at a minimum;

2. That the security program itself is kept in internal balance, both as among the various types of military expenditure, and as between military and other forms of security expenditure;

3. That measures to further the security objective and measures to further other important objectives of national policy are kept in balance. An over-all review of all national policies, their timing and their economic cost is needed to appraise their effects on both security and freedom.

The committee believes that such a review is especially needed because, in its opinion, the present security program tends to be unbalanced; it tends to overemphasize the military at the expense of nonmilitary measures. An informed diplomatic service, a strengthened Voice of America and a more effective intelligence system would cost relatively little compared to military arms. Their contribution to security could be many times that of an equal expenditure. We believe that the desirability of expanding each of these activities should be given careful attention.

We also urge an effective foreign economic-assistance program. Economic assistance is not a cure-all or save-all; it can only be a means of helping other nations to help themselves. A failure of the economies of our potential allies would weaken our security.

Further, it is our opinion that the present security program has been developed with too little attention to its consequences upon other national objectives. We believe this to be true not only with regard to the objective of preserving and strengthening our free society, but also the objectives of increasing productivity and living standards and providing greater opportunities for all our people.

Better coordination of the separate aspects of security policy is needed. In particular, there needs to be a close integration between military policy and foreign policy.

The question of timing becomes tremendously important. We must not crystallize our weapons program lest we waste resources in weapons that become obsolete. The cold war is a matter of continually recurring crises. Scares will be frequent. It will take a fine judgment to use and retain the powerful assets and resources of America. Timing is a part of the balance.

The attainment of a balanced and efficient security program requires thoughtful, continuing attention by the President, by the Congress, and by all citizens. Given such attention, we believe that an adequate security program can be developed which will be consistent with a strengthened chain of civilian control, with the maintenance of our system of individual liberties and with the preservation of our free economy.

Vigilance is the price of freedom

In the last analysis, the economic strength and the freedom and security of this country rest on the moral and spiritual vigor of its people. The prestige and friendship we enjoy in many parts of the world arise not merely because of our power but because we have offered the world a unique brand of idealism—the determination to base our political organization on the capacity of individuals for self-government.

By holding to the principle of self-government, we give dignity to the individual and, at the same time, we place on him great responsibility. We are dedicated to the idea that individuals should have maximum opportunity to realize their individual capacities—spiritually, intellectually, and materially. But equally we rely on individuals to exercise the powers of self-government in a responsible fashion. A free society can be preserved only by responsible citizenship.

Under this system, we have fared well as a people. More of our people have enjoyed more freedom and greater material benefits than have the people of any other land. We have developed a nation of self-reliant individuals.

Now the new requirements of national security threaten our freedom. A major security program requires big Government and means greater interference in the lives of us all. The danger is likely to be with us a long time. We must, therefore, have a security program that is continuously in balance, both internally and with other Government programs. It must be efficiently administered and must avoid waste in the use of limited national resources. We must maintain our dynamic free economy and we must insure the flow of information to the public necessary to the operation of democratic government. We regard the recommendations we have made above as likely to contribute to these ends. But improvements in governmental organization and procedure are not, of themselves, sufficient. Only an alert and responsible citizenry can insure that adequate security is obtained without the loss of essential freedoms. We are confident that the American people can and will solve this problem.

Where Your Money Goes

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. SADLAK. Mr. Speaker, the Christmas season is supposedly over, but an editorial that appeared in the Hartford (Conn.) Courant of December 26, 1949, points up some thoughts about Santa Claus, especially how he, dressed in the garment of a beneficent government, is able to make presents to other sections of our great country from the contributions of my constituents in the Constitution State.

The editorial is as follows:

WHERE YOUR MONEY GOES

The Public Administration Clearing House is currently making a study of Federal grants. Some of these findings are worth pasting in your hat for future reference, particularly if you are one of those who believe that Uncle Sam is Santa Claus. Connecticut is contributing about $40 for every dollar it gets back from the Federal Government. Although it stands forty-fourth on the list for the total amount of Federal money returned, it stands fourth in the amount of money being siphoned from your pockets and the treasuries of Connecticut industries.

In 1947, for example, Connecticut paid $216,000,000 in Federal taxes. It got back a scant $5,023,000, far less even than the national average of $8,004,000. To add insult to injury, many of the States that are benefiting by this policy of robbing Peter to pay Paul, are offering all kinds of inducements to get Connecticut industries to move to a friendlier tax climate. Nor is the money being used in so-called poor States. Texas is an example, and a good one, because several thousand Connecticut jobs recently were transferred to that State. Although Texas paid a scant $96,000,000 in taxes, the twenty-eighth in order, it received in Federal benefits more than twice the amount Connecticut received. Oklahoma is another example. It placed second in grants received, four times that given Connecticut, but stood thirty-fifth in taxes paid.

North and South Carolina have been active in promoting the exodus of New England industries and both profited by this share-the-wealth program. For example, although South Carolina stood forty-sixth in taxes paid to the Federal Government, grants received were $8,067,000, or $3,000,000 more than Connecticut received.

As the Public Administration authorities point out quietly, "New York and Connecticut rank very low in per capita grants. This would indicate that grants are distributed so as to give the greatest benefit to the low-income States."

That may be a good idea. But for any politician in Connecticut to suggest that the Federal Government is helping Connecticut by these grants is sheer idiocy. The Federal Government is taking $40 away from Connecticut for every $1 it returns.

The demagog may weep crocodile tears over the plight of the unemployed and may seek to put on a poultice of liberalized unemployment benefits. Real statesmanship would look toward the causes which create a special emergency of unemployment during a time of great national prosperity. If such emergencies occur during prosperous times what have Connecticut citizens to look forward to in bad times? Certainly nothing very cheerful when State and Federal policies cause the atrophy of jobs and the exodus of industry to friendlier climates that are being subsidized by Connecticut taxes. Do you still believe in Santa Claus?

Income-Tax Allowance Plan for National Health Insurance

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include a statement by Mr. Sol M. Linowitz urging the passage of legislation to provide an income-tax allowance for the cost of health insurance as an alternative to the administration's program of political medicine. Its stress is upon inducement rather than compulsion, similar to that envisioned in H. R. 6727, which I introduced last week.

Mr. Linowitz, a prominent and able attorney of Rochester, N. Y., has done a great amount of pioneer work in this field. His research, his soundness, and his ability commend his views to careful study and favorable consideration.

A portion of his statement follows:

INCOME-TAX-ALLOWANCE PLAN FOR NATIONAL HEALTH INSURANCE

The compulsory health-insurance program was formulated on the assumption that such a program would make available to most of the people necessary medical and hospital care as required. Its proponents maintain that voluntary plans have failed to do the job and give little promise of achieving the desired broad coverage in the future. The opponents of the program object primarily to its compulsory feature, claiming that the introduction of a Government-controlled medical system will drastically and detrimentally affect medical care and the doctor-patient relationship. They contend also that the cost of establishing and maintaining such a program will be exceedingly great and that only through some voluntary method can the problem be handled properly and in the best interests of all concerned.

Both factions appear to agree on the following:

1. The state of health of the country needs improvement, and Nation-wide prepaid medical and hospital insurance can go far to remedy this situation.

2. The primary aim of any health-insurance program adopted should be to assure adequate medical and hospital care for as many as possible.

3. The problem of the shortage of doctors, nurses, dentists, and hospitals involves a separate program of legislation and must be handled in such manner as will make available to the Nation medical facilities and services where and when required.

4. Medical care for a sizable number of people—the unemployed, the indigent, and the medically indigent—will, under any plan, have to be provided for by public funds, such as Federal grants-in-aid to the States.

The issues, therefore, can apparently be resolved in a manner acceptable to all if a program is adopted which will be voluntary in character yet lead to substantially Nation-wide insurance coverage against costs of medical and hospital care. My suggestion early this year regarding an income-tax allowance was designed to accomplish this objective. The following questions and answers may be helpful in evaluating the proposal:

I. WHAT IS THE PLAN?

The Government would provide that every person who insures himself and his dependents against the cost of medical (including hospital) care under an approved plan with a commercial or noncommercial group may claim a special and separate tax allowance (or credit) for the cost of such insurance. In other words, all taxpayers would be entitled to a tax benefit upon obtaining an approved plan of insurance affording requisite protection against medical costs. Blue Cross, Blue Shield, and other existing commercial or noncommercial groups would make such insurance available through the country. In addition, each community or group would be free to institute programs best designed to meet its own requirements. In some areas, the State itself might seek to offer such insurance to its citizens.

The object of the proposal is to induce rather than compel health insurance. Its essential value is that, by building upon established groups and practices, it offers a voluntary plan, adaptable to particular needs and free of Federal control, which would lead the average taxpayer to obtain health insurance. Furthermore, the millions of State and local employees and railroad workers not covered by the compulsory program would be eligible for coverage under this plan.

II. SHOULD THE INCOME TAX FIELD BE USED FOR THIS PURPOSE?

The Federal Government has long recognized the propriety and desirability of using the income-tax field to foster a governmental social purpose. The special tax exemptions for the blind and the aged, and the deductions for charitable contributions and extraordinary medical expenses are illustrative. In New York State the allowable tax deduction up to $150 for life-insurance premiums reflects the same philosophy. With reference to the instant proposal, the present income-tax regulations have already taken the first step in this direction by permitting the inclusion of health insurance cost in computing the right to an allowance for extraordinary medical expenses.

III. HOW WOULD THE PLAN BE IMPLEMENTED?

The most effective method for implementing such a proposal would be to allow a special tax credit to all taxpayers for a designated portion of the cost of an approved type of health insurance. Such a credit or allowance could properly vary in the different tax brackets, making the greatest allowance—and therefore offering the greatest inducement—to those in the lowest income classes. The precise nature and size of the tax allowance and the particular method of implementation will necessarily be determined by those charged with framing the required legislation.

IV. HOW MUCH WILL SUCH A PROGRAM COST?

The exact cost to the Government in lost taxes will depend on a number of factors, many of them under the control of the Government itself in setting up the program. For example, the type and size of the tax allowance offered will have tremendous bearing on this question. In addition, much will depend upon the effectiveness of the program in leading taxpayers to obtain health insurance since premiums will be directly affected by the number of people covered.

In this regard, it is important to recognize that the cost to wage earners of the compulsory insurance plan will be at least $6,000,000,000 per year. Moreover, the Government itself will admittedly be required to pay additional billions in order to make the plan effective and to administer it on a Nation-wide scale. The income-tax-allowance plan would make unnecessary any such costly Federal regulatory or administrative body.

Under any circumstances, therefore, implementation of the income-tax-allowance plan here proposed could be accomplished at substantially less cost than that involved in implementing and administering the compulsory-insurance program.

Letter on Behalf of International Union of Electrical, Radio, and Machine Workers

---

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

INTERNATIONAL UNION OF ELECTRICAL,
RADIO AND MACHINE WORKERS,
Washington, D. C., January 14, 1950.

Hon. WILLIAM J. GREEN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN GREEN: I am addressing this letter to you on behalf of the International Union of Electrical, Radio and Machine Workers, CIO, a labor organization which was chartered by the CIO last November 2, following expulsion of the Communist-dominated United Electrical, Radio and Machine Workers.

We wish to bring to your attention an exceedingly ominous situation in our industry which we believe not only menaces democratic American trade unionism, but also involves grave questions of national security and defense.

The IUE-CIO is now engaged in a crucial Nation-wide contest with the UE over the right to represent more than a half-million men and women in our industry. Sometime in the near future that contest will culminate in a series of representation elections conducted by the National Labor Relations Board.

We of the IUE-CIO have bent every effort toward the earliest possible settlement of this representation question through NLRB elections, because: (1) We are confident that we represent the overwhelming majority of workers in the electrical, radio, and machine industry; and (2) we are anxious that industrial stability be restored in this important field of production through the establishment of sound collective bargaining relations.

There have, however, been numerous obstacles placed in the way of a swift and amicable settlement of the representation issue. Most of these obstacles have been erected by UE in a deliberate and vicious campaign to postpone—and even prevent, if possible—the holding of elections. And in this campaign, as we shall show, certain sections of management, particularly the General Electric Co., have given active assistance to the discredited Communist-led minority represented by UE.

It would require a small volume to describe to you the insidious legal maneuverings and harassments employed by UE to block resolution of the representation question. In almost every city in the country where the electrical, radio, and machine industry is organized, UE has filed law suits, petitions for injunction and other court actions to prevent the membership from making their own democratic determination of their collective-bargaining agent. Suits to tie up union funds, suits to prevent use of our union's name, suits to prohibit union meetings, suits to force solvent local unions into bankruptcy—all have been commonplace. The deluge of disruptive judicial jockeying has spared no one; even the NLRB itself was sued for $100,000 by UE. Here again we claim that the position taken by management in this dispute has abetted and encouraged the UE in its prolonged legal wrangling.

We would like to emphasize as strongly as we can that this is definitely not a common jurisdictional squabble between two labor groups. This is a fundamental fight—which has long since passed from the cold-war to the hot-war stage—between two diametrically opposed concepts that affect the entire United States labor movement and, through it, our entire economy. It is a fight to the finish between democratic American trade unionism and the attempts of the Kremlin to preserve the UE as a mass base for the expression of Soviet foreign policy in this country. It is a fight, in one of the Nation's most critical industries, between loyalty to traditional American ideals and the menace to national security represented in a type of union leadership whose only loyalty is to a totalitarian foreign power. It is for these reasons that we have become increasingly apprehensive over the role that management is playing in offering aid and comfort to these implacable enemies of American liberties.

That the UE is Communist-led and Communist-dominated and that under this leadership it represents a direct threat to our national security has been recognized time and again by congressional committees and the Atomic Energy Commission among others. The accumulative evidence is overwhelming that in this "sensitive" industry, UE's leadership is more than 90 percent Communist or pro-Communist. The irrefutable truth of this was attested by the Atomic Energy Commission when it completely outlawed the UE as collective-bargaining representative for any workers employed on classified or secret atomic energy projects.

A subcommittee of the House Labor Committee, headed by Representative Charles J. Kersten, made a report on December 14, 1948, following an intensive investigation into UE. The report, which recommended contempt citations against 15 UE leaders including Leo Jandreau, the top Communist leader of UE in Schenectady and upstate New York, proposed several measures for tightening security regulations, all of which were clearly aimed at the threat to national safety represented by UE. The subcommittee declared that Communists have seized control of the UE's "national office, the executive board, the paid staff, the union newspaper and a number of its districts and locals."

Further, the subcommittee concluded: "The hold of the Communists on America's electrical industry is the hold of Communist Russia. It is communism in action—now. It is not a historical danger; it is a present danger."

This evidence of UE's flagrant subservience to Communist Party dictates and Kremlin control has, as I say, been documented repeatedly by other congressional and non-congressional groups. Consequently this information has been fully available to the employers in our industry such as General Electric.

Therefore, at no time could General Electric plead ignorance of the subversive character of the organization with which it was bargaining.

In my testimony before the Kersten subcommittee on September 2, 1948, I charged under oath that management in the electrical, radio, and machine industry has been guilty of aiding the Communist forces and discriminating against the anti-Communist elements among rank-and-file employees. I emphasized that "It has been my whole experience that the employers find it easy to get along with Communists because the Communists cannot be aggressive in adjustment of a grievance." In addition, I pointed out—giving the names of individuals—that in some instances management has even discharged known anti-Communists from their jobs at the behest of UE.

In the face of such evidence presented to the subcommittee, Congressman Kersten, not once, but twice, declared that the collusive arrangements between management and the Communist-controlled UE should be investigated.

At one point Congressman Kersten asserted, "Certainly if it is true that any management is so stupid as to cooperate with Communists, the light of day should be thrown on that situation as well as on any other situation where people are cooperating with the Communists. If there is cooperation on the management side, that should be brought out, too. I can see where it is probably even more dangerous where there is cooperation between management and the Communists."

On the same theme, Representative CARROLL D. KEARNS, who is still a member of the House Labor Committee, remarked, "I think the industry should be called upon to explain that type of action within their own industry, regardless of what it may be, if they are following procedures of that kind." Other members of the committee expressed similar sentiments.

I cite these facts for the reason that although these hearings were held in September and October 1948, there has been no move of any kind to investigate charges of

collusion between management and the totalitarian left. We in IUE-CIO believe it is a fine thing, and important, for Congress to be concerned about the Communist occupation of China and Formosa, about the containment of Soviet expansion in Europe, and the necessity of spending billions of dollars in Marshall plan funds to repel the threat of spreading bolshevism. But we also believe that Congress could wisely turn its eyes homeward toward the even greater danger constituted by opportunistic management collaborating with the Communists. It is the clear and immediate duty of Congress to investigate these charges; to ascertain, for example, whether management's patronage of Communist-controlled unions is dictated in any way by advantageous contracts the companies may hold with Amtorg, the Soviet trade agency. National security demands that the whole field of this question be publicly explored and exposed.

In this period of cold war with the world threatened by a new totalitarian wave, there can be no such thing as neutrality, particularly on the part of giant corporations whose functioning determines both the peacetime health and wartime strength of our economy. Yet management, General Electric conspicuously, pretends to a position of impartiality in this struggle which is concretely reflected in the current dispute in its plants between IUE and UE.

There is ample evidence that GE's impartially is not only a pose and a pretense but that it also disguises a definite pattern of collusion with the Communist UE. Let me offer just one example, a very recent one.

Last week, while IUE was preparing its campaign for the forthcoming NLRB elections in General Electric, more than 10,000 dues check-off cards were circulated through the vast GE plant in Schenectady, N. Y. The circulation and signing of several thousands of these cards was accomplished by UE within the space of a single day. We know that such an enormous undertaking as this could never have been accomplished without flagrant, illegal collusion between GE and UE, between foremen and other management representatives and leaders of the Communist minority of UE. We know that men were threatened with loss of their jobs, told that they would lose precious seniority, and deceived with the argument that by signing the cards the workers would only be speeding up the date of the NLRB elections. Foremen and other management representatives facilitated the distribution of these cards and actively promoted the threats and lies circulated by the UE representatives.

Such seemingly eccentric behavior by management becomes much more understandable when it is viewed against the background of the company's policies in the past. L. M. Boulware, GE's vice president in charge of labor relations, has for example, inserted full-page ads in daily newspapers titled "A Plague On Both Your Houses." This truly amazing statement by a major American corporation professed to find no difference between democratic American unionism and the revolutionary arm of the Kremlin in the United States which is dedicated to the overthrow of our form of government.

These advertisements, read by millions of Americans, expressed as GE's opinion:

"While frequently the leader and his associates on one side are termed left-wingers, and the leader and his associates are—wrongfully in our opinion, regarded as right wingers, we believe they have in the end the same objectives. We believe that what each side advocates would result in the long run in substantially the same thing for our employees, our company, and our country. In our opinion, whether they realize it or not, both are collectivists—believers in government being big and in people being little."

GE's attitude toward communistic control of its employees in wartime was disclosed when GE President Charles E. Wilson remarked during a session of the War Labor Board, "Matles and Emspak may be Communists but they are very easy to work with. It's just like having a company union and having the workers pay for it."

Time and again it has been indicated that GE would like to see the left and the right destroy each other or else bleed each other to such a point of weakness that collective bargaining would be reduced to the level of company unionism.

When we learned last week of GE's complicity with the Communist-led UE in the circulation of the 10,000 check-off cards through the Schenectady plant, we promptly sent the following telegram to GE President Wilson:

"The International Union of Electrical, Radio and Machine Workers, CIO, has learned that General Electric Company has entered into a collusive deal with Leo Jandreau of Local 301, UE, at Schenectady, N. Y., under which that local would be paid over check-off monies in return for turning in new signed check-off cards.

"This was done right in the plants, with UE working with the aid and abettance of management.

"This came at a time when an application for an election was pending with the National Labor Relations Board and at a time when GE has a suit pending in the Federal court of New York covering the Schenectady plant seeking a determination as to whether the dues should go to IUE-CIO or to the UE, and when GE has been proclaiming that it is impartial.

"This action by GE is a clear act of favoritism and a flagrant violation of the law. Such violation can be cleared only if GE extends the same privilege to IUE.

"Will GE agree to provide IUE-CIO with the same consideration in similar situations as with UE in Schenectady regarding the check-off or is this agreement confined to financing the Communist-controlled UE 301?

"We demand an explanation and an answer."

As of this date we have received no reply. If and when we do receive a reply we will be glad to forward a copy to you for your information. Possibly, however, you may wish to obtain a direct answer from General Electric to our charges of favoritism and violation of the law on behalf of UE-CP.

No objective observer of the labor scene in America today can escape the compelling fact that it is to management's temporary advantage to deal with Communist-led unions. Because they are the objects of public antipathy, because they have lost irretrievable ground numerically and financially, Communist "union leaders" today are willing to make any sort of deal, any sort of concessions to maintain their dwindling power over sections of American labor. We are prepared to show the extent to which management has found this situation immensely to its liking because the contracts it has been able to impose are frequently spineless and regressive. In some instances Communist "union leaders," to the intense satisfaction of management, have agreed to accept wage cuts for their members. But in nearly every case pay raises, pension plans, and other contract improvements have been measurably weaker where the union has had Communist leadership. An instance in point is UE's negotiations with General Electric over the entire year of 1949. UE's absurdly vague proposal of a "$500 package" increase, unprecedented in the history of American labor's contract demands, was borne out of the weakness, confusion, and disunity that has corrupted UE's strength in recent years. Management, of course, has simply laughed at the "$500 package" idea, and as a result workers in the electrical, radio, and machine industry have gone without any wage increase, pension plan, or other benefits while hundreds of thousands of auto and steel-workers have won new and precedent-setting contract improvements.

When these facts are considered coolly and calmly, it can surprise none that GE publicly proclaims a policy of "plague on both your houses." It is to GE's very substantial advantage to give surreptitious aid to the Communist-led minority, to facilitate the circulation of dues check-off cards, and to compound the confusion of representation as much as possible.

But we in IUE-CIO hold the conviction that the masters of great corporate wealth and power in this country have a sacred responsibility to the American people and to American democratic principles. They must not be permitted, for purposes of financial expediency, to assume a fake pose of "impartiality" to cloak a policy which nourishes a fifth column in America.

The Nation has been exceedingly generous to the managers of this industry. Their profits have been enormous, their return on investments huge. They have benefited greatly by large tax rebates and through cost-plus contracts during the war. In numerous instances where companies, such as General Electric, have been found guilty of international cartel conspiracies or violation of the Sherman anti-trust law, they have escaped with astonishingly light penalties.

General Electric, for example, increased its net profits from $40,900,000 in 1939 to $131,600,000 in 1948, an increase of 222 percent. Profits after taxes rose from 3.5 percent in 1943 to 5.7 percent in 1946, to 7.6 percent in 1947, and 8.1 percent in 1948. GE's annual dividend rate of $1.40 per share in 1945 jumped to $2 in the third quarter of 1948 and to $2.50 in the fourth quarter of 1949. All other financial statistics involving this company provide proof of GE's growing power and profitability.

These facts offer additional reasons why GE's employees and the American public have a right to expect a degree of responsibility and devotion to democratic ideals that is not reflected in the company's policy of cooperation with a totalitarian "labor" organization.

It has long been established that UE's leaders are interested only in the proposition of proving that democracy cannot work. If in that undertaking they are given haven and sustenance by General Electric and other companies, the crime is an outrageous offense against American principles and national security.

For our part, we in IUE-CIO are wholly convinced that the employees of General Electric and the rest of the industry do not want to remain in a Communist-led union. Within the short space of 2½ months, more than 250,000 workers in the electrical, radio, and machine industry have given their blunt answer to the Communist control of UE by taking membership in 150 chartered local unions of the IUE-CIO. The UE will not win the right to represent the GE workers in Schenectady or in any other plant through default by the IUE. To retain control over the economic lives of thousands of workers in this industry, the Communists need the support of inaction or reaction on the part of management.

For these and other reasons we strongly urge you to propose an immediate investigation by the proper committee of Congress into the activities and policies of some sections of industrial management in providing collusive support and encouragement to totalitarian and anti-democratic elements that have infiltrated into American trade-unionism.

We cannot, of course, speak for GE or other corporations. We ask for your assistance in requiring them to speak for themselves on this grave question.

Please accept our assurance that the IUE-CIO, its leaders and representatives, will give the utmost cooperation to any congressional inquiry into this question, and will gladly

make available the evidence accumulated over many years of painful experience with this problem.

Sincerely yours,

JAMES B. CAREY,
Chairman, Administrative Committee.

Who's Isolationist Now?

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica (Calif.) Evening Outlook:

WHO'S ISOLATIONIST NOW?

Former President Herbert Hoover has joined Senator ROBERT TAFT in proposing that the United States do everything possible, including sending naval aid if necessary, to keep the Chinese Communists from seizing Formosa and other strategic islands off the China coast. "It is my strong belief," he wrote Senator KNOWLAND, "that we should not recognize the Communist government of China; that we must continue to recognize and support the Nationalist Government; that we should, if necessary, give it naval protection to the possession of Formosa, the Pescadores and possibly Hainan Islands."

Listing seven reasons why the United States must strengthen its China policy and help Chiang, Mr. Hoover said it is necessary to build a Pacific wall around communism, defend Japan and the Philippines, prevent Communist China from gaining a permanent seat on the United Nations Security Council and from participating in drafting a Japanese peace treaty, and that the United States would have a better chance of saving the southeastern area of Asia from communism if it maintains at least a symbol of resistance.

Every one of these points has invincible logic behind it, and together they make what seems to us an overwhelming argument for a strong American policy in the Far East. The arguments of the other side are chiefly two: (1) That it is too late for us to aid the Chinese leader who has already lost China; and (2) that such a policy might embroil us in a shooting war with the Chinese Reds, which in turn might become world war III.

Has anyone noticed how remarkably similar these do-nothing arguments are to those which were made by American isolationists of 1940 and 1941? Then it was a question of our giving aid to Britain after Hitler had gained control of the European continent; many believed that Britain was doomed to defeat, that American aid would be useless, and would only involve us in war with Hitler. As it turned out, we went to war, not because of our aid to Britain, but because the Japanese war lords made the stupid blunder of blasting us in. There is no exact parallel, because in 1940 most of the world was at war, while today both Russia and the western world want to keep the peace. But it is at least suggestive to note that the same defeatist arguments that were used against 1940 aid to Britain are now being made against our doing anything to save Formosa, and by people who formerly denounced isolationism.

We were against isolationism and defeatism in 1940, and we are against them today. If it had listened to such counsels in 1940, the United States would have lost World War II and would have been left to the mercy of Hitler and the Japanese war lords. Had it listened to such counsels in 1948, there would have been no Marshall plan and no Berlin air lift, and Russia today would be master of Europe. We do not believe that it is too late today, if the United States stops being weak and defeatist about China, to stop communism from taking over Formosa and southeastern Asia. And we emphatically do not believe that such action would lead to world war III.

United States Deserts China, as France and Britain Abandoned Czechs in 1938

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer, published January 6, 1950:

UNITED STATES DESERTS CHINA, AS FRANCE AND BRITAIN ABANDONED CZECHS IN 1938

(By Edgar Ansel Mowrer)

The American administration's apparent refusal to save Formosa from the Chinese Communists and Moscow resembles nothing so much as Britain and France's abandonment of Czechoslovakia in 1938. Five years after victory over the Axis, the United States has adopted the policy of appeasement.

Defenders of the do-nothing policy that is giving Asia to Stalin use the same arguments that Neville Chamberlain and Edouard Daladier used as excuses for bowing the neck to Hitler. At that time, British, French, and American pacifists took their policy from the Nazis.

The Americans, unfortunately, paced by the British, are taking their policy from the Communists. This policy—for 1949—as sent out by the American Communist Party—consisted of three points:

1. End aid to Nationalist China.
2. Prepare for the recognition of Communist China by the United States Government.
3. Reestablish trade with Communist China.

All three are likely to be accepted by the United States within the near future.

HISTORY REPEATS

In 1938 British and French appeasers argued that the Slavic Czechs mistreated the German Sudetens—and proceeded to hand the latter over to a regime that mistreated everybody.

Now it is the Chinese Nationalist Government that, by mistreating the Chinese people, justified Moscow in taking them over.

Then the appeasers argued that Britain and France lacked the military power to defend Czechoslovakia. Now the same sort of people insist that the "Asiatic mainland is outside the limits of effective military power." (But 1 year later, Britain and France went to war under more adverse circumstances when they finally understood that they had to fight to save themselves.) As matters are now going it will not be many years before the United States may be fighting a terrible rear guard action without any of the Asiatic peoples that we shall have meanwhile abandoned.

In 1938 Chamberlain and Bonnet said that the Sudetens were not worth fighting for. (And a year later, these people were at war for something much smaller, the city of Danzig.)

PACIFIST RED HERRINGS

Now the pacifists and pro-Communists are repeating that Formosa (or Indochina, or Tibet, or Burma, or even India, I suppose) is not worth fighting about.

They are trying to convince us that it is too late to save China, too late to save Formosa, too late to save Asia.

I say it is not. Ex-President Hoover is quite right in urging us to erect a wall against communism.

Again the appeasers protest. The neighbors of China do not want to resist, they say. These states want to negotiate, not to fight. In Asia the United States should defer to Thailand and Burma and come to terms with Communist Mao Tse-tung. If we try to defend Asia with our forces, then Prime Minister Nehru, of India, who has already recognized Communist China, will not like it. Pandit Nehru, another source informs us, is convinced that if we are nice to Mao, he will perhaps consent to play with us and not waste all his cookies on the Russians.

Moreover—the appeasers continue—our European friends do not want to resist in Asia. For us to attempt to use the aid we are giving them to induce them to accept our policy would be most wicked. Etc., etc.

OUR POTENTIAL GREAT

The facts are different. The United States has the means to provide a military force incomparably larger than the one we keep in being now. We can fight, if we have to, anywhere in the world. Some of the countries of southeastern Asia, beginning with the Philippines, want nothing better than to be protected by the United States. If the Government of India has another policy, then the United States should bid that country follow its own line with our blessing. But without us and without our money.

France, our second biggest ally in Europe, has, for the last 2 years, been asking for a common Franco-Britanno-American policy to prevent the further spread of communism.

In other words, a policy that will stop Russia in Asia just as it has been stopped in Europe is possible. We shall have the allies once we start to show both the means and the will.

But before we can get very far with any such salvage, two things are necessary: we shall have to begin to think primarily in terms of the vital interests of the United States; we shall have to exclude from policy making all those Americans, misguided or worse, whose pro-Communist sympathies or errors got us into the present plight.

Foreign Trade Agreements Being Made by the New Deal Are Proving Disastrous to Many American Industries

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. JENKINS. Mr. Speaker, the efforts of some of our administration leaders to persuade the public to "buy abroad" is forcing labor and management in many industries in the United States to join together in the common cause of keeping alive.

Imports are increasing and exports decreasing. Employment keeps dropping

off as a result of the old New Deal doctrine that some industries should be sacrificed for the benefit of others.

Tomorrow there will be a big meeting here in Washington, participated in by labor and management on an equal basis, to discuss methods of meeting this challenge. The industries to be represented are important—they are especially important to the communities in which they operate. More than 50 top-ranking representatives of both labor and management in each of the industries participating will meet together to discuss this serious problem.

The industries to be represented produce pottery and glassware, matches, cedar shingles, fish and sea-food products, scientific instruments, leather and wool gloves, hats and millinery, hothouse vegetables, aluminum products, and kaolin. A number of other industries have expressed great interest, and other similar meetings will probably follow.

The public notices of this meeting contain some very pertinent information. Two of these are as follows:

[Press release for publication Thursday morning, December 15]

Alarmed at the prospect of increasingly heavy competition from European and other sources as a result of the ECA import program and the State Department's recent announcement of a third round of tariff cuts in 1950, a joint group of representatives of both labor and management in some 10 industries will meet in Washington, D. C., the 17th of January to map plans of defense.

The meeting was initiated by a group of AFL unions that are members of America's Wage Earners' Protective Conference, of which Matthew Woll, who is also second vice president of the AFL, is president. Among the industries that will participate are pottery and glassware, fisheries, hats and millinery, scientific instruments, jewelry, matches, and wallpaper.

Pointing out that these groups are representative of the miscellaneous industries in this country that will bear the brunt of any increased competition from abroad, O. R. Strackbein, executive secretary of the labor group, stated today that the economic life of many long-established small and medium-sized industries in this country, devoted principally to the manufacture of consumers' goods, is at stake.

"Few people realize," Mr. Strackbein said, "that in order to hold our export markets at their present abnormally high level, our avowed national policy of opening ever wider our gates to imports, to make it possible for other countries to pay for our exports, is designed consciously or unconsciously to fatten our large mass-production industries which are our heaviest exporters, at the expense of the smaller industries scattered throughout the United States. The big exporters are the industrial giants that manufacture automobiles, iron and steel, electrical equipment and machinery, petroleum, agricultural implements, etc."

Expressing complete sympathy with the objective of European recovery, he said that the meeting scheduled for next January would explore alternative means of correcting the trade balance without bringing unemployment and depression to numerous industrial areas in this country. "There would be little point in gaining recovery for Europe which would be merely temporary," he said, "if this can be accomplished only by visiting a blight upon our own producers in competing lines. This should not be necessary."

In calling the meeting, Mr. Strackbein said, full cognizance was taken of the gravity of the dollar-gap problem. "We want to know whether we (the miscellaneous group of industries) are being peddled off by our diplomats to satisfy an untested theory or to satisfy the export interests, and whether there is some other way of meeting the problem. If further tariff reduction is no solution, considering its boomerang aspects, we want to know why we should be offered up as the sacrificial goats, simply as a disastrous experiment or a grand but empty gesture to impress western Europe.

"Mr. Paul Hoffman, ECA Administrator, who comes from the automobile industry, has so far offered no suggestion to show how the vast domestic automobile market might best be shared with European producers. His eagerness for imports falters at this point," Mr. Strackbein commented.

"As long as our exports continue at the post-war pace," he continued, "there is no hope of striking an import balance without bringing many of our industries to the brink of destruction. The statement that proposed increased imports of $2,000,000,000 a year from Europe would amount to less than 1 percent of the gross national product is true but must be known to be wholly meaningless by those who give it currency. This is like saying that a disastrous flood would represent only a small amount of rainfall if it were spread over the whole United States. Actually, a $2,000,000,000 increase in imports would not nearly bridge the present gap between exports and imports. To do that we would have to increase our imports by another two or three billion dollars, presumably from Asiatic countries.

"If we continue our foolish worship of exports and attribute special virtue to them, our problem will continue to be perplexing and will bedevil us and the rest of the world for years to come."

The meeting will consider beside the tariff and import program, the Charter of the International Trade Organization, and the escape clause in the trade agreements. "It will be the first joint meeting of its magnitude between management and labor where both will be talking the same language and seeing eye to eye, that I know of," Mr. Strackbein remarked. "Perhaps the idea will catch on in other directions."

AMERICA'S WAGE EARNERS' PROTECTIVE CONFERENCE.
WASHINGTON, D. C.

[For release Thursday morning, January 12, 1950]

Over 50 representatives of labor and management in 15 industries will meet in Washington on January 17 to attend the conference sponsored by America's Wage Earners' Protective Conference. The meeting will consider what action can be taken to safeguard American industry and labor against the impact of the increasing foreign competition resulting from the import-promotional work of the Economic Cooperation Administration and the Department of Commerce, supported by the tariff-cutting activities of the State Department.

The campaign to open wide the doors of the American market to billions of dollars of additional imports, as proposed by the ECA, was first challenged a month ago in a statement made by O. R. Strackbein, executive secretary of the Wage Earners' Conference. In calling the meeting which will assemble here next week, Mr. Strackbein outlined the program as including beside the ECA-State Department import proposals, consideration of the Habana charter of the International Trade Organization which is before Congress for ratification.

Among the industries that will be present will be fishing, fish-canning, and sea-food-processing industries. Imports of fresh and frozen fillets have risen to levels far above prewar imports, principally from Canada and Iceland. Imports of canned tuna have alarmed the tuna fisheries and canneries of the west coast.

The pottery industry is confronted with rising imports of chinaware from Japan, Germany, and other European countries. Approximately $20,000,000 of pottery was imported in 1949 and the trend last year was still upward.

A sharp rise in the importation of women's fur felt hats took place in 1949, bringing the import level well above prewar years in terms of both quantity and value. Leather and woolen gloves and mittens have felt the keenness of competition from Japan and Europe, and it is feared that even without further duty reductions the domestic industry is faced with a substantial loss of market and shrinking employment.

Other industries among those that will be present are the makers of wallpaper and of matches. Imports of printed wallpaper have made extensive inroads into the market, with Canada the chief source. Matches, on which the duty was reduced in the recent Annecy agreements, face stiff competition from Scandinavian countries.

Pressed and blown glass tableware imports, coming principally from Czechoslovakia, have slackened employment in domestic plants making glassware for the American household. Japan last year joined Czechoslovakia as a shipper and began to loom as an important source of low-priced competition.

Makers of scientific apparatus, kaolin producers, and wool hat manufacturers have likewise felt the rising tide of imports at prices that are alarming to those who are interested in either jobs, wages, or profit.

The foregoing industries, represented by top executives of both management and of the labor organizations concerned, will be on hand for the meeting.

"Other industries asked to be represented," Strackbein said, "but we were unable because of the principle of parallel representation of both labor and management, to arrive at a satisfactory basis for invitation, for the present."

Top labor representative to attend the meeting will be Matthew Woll, president of America's Wage Earners' Protective Conference and also vice president of the American Federation of Labor.

AMERICA'S WAGE EARNERS' PROTECTIVE CONFERENCE.
WASHINGTON, D. C.

Veterans' Benefits—A Matter of National Interest

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. CASE of South Dakota. Mr. Speaker, no nation can long survive which fails to reserve for the service of its war veterans a respect and recognition above and beyond that which is proper for simply living so many years or for meeting the responsibilities of civilized society. At the same time, the Veterans' Administration is neither sacred nor perfect and I shall continue to explore and expose waste or inefficiency if found there as I would in any other Government agency. That was my reply to the South Dakota American Legion which recently wired me asking my posi-

tion on certain proposals relative to veterans' benefits.

The text of the American Legion telegram to me and my reply follow:

YANKTON, S. DAK., *January 9, 1950.*

Hon. FRANCIS CASE,
United States Representative,
Washington, D. C.:

The American Legion of South Dakota is definitely against that part of the Hoover Commission report dealing with veteran affairs. Separating the Veterans' Administration into other and more Federal bureaus and commissions will not mean economy but rather complete chaos and confusion eventually ending in nonservice to the disabled veteran and family. Keeping all veteran affairs under one administration is our want, and watching economy in that administration is our aim. Will you wire me your exact position regarding veterans' affairs as contained in the Hoover report so that the American Legion of South Dakota will know where you stand on this vital issue.

C. O. CHRISTOPHERSON,
Department Commander.

My reply:

WASHINGTON, D. C., *January 11, 1950.*

Mr. C. O. CHRISTOPHERSON,
Department Commander,
American Legion,
Yankton, S. Dak.:

Re tel. Am opposed to any proposal that would destroy identity of Veterans' Administration hospitals or attempt to convert compensation for service disabilities or hazards as reflected in established veterans' pension system into any general social-security benefits.

This is not any new position for me. In fact in many talks I have cited such proposals why I thought recommendations of Hoover Commission should be acted upon selectively rather than in block. Similarly object to undertones in President Truman's budget message where he cited eligibility of veterans to benefits "under the general social-security program of the Government" and expressed concern over "special benefits for veterans."

Put me down as believing that no nation can long survive which fails to reserve for the service of its war veterans a respect and recognition above and beyond that which is proper for simply living so many years or for meeting the responsibilities of civilized society.

At the same time the Veterans' Administration is neither perfect nor sacred and I shall continue to explore and expose waste or inefficiency if found there as I would in any other Government agency.

FRANCIS CASE,
Representative in Congress,
Second District, South Dakota.

California and the River

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Fortnight magazine for December 23, 1949:

CALIFORNIA AND THE RIVER—SOME FACTS AND CURIOUS FIGURES ON THE GREAT COLORADO CONTROVERSY WITH ARIZONA

A California fisherman aimed a plastic plug toward the east shore of Lake Havasu back of Parker Dam on the Colorado River. Almost immediately the little, barbed, mouselike lure was seized by a 3-pound bass. The fisherman landed his prize, one of several, and was proud and happy, but only for a moment. During the excitement he had overlooked the drift of his skiff and the approach of a small power craft.

The Arizona game warden noted that he was fishing in Arizona water and demanded his Arizona fishing license. Not having one, the California-licensed fisherman was arrested, his gear confiscated, and he was ordered to appear before the justice of peace in Parker, Ariz., the following day.

As a retaliation measure, California wardens frequently arrest Arizona fishermen for taking their catch in California waters behind the dam and along the main stream of the river dividing the two States.

Such petty skirmishing marks the great California-Arizona-Colorado River controversy on the lower level. The issue extends from here on up and up, however, and involves every single consumer of water, user of power, and resident of southern California. The Governors and congressional delegations of both States are likewise deeply involved and both sides seek by every means at their command to enlist sympathy for their sides. The President, his Cabinet, fellow Members of Congress, and all manner of officialdom are buttonholed and belabored in the name of God and/or the devil to come to the aid of the contesting States.

The year 1950 will see an intensification of this controversy and it may see a decision in favor of one State or the other.

SHOW-DOWN

If California should be successful in establishing her rights to Colorado River water, the investment of billions and the hopes of millions will be secured. If California is unsuccessful in maintaining rights to water she has contracted for, the millions of people in urban areas of southern California can expect to share the desperate plight of residents of New York City with their water level down.

The full implication of such a circumstance is difficult to calculate and measure, but Dean Franklin Thomas of Cal Tech, one of the wisest and ablest citizens of the southland makes some of the meaning clear.

VIEWS

Although Dean Thomas is fully a California partisan, he is first of all a man of science, president of the American Society of Civil Engineers, and as such, he takes an objective view that is not always shared by his fellows on the board of the Southern California Metropolitan Water District. He is chairman of the board and oldest member in point of service and most adept at slide rule savvy. He says that if Arizona succeeds in its bid for a greatly expanded use of Colorado River water, there will be little, if any, left for the metropolitan areas of southern California.

Perhaps not so exactly, but certainly more colorfully, Congressman CLAIR ENGLE, Democrat, from the cow counties and squirrel gun country, states the issue this way: "The Central Arizona project proposes to use water which it doesn't own, lift it nearly twice as high as the Washington Monument, convey it farther than from Washington to New York, at a cost to the Federal Treasury of a billion dollars, to irrigate 200,000 acres of war-boom desert land, one-half of which is owned by only 420 landowners, who would not be required to repay any of the construction costs, and would raise only crops which are surplus in this country."

BOILED DOWN

The explosive force behind Congressman ENGLE's multi-barrelled blast is distilled and refined from the mountain of evidence assembled over more than a quarter of a century in the bitter water issue between California and Arizona. His statement hints of the land speculation and the war profiteering, the national politicking and the savage contest for influence between powerful men and bureaus and special interests. Events are shaping up for a show-down between the two States at the forthcoming session of Congress and a delineation of the shadows and highlights of Arizona's program appears to dwarf other land speculation schemes and pork-barrel programs that have marked American westward expansion.

It is important for every Californian to understand that Colorado River development in the lower basin has been all California's doing. That the great conquest of the river has been financed by California although the benefits of these installations have extended to all States and to the Republic of Mexico.

The millions of newcomers to southern California would not be here but for the vision and courage of such men as Dean Thomas and many, many others, in staking out the water needs of southern California for years to come. And they won't stay here unless Arizona is checked in her designs upon California water.

NATURE'S CHOICE

Also, Californians should understand that the water of the Colorado is a variable amount, subject to the influence of drought, evaporation, and flood. Within man's ken to calculate such things, this short supply of water has been distributed between the upper-basin and lower-basin States under the Colorado River compact. These assignments were arrived at upon the basis of need and use and are subject to strict priority, based upon the length of use and international treaty.

The inescapable fact is that should Arizona succeed in her multimillion-dollar bid for water for the central Arizona project, more water would be assigned than flows in the Colorado and under the priority rights arrangement, urban areas of southern California would be among the first to dry up.

MINUS

Stated in acre-feet (sufficient water to cover 1 acre of land 1 foot deep) the river, according to Bureau of Reclamation estimates, is 300,000 acre-feet short of the water required to operate present projects contracted for with the Federal Government. The Arizona project would require an additional 1,200,000 acre-feet annually. This water could be supplied only at the expense of California.

So much for the threat to the present welfare and future of southern California contained in the Arizona program. But what of the project itself? An examination of the record of this scheme is another story and while Arizona likes to play up and portray itself in the sympathetic pattern of a "David and Goliath" role, the facts disclose a set-up for a swindle, a gigantic land-speculation deal that would pay off in millions to a few large Arizona landholders at the expense of taxpayers from all States and this with none of the risk and obligation with which California saddled itself in pioneering Colorado River development.

The California-Arizona controversy is highly technical, but generally involves three issues.

First. A disputed interpretation of the meaning of the terms "unapportioned" and "excess or surplus" as used in the original Colorado River compact. At least 500,000 acre-feet are at stake in this difference between the States.

Second. A difference of 600,000 acre-feet in favor of Arizona in determining beneficial consumptive use involving the Gila River, a Colorado tributary, whose waters are totally used within Arizona.

Third. Arizona's insistence that evaporation losses at Lake Mead behind Hoover Dam, calculated at 550,000 acre-feet yearly,

be subtracted from California's apportioned total share of Colorado River water.

IF

The stakes are indeed high, more than a million and a half acre-feet. In fact this is the water committed to supply the cities of southern California. The conflicting claims to the water are shrouded in more than a quarter of a century of bitter debate and controversy, but despite charges of water imperialism against California by Arizona and Author Carey McWilliams in his current book, California, the Great Exception, the record will show that California through the years has tried to resolve the differences with Arizona by arbitration and negotiation. Governor Warren's most recent words on the subject, spoken in Los Angeles before the Colorado River Association, only last fortnight, reflected the good-neighbor attitude to the disappointment, it might be pointed out, of many present who advocate a sterner, tougher dealing with Arizona.

California's congressional delegation, Republican and Democrat, has been in total harmony in this issue, seeking a Supreme Court hearing and settlement of the serious differences.

NO LAW

Arizona, on the other hand, has avoided and fought at every point against a judicial determination of the issues, relying upon a political resolution of the differences. Her strength and power in this sector is impressive for the chairman of the powerful Senate Appropriation Committee is Arizona's senior Senator, CARL HAYDEN. His horsetrading might win for Arizona. Too, Arizona apparently fearing the impartial judgment of the Court, has enlisted the politicians of the Department of the Interior's Bureau of Reclamation to her cause.

Her tactic is to oppose with all the considerable political force she has in Congress those California bills soliciting Supreme Court determination of the points in dispute and, at the same time, seeking a congressional approval of the construction of a billion dollar reclamation and power project, the central Arizona project. Clearly, the only water available for this project is the disputed 1,500,000 acre-feet, that California already has and seeks to assure title to through Supreme Court determination.

DATA

Congressman DONALD L. JACKSON (Republican), of Santa Monica, a city 100 percent dependent upon Colorado River water, last July took dead aim on the "Arizona bubble" in a speech in the House of Representatives. His disclosure of the speculative nature of the land scheme has not been denied. His evidence was taken largely from the Bureau of Reclamation reports on the project and from the files available to Congress dealing with the matter.

"In every financial transaction there is a beneficiary," he said. "It might be well to approach the central Arizona project with this premise as a reference point. There is every indication and there is evidence to prove that the beneficiaries of the project, if approved and constructed would be a limited number of large landowners in the State of Arizona. At this time the landowners, together with others, have contributed thousands of dollars in an effort to promote the central Arizona project here in Congress.

"The proposed undertaking is a most complicated and involved one, but stripped of all extraneous issues, the entire proposition, boiled down to its essential factors, means simply that the United States Government is being asked to spend approximately a billion and a half dollars upon the construction of an irrigation project designed to transport Colorado River water several hundred miles into central Arizona. All other factors aside, the cost of the program is so great as to merit the preoccupation of every Member concerned with Federal expenditure and Federal income. There is nothing to indicate that the United States Treasury would reap any material return on the huge investment, but there is considera evidence to support the belief that some Arizona sponsors would harvest a bumper financial crop for years to come at the expense of the American taxpayers in general."

SAVING

JACKSON pointed out that those who are beating the drums for the project would not pay 1 cent of the cost of the gigantic irrigation program, aside from the money, about $200,000 they have raised for promotion and publicity and he listed for the record the contributors and the amounts subscribed.

"Let us deal for a moment with the cost of the project," JACKSON said, "There is every reason to believe that the cost on completion would approximate $1,500,000,000. Those speaking on behalf of the project state that the cost would be about half this figure, but it must be said that those who so contend are either extremely naive or blind to current construction costs."

The speaker then let fly with an eight-point indictment of the project that has not yet been discounted by Arizona:

"First. All of the land in the proposed project area is privately owned. Farm land within the project area with water on it today is worth a maximum of $300 an acre. The land without water on it today, but actually within the proposed project area, is worth probably $50 an acre.

"Second. It is anticipated that 73,500 acres of land within the project area, now without water, would receive water under the project. Certainly, the irrigation of that much additional land for the benefit of homesteaders and others who sorely need land and water, would be a beneficial project. But the 73,500 acres is somehow mysteriously missing. No one to this time, including the Arizona advocates or the Bureau of Reclamation, has identified this land, nor have the names of those who own these acres been made public.

"Third. There are some 400 large landholders in the project area who would be likely to receive indivdual benefits averaging more than $500,000 apiece.

"Fourth. About 30,000 men, women, and children in the project area would stand to receive benefits of $50,000 each, all as a gift from the people of other States.

"Fifth. Up to April 1 of this year a sum of more than $178,000 has been contributed from private persons in Arizona to promote the central Arizona project. Of this amount, more than $57,000 was contributed by anonymous, or unidentified persons. The money so contributed went to the Central Arizona Project Association in Phoenix.

"Sixth. The proposed project would cost more than twice as much as the Panama Canal, and more than the combined cost of TVA and Hoover Dam.

"Seventh. To obtain an assured water supply for the project, water that now belongs to other States would, of necessity, have to be taken from the Colorado River. The other States now own this water under contracts with the United States Government. Advocates of the Arizona project are asking Congress to break these contracts, and to give the water to a few private landowners in central Arizona.

"Eighth. The project scheme would take two-thirds of the power revenues from the project to help pay for it. The other third of the power available would be used to operate a 1,000-foot pump lift on the project. All additional costs of the project would be an outright gift from the people of the United States."

DETAILS

Congressman JACKSON then detailed his eight points and quoted the Bureau of Reclamation report on the project regarding the matter of private ownership as follows:

"Six hundred and twenty-eight thousand seven hundred and sixty acres (in the project area) are practically all privately owned. It is estimated that 10 percent of the privately owned land is held by corporations. The total amount owned by the State and the counties is not significant."

Not one acre of the new land would be available to veterans or other worthy Americans who wished to find farm homes, JACKSON said, and continued with discussion of important 160-acre reclamation law as it applied to the project.

"In the Salt River area alone, which area contains more than two-thirds of the proposed Arizona project land, there are 995 ownerships in excess of reclamation law. About 32 percent of the irrigable land in this one area is held in excess ownership.

True, the Bureau of Reclamation says that the 160-acre law will be enforced if the Arizona project is built. But we know that this law has never been enforced there. There is no reason to believe it will be enforced in the future.

"But enforcement of the 160-acre limitation, or failure to enforce that law, will make little difference to the large landowners involved. They will not be injured in either case, for the idle land now held by the big landowners will immediately increase in value 6 to 10 times. If, on the other hand, the large landowners should be forced to sell all but 160 acres, they would, of course, sell at tremendous profit."

STRANGE DOINGS

The speaker then went into the curious subsidy pattern of the program, pointing out that 86 percent of the crops grown in the area are those common, competitive field crops already subsidized by the Government. Under the scheme, the Government s asked to pile the king-sized irrigation water subsidies on top of the crop subsidies.

Of the 73,500 waterless acres in the project area, JACKSON has this to say:

"This acreage has a value today of approximately $3,657,000. With water on these acres this privately owned land would have a minimum value in excess of $32,000,000."

Hidden, but nevertheless in evidence in the Bureau of Reclamation report, is the full dope on farm ownership. The report states that the proposed project area contains an estimated 6,000 farms and that 7 percent of these farms are of 500 acres or larger. The 7 percent contain 55 percent of the irrigated land.

Seven percent of 6,000 farms is 420 farms. In other words, the 420 farms containing 55 percent of the irrigated land would get 55 percent of the irrigation benefits.

Fifty-five percent of the estimated cost of the irrigation feature of the project, $420,019,000, amounts to $231,010,450, or an average of about $500,000 for each of the 420 farms.

It must be pointed out that the President and many high Government officials have not been taken in by this scheme and have expressed their opposition to the engineering and economic aspects of the program. Look what happened to Secretary of Interior "Cap" Julius Krug. But Californians got little comfort in viewing the new Secretary, Oscar Chapman, a career Bureau of Reclamation man and, as Congressman JACKSON points out, the Bureau favors Arizona, apparently motivated by an interest in another gigantic project under its jurisdiction.

As JACKSON put it, "The Bureau obviously does not care whether the project is financially feasible. All the Bureau desires is more control over the economy of the West. Bad projects as well as good ones give the Bureau that control."

"War Outmoded," General Wedemeyer Says

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a speech by Gen. Albert C. Wedemeyer before a chamber of commerce luncheon in Los Angeles on November 10. This outstanding military man calls attention to the dangers that lurk in the building of a gigantic military machine.

PLEADS FOR IDEAS TO REPLACE BULLETS AT CHAMBER OF COMMERCE LUNCHEON MEETING HERE

A military man, high in office and a professional soldier, yesterday pleaded for use of ideas in place of bullets, decrying war as an outmoded method of settling disputes.

"No satisfactory decision was ever reached by punching someone on the nose," Lt. Gen, Albert C. Wedemeyer declared. "The puncher may have been satisfied, but the gentleman on the receiving end was more strongly entrenched in his original belief than before the punch was thrown."

That colloquialism was interjected in a scholarly address on world affairs before a luncheon meeting sponsored by the Los Angeles Chamber of Commerce's military affairs committee headed by Morris B. Pendleton.

FIRST VISIT HERE

It was General Wedemeyer's first visit to Los Angeles since he took command at the Sixth Army Headquarters at the Presidio, San Francisco. In the war, he was commander of United States troops in China. He is a West Pointer.

The unusually tall, slender soldier in his trim uniform spoke with the deepest conviction. He was addressing an audience in the Biltmore Bowl which included high Army, Navy, Marine Corps, and Air Force officers in this area.

"I consider most important of all psychological or cultural resources," General Wedemeyer said. "Guns, tanks, planes, A-bombs—none of these can cope adequately with the tremendous force of ideas."

DANGEROUS IMPLICATIONS

"The destructive power of weapons made available by science indicates clearly the dangerous implications of employing military force in the future. From a strictly military standpoint, World War II was a conclusive victory for the Allies. But, paradoxically, today we are sacrificing lives and treasure to build up the political and economic structure of our former enemies.

"It seems inconceivable that any nation would start a war at the present time, especially with so much rebuilding necessary as the result of the last war. However, totalitarian governments are unpredictable. We should not destroy our military resources."

NO PEACE GUARANTY

"Both western democracy and communism claim the same ultimate objective—a good life for all, regardless of race, creed, or color. Methods for reaching this goal are so different that many think the final settlement can only be made by force of arms."

"A third world war would settle nothing. Even if one nation and its allies should conquer the world, a permanent peace would not be guaranteed. Our problem is to find a method whereby governments with vastly different political, economic, and social structures can live harmoniously in the world. This has been done. After all, the American people represent every shade of political, social, and religious thinking and work successfully together."

The speaker said the solution lies in finding a common denominator, a unanimity of purpose similar to that found in this country.

AFTER SAME THING

"Is it not that we are all seeking the good life, religious, social, and economic freedom to do what one wants to do, plus permanent security," he asked. "Certainly, the world's peoples are after the same thing.

"Marxian communism's ultimate objective was a sort of Utopian anarchy with everyone doing what he wants and getting what he wants. Present-day Communists are a long way from this step. Many will agree that the last step is merely impossible, wishful thinking. However, it does lend strength to the idea that the world's peoples already have a common denominator ready for exploitation in the name of permanent peace."

PLAN NEEDED

"Except for glittering generalities of the Atlantic Charter and occasional vague pronouncements by leaders of the allied nations, neither we nor our Allies during World War II enunciated realistic, common objectives for rebuilding a sound world order. Much of the world's suffering today stems from this failure. We must abandon, once and for all, the old habit of offering pious platitudes in the field of diplomacy. We must explain clearly the principles for which we are prepared to make any sacrifice.

"This must be done through a well-conditioned plan—in military terminology, a strategic plan. Strategy is the art and science of applying resources to accomplish national objectives. The resources that concern us now include the political, economic, psychological, and military. I place military last because it is my conviction that if we employ these other resources in a timely and intelligent manner we can avoid war with all of its dire consequences."

The Way To Balance Is To Begin

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Christian Science Monitor of January 10, 1950:

THE WAY TO BALANCE IS TO BEGIN

The most notable thing about the budget is that it does not begin to balance. President Truman estimates that under present tax laws intake would fall short of outgo by more than $5,000,000,000. He hopes to reduce that by new taxes—an exceedingly precarious hope considering the drive for tax cuts—but he does not pretend there will not be a whopping deficit. This he accepts.

Here is the basic policy decision which the American people and their Government have to make: Is an unbalanced budget necessary—or wise under the circumstances?

It certainly is not inescapable. It is true that 70 percent of the budget goes for interest, veterans' benefits, defense costs, and foreign aid, and it is widely assumed that these are virtually irreducible. Actually, every one can be cut, is being cut. Defense costs and foreign aid are being reduced more than $2,000,000,000 under current expenditures. Veterans' readjustment costs should decline. The President also expects a reduction in the cost of farm-price supports. Yet the budget he offers for 1951 is, at $42,500,000,000, less than a billion below this year's.

This figure is not, in fact, irreducible. The Committee for Economic Development has just proposed a budget more than $6,000,000,000 below this year's. The National Association of Manufacturers says the Government could be run on less than $34,000,000,000. The CED saving includes $2,800,000,000 for veterans' insurance dividends—which, although paid out in 1950, was not a charge on taxes collected in 1950. Indeed, we believe both organizations would find it almost impossible to achieve all these savings. But allow for a billion or two and they still indicate the possibility of balancing the budget.

Big savings are possible without destroying the foreign aid program, without dangerously reducing military requirements, and without demobilizing any essential service of the Government. The President is resisting some pressures, like those for excessive veterans' payments, and is putting some of the Hoover reforms into operation to obtain efficiency and economy. He has refrained also from embarking on new public works, except those for atomic defense and development. But he insists that new Federal projects like medical assistance programs, housing for middle-income families, and aid for education should be undertaken.

As we see it, some of these projects might be useful under normal conditions, but should not be undertaken while the Nation is still burdened with such heavy military and foreign aid costs. We do not believe a second housing program is so urgent as Mr. Truman says. On aid to education, why not limit it to the States which show the greatest need? And some of the existing public works projects could be slowed down.

The President implies that the Government must continue to spend at nearly the present level to prevent the national economy going into a tailspin. We can imagine circumstances in which a large program of public works should be launched to help head off a depression. But the Government through its vast military expenditures, crop supports, veterans' benefits, social security, and foreign aid program—the money buys mainly American goods—is already pouring out over $25,000,000,000 that helps to sustain the economy. A national economy bolstered by that amount of subsidy in boom times should begin to try its weight on its own legs. And the way to balance the budget is to begin.

Friendship With Spain

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include the following confirmation of the judgment of my friend, Dr. Joseph F. Thorning, associate editor of World Affairs. The latter, writing in the New York Times, June 21, 1948, pointed out that the 1946 resolution of the United Nations General Assembly about Spain had been rendered invalid by the 1947 failure to pass the identical resolution. This is the view now proposed in some detail and with unanswerable logic by a

Washington attorney, Mr. William J. Byrne. As both Dr. Thorning and Mr. Byrne have emphasized, the attempt by Soviet Poland to censure the present Spanish Government as Fascist and as having been imposed by the Axis was overwhelmingly defeated by a General Assembly United Nations vote of 1949. As a distinguished Senator recently said, all nations are now free to accredit ambassadors to Madrid. The United States can and should act, without delay.

AGREES THAT UN ANTI-FRANCO RESOLUTION NO LONGER IS VALID

To the EDITOR OF THE STAR:

Your editorial, The Spanish Fraud, approaches the question of our duties with regard to Spain in their true light and confirms the statement of the chairman of the Senate Foreign Relations Committee, Senator CONNALLY, to the effect that no resolution of the United Nations binds us to curtail our diplomatic relations with Spain.

With your leave I would like to develop this. In 1946 a recommendation was passed under Soviet pressure restricting diplomatic relations with Spain and recalling all chiefs of mission from Madrid. But in 1947 the same resolution was submitted again to the UN General Assembly. It was not approved because it did not get the necessary two-thirds majority. It is apparent that from that moment the original resolution is not valid; but the representative from Soviet Poland, disregarding this fact, immediately stated that the 1947 resolution was not valid. Why? Nobody knows. If the 1946 resolution was to be permanent, there was no need for its being considered again, but, if considered, as did happen, the result had to be binding. Or was it to be a privileged resolution according to which, no matter what the final result, it was to continue in force? Why vote in that case?

VOTE SEEN AS VALID

Some assert that it was only a negative vote. But is not a negative vote valid? If in our courts a jury is asked if the accused is guilty and it answers that he is not, the accused is a freeman even if the jury did not pass an affirmative vote as to the accused's innocence. The words of acquittal are "not guilty"; the man is released on a negative vote of the jury. It is a universally used form of parliamentary and legal procedure.

With a view to clearing up any doubts that might have existed in the minds of the respective governments, a new resolution favorable to Spain was presented to the Assembly—and this you mention in your editorial—by Brazil in 1949. This resolution did not get the required two-thirds majority. In his speech to the General Assembly Dr. Arce stated that he would vote for the resolution, although he thought it unnecessary as the Argentine considered that the 1946 resolution had been rescinded. All those nations which voted in favor of the resolution believed the same and considered it a mere symbolic act which, as you state, obtained a 26-to-15 majority. It is not illogical to suppose that some countries, such as Chile, China, and Haiti, might have cast their votes in favor of the resolution if the United States had done likewise. Moreover, of the 15 votes against, two—those of Australia and New Zealand—today would be either abstentions or favorable as a result of the recent elections in those countries. Without those two votes opposed the resolution would have been successful.

MARGIN WAS NARROW

As a point of fact the Brazilian effort failed, not by a margin of four votes as you say in your editorial, for as the number of votes cast, according to the Rules of Procedure of the General Assembly Nos. 76 and 78, was 41 (26 in favor, 15 against) and since two-thirds of 41 is 27.33 the margin really was only 1.33.

But the Assembly dealt again with Spain after the defeat of the Brazilian proposal. A Soviet-inspired Polish proposal was considered and can be taken as the UN's final word in the matter. As various nations considered the 1946 resolution annulled by that of 1947 and had appointed Ambassadors to Madrid, Poland attempted to have a vote of censure passed against them for it considered that their action constituted a flagrant violation of the high principles and purposes of the United Nations, undermined international confidence, and will convince the Spanish people that it has been abandoned by the United Nations.

The Polish proposal was defeated 36 to 6, with 11 abstentions. Thus it clearly was established that the May 16, 1946, recommendation no longer was in force and that the member nations were free to resume full diplomatic relations with Spain without transgressing any limits set up by the UN. There can be no legal quibbling in this respect and Senator CONNALLY was following a strict interpretation of the case when he stated that he did not regard the 1946 resolution as binding on this country.

WILLIAM J. BYRNE.

Red Conquest of Hainan and Formosa Will Increase United States Expenses in Japan

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown in the Washington Star:

RED CONQUEST OF HAINAN AND FORMOSA WILL INCREASE UNITED STATES EXPENSES IN JAPAN

(By Constantine Brown)

The conquest of Hainan and Formosa Islands by the Chinese Reds would result in a heavy additional American expenditure in Japan—that is to say, another burden on the American taxpayer—according to reports from economists in Tokyo.

Hainan is considered the richest island in the world in iron ore. A mountain in the middle of the island yields a 70-percent ore. This is shipped to Japan, where it is used in the new Japanese factories.

As for Formosa, which is one of the richest islands in the Pacific, its loss to the Communists would create a serious food shortage in Japan. There are three rice crops a year. The large surplus is exported to the islands in the north.

The same thing applies to Formosa's tea and many other products, which are exported to Japan primarily on a barter basis. Raw materials are shipped to Japan and the ships return with cargoes of manufactured products for the island's 7,000,000 inhabitants.

CONDITIONS IMPROVE

According to most recent reports from American observers, it seems that conditions have improved since K. C. Wu, the progressive and scrupulously honest former mayor of Shanghai, was placed at the head of civil authorities in the island.

Realizing the mistakes and corrupt practices of his predecessors, he has organized the island on a Western economic basis and placed educated Formosa natives at the head of important departments. The local currency is pegged to the dollar. There is, of course, the inevitable black market, but the spread between the official rate of exchange and the black market rate has been reduced from 40 percent to about 10 percent.

The Nationalists' treasury is not completely empty yet, although the cost of government amounts to about $1,000,000 a week. Chiang Kai-shek transferred from Nanking about $250,000,000 in gold when he realized that his capital would be conquered by the Reds.

Although Chiang's action in removing the gold was denounced at the time by Chairman CONNALLY of the Senate Foreign Relations Committee as another indication of Chinese corruption—he accused Chiang of absconding with the Republic's funds—the money is coming in very handily now, when the Nationalist government has been almost entirely cut off from any further bonanza from the United States.

A Nationalist force of about 300,000 is being maintained now on Formosa. The morale of this army—mostly young recruits—is not bad. They might be able to offer a real show if Formosa is invaded. The main difficulty confronting the army commander has been that he has not been able to obtain necessary war material for his troops. The loading of 90 carloads of tanks and armored vehicles for the Nationalists on a ship at Philadelphia may alleviate this situation somewhat.

EARLIER PLEA RECALLED

Conditions are not much different from those which existed in northern China in 1948 when Gen. Fu Tso-yi had six armies at his disposal but had equipment for only three. He asked them, when he was still winning against the Communists, for only 4,000 machine guns and some 45,000 rifles with the necessary ammunition. His request was supported by the American military observers on the spot and those, like Vice Admiral Oscar Badger, United States Seventh Task Fleet commander, who visited his forces. After a long and fatal delay in Washington some 400 machine guns and 5,000 rifles reached the Chinese commander.

The Nationalists' armies were defeated and large-scale desertions followed. Officers and men became disheartened because they were being let down by their American friends. This is a matter of record available to those who might wish to investigate the truth of the defeat and desertions of the Nationalists' last combat forces on the Chinese mainland.

A similar situation may arise in Formosa. According to unbiased American observers the non-Communist ground, air, and naval forces might give a good accounting of themselves if they had the means to fight.

Amphibious operations which must be undertaken by the Reds are not easy when the opposing force is full of fight. Neither the Chinese nor the Russian armies have ever undertaken such actions in the past. It is true that the Russians now are training three Chinese paratroop divisions in central China. But even at this late hour a more liberal policy toward the non-Communists—such as providing them with arms, planes, and gasoline—might still be effective.

The Road To Ruin

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, as an extension of my remarks, I

would like to include the following article written by George E. Stringfellow, past president of the Kiwanis Club of New York City, and which first appeared in the January issue of the Kiwanis magazine:

THE ROAD TO RUIN

Lenin, the chief architect of communism, said, "Some day we will force the United States to spend itself to destruction." The way we have squandered our wealth and pyramided our debt during the last 18 years must have gladdened the hearts of Communists everywhere.

Yet while a candidate for the Presidency in 1932, Franklin D. Roosevelt emphasized the importance of economy in government. He said, "Too often in recent history liberal governments have been wrecked on the rocks of loose financial policy. We must avoid this danger."

The Federal debt in 1932, which Mr. Roosevelt had asserted was dangerously high, was less than $20,000,000,000, and the annual cost of government, which he promised to reduce by 25 percent, was a little over $5,000,000,000—less than the cost to service the national debt today.

Five years later the debt had risen to $36,500,000,000 or 82.5 percent and the annual cost of government had increased more than 60 percent.

How can President Roosevelt's about-face on cost of government and debt be reconciled with his announced policy of economy and debt reduction during the first 4 months of his first administration? Here I think is the answer to that question. Roosevelt embraced the philosophy of the late Lord John Maynard Keynes, British economist, who visited the United States in 1933, and, according to the British press, Keynes' ideas "captivated President Roosevelt." Those who are in a position to know say that Roosevelt's change in matters of debt and economy stemmed from this captivation. Since that time Keynes' philosophy of "compensatory" spending—the essence of which seems to be that the more you spend the more you have—has been practiced by our Federal Government, and it has infiltrated the States and municipalities.

Keynes' philosophy of "compensatory" spending has about bankrupted Britain. A similar philosophy destroyed the Roman Empire. Keynes' philosophy is advocated by the Communists for our destruction.

Those Americans who are today clamoring for more aid to Britain and other nations at the expense of the sorely pressed American taxpayer might well give thought to the fact that since World War I our Government gave Britain approximately $44,000,000,000. Since World War II we gave Britain and other nations $33,000,000,000. American money has kept socialism alive in Britain; it would have died on the vine without it.

And in some instances our grants have helped the Communists. For example, since World War II we have given Communist Russia more than $440,000,000 through lend-lease and other grants. To her satellite Poland we have given over $480,000,000 and are today buying rye from her, a grain of which America has a great surplus.

This gift of more than $900,000,000 of the American taxpayers' money to Communist Russia and Communist Poland since World War II is hard to believe, but the United States Department of Commerce and Senator HARRY F. BYRD are authorities for this statement. We are, therefore, using our money and our substance to fight communism in Italy, Greece, France, and other parts of the world while feeding it at the core.

If we continue our extravagance at county, State, and National levels, if we continue to live beyond our income, and if we continue our "loose fiscal policy" against which Franklin Roosevelt warned us, our living standard will drop to that of Britain and other socialist countries which may force us to adopt communism through the back door.

Rome was ruined by extravagance, Britain is being ruined by extravagance, and if we continue to follow her lead, we will certainly meet the same fate. Rome fell because her rulers gained and retained power through false promises and the use of taxpayers' money with which to corrupt the electorate, a procedure not different from that of our British cousins and our American politicians.

In speaking of Britain's Socialist government, Winston Churchill said: "Our Socialist spendthrifts and muddlers extracted from the British people a higher rate of taxation than was required in the very height of the war. Never before in the history of human government," concluded Britain's great wartime Premier, "has such a great havoc been wrought by such small men."

During President Roosevelt's three terms, the average yearly spending of the Federal Government was $31,000,000,000, including most of the military cost of World War II—and F. D. R. was no miser in spending public funds. In the four postwar years, the average yearly spending jumped from $14,000,000,000 to $45,000,000,000—an increase of almost 150 percent.

Eighteen years ago a Roman holiday was declared by and for our "spendthrift and muddling" politicians. Since then governmental extravagance at county, State, and Federal levels has been the order of the day. The national debt has increased from $20,000,000,000 to $255,000,000,000—an increase of 1,175 percent. The cost of government has increased from $5,000,000,000 to $45,000,000,000, or 800 percent

In pursuing the welfare state we are following the precepts of the British Socialist leaders. We are following Keynes' philosophy of "compensatory" spending. We are following the philosophy advocated by the Communists for our destruction. We are on the Roman road to ruin.

Governor Dewey Says: Latham-Halpern-Preller, a Splendid Legislative Team

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. LATHAM. Mr. Speaker, I have always tried to work in close harmony with the State legislators of my district for the benefit of the people of my home county of Queens. One could not ask for finer or more cooperative legislative teammates than State Senator Seymour Halpern and Assemblyman Fred W. Preller.

The first citizen of our great State of New York, Gov. Thomas E. Dewey, has seen fit to recognize this teamwork in the following letter to Assemblyman Preller, and I take pride in setting it forth in the RECORD:

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, January 11, 1950.

Hon. FRED W. PRELLER,
Member of Assembly,
Queens Village, N. Y.

DEAR FRED: I wish to take the opportunity to compliment you and your legislative colleagues from Queens, Congressman HENRY J. LATHAM and State Senator Seymour Halpern, on your vision and energy in the field of State-Federal fiscal relations.

For several years now this legislative team, working in close harmony, has sponsored bills looking toward the eventual elimination of tax competition and duplication between the Federal Government and the States, especially as concerns the taxes on gasoline and amusements.

As you know, I have made this subject one of my major proposals to the New York State Legislature this year. I believe strongly, as I said in my message to the legislature, that the rights and responsibilities of the people of our State are being nullified by the voracious appetite of the Federal budget which is now taking $8,000,000,000 in taxes from New York State citizens as against $1,500,000,000 in 1941. The effect of this policy is to impair the sovereignty of our State and reduce its spirit of self-determination.

Keep up the good work. Legislative teams like Latham, Halpern, and Preller are hard to find.

Sincerely,

THOMAS E. DEWEY.

Economy in Government

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. VURSELL. Mr. Speaker, never in peacetime since the United States Government was founded have the Members of Congress faced greater responsibilities to the American people than at this session. To fully meet them we must put the interest of our country first.

To properly meet and solve them, it will require clear thinking and courageous action, a determination to do our full duty in approaching legislation without the thought of how it may affect us politically, but how well the position we take on legislation will serve the people of our Nation.

We are faced with world chaos, and with a more dangerous situation on the home front. Certainly it is a time to approach every question with the highest standard of statesmanship we can bring into play in dealing with the momentous questions which are pressing for solution.

BIGGEST BUDGET EVER

In peacetime we are faced with the President's budget request of $42,400,000,000, the greatest ever asked in taxes of the American people, and at the same time the President predicts that this enormous amount will lack by over $5,000,000,000 paying the cost of the Government for the coming year. At the close of this fiscal year, June 30, we will also have this year's budget deficit of something like $5,000,000,000 in addition. In other words, at the end of the next fiscal year our deficit for the 2 years will be over $10,000,000,000.

This means that with the highest income in the history of the Nation during these 2 years, against which we have levied the highest rate of taxes in the history of the Nation, we will still lack

over $10,000,000,000 of paying the running expenses of the Government. Nothing like this has ever happened in peacetime before in our country.

Mr. Speaker, something must be done about it, and the time to start is now with the first appropriation bill that comes before this Congress. We must then continue to cut all appropriations to the very bone in an effort to reduce the cost of government as many billions of dollars as is possible in this session.

With the cooperation of the President, and with the cooperation of the Republicans and Democrats working harmoniously together, we should be able to effect savings that would wipe out the last year's deficit of $5,000,000,000.

We talk about the danger of another war in the future. The best strategy to prevent another war is to keep this Nation so prosperous and so sound financially that no other nation would dare attack us.

Our first line of national defense is the financial solvency of this Nation. Unless we protect this first line and keep this country in a sound financial condition we cannot defend ourselves against a foreign foe, nor can we preserve freedom and maintain our representative Government for our own people.

Mr. Speaker, with a national debt hanging over us of $256,000,000,000, if a serious depression would overtake us we would at once be in serious trouble financially. We must cut the cost of Government, balance the budget, and begin to reduce the national debt. We cannot increase our income and balance the budget by raising taxes. Taxes are as high now as we dare let them go. Higher taxes will slow down business, throw millions of people out of work and bring in less revenue. We have gone down the road of extravagance, waste, high taxes, and greater spending until we have reached the danger point that we must not pass.

Not a single piece of new legislation that is not absolutely necessary which will add to the cost of government should be enacted into law in this session. This is no time to give serious consideration to such legislation as the Brannan plan and socialized medicine, the two of which, it is estimated, will cost the Government an additional $10,000,000,000 a year.

We should approve the Hoover reports as quickly as possible in the hope that by so doing we can reduce the cost of government by $2,000,000,000.

We must vote against further waste and extravagance on every front.

We must drastically reduce the billions of dollars we have been giving to foreign nations for the past number of years. By adopting the Hoover report, refusing to pass new legislation that will add to the cost of government, and by reducing every appropriation bill as much as possible that comes before us, we ought to be able to cut the over-all cost of government by over $5,000,000,000 and balance the coming year's budget without any additional taxes. I hope and believe that the Members of Congress will cooperate to this end. We must not continue deficit spending.

Congress Must Save the Country

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, it serves no good purpose for Members of this body to complain about governmental spending when we appropriate the money. The responsibility is ours. In this connection I am including as part of my remarks an editorial that appeared in the Janesville Gazette, Janesville, Wis., on January 10. This editorial is to the point and fixes our responsibility:

ONLY CONGRESS CAN SAVE US FROM SPENDING SPREE

President Truman has cast the die. He intends not only to continue his wild spending orgy but to expand it with another $5,000,000,000 deficit, taking the Nation further down the road to socialism. Only our Representatives and Senators in Congress can block his way.

While avoiding the subject entirely, President Truman in his budget message left the citizen the conclusion that the President and his advisers do not trust the individual American to handle his own affairs. Hereafter, he will be more and more dependent upon Washington hand-outs, if the Truman Fair Deal succeeds.

There is no alternative for the citizen. If he yields these powers to the Washington hierarchy, the powers to regiment his job, his income, his working conditions, his security, his employer, and the prices he pays for his daily needs—if he yields all this he yields the personal freedom of action which earlier Americans gave their lives to secure, which Americans of World Wars I and II fought to preserve.

Mr. Truman's message reflects fears that the American system will not stand up. He shows a lack of courage to face facts, fearing that our competitive-enterprise system is doomed to fail to provide jobs and income and production sufficient to sustain the needs of our people.

He as much as tells Americans, "You cannot provide your own security or jobs or welfare or housing or adequate education or manage your farms adequately, so we shall have to take over in Washington. To do this you will pay more and more, but Washington bureaucrats will relieve you of all your worries."

In Rock County we wonder why Washington does not cut wasteful spending to balance that budget. Why does Mr. Truman assume that Federal expenses of billions cannot be cut?

The truth is that President Truman does not intend that Government spending be cut. Why? Because he wants his regime to be one of bloated income and a bloated welfare state wherein the citizen, unconscious that he is giving up his freedom, must look to Truman and his cohorts for everything from necessities to luxuries.

Do we want industry looking to bureaucrats for loans, home builders for mortgages, the employed for security, the farmer for Brannan price supports, labor looking for Truman aid for pensions—with everyone reaching his hand out for Federal pap of some kind? How can Americans keep their individual freedom of action if they give up the precious right to remain independent?

How does the citizen, Mr. and Mrs. John Q. Public on Main Street, come out? At first it all looks grand. The Fair Deal looks like a Fort Knox with the doors swung open. It looks as though Washington, with the appearance of a rich Uncle, could go on endlessly passing out doles to Mr. and Mrs. and all the children.

Who is going to pay? There is no rich uncle. There is no Santa Claus. There is no bottomless gold stock in Fort Knox or Washington or elsewhere. The billions which President Truman plans to spend he must first take from the worker, the farmer, the businessman.

Before the spending there comes the tax collector. This will be made as painless as possible, but his hand will be in Mr. Public's pocket every day, month in and month out. He must pay more and more and more and more—endlessly—and when he wakes up he asks himself, "Why work 3 hours a day for those bureaucrats?"

Right then he will realize that his initiative has been stolen and so have his personal freedoms. He sold his soul for a mess of hand-outs.

Performance Budget

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. HOLIFIELD. Mr. Speaker, I would like to call the attention of the membership to the improved form and procedure used in drawing up the President's budget for the coming fiscal year.

In my opinion, this new performance budget will be an invaluable tool in achieving economical and efficient Government operation. It will assist us as Members of Congress to properly review and make appropriations for Federal Government activities, and it will assist those serving in the executive branch to more accurately plan their programs and their expenditures.

The performance budget is another important step forward in the reorganization of the executive branch of Government. Its use brings into practice modern budgeting procedures recommended by President Truman and the Hoover Commission.

Under unanimous consent to extend my remarks in RECORD, I include a memorandum describing the performance budget prepared by Mr. Robert L. L. McCormick, Director of Research of the Citizens Committee for the Reorganization of the Executive Branch of Government:

BACKGROUND MEMORANDUM ON THE FEDERAL PERFORMANCE BUDGET

WASHINGTON, January 7.—Within a few days Federal fiscal history will be made. The President will present the customary annual Executive budget to the Congress, but the form and quality of that instrument will be changed. For the first time, the budget estimates have been prepared according to a pattern based on logic instead of one based on antiquated custom.

WHAT BROUGHT ABOUT THE NEED FOR THIS CHANGE?

The dynamic circumstances of the twentieth century have made the Federal Government the largest business organization in the world. With the growth of Government services, the Federal budget—our financial plan—has grown in size and complexity, so

that it defies public comprehension. Members of Congress, Federal officials, and citizens have increasingly felt the need for an understandable and workable financial plan for Federal expenditures.

Early in 1949 the Hoover Commission recommended basic changes in the Federal budget process to replace a system instituted and largely unchanged since the Nation's earliest days. The Commission made performance budgeting its No. 1 recommendation on budget reform. Both Presidential and congressional endorsements of performance (sometimes called program) budgeting have followed the Hoover Report.

President Truman announced, in a message to Congress on June 20, that he had instructed the Director of the Budget to work out a system for preparing budget estimates on a performance basis. Both the House and Senate have passed bills requiring a performance budget in the case of the National Military Establishment, and the Senate Appropriations Committee, in its report on the 1950 military appropriations, endorsed this requirement.

HOW DOES THIS NEW FINANCIAL PLAN WORK?

Generally, the new plan places emphasis on achieving objectives rather than on how those goals are achieved. This means that attention is focused upon the general character and relative importance of the work to be done, or upon the service to be rendered. In the past, emphasis was upon the things to be acquired, such as personal services, supplies, and equipment. The all-important thing in budgeting is the work or the service to be accomplished, and what that work or service will cost.

In the 1951 budget, to be transmitted to Congress in a few days, will be incorporated textual statements on program and performance, on what work is to be done and for how much. Past budgets have presented a tabulation of the financial plan for the year, consisting primarily of the language of appropriation bills proposed for enactment by Congress and lists of expenditures. The new budget will present two plans: The financial plan, in tables of figures, and the "program" plan, in narrative style, with the two related through performance data.

RELATING WORK DONE TO DOLLARS

Another change which may be less noticeable in form but equally significant is the improvement of "activities schedules." Where more than half of the appropriations in the past have not been accompanied by any break-down showing how the dollars would be related to programs, the new budget will break down over 90 percent of the appropriations to show the programs, projects, or activities to be carried on and the dollars to be devoted to each.

The work output under many programs will be shown. It is hoped that in future years the work output under every program will be shown. Under each program will be indicated such things as how many checks were written, how many cases were handled, how many operations of such and such a type took place. By relating the workload under the program to the dollars spent, it will be possible to measure the unit costs. It will be possible to relate one operation to another. It will be possible to point out weaknesses and places where restrictive legislation runs up costs. It will be possible to relate like operations and to weed out the inefficient.

This work is not yet complete and will not be for several years, but remarkable strides have been made.

OTHER REFORMS

Four additional recommendations of the Commission on Organization also will be involved in performance budgeting, although it will take some time to put them into effect fully.

One of these recommendations is for improvement of the archaic appropriation structure. For example, the 1951 budget proposes that the number of appropriations for the Bureau of Mines be reduced from 19 to 4.

Another proposal of the Hoover Commission reflected in this budget is the separation of budget estimates between current expenses and capital outlay, as has been done in every major private enterprise for years. In addition, the activities schedules will show separately the money the Government spends in the form of grants, subsidies, and contributions. Thus current expense covers the current operations of the Government. Major capital outlay relates primarily to public works and improvements, loans, and other payments in which the Government exchanges cash for some other kind of an asset.

A third Hoover Commission recommendation involved in performance budgeting provides for extension of business-type budgets to 35 Federal organizations, including the Bonneville Power Administration and the Panama Canal. For the first time, we will be able to see profit and loss statements for these agencies.

Another important recommendation in this financial planning area provides for presentation of accounting information on an accrual basis. This will mean that we can see our expenditures for a year in terms of actual costs for services rendered and materials used.

COMPARISON WITH A HOUSEHOLD BUDGET

Specifically, compare this new Federal budgeting plan with planning expenditures in your own home. For example, under the earlier system, the Veterans' Administration could not tell how much it cost to run the veterans' life insurance program nor could the Navy say what it cost to operate the Brooklyn Navy Yard. Likewise, the Civil Aeronautics Authority could not reflect total operation and maintenance costs for civilian airway facilities. But they knew the costs for all "Personal services" or for "Supplies."

If, under this older Government system, in your household budget you would lump together under "Personal services" such items as plumbing repair jobs, baby sitting service, and haircuts, there would be no way in which you could tell how much you expected to spend for baby sitting or plumbing repairs. Likewise, in your home budget under "Supplies," you would not know the expected costs for food, or gasoline, or writing paper, because they all would be lumped under "Supplies."

On the other hand, the Federal Government and the taxpayer, with a performance (or program) budget have their attention centered on the function and activity—the accomplishment of the purpose. Thus, the new type of Government budget will eventually tell how much it costs on the average to service a single veteran's life insurance policy or to operate and maintain, in the aggregate, such civilian airway facilities as visual and electronic devices, traffic control towers, intermediate landing fields, and radio stations. Likewise, you can tell under a program type of household budget, how much food, or rent, or operating an automobile costs. Although the problem is a more complex one in the Government, the principle is the same for household and Federal budgets.

HOW WILL THE NEW-TYPE BUDGET AFFECT US?

The Commission on Organization of the Executive Branch cited advantages of performance budgeting as follows: (1) "Performance budgeting gives more comprehensive and reliable information to the President, the Congress, and the general public"; (2) it "helps the individual Congressman to understand what the Government is doing, how much it is doing, and what the costs are"; (3) it will "improve congressional examination of budgetary requirements," and "enable the Appropriations Committees more easily to decide the basic expenditure issue each year"; (4) it will "make it possible for the budget document to be submitted and acted upon in a shorter length of time"; (5) it will "enable administrators to place responsibility upon subordinate officials for the clear execution of the provisions made by the Congress."

In other words, individually, we are to be given a type of financial plan for the Federal Government which is much simplified and more meaningful. We have a better chance of seeing what we expect to buy in Government work and services, and how we expect to buy them. We will see with greater clarity more complete expenditure estimates and more accurate revenue figures for the next budget period.

For the President and the Congress, this new method of budgeting includes the same important implications as were outlined above for all American citizens. However, it has special uses for our National Government. In reality, this method concentrates congressional action and Executive direction on the scope and magnitude of the different Federal activities. It places both accomplishment and cost in a clear light before the Congress and the people. As for the executive branch, the budget and appropriation process is the heart of management and control.

In conclusion, it is important to remember that the 1951 budget will represent a distinct break with the past, and, from now on, efforts will be marshalled toward a program budget along the lines suggested by the Hoover Commission and others. The 1951 budget will look considerably different from the past documents.

The 1952 and 1953 documents will offer further improvements, as a result of additional experience, improvements in program reporting and accounting, and additional effort put on the budget. While this 1951 instrument is the first performance budget, it will be far from perfect, but it is a most significant step in national financial planning for every American.

ROBERT L. L. MCCORMICK,
Director of Research, Citizens Committee for the Hoover Report.

One Hundredth Anniversary of New York Typographical Union, No. 6

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. CLEMENTE. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a story of the development of New York Typographical Union, No. 6, which this year will celebrate its one hundredth anniversary. This history has been submitted to me by Mr. Louis Rubin, chairman, centennial publicity committee, New York Typographical Union, No. 6:

NEW YORK TYPOGRAPHICAL UNION, No. 6,
New York N. Y., October 25, 1949.

Congressman L. GARY CLEMENTE,
House of Representatives,
Washington, D. C.

DEAR MR. CLEMENTE: All correspondence requesting issuance of a special stamp to commemorate the one hundredth anniversary of Typographical Union No. 6 has been turned

over to me with the request that I supply you with at least a brief story of the long trek traveled by this union in its march down the corridor of American history.

Its official life began several decades before 1850, although its present official name, still in use, has been carried 100 continuous years. Horace Greeley, famous editor and founder of the New York Tribune was its first president. He was also a distinguished statesman, whose manifold services to the Nation constitute a major phase of American history.

From its very beginning, Big 6, as it came to be called, set up rules for governing its several functions. These were based on American principles, and they are given even greater emphasis today when the democratic ideals of the Nation are being challenged by ideologies which are so inimical to our way of life.

Love of country has been a preeminent phase of its membership. Shortly after it assumed its present name, it gave public expression to its patriotism when on July 20, 1850, it passed resolutions honoring the memory of General Zachary Taylor, president of the United States, who passed away on July 9 of that year. Well represented in the funeral pageant, Big 6 declared, in part:

"Our country has sustained the loss of a gallant soldier, a capable, humane, and victorious commander, a devoted patriot, and a truly honest man."

Within a fortnight after the attack upon Fort Sumter, on April 12, 1861, 13 of its members answered the call to arms. One year after hostilities, 83 of its members were at the front. At the close of the Civil War, 170 members of this New York union were in the Army, many of them having enlisted more than once. During those four perilous years, the union had a membership of 507, including those who went to war. Thus, the proportion of men who served their country reached the astounding figure of 33⅓ percent.

The Spanish-American War tells an identical story of patriotic devotion. Big Six went beyond its normal strength in standing behind the Nation. On October 20, 1895, it petitioned the Congress to grant belligerent rights to Cuba, and on January 3, 1897, it appealed to the National Legislature in gallant candidness:

"The citizens of Cuba are engaged in a struggle similar to that by which our forefathers gained our liberties—shook off the monarchial yoke and established the greatest Republic on earth—the United States of America.

"We hereby extend to the Cubans our sympathy in their notable fight, and we favor immediate legislation by Congress recognizing the independence of the new Republic of Cuba."

We have records in abundance which reveal the vigor with which Big Six pursued its responsibility in World Wars I and II. In the latter, 895 of its members were in the service, while those who were not privileged to serve in the military did all that was humanly possible to help the Nation in its supreme effort.

The story of No. 6's participation in the Nation's wars is only one phase of its services to the Nation. Its peacetime participations are equally notable, for it stood in the forefront of many of the country's most notable advances. For example, it took an active part in the celebration of the electro-magnetic telegraph invented by Samuel F. B. Morse on May 27, 1844. It played an active role in the celebration of the laying and completion of the Atlantic cable in 1858 which united Europe and America for the first time. Documents revealing its enthusiasm over these first-time performances manifestly show the elation with which Big 6 greeted these achievements which, like printing, were also means of communication.

As early as 1907, it was a principal factor in espousing peace among nations. On February 24, of that year, the National Arbitration and Peace Congress requested Big 6 President James J. Murphy to act as vice president at a gathering held for this purpose at Cooper Union, April 16, 1907. Efforts of this type are recorded in legion.

Its predecessor organization, the New York Typographical Society, also had illustrious names its councils. Samuel Woodworth, poet and author of The Old Oaken Bucket, was prominent in its affairs. He was the youngest son of a Revolutionary War patriot. The author of Woodman Spare That Tree, General George P. Morris, also became a member. On October 5, 1816, Thurlow Weed, union printer, journalist, and political figure, was admitted. Ellis Lewis, Chief Justice of the Supreme Court of Pennsylvania, compositor on the old New York Courier, joined March 1, 1817. The list is incredibly long.

Even in our own day many illustrious sons of America were, and still are, members of Big 6. It would seem that the incomparable record of this organization induces one to the conviction that we have, here, something more than just another labor union to consider. Here, before our eyes, we have a living, vital, breathing entity which has seen and participated in the entire history of the Nation. That is rare. It is with pride, and not with egotistical affectation, that we, of Big 6, see our union as a brilliant and conspicuous thread in the inimitable American fabric, for in commemorating its one-hundredth anniversary, it also celebrates 100 years of American history, thus demonstrating, incontestably, to the world at large, that the freedoms of this country are not so many abstract phrases, but a reality concretized by the centennial itself.

In brief, the survival of this organization proves the continued and insuppressible duration of the American way of life from the very beginning of our country, and what better way can be point to the proof of America's magnanimity than by the fact that it can point to an American group of workingmen as typical of the freedom which has been extended to it for 100 years of its official existence.

It would seem, sir, that any organization so molded by a century of American history is the true offspring of that history, and that, accordingly, the creation of a Government stamp to commemorate so majestic a triumph would be granted in joyous recognition of pride in its millions of patriotic workers. What a glorious opportunity lies here for an adequate symbol to convey to the nations of the world America's infallible faith in the loyalty and devotion of those who comprise her ranks of labor.

Respectfully yours,

LOUIS RUBIN,
Chairman, Publicity, Centennial Committee.

William Scudder

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. PHILLIPS of California. Mr. Speaker, though the recent world war is behind us—and it is to be hoped that we do not face another in the lifetime of any of us here today—certainly any time is the right time to polish the medals of our militray heroes and to give public recognition to unique deeds of valor committed in the defense of the Nation.

It is in this spirit that I submit to the Congress the name of William Scudder, who now lives in San Jacinto, Calif., in my congressional district. Mr. Scudder claims the unusual distinction of being the only man alive who participated in both the conquest and the liberation of the Philippines.

As a beardless youth, he signed on the U. S. S. *Boston*, which was part of the fleet which met the Spaniards in Manila Bay on May 1, 1898. Our flotilla was under the command of the immortal Dewey, as you well remember.

There was a catchy little tune born of that conquest. It went:

Dewey was the morning upon the first of May;
And "dewey" were the Admiral's eyes down on Manila Bay.

No doubt that strain, or the distilled sentiment of it ran through the mind's eye of William Scudder when 46 years, 3 months and 3 days later, during World War II, he sailed into Guam. This time he was aboard the motor vessel *Pennant*, part of a Coast Guard unit bent on liberating the Philippines from the Japanese.

The quartermaster general of the Spanish War Veterans organization recognizes the yeoman service of Mr. Scudder in these words: "We salute you for your tenacity and we also applaud you as a Navy man."

As spokesman in the House of Representatives for the people of the Twenty-second District of California, I too commend Mr. Scudder and thank him for his patriotic service when the country was in danger.

It is a sorry indictment of our methods in international affairs that two world-encompassing wars and the incident of arms in 1898 should occur in the lifetime of one generation. However, such opportunities for patriotic service have only enhanced the usefulness and courage of such men as William Scudder.

Same Old Tune, Same Old Words

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, Henry Baker Reiley, editor and publisher of the Somerset Daily American, Somerset, Pa.—you can see the county courthouse from the turnpike—in the issue of January 10, gives us a couple of editorials which cannot only be read but acted upon with profit.

They follow:

BILLIONS

There is a markable resemblance between the talk of President Truman and that of his immediate predecessor. Their performances also exhibit their kinship.

Franklin D. Roosevelt, seeking the Presidency in 1932, went up and down the Republic promising to cut the Federal Government's expenses "at least one-fourth."

At that time it cost about four billions a year to operate the Federal establishment.

At that time the Federal debt was less than $20,000,000,000.

President Truman has asked Congress to appropriate more than ten times as much as the amount Mr. Roosevelt promised to reduce "at least one-fourth," for the operation of the Federal establishment next year, and the national debt is more than $250,000,000,000.

Speaking of appropriations while he was yet merely a Senator from Missouri, after the fashion of Mr. Roosevelt while he was a candidate for the Presidency, Mr. Truman said:

"It is easy to appropriate billions of dollars, but it is not so easy to obtain those billions of dollars.

"There is a limit to the amount by which we can safely increase our national debt. The American people are not willing and must not be asked to suffer unnecessary burden of waste, carelessness, and confusion."

Former President Herbert Hoover agrees with the President's warning. But Mr. Hoover has gone further. He has said that we have already reached the saturation point in taxation. By that he means that though we may levy higher taxes, or increase the levies already made, the proceeds of the levies will not produce according to calculations.

We Americans are suffering from unnecessary burdens of waste, carelessness, and confusion.

Congress would do well to agree upon a simple course:

1. There must be no unnecessary appropriation made.

2. There must be no new tax levies.

3. Waste, carelessness, and confusion must be eliminated.

BEWARE THE LION

The Associated Press carried a story several days ago about a trainer who monkeyed too much with a lioness.

His act was to stick his head in the animal's mouth. She evidently didn't think much of it, for one day she snapped as he was withdrawing it and took a hunk out of one arm. When his injury had healed sufficiently for him to go back to work, at the very first performance she nipped off the end of his nose and the end of his chin. Obviously, the lioness was trying to tell the trainer:

"Beware the lion."

Now the Government in Washington shied at the British lion during the Wilson, Harding, Coolidge, and Hoover administrations, after having rescued the brute from the Kaiser's armed forces in the First World War.

The Russian bear had shown the white feather during the First World War and had made peace with Germany. That is when the United States saw the necessity for entering that conflict. Except for the series of incidents that impelled the action of Washington, Britain might have been subjugated by Germany.

But the lesson was of little value to Britain, for at the first opportunity, the lion stuck his head into the mouth of the bear by resuming diplomatic and commercial relations.

The agreement between Russia and Germany which enabled Hitler to open the Second World War was a sort of nipping of the arm of Britain.

The eagle had watched the performance of the lion and the bear and had become eager to follow the lion's example. So, diplomatic and commercial relations between the United States and Russia were resumed.

The eagle was grieved to see what had happened to the lion when Hitler turned on the bear, but when Hitler turned on Stalin, its admiration for the bear was revived.

The Chinese Communists were mere imitators of the Russian, but the lion was brave, so when they had conquered China, in he rushed to make the Chinese partners of the bear.

The eagle lost a good many feathers as a result of following the tail of the lion after the First World War. Indeed, the Second World War was a logical sequence to the eagle's gleeful pursuit.

Both got nipped by the bear at Tehran, at Yalta, and at Potsdam. The bear has been ruminating ever since the end of the fighting in the Second World War. It has made a fuss in Manchuria, in Korea, and in China, to say nothing in a group of less important European nations.

But the lion is brave, and the eagle has a marvelous admiration for the lion's tail.

Economic Forces Operate Against Small Business

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. CRAWFORD. Mr. Speaker, it is my firm belief that the economic forces operating against small business or enterprise in the United States are now running stronger than at any previous time since the inception of this Government. Furthermore, I am of the opinion that insofar as the Congress of the United States is concerned, there has been too much lip service and too little real service extended to those who, in the first place, live simply, exercise thrift, and who, in the second place, take their savings and invest them as equity capital in enterprise for the purpose of expanding the general foundation of so-called small business.

Anyone who strikes at the foundation roots of small business strikes at the very private enterprise which has made this country industrially what it is today. Those who are now attacking business simply because it is big and who, in the same breath, advocate big government for the purpose of taking over big business are not friends of the enterprise system upon which our people depend.

If reasonable management, with due regard for the worker, the investor, and the consuming public is to be had, management must be found outside the realms of politics. Government ownership and management simply means political ownership and management. If Government ownership and management is to prevail, this means that the quantity and quality of goods and services to the consumer will decline.

Anyone who moves in the direction of removing from the enterprise system the forces of competition, likewise overlooks the interests of the consumer. Under the free enterprise system the only economic protection the consumer has comes to him through the free play of the forces of competition.

In this connection, I wish to insert a statement made by Mr. DeWitt Emery, president of the National Small Business Men's Association:

NATIONAL SMALL BUSINESS MEN'S ASSOCIATION, INC.,
Chicago, Ill., December 2, 1949.

Mr. RAY TUCKER,
National Press Building,
Washington, D. C.

DEAR MR. TUCKER: My attention has just been called to your column published on November 21 in the Charlotte Observer, Charlotte, N. C., which column is devoted entirely to a smear attack on this association and the Small Business Economic Foundation.

According to this column, your information is based on disclosures made during an investigation conducted by Congressman WRIGHT PATMAN (Democrat, Texas), chairman of the Small Business Committee of the House.

If Mr. PATMAN told you, as you say he did, that the Small Business Economic Foundation is a lobbying organization or that it has ever done any lobbying of any kind or character, he's lied to you and I'll be glad to have you tell him I said so.

The foundation has never had anything whatsoever to do directly or indirectly with any Federal or any other kind of legislation or any kind or type of lobbying activity.

Mr. PATMAN knows this, and telling you otherwise can only mean that he deliberately deceived you so as to use you as a tool in his smear campaign against the foundation and our association.

Actually and as a matter of positive and absolute fact, the activities of the Small Business Economic Foundation are entirely—100 percent that is—educational. Its one and only purpose is to develop and promote a better understanding of the American way of life.

Also if Mr. PATMAN told you, as you claim he did, that the members of the National Small Business Men's Association are not fully informed concerning the objectives and activities of the Small Business Economic Foundation, he told you something which he knows is not true. He has on file in the office of the Small Business Committee of the House, copies of Pulling Together, the association's monthly bulletin to members—these bulletins, together with financial statements and a lot of other material, were filed with the committee at Mr. PATMAN's request—in which the foundation and its activities are discussed at considerable length.

The National Small Business Men's Association was started in 1937, its stated purpose being to give small-business men a voice in national affairs and to help preserve freedom of enterprise in the United States.

Obviously giving small-business men a voice in national affairs meant that the association would be active in connection with Federal legislation. Just as obviously, helping to preserve freedom of enterprise meant that the association would carry on an educational program, a program designed to make the largest possible contribution toward getting the man in the street to understand what freedom of enterprise is, how it operates, and what it means to him.

The association went along from 1937 until the latter part of 1946 carrying on its twofold legislative and educational program. In August 1946 Public Law No. 601 became effective. Title III of 601 is known as Federal regulation of lobbying. Under title III anyone, meaning any organization or any individual, who, as one of his principal activities, endeavors to influence the passage or defeat of Federal legislation must register with the Clerk of the House and file quarterly sworn financial statements.

One of the principal activities of the National Small-Business Men's Association very definitely was and is to influence the passage or defeat of Federal legislation; therefore, it was necessary for the association to register

as provided in title III, which it did and each quarter since has filed the required financial statement.

Shortly after the association registered, the trustees decided that a more extensive and more effective job could be done if our educational program was carried on by a separate organization which would devote itself exclusively to educational work. In accordance with this decision, the Small Business Economic Foundation was incorporated under the nonprofit statutes of Illinois in November 1946.

The association is a nonprofit membership organization incorporated under the laws of the State of Ohio and has its national headquarters office in Akron, Ohio. The association is financed 100 percent by dues paid by its members, all of whom are bona fide small-business men. The dues are $18 the first year and $15 each year thereafter.

The foundation has its office in Chicago. It does not have any members and is financed entirely by contributions made by anyone and everyone interested in its educational program who wants to help it carry through that program.

There may be something wrong with small business, medium-sized business, and big business jointly financing an educational program to develop and promote a better understanding of the American way of life, but if there is I frankly do not know what it is. I don't mean the things a publicity seeking, two-bit politician may rant and rave about, but rather something basically or fundamentally wrong with all businessmen working together to preserve constitutional government and freedom of enterprise in the United States.

Which has the biggest stake in preserving our American way of doing business, small business or big business? The answer is small business 10 times over. If you don't believe this, check with the Census Bureau of the Department of Commerce and you'll find that more than 90 percent of the 3,900,000 business establishments in this country have less than 100 employees.

How long could any big business organization in the country stay in business if it did not have the cooperation of thousands of small businesses as suppliers and dealers or sales agents? Take the big automobile manufacturers as an example. Not one of them could keep its assembly lines running without the bits and pieces furnished by several thousand small business suppliers, nor could any of these giant corporations keep their factories going for even a few months without each having more than 20,000 dealers—all of whom are small-business men—to sell and service their cars and trucks.

This interdependence between large and small business, which applies to our whole business structure up and down and across the board, gives small business a mighty important stake in big business and big business an equally important stake in small business. This being true, I'm sure neither Mr. PATMAN or you will deny that it is, why then shouldn't businessmen at both ends of the scale, top and bottom as well as those in the middle, unite in supporting an educational effort to give more people a better understanding of our American way of working and living together?

Your column is as full of untruths, half truths, and misstatements of fact as a cur dog is of fleas. You say, "Both lobbies are anti Taft-Hartley." The Small Business Economic Foundation is not a lobby so that's one misstatement of fact in these five words. The National Small Business Men's Association is very, very strong for the Taft-Hartley Act, which is the second misstatement of fact in the same five words.

Our association and its members ran the attached ad addressed to Mr. Green and Mr. Murray as a full page or a half page in 214 daily newspapers scattered all over the country and the tremendous public sentiment favorable to the Taft-Hartley Act which this ad generated is one of the principal reasons this act is still on the books. Also, if the truth were known, our effective opposition to the repeal of the Taft-Hartley Act is the principal reason Mr. PATMAN and some of his cohorts are doing their utmost to destroy or discredit the National Small Business Men's Association.

The foundation's educational program includes the distribution of hundreds of thousands of pamphlets to wage earners, to high school and college students, to high-school and college teachers, to professional people, to businessmen and others all over the country.

The foundation also sponsors a talking moving picture, Letter to a Rebel, which each week is being shown to more than one hundred 16-millimeter audiences of all kinds all over the country. This picture was recently given an honor award as an outstanding and distinguished educational effort by Freedoms Foundation, Inc.

Currently most of the foundation's effort is being concentrated on its series of full-page newspaper educational feature ads which in a short time will be running once a week for 52 weeks in more than 100 daily papers and eventually will run in more than 300 papers scattered over the 48 States. Last week the foundation was awarded a gold medal by Freedoms Foundation, Inc., for the first 13 ads in this series, which to date is all of the series that has appeared in one or more daily papers.

I could continue this discussion indefinitely but believe what I have said will serve to show that you haven't the slightest idea what you are talking about. Either that or you are the sort of person who will deliberately twist, distort, or misrepresent anything in order to turn out what he thinks is a good story.

Sincerely,

DEWITT EMERY,
President.

The World's Free Workingmen Unite

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. KEE. Mr. Speaker, the free and freedom-loving workingmen of the world are organizing to resist communism in labor unions and to combat totalitarianism. The great American labor organizations are joining in this world movement. It is one of the most significant and reassuring signs of these times to see workingmen everywhere repudiating the claims of Communist impostors that their movement befriends, protects and delivers labor from the shackles of non-Communist governments.

I find an excellent review of this free labor movement in Business Action, a publication of the Chamber of Commerce of the United States, a copy of which I append herewith under leave to extend my remarks:

WORLD UNIONS GIRD TO FIGHT TOTALITARIANISM

(By Anthony P. Alfino, employer-employee relations)

A new world-wide labor organization has been established by trade unions to help workers everywhere resist totalitarian infiltration.

Meeting in London late in 1949, labor delegates from many parts of the world set up the International Confederation of Free Trade Unions (ICFTU) as opposed to Communist-dominated World Federation of Trade Unions (WFTU).

It all started about a year ago when representatives of CIO, British Trade Union Congress, and Dutch Union Center walked out of WFTU because of its Communist predominance.

JUSTICE AND SECURITY

The new group, ICFTU, proclaims the right of all workers to social justice, to job security, and to association in trade unions which shall be free bargaining instruments and which derive their authority from their members.

Although primary impetus came from those who pulled away from WFTU, many additional trade union groups were represented at London. The second report of the credentials committee, accepted by the conference, listed 261 labor officials from 53 countries in attendence, representing more than 48,000,000 members. Overtures to other trade unions to join, if successful, would raise this claimed total to 60,000,000 members.

Only CIO had been associated with WFTU. However, both AFL and CIO are participating in the new ICFTU, keeping apart their domestic rivalry in order to work together both in the initial preparations for the new world labor body and in the conference itself.

COMPROMISE ON PERSONNEL

Among important compromises was the question of geographic distribution of membership on the powerful executive board. As finally constituted, the board will consist of 19 members.

British delegates, aided by a group of European Socialist members, had proposed London as the permanent site for the organization while American delegates sought a continental city. Finally chosen, by unanimous vote, was Brussels, Belgium.

The conference decided to admit Christian trade-unions which promise to give up membership in the International Christian Federation within 2 years. The French Confederation of Christian Workers abstained from approval of the ICFTU constitution in order not to imply willingness to affiliate on the basis proposed. The Belgian Christian Unionists announced their affiliation, however, and the Italian group is believed definitely within the organization.

WORK WITH SECRETARIATS

ICFTU is considering provisions in its structure for close cooperation with the international trade-union secretariats, world-wide organizations devoted to workers' problems in specific trades and industries.

Figuring in ICFTU's present planning are these trades and industries: Transport, metal trades, building and woodwork, mines, communication, general factory, textile, boot and shoe, public service, clerical and technical work, farm laborers, diamond workers, printing trades, hotel and restaurant, tobacco, garment, food and drink, trade-unions in exile.

The ICFTU organizational set-up provides that it will be governed by a congress of delegates from all unions meeting once every 2 years. In the intervening years, a smaller group known as the general council will meet. Actual execution of decisions of the congress and council, as well as direction of ICFTU activities, will be handled by the executive board, to meet every 6 months.

The board has a seven-man subcommittee, to be on call between board meetings. Area representation on the subcommittee is distributed among Asia, Britain, Europe, Latin America, and North America, with Europe and North America each having two places.

BELGIAN ELECTED PRESIDENT

The confederation elected Paul Finet, of Belgium, as its first president, and J. H. Oldenbroek, of the Netherlands, its first secretary general. Oldenbroek for many years has been head of the International Transport Workers Federation.

United States labor unions have two places on both the executive board and on the subcommittee, filled by AFL President William Green, and CIO President Philip Murray. Green's alternates on the executive board are George Meany, AFL secretary-treasurer, and Irving Brown, AFL international representative for Europe; Murray's alternates are James B. Carey, CIO secretary-treasurer, and Elmer Cope, CIO international representative for Europe.

The other two members of the executive board from North America are Percy Bengough and Pat Conroy, both Canadian labor leaders.

Marine Corps Striking Force

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. THOMPSON. Mr. Speaker, the announcement during recent days that the Marine Corps striking force is to be reduced to six battalion landing teams has caused a great deal of concern to those of us who are interested in a balanced national defense. There is no question of the determination of some of defense officials, both in and out of the service, that the Army shall take over the functions of the Marine Corps. Apparently the battle is shortly to be joined and the decision should be made in the Congress. The editorial from the Christian Science Monitor which follows sheds light which is of interest to those of us who will be called upon to make the ultimate decision:

TELL IT TO THE PENTAGON

(By Harlan Trott)

WASHINGTON.—So the marines think they're tough, do they.

Montezuma, Tripoli, Chateau-Thierry, Guadalcanal, Iwo Jima? Huh.

Never mind the howitzers, men. Belay those ready assault waves. Call off your close air support. Those marines aren't that tough. We've found a way to lick 'em.

Scuttle 'em in one sentence. Let 'em have it—smack in the budget.

Like this, see: "Six marine corps battalion landing teams will be maintained."

Six battalions of marines, a bare half a division, is all the new 1951 budget leaves the Nation's "first team"—instead of the two skeletonized divisions—of the fleet marine force Congress and the country have been counting on as the hard, steel spearhead of a force-in-readiness poised and ready to move by land or sea or air on less than 24 hours' notice.

This solar plexus punch by the Pentagon planners did not take the marines by surprise. The fact is they saw it coming.

They have been warning Congress about the fancy footwork of top defense officials, the familiar tactic of stroking the Marine Corps with one hand and yanking its funds out from under it with the other.

Gen. Clifton Cates, Marine Corps commandant, reminded the Vinson committee last October of the fears within the corps that the functions assigned it by law are being usurped by others, namely the Army General Staff.

The prevailing opinion around the Army section of the Pentagon seems to be that the Marine Corps is a luxury the country can do without. Generals Bradley and Collins have given the impression that there's nothing in the Marines' manual the Army can't do as well.

They admit that the marines pioneered and perfected the techniques of amphibious warfare. But look at the Army's record in Sicily, Southern France and Normandy, the generals say. They are especially proud of their webfooted exploits in Normandy where General Eisenhower's infantrymen swarmed out of the surf and over the German west wall.

General Cates told the Vinson committee last October that the corps was pared down to the limit of its bone and muscle. Any further reductions in combat strength, he intimated, would be fatal to the concept of the force-in-readiness, which Congress mapped out for the marines.

Now, the thing General Cates greatly feared has come upon the marines in the new 1951 defense budget, which cuts the present nucleus of two divisions in half. Marine Corps leaders say this reduces them to the role of policemen as effectively as though the issue had never been debated in Congress and decided in the Marine Corps' favor.

In writing the 1947 National Security Act, Congress plainly intended to safeguard the Marine Corps, especially its amphibious functions, and provide for its integrated mobilization in time of war.

But the trouble is that Congress didn't go far enough. It put a ceiling on the Marine Corps. It said the marines should not exceed 20 percent of the personnel of the Navy. But it failed to put a floor under the Marine Corps.

General Cates told the Vinson committee bluntly that the underlying effort on the part of the Army to contravene the act of Congress has never subsided. The Marine Commandant said furthermore that the Army was not seeking to have Congress redefine the roles and functions of the armed services but was proposing that the Joint Chiefs of Staff put to a vote the Army-sponsored proposal to transfer and reassign the traditional Marine Corps functions.

Each of those two budget-riddled fleet marine forces—one on each coast—has been regarded as the Nation's No. 1 force in readiness: Air-ground teams, developed during World War II when the Marines perfected the method of coordinating the striking power of air and ground forces in a new form of attack.

Under the roles and missions drawn up at Key West at a conference of Army, Navy, and Air Force leaders, the Marine Corps was designated as the amphibious force in readiness to move within the first 24 hours after the outbreak of war.

It was assumed at Key West the Nation was confronted with the possibility of a war in which an opponent would hold the initiative. Circumstances alone, it was agreed, would restrict the United States to a series of damage-control operations—the marine's job—against the time when the Nation could grapple with the enemy somewhere on the flaming outer fringes.

The marines may be in for their hardest fight—their last one or their best one—when that sentence in the budget reducing the fleet marine forces to six battalion landing teams comes up for consideration. There are signs that they will have considerable close support in Congress by the time the decisive battle begins.

A Voluntary Approach to a National Health Program

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. KEATING. Mr. Speaker, since my introduction of H. R. 6727, my attention has been called to the publication, entitled "A Voluntary Approach to a National Health Program," issued last year by the National Catholic Welfare Conference, in which that important organization advocates a plan quite similar to that envisioned in my bill.

I quote from pages 16 and 17 of this publication:

At the present time there are more than 33,000,000 people in the United States covered by hospital insurance in the Blue Cross and a rapidly growing number in the Blue Shield for medical or surgical benefits. There are approximately 52,000,000 if we include all types of hospital insurance. Another large group of Federal employees could also be included if prohibitions were removed. In order to stimulate enrollment in these voluntary insurance systems and to increase the benefits under Blue Shield so as to include full-scale medical and surgical care given in approved hospitals, we suggest that the Congress amend the income-tax law so as to permit a deduction of premiums up to $75 for health insurance from the net income tax of all individuals in the lower-income brackets, i. e., up to $5,000.

Although the above suggestion differs in detail from the income-tax credit provided in H. R. 6727, the same general principles apply. They are so well stated in the foreword to this brochure prepared by Most Rev. Karl J. Alter, bishop of Toledo, chairman of the bureau of health and hospitals, social action department, National Catholic Welfare Conference, that I have obtained permission to extend my remarks to include this foreword. The high motivation behind the recommendations of the National Catholic Welfare Conference is best expressed by the final paragraph in which it is stated:

It is our fervent hope and purpose by means of the system proposed in this statement to assure each citizen and the members of his family that they will enjoy under God's providence the best possible medical care.

The foreword prepared by Bishop Alter follows:

FOREWORD

The immediate problem under consideration in the following pages is that of developing an adequate national-health program. Interest in the subject has become quite intense and widespread. There has been much discussion and much controversy; but unfortunately there has been also much confusion. The confusion arises in large part from the tendency to oversimplify the problems involved and to assume that the cost of medical care is the only obstacle in the way of a great improvement. The lack of institutional facilities and professional personnel has

been greatly underestimated by reason of the emphasis placed on the former. In itself the latter is a primary obstacle and equally in need of remedy if the quality of medical care is not to deteriorate into a mere increase in the quantity of patients. A sound national program should provide for the elimination of both obstacles.

The controversy revolves in large part around the issue of an exclusive and compulsory Government health-insurance system versus private and voluntary effort supported by Government assistance instead of control. Many competent authorities fear that an exclusive state system under a compulsory tax will necessarily involve a loss of freedom for the voluntary health agencies and put an end to private initiative to the ultimate detriment of the health of the Nation. There is no controversy or disagreement concerning the advisability or advantage of a prepayment plan to meet the cost of medical care. Acceptance of such plans is practically unanimous. The division of opinion concerns the question whether there should be an exclusive state monopoly or whether there should be a cooperating partnership between the Government and voluntary health agencies. A right approach to the problem depends not only on a correct analysis of the concrete situation, but also on a correct social philosophy. The rights and duties of society, the state, and the individual must be considered in relationship to one another.

Society is a much broader and more comprehensive concept than that of the state. Government is indeed a necessary agency of society, but it is not the only one. There are many others. Because man is a social being he enters into association with others in order to achieve the benefits which are comprehended in the category of social welfare. These associations of a voluntary nature have as legitimate a right to exist as the state itself, provided they serve the common good. The state has a definite responsibility to help protect and promote the health of the Nation inasmuch as the Government is charged under the fundamental law with the duty of promoting the general welfare and inasmuch as the Government alone has adequate resources to implement a comprehensive program. Voluntary agencies, however, have a definite right and responsibility to exercise an important function in planning as well as in executing such a program. It is socially undesirable to neglect the contribution of either the one or the other.

Individualism as a philosophy of life has been discredited, not only because it has failed in practice, but because it stems from a false concept of human nature. Man has a twofold nature, both individual and social. His personal dignity and sacred rights originate in the fact that he is created as a distinct, intelligent, and responsible person, with a destiny of his own. His full development as a human being can be achieved only in as far as he is a member of society and only in as far as the obligations of social justice and social charity are fully activated. Ethical and religious ideals which furnish the highest motivation in the care of the sick as in all social service can function more effectively in voluntary associations than through the medium of the modern secularist state.

The bureau of health and hospitals of the social action department, NCWC, the administrative board of the Catholic Hospital Association, and the directors of Catholic charities have given careful consideration to the varied phases of a national health program, and in formulating their conclusions they approach the problem not from a negative but from a positive viewpoint. They recognize the existence of social responsibility, but at the same time they reject the concept of an exclusive state responsibility for the health and well-being of the American people. They reaffirm their conviction that a partnership between the state and voluntary associations provides the better solution and is more consistent with our democratic processes. Monopoly means control; partnership means freedom. They entertain the hope that the following statement will throw new light on the subject and that a genuine cooperation of all parties at interest will produce a constructive program adapted to the needs of the Nation and effective in promoting the highest standards of health and well-being.

KARL J. ALTER,
Bishop of Toledo, Episcopal Chairman, Bureau of Health and Hospitals, Social Action Department, National Catholic Welfare Conference, and Chairman, Administrative Board of the Catholic Hospital Association of the United States and Canada.

Amending the Agricultural Adjustment Act of 1938

EXTENSION OF REMARKS
OF
HON. LLOYD M. BENTSEN, JR.
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. BENTSEN. Mr. Speaker, I have introduced a three-sentence bill which I think merits your support. Its purpose is to amend the Agricultural Adjustment Act of 1938, as amended, to alleviate the undue hardship which would otherwise befall two groups of veterans.

The first group is composed of veterans who, owning farms on January 1, 1950, have an old-growers allotment for 1950 less than the county percentage factor. It is my feeling that these veterans who returned late from the war and got started on their cotton slowly should not be held down by the greatest acreage limitation. Consistent with the policy of the over-all act, limiting total production, they should be allowed to produce up to the country average. My bill provides for this, but stays within the policy of the act by specifying that only acreage previously allotted to other farms and voluntarily released to the county committee be reapportioned to these veterans.

The second group is composed of veterans who, owning farms on January 1, 1950, are not eligible for a 1950 old growers allotment. Here I am principally concerned with veterans who planted to cotton in 1949, but not in a prior year, for which reason their farms were not considered when acreage allotments were computed. My bill would accord to these veterans an adjustment in their new growers allotments, and to an extent equal to the county percentage factor for old growers, but only so far as released acreage will permit.

I spoke of both these groups in a speech I delivered on the House floor February 2, 1949. My remarks were directed at H. R. 128, which subsequently became Public Law 28. While I agreed with the majority of the House that the purpose of the bill was most commendable, I pointed out that serious inequities would result unless in the final agricultural bill some allowances were made for these veterans off to a late start following their return from service.

It was at the encouragement and recommendation of the United States Government that many returning war veterans of south Texas took lands of very low economic value and at high cost to themselves cleared the brush and put the land into cultivation to grow cotton and feed crops. This arduous process of clearing mesquite and ebony trees to make the land suitable for cotton took a great deal of time, and when it is considered that many of these veterans were late in 1946 discarding their uniforms, and late, perhaps, in 1947, getting readjusted to civilian life and establishing themselves again, it is easy to understand how 1949 may have been the year of their first cotton crop. Or, if not the first, then easy to understand how very small the acreage actually put to cotton in 1948 may have been.

These veterans by their improvements to the land have taken property that was on the tax rolls at values of $2 and $3 and increased the valuations tremendously, with resultant benefit to the counties and State of Texas.

But while the counties and the State have profited, the veterans by their efforts have incurred heavy mortgages and debts in purchasing and developing the land. They bought and cleared their acreage with an eye to the future, and now must face that future uncertainly, as their dry land with its limited uses is further restricted by a law seriously curtailing any cotton quota they might obtain.

In my speech of last February I said:

> If 1949 is not allowed in future cotton quotas, and the cotton-quota law, as yet to be drafted, does not provide a means of giving them quotas substantially up to the county average, it will bankrupt a number of men, including many World War II veterans who are planting new lands to cotton this year for the first time, since they would have their cotton allotment appreciably decreased in 1950.

I then went on to point out that much of this new land cannot be profitably farmed unless a large percentage of it is planted to cotton.

My bill, as I have said, is limited to three sentences. The heart of the amendment is contained in the first sentence. This is the provision which reallocates released acreage to veterans of either of the two groups that I have discussed. It reads as follows:

> Any part of the acreage allotted to individual farms in any county under the provisions of this section which the owner or operator releases to the county committee shall be deducted from the allotments for such farms and apportioned to farms in the county which are owned by veterans who acquired such farms prior to January 1, 1950, and for which allotments for the 1950 crop are established under subsection (f) of this section, so as to provide, to the extent that the released acreage will permit, an allotment for

any such farm equal to the acreage determined for the farm by applying the percentage factor computed under subsection (f) (2) of this section.

The second sentence was put in the bill to provide for the disposition of released land not required by the veterans. The wording of this provision is:

Any released acreage not required for such veterans' farms shall be used by the county committee for making adjustments of other farm acreage allotments established under subsection (f) of this section so as to establish allotments which are fair and reasonable in relation to the factors set forth in paragraph (3) of that subsection.

The third and last sentence is intended to safeguard an annual supply of released acreage. Without this provision I believe most farmers would be extremely reluctant to give up any part of their quota. The provision reads:

For purposes of establishing farm acreage allotments for any subsequent year, any acreage transferred pursuant to this subsection shall be considered as acreage planted to cotton on the farm from which such acreage was transferred and shall not be considered as acreage planted to cotton on the farm to which such acreage was transferred.

I sincerely believe that the amendment I have introduced is a necessary and proper one. It is not a veterans' handout bill. Rather, it seeks to take into account certain factors now serving to penalize some veterans for their years in uniform, and to make an adjustment for them by putting their lands on a more workable, productive basis. I earnestly solicit your support for the passage of this important legislation.

The Lambs Go Traveling

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to include this revealing editorial from the Wisconsin State Journal of Madison, Wis.:

THE LAMBS GO TRAVELING

With all the genius Democrats can demonstrate when it comes to raising party slush funds, it's a wonder they can't balance the national budget, which, by Truman's own figuring, is $5,500,000,000 out of joint.

Take, for instance, the case of Charlie Cashin and his fellow United States attorneys across the country.

Charlie and his colleagues have been summoned to Washington for a conference with the United States Attorney General, Mr. Truman's former campaign manager.

The taxpayers will pay their traveling expenses. Nice trip for all the boys. But—

Once there, they're all expected—that's the official word, expected—to plunk down $100 apiece for the Democrats' Jefferson-Jackson day fund-raising feed. The shakedown dinner just happens to fall on the day of the conference's opening.

Neat. Quite neat.

The party-in-power, and power is the word, taps the public till to haul the sacrificial lambs into position for blood-letting. And everybody loses but the boys in power.

Yes, just as neat as the pattern in Wisconsin, where worried mail carriers, postal clerks, and other civil servants are getting those letters signed by Jerry Fox and Carl Thompson * * * "Our records do not show you listed as a contributor to the Democratic party * * *." Get going. Cough up. Bam! Slug! Squeeze! * * * "so that party activities and the 1950 campaign fund can be assured."

Neat as the way you get a census-taking job in Wisconsin.

"Come on up and join the Democratic Party!"

Neat, indeed. Very neat. And maybe just a little bit too gaudy.

Vote-Getting Fraud

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the Sioux City (Iowa) Journal under date of January 13, 1950, as follows:

VOTE-GETTING FRAUD

Harry S. Truman is President of the United States and in that position he deliberately is planning political fraud on the American people by promising them things he must know he cannot deliver. It is all part of a design for election victories. He promises, as someone has said, all things to all people, yet is bound to realize that he cannot make good on such extravagant assurances, the while he craftily calculates the vote-getting power of the attitude he thus announces.

When compared to his predecessor, Mr. Truman may not suffer as much, as a politician, as the average observer may think, Franklin D. Roosevelt for years was regarded as possibly the most astute politician in United States history. He was credited with knowing far in advance of the developments what the people would want and demand, with knowing before they had made up their minds what they were going to think later, with anticipating situations affecting the social and economic life of the country, and with making his plans accordingly. Harry S. Truman is not far behind him in political craftiness if, indeed, he is in that position at all. Both were opportunists, and it may be said of the Chief Executive of today that he works just as hard at it as did his predecessor.

It is common gossip in Washington among Members of Congress of both major parties, among newspaper correspondents of years of training and experience, that Mr. Truman, who is to make various demands on the House and the Senate for legislation, does not expect such measures as he champions to be put through. It also is whispered about that with reference to some of the things he will emphasize he actually does not want them to succeed. But—and this is the important thing—having advocated the reforms, which his own party members in Congress confidently are expected to reject, he can remind the electorate that he tried to put them over, that his heart was in the right place, that he was thinking of them, and was trying to do something for them, wherefore they ought to support him when election time came.

Members of Congress considered closest to the White House admit that in this session of Congress Mr. Truman already is as good as whipped on three things he will emphasize: Repeal of the Taft-Hartley Act, compulsory health insurance, seen by many as socialized medicine, and substitution of the Brannan farm plan for the present price-control law. They also think he has little chance to put through his civil-rights program. Mr. Truman knows this as well as do others. But that does not worry him for he feels that various groups to which he makes his promises will vote as he wishes even if he isn't able to make good his pledges.

If Our Nation Would Remain Prosperous, Like the American Family It Must Balance Its Federal Budget

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mrs. BOLTON of Ohio. Mr. Speaker, so accustomed have the American people become to thinking in terms of billions of dollars when speaking of our Federal budget, that we have lost sight of the simple economics involved in the matter of remaining solvent, whether as an individual, a family, an institution, or the Government itself.

The following editorial published in the Cleveland Plain Dealer of January 11, 1950, entitled "This Is Not Fiction," translates into terms we all can understand the meaning of our Government's unbalanced budget. I ask unanimous consent to have the article from the Plain Dealer reprinted as follows:

THIS IS NOT FICTION

Will the reader pretend that he has an obscure neighbor by the name of Harry Truman? And will he pretend that Neighbor Truman has decided he must borrow money, a decision which many of us ordinary folks have reached at times in the tempestuous course of life?

Neighbor Truman, we're going to pretend, steps into the bank to apply for the loan, and we're going to have the privilege of observing the transaction.

"I want to borrow $500," says our neighbor. (Now most will anticipate the next few questions, having been through it.)

"Do you have any debts at the present time?" the banker inquires.

"Yes," says our neighbor. "I owe the bank at this moment about $25,800."

"What is your annual income, Mr. Truman?"

"I have take-home pay amounting to $3,750 a year," says he.

"Hmmmmm," the banker hmms. He at once is suspicious of the client's ability to pay the old debt without $500 more added. And aren't his eavesdropping neighbors suspicious, too?

But the banker gives allowance for unforeseen circumstance. So he asks Mr. Truman: "Do you think you will be able to save a large portion of your income this year and each succeeding year to reduce your indebtedness?"

"Oh, no," Neighbor Truman replies to the surprise of the banker, and the neighbors listening in. "My necessary living expenses

this year will be $4,250. I'll be forced to spend more than I earn."

"Pardon me," the startled banker interjects. "Do you mean that, owing already an amount that constitutes seven times what you'll take in during a year, you're going to spend more than you earn?"

"That's right," says Neighbor Truman. "You see I must provide tuition at private schools for my children. I must help a poor relative set up a new business in which he's going to lose money for a long time to come."

"Just what kind of business is that relative going to sink your money in?" the incredulous banker asks.

"Why," says Mr. Truman, "he's got a wonderful humanitarian idea. He's going to sell milk to the Hottentots at a price they can afford to pay."

"But just those things won't eat up your whole income this year; will they?"

"No; but that isn't all," says Mr. Truman. "I am building security for my children by putting price supports under them. My boys sell newspapers to the neighbors at a nickel apiece, but I give them an extra nickel. My daughters make lamp shades which they sell for $5, but I don't think that's a fair price, so I give an extra $2 for each one they sell. Besides, my wife wants a television set."

The banker now steps aside to get his breath. Here's a fellow who owes more than he can ever repay if he lives frugally below his income seeking to borrow still more, and at the same time boldly proclaiming his intention of carrying out fantastic money-spending schemes.

What will the banker do?

Will he lend the new money? It's silly even to ask the question.

This scene is not fiction. It constitutes a faithful reproduction of the program set forth in regal solemnity by President of the United States Harry S. Truman. Multiply all figures by 10,000,000 and you have the Truman budget, his plan of Government, the Government's income, and the Government's debt.

In this case Congress is the banker. If it makes the loan, Borrower Truman's note will have to be signed by the taxpayers, which is to say by all the people. Who, in his right mind, would voluntarily sign the note of such a profligate spender?

A Free Hand in the Far East

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. KEE. Mr. Speaker, I note an editorial in the Christian Science Monitor of January 6, 1950, which I regard as a clear and comprehensive view of the problems that confront us in dealing with the Far East. The conclusions reached by the Monitor I believe to be sound, when we take into consideration all the factors of the complex situation. It is not China alone that we are dealing with, but rather a world problem that calls for circumspection on our part as we endeavor to shape a far-reaching policy. Under leave to extend my remarks, I attach the editorial, as follows:

A FREE HAND IN THE FAR EAST

The choice for United States foreign policy on Formosa has been a choice of methods. Americans are agreed on stanch resistance to the spread of communism in the Far East. The differences arise over the most effective ways and means. In adopting a hands-off-Formosa position President Truman—with the advice of the National Security Council—has chosen, we believe, the wiser way.

Any other decision would have left American policy weighed down by the incubus of the émigré regime of Chiang Kai-shek. Armed intervention was the most dangerous venture into which that incubus would have forced the United States. In behalf of a regime plainly repudiated by the Chinese people, intervention would have risked war with the government which—little as we like it—now speaks for the Chinese people.

But as Mr. Truman indicated and Secretary Acheson has more fully explained, American policy now goes farther than mere rejection of armed intervention. It continues technically to recognize the Nationalist government, but practically cuts loose from the discredited Chiang. It refuses to send him military advisers. It confines aid for Formosa to ECA measures already authorized.

The United States refuses to quibble over the legal status of Formosa under the Cairo and Potsdam agreements—which, in the absence of a peace treaty, might have been used as an excuse for American occupation. Mr. Truman specifically renounces any American desire to obtain special rights or to set up military bases in Formosa.

These moves draw the poison fangs from Moscow's charge of imperialism. Americans know that charge is untrue. But the Chinese people, moved as much by anti-foreignism as by communism, have been influenced by it to regard the United States as an enemy. So, too, have millions of other Asiatic peoples.

It is not easy to cut loose from the only organized Chinese resistance to communism. If Chiang could reasonably claim to speak for China, aid for him even in exile might be justified. But when he has been so plainly rejected by the people and is particularly unwelcome in Formosa, continued active support of him was clearly a millstone about the neck of American policy.

Released now from this burden, the United States can begin, in cooperation with other anti-Communist governments—particularly those in the Far East—to regain the friendship of the Chinese people. Now, with hands freed, American policy should seek with renewed vigor to dissociate itself from the imperialism, racial discrimination, and feudalistic exploitation which give Moscow its main chance in the Far East.

The Time for Economy

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, many of us, in considering the way our gigantic national debt is being increased by deficit financing, wonder if it ever will be possible to balance the budget, since the present administration thinks it cannot be done in these relatively prosperous times. And the editor of the largest newspaper in my State wonders if the administration ever will see any need for economy. Under permission to extend my remarks, I would like to place in the RECORD an editorial from the Milwaukee Journal:

TRUMAN'S UNBALANCED BUDGET

President Truman in his wordy budget message says that the Federal budget must be balanced one of these days, but not in 1950, which, of course, is a political year.

Though his 1951 budget entails a $1,700,000,000 cut in foreign commitments and aids to veterans and a $1,500,000,000 increase in social security and postal revenues, it ends with a deficit only $400,000,000 less than in 1950.

Despite the $5,100,000,000 deficit in 1951, the President argues that he has taken the only possible realistic position—that every cent he asks for is minimum for our national safety and our domestic well being. He hints that, were it not for his realization of our fiscal difficulties, he would have set budget goals far higher. After all, the Fair Deal is being expanded by only a billion or so in 1951.

But why, if realism is a factor, must we increase a deficit by spending the $520,000,000 for Federal highways in 1951? Why must we expand relief grants to the States by $250,000,000? Why must we start a $300,000,000 program of educational aids? Why must we in 1951 do a dozen other things the President feels cannot be postponed?

The answer is, of course, that we do not have to extend our social experimentation, unless we choose to. The President's budget, made on the eve of (and with an eye on) the fall elections, can be cut materially without the slightest damage to worthwhile existing programs. The question is whether Congress, also with an eye to the elections, will do the job.

Congress always finds it difficult to cut expenses. Yet it is toying with the idea of reducing the war excises. If it does so, the deficit contemplated by the President may rise from $5,100,000,000 to around seven billion. Congress has never looked with favor on increasing postal revenues by raising second-class mail rates, as the President asks. If it turns down that suggestion, the deficit may approach seven and one-half billion, which is two billion more than this year.

Against this, we shall have the President's proposals for a revision of our taxes, to come later. The revision, he says, will be primarily to remove injustices and only secondarily to increase revenues.

The whole thing adds up to a new Truman policy of gradually decreasing deficits. He would expand expenditures almost to keep pace with future increases in revenue and would reach a balance sometime within the next decade or two.

The time for economy, says the President, is not now. We wonder whether, in his mind, there ever need be such a time.

After all, he has already asked for numerous programs that would boost expenditures far above those even envisaged in this budget message.

Forty-eight Sovereign States

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Boston Herald of Friday, January 6, 1950:

FORTY-EIGHT SOVEREIGN STATES

The distinguishing mark of the Fair Deal is a sprawling array of social services imposed extravagantly on the entire country at the Federal level. In the first place the National Government does it and not the States, in the second the Government usually makes its reforms compulsory, and in the third it neglects the capacity of the economy to support the reforms.

This centralization is neatly annotated by Governor Dewey's message to the New York Legislature. Mr. Dewey reports on an impressive list of social services offered or proposed by the State government. But the services are untainted by governmental paternalism, and they are not expanding beyond the power of the State to support them.

It is particularly significant that while President Truman feels the need to ask for a moderate increase in Federal taxation, Governor Dewey prefers to cut State spending to remain within the present tax structure. In the nice adjustment of social welfare to the ability of the tax base to support it, Mr. Dewey wishes to remain on the black-ink side of the ledger.

Mr. Dewey declares that no person in New York State need go without medical care any more because he cannot afford it. This has been accomplished not by any compulsory insurance plan or by any elaborate system of general free services entailing heavy taxes on everyone. It has not interfered in any way with the traditional physician-patient relationship. There is no over-prescribing scandal such as hangs over the British system. It is done by carefully restricting the operation of the government to the area in which the system of individual initiative cannot effectively function.

There are other examples of this State administration of welfare. The point we would make here is that the Federal Government is crowding in on the States in setting up its own social services, and it does so partly by laying such a heavy Federal tax burden that the States cannot pursue their own programs.

There is no justification for saying that the Federal Government can do these things better. No national program can be tailored for the individual State, and what Mississippi might need in the way of social services won't do in New York or Massachusetts. Mr. Dewey brings home that the States can do it, and can do it within the bounds of free enterprise without Federal direction.

For Whom, the Rocks?

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks, I include the following interesting editorial from the Daily Belle Fourche (S. Dak.) Post of January 5, 1950:

FOR WHOM, THE ROCKS?

Unless something happens to change the atmosphere, the months between now and next November are going to be an accelerated repetition of the months between November a year ago and now. It's going to be a political campaign whirl during which facts generally are warped into campaign issues for public consumption. The citizen, meanwhile, poses as a lout who will swallow anything if it is poked at him often enough.

It will be a time for digging out campaign issues. And digging out campaign issues has come to mean unearthing petty issues that can be blown up so that they will be mistaken for vital issues.

The flat fact of the political picture today is that there is no between-election period when all officials buckle down to work for the good of the Nation. Campaign overlaps campaign, the only variety that of intensity.

In the meantime, the citizen looks at government as something apart from himself. He pokes fun at Congress, not once admitting that Congress is the people's branch of the Government, and that whatever it is or is not, he has made it. He pokes fun at Congress never realizing that he is poking fun at himself, at his failure in performing the duties of self-government.

Every Representative or Senator in Washington was elected by the people. He was chosen first by his party mates in a primary election. He was approved by the people of his State or district in a general election. But in spite of these common facts, people make jibes at Congress, not realizing that they are discrediting their own voice in the Government.

There is plenty of fodder to use in poking fun at Congress. The executive branch of the Government sees to that. It is only natural that the administration should try to weaken the force that provides its greatest check—the branch that limits its power.

Consequently, if there is one fact that needs to be hammered into the minds of the people it is this: To discredit Congress is to discredit themselves. To discredit Congress is to prove that men are not bright enough to rule themselves.

The Congress has just opened a new session. But reporters and commentators, before the first day was over, were poking at Congress as they might poke at a congress in Timbuktu—a congress in which they had no part. We belong to this commenting group. And we hang our heads in shame that any group can be so blind to what they are doing. It is all the more to their discredit that these writers, these commentators are among those who have profited most from our free government and its free system of education. Yet they are leading the pack in tearing it—and themselves—to pieces.

Whatever this Nation is, we the people, have made it. If Congress is weak, we, the people have made it so. There is not one among us who has the right to stand off and pitch rocks, as uninterested persons, at the Congress we, ourselves, elected.

Before it's too late, let's realize what we're doing. Before it's too late let us realize that now is the time to choose our best minds and our greatest hearts to represent us and manage the affairs of our Government. Our best in Congress, our best in the Senate, our best in the statehouses—this is the first demand in a democracy. And if it is otherwise, we have nobody to blame but ourselves.

The Need of Limiting by Congressional Amendment the Spending and Taxing Powers of Congress

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. GWINN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter from Robert B. Dresser, Providence, R. I., on the Need of Limiting by Constitutional Amendment the Spending and Taxing Powers of Congress:

JANUARY 3, 1950.

In a speech on the floor of the United States Senate on July 14, 1949, Senator BYRD, of Virginia, speaking of President Truman's speech the night before on the Economic Report, said:

"I say that the fiscal program announced last night by the President is the certain road to ruin. Unless the Congress and the people can defeat this program, we will go over the precipice of financial disaster.

* * * * * *

"Such a program can only hold in prospect for business increased taxes or national insolvency. Increased taxes applied to a declining business probably would reach a point of confiscation, and insolvency would mean default on the public debt, in which is now invested a great part of the security of the American public. Confiscation would mean socialism, and default would mean national bankruptcy."

This speech was delivered in the current fiscal year, in which the estimated expenditures of the Federal Government, $43,500,000,000, are the largest in any peacetime fiscal year, and the estimated deficit, $5,500,000,000, the second largest, being exceeded only by the year ended June 30, 1941, when outlays on the defense program led to a deficit of $6,159,000,000. Moreover, in less than five peacetime years under President Truman, the Federal Government has spent $191,081,000,000, an amount greater than the total amount spent from 1789 to July 1, 1941. In 1931 the cost of the Federal Government was $30 for each man, woman, and child. In the current fiscal year it will be over $300.

According to ex-President Hoover, "Twenty years ago persons directly or indirectly receiving moneys from the Government * * * represented about one person in every 40 of the population. Today about one person out of seven in the population is a regular recipient of Government moneys. If all of those of age are married, they comprise about one-half of the voting strength of the last presidential election."

But this is not all. The present administration has proposed legislation that according to some estimates would eventually add over $20,000,000,000 to the present budget.

This alarming state of affairs has been brought about during the past 16 years by the policy on the part of our Federal managers of tax, spend, and elect, the formula for socialism proposed by the late Harry Hopkins.

If we are to retain our freedom, we must drastically reduce our spending and our taxes, and to prevent recurring abuses of the spending and taxing powers they should be limited by amendments to the Federal Constitution.

One amendment should eliminate the general-welfare clause and limit the spending power of Congress to the specific purposes enumerated in the Constitution. This would merely be an adoption of Mr. Madison's view, as opposed to that of Mr. Hamilton, that the general-welfare clause adds nothing to the purposes specified in the Constitution. The amendment should also give to any State the right to question in the courts the validity of an appropriation—a right which generally speaking no one possesses at the present time.

The other amendment should (1) deprive Congress of the power to impose death and gift taxes, and (2) limit the power of Congress to impose taxes on incomes in peacetime to a reasonable maximum rate. The adoption of this amendment would do the following things:

1. It would provide needed assurance, which statutory law cannot provide, against

recurring abuse of the Federal taxing power, and aid greatly in the formation of much needed venture capital.

2. It would increase the national wealth, and over the years, the Federal revenue.

3. It would aid greatly in saving our free-enterprise system.

4. It would free the States from Federal domination and aid in preserving our present form of constitutional government.

5. It would terminate the duplication of death and gift taxes by the Federal Government and the States, and leave that field of taxation exclusively to the States, the laws of which, and not the Federal law, determine the right to dispose of property by gift and on death and the rights of inheritance. The death taxes, running to a high of 77 percent, are extremely destructive of capital and will in the long run destroy the accumulations of capital so necessary for industrial activity and expansion and for the full employment of labor and the payment of high wages. The revenue from these taxes is trivial, constituting less than 2 percent of the present Federal budget. The gift tax is auxiliary to the death tax, and both should be dealt with alike.

As to the income tax, both reason and our own Government's experience demonstrate that in peacetime a moderate rate of tax will in the long run produce more revenue than a high rate.

In the United States 90 percent of the work today is done by machinery. It is this machinery that has made the high wages and high standard of living possible. The capital required to provide this machinery comes from the savings of corporations and individuals. Only a small percentage of the people, probably not over 10 percent, save money for investment in such machinery. If these savings are taken in taxes, the capital is not available to provide the machinery needed to maintain and expand our industrial plants.

It is the heavy progressive income tax that does the damage by appropriating the savings of those taxpayers who supply the bulk of the capital needed by industry.

It is clear that unless Federal spending and taxes are drastically reduced, our venture in individual freedom will end and the socialistic state will take over, and it may be sooner than many realize.

In the words of the English historian, Thomas Hodgkin, in his book, Italy and Her Invaders, written in 1880:

"Whatever occasional ebbings there may be in the current, there can be little doubt that the tide of affairs in England and in all the countries of western Europe, as well as in the United States of America, sets permanently toward democracy. Will the great democracies of the twentieth century resist the temptation to use political power as a means of material self-enrichment? With a higher ideal of public duty than has been shown by some of the governing classes which preceded them, will they refrain from jobbing the Commonwealth? Warned by the experience of Rome, will they shrink from reproducing directly or indirectly the political heresy of Caius Gracchus, that he who votes in the forum must be fed by the state? If they do, perhaps the world may see democracies as long lived as the dynasties of Egypt or of China. If they do not, assuredly now as in the days of our Saxon forefathers, it will be found that he who is 'giver of bread' is also lord. The old weary round will recommence, democracy leading to anarchy, and anarchy to despotism, and the national workshops of some future Gracchus will build the palaces in which British or American despots, as incapable to rule as Arcadius or Honorius, will guide mighty empires to ruin amidst the acclamations of flatterers as eloquent and as hollow as the courtly Claudian."

ROBERT B. DRESSER.

Acheson's Red Herring

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an editorial which appeared in the Washington News of January 14:

MR. ACHESON'S RED HERRING

When a defense attorney can't make out a good case for a client, it's a common expedient to divert attention from the real issues by dragging out a red herring.

Secretary of State Acheson has done this in defending the State Department's blunders in China. Russia is the red herring—and no pun intended.

The Soviets, he points out, are annexing four northern areas of China—Outer Mongolia, Manchuria, Inner Mongolia, and Sinkiang. He predicts that this will provoke the hatred and righteous anger of the Chinese people, and explains that American policy in the Far East is based on that expectation.

Mr. Acheson seems to have forgotten that President Roosevelt agreed to the separation of Outer Mongolia and China in the Yalta deal of 1944, which China confirmed under American pressure in the Russian-Chinese treaty of 1945. We may be sure, however, that the Chinese people have not forgotten it.

Given uncontested control of Outer Mongolia it was easy for the Russians to penetrate Inner Mongolia and Sinkiang.

What actually happened in Manchuria, after Russia invaded that area at our urgent request, is of even more recent memory. But, as far back as 1947, Lt. Gen. A. C. Wedemeyer saw that Russia planned to annex that vast area and advised our Government to put it under a United Nations trusteeship to save it from the Communist invasion. Mr. Acheson's predecessor in the State Department, General Marshall, vetoed that proposal.

In brief, the United States conceded Outer Mongolia to the Russians, and opened the doors of Manchuria to them. This much is recorded in the State Department's own white paper.

Possibly, as Mr. Acheson professes to hope, the Chinese people in time will rise in their wrath and drive the Russians out. Something remotely like that has happened in Yugoslavia. But it has not happened in Poland, despite the country's long tradition of hatred for all things Russian. It hasn't happened in any of the other satellite states.

It is no easy matter for unarmed peasants to overthrow a police-state dictatorship, however unpopular it may be.

Mr. Acheson also is a better defense attorney than historian in his explanation of Nationalist China's collapse.

A much different version is running currently in the Saturday Evening Post.

Chiang Kai-shek, according to Mr. Acheson, emerged from the war the undisputed leader of his people, opposed only by a few ragged Communists hiding in the hills. If that had been the case, by what right or reason did the United States intervene in China in 1946 and demand that Chiang take this unimportant minority into his government? We did that, through the Marshall mission.

Our intervention halted Chiang's armies in their tracks when they were at the point of knocking the Communists out of the war. His support melted away, as Mr. Acheson says it did, but that was because Chiang's war-weary country was unequal to the burden of maintaining his idle armies in the field during the long American-imposed truce, which Mr. Acheson does not mention.

Finally, when Chiang was at the end of his resources, American support was withdrawn from his government because it had failed to satisfy the Communists' demands.

The Coal Situation

REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. EVINS. Mr. Speaker, for the past several months the slow-down of work in the coal industry brought about by the dictatorial demands of John L. Lewis has served to increase in intensity the present coal situation. Although the weather in certain sections of the country continues to be favorable and thus averts a most critical situation, in other sections of the country where intense and severe cold weather prevails, with a resultant great use of coal, a most acute condition prevails.

To add to this, there continues to be a coal shortage in industry and many of the miners themselves are highly displeased and dissatisfied with the 3-day week and the slow-down in production ordered by Lewis. These miners are most anxious to go back to work.

Mr. Speaker, it is a deplorable situation in this country when one man can dictate to the laboring man when he shall work and for how long. John L. Lewis should be effectively dealt with and promptly. The provisions of the Taft-Hartley law should be invoked and the slow-down and crippling strike ended and coal production resumed, in the interest of the workingman, industry, and the people of America.

DICTATOR JOHN L. LEWIS SHOULD BE DEALT WITH PROMPTLY AND EFFECTIVELY

I have, heretofore, called upon the President to take action in this connection. I deem it of importance in the interest of the people of America.

Mr. Speaker, in this connection, I include in the Appendix of the RECORD the following two editorials:

[From the Nashville Banner of January 12, 1950]

HOW NOW, CONGRESS?

A resolution has been proposed in Congress which, if adopted, would urge President Truman to exercise the authority vested in him to get full production of coal resumed.

Here is Congress' opportunity to demonstrate clearly, for all to see, how it feels about the situation brought about by John L. Lewis' whims and hates.

It is clearly shown that President Truman is not disposed to take the action the law provides he can take to protect the public. Congress should show the President, and the people, what it thinks—one way or the other.

In no uncertain terms, the gravity of the situation has been presented at the White

House and on Capitol Hill by the people best acquainted with the Nation's fuel necessities.

From the White House has come nothing. From Capitol Hill will come—what?

[From the Nashville Tennessean of January 13, 1950]

ANY MONOPOLY SHOULD BE CURBED

Mr. John L. Lewis, who is probably more responsible than any other man for the Taft-Hartley Act, has now forced upon Congress the possible need of applying antitrust laws to labor unions in order to outlaw the sort of monopolistic restraint of trade that exists in coal production.

The antitrust laws were designed to prevent just such a condition as now exists. For the good of the country, it has been decreed, no man or group should have power enough to dictate the operations of any trade or industry, to fix prices to the detriment of the public, to manipulate production for private gain, and to eliminate competition.

Where coal mining is concerned, of course, there is little or no competition. But here again the question of tyranny arises, since all efforts to challenge the power of a dictator are promptly put down—by force, if necessary.

As an hypothesis let it be assumed that instead of a threat to the economic system by one man in control of the Nation's miners, this state of affairs had been brought about by a person or persons dominating one of the basic private or semiprivate industries. The rich and powerful steel industry may be taken as an example.

Big steel is not without its faults. Its leaders are smart; they take care of profits and, for themselves, handsome salaries and pensions. But no czar of steel has the power to manipulate the industry as coal production is manipulated, with utter disregard of the national public.

How long would a steel dictator last who systematically shut down operations to create shortages and unemployment, thereby starting a chain reaction affecting unfavorably the whole economy? Would the country thus permit its railroads to be partially paralyzed and operations to be curtailed or ended in a vast number of factories, power plants, and private homes? Would the people, to say nothing of the Government, be tolerant if result were to bring actual physical suffering to millions, as is the case when coal supplies are limited by one man's decree?

The result would be a quick declaration that no man or organization is greater than the Government and that ruthless restraint of trade through monopolistic power must stop.

Laws exist for dealing with an imaginary condition of the kind outlined. If they did not exist they would soon be enacted. The important thing, however, is that the American people would not tolerate such an outrage under any conditions.

In the present crisis, President Truman may be forced to application of the Taft-Hartley law. But that would mean only impermanent alleviation. In due time, the tyrant of the coal fields could return to his harassing tactics, as he has always done.

Temporary relief will be welcome, but the time is at hand when it should be made lasting. The right to strike is inherent, but the right to dominate a country is inimical to American principles.

Antitrust laws have been on the books a long time and have served a good purpose. They should be the Nation's safeguard against dangerous monopoly of any kind, and labor has Mr. Lewis to thank for the growing sentiment that its scope should be extended so that the habitual offender who heads the United Mine Workers can be cut down to size.

Rural Electrification

REMARKS

OF

HON. BOYD TACKETT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. TACKETT. Mr. Speaker, as an ardent supporter of rural electrification, and being a bit skeptical of the ultimate intentions of the Southwestern Power Administration, I am alarmed at the report of a contract between the Southwestern Power Administration and the rural electric cooperatives within my area, awaiting approval of the Rural Electrification Administration of Washington, having as its principal purpose the socialization of the rural people and the abolition of the fine intentions of the rural electrification program.

JUSTIFICATION FOR RURAL ELECTRIC COOPERATIVES

Rural electrification is a justifiable program within a free democracy operating under our free enterprise system—justifiable for the simple reason that existing private utilities could not in many instances economically reach the sparsely settled rural areas. These rural people have joined together in a true American spirit for the purpose of bringing into their respective communities a necessity and convenience to which they are entitled. These democratic groups who own and operate their own systems are just as free as the stockholders in any other corporation dealing in private enterprise under our system of government. Merely because banking institutions could not economically justify long-term loans at a sufficiently low rate of interest with which electricity could be brought to the sparsely settled rural sections accounts for the need of loans from the Federal Government, to which these people are as much entitled as any business that might borrow from the Reconstruction Finance Corporation or any other loan agency of our Government. I have no hesitancy in further stating that the rural electrification program is economically sound, and there is no reason why every penny of the money will not be repaid to the Government.

INTENTIONS OF THE SOUTHWESTERN POWER ADMINISTRATION

The expressed intentions of the Southwestern Power Administration are legitimate, but I have always been a bit doubtful as to whether this organization actually intends to limit its activities to the borders of its expressed intentions. This organization has publicly contended that its existence was necessary for the pooling and proper distribution of power generated by the Federal Government at various multiple-purpose dams within the Southwest. There has been some doubt in my mind whether the Southwestern Power Administration does not in some ulterior manner intend to eventually generate and produce power from sources other than that provided by the Government Flood Control Act. However, along with many other Members of Congress, I have often been assured by officials of the Southwestern Power Administration that they never anticipate the operation of steam-power units for the generation of electricity, or to in anywise attempt the regimentation of our splendid rural electrification system which means so much to the rural people of this country.

However, we now find the Southwestern Power Administration entering into a contract with the rural electric cooperatives which will, in effect, through the back-door method and contrary to the intent of Congress, according to my interpretation of the contract, allow the Southwestern Power Administration to receive all benefits from steam-power electric generating units provided with rural electrification moneys within the Southwest; to operate and eventually own electric transmission lines built with rural electrification moneys that could well be used to extend distribution lines to unserved rural people within my area—which authority has been specifically denied by Congress; and to stranglehold the free operations now being enjoyed by the rural electric cooperatives by allowing the Government through the Southwestern Power Administration to dictate all policies of, and completely regulate the involved rural electric cooperatives.

My accusation that the Rural Electrification Administration is using moneys for purposes inferior to the need for distribution lines to unserved eligible people as provided in the law is advisedly made. For example, I have several times brought to the Administration's attention my personal knowledge of approximately 375 eligible rural people within Scott County, Ark., who have not as much as received consideration at the hands of the Rural Electrification Administration on a loan application filed in December 1947, while during this same time millions of dollars in loans have been approved for the construction of steam-power generating units which will, under the terms of the proposed Southwestern Power Administration-rural electric cooperatives contract, be used for the ulterior motives of the Southwestern Power Administration rather than for the benefit of rural electrification, which action and procedure, I maintain, is contrary to the intent of Congress.

AUTHORITY OF THE RURAL ELECTRIFICATION ADMINISTRATION

The Rural Electrification Act of 1936, signed by the President on May 20, 1936, is still the controlling law for loans to Rural Electric Cooperatives for rural electrification purposes by the Rural Electrification Administration in Washington. It provides for the loan of funds to rural electric cooperatives and others for the purpose of serving electric energy to persons in rural areas who are not receiving central station service. It provides that loans in the opinion of the Administrator, must be liquidating over a period of originally 25 years, now 35 years. It defines rural areas as areas within the limits of towns of less than 1,500 inhabitants, and in strictly rural areas. The clear intent of this act is

that the moneys loaned by the Government from the Treasury of the United States is to be used under this act for the sole purpose of serving persons in rural areas who are not receiving central station service.

AUTHORITY OF THE SOUTHWESTERN POWER ADMINISTRATION

On December 22, 1944, the Flood Control Act of 1944, was passed, which provides for the construction by the Army engineers at the expense of the Federal Government of a number of multiple-purpose projects, especially on the rivers of the Southwest, in the States of Missouri, Arkansas, Oklahoma, Texas, and Louisiana. Section 5 of this act provides that power and energy produced at multiple-purpose projects, constructed by the War Department, should be delivered at the dam to the Department of the Interior, who should transmit and dispose of such power so as to give the most widespread use thereof at rates to be set by the Federal Power Commission as low as reasonably possible consistent with good business principles. Preference is to be given in the quantities of power and energy available from such projects to public bodies and cooperatives.

In transmitting and disposing of power and energy from such multiple-purpose projects, the Department of the Interior was authorized from funds to be provided by the Congress to construct only such transmission lines and related facilities as are necessary to deliver power and energy at wholesale quantities to facilities owned and operated by Federal Government, public bodies, rural cooperatives, and privately owned companies. It will be readily seen from reading of section 5 of the Flood Control Act that the Southwestern Power Administration is not authorized to own, construct, lease, or otherwise acquire steam generating plants, nor is Southwestern Power Administration authorized to build any transmission lines that are not directly necessary for the delivery of power and energy to the facilities owned by others as described by section 5 of the Flood Control Act. Mr. Douglas Wright, Administrator of the Southwestern Power Administration, has repeatedly testified before Congress and publicly stated that Congress has not authorized the Southwestern Power Administration to construct, own, or operate steam-power electric generating plants.

It will be further noted that section 5 of the Flood Control Act has no limitation as to what parties Southwestern Power Administration may sell and deliver the power and energy from such multiple-purpose dams. Preference as to quantities of power and energy is granted to public bodies and cooperatives, but even in the case of these agencies, if power and energy can be delivered over lines already in existence, Southwestern Power Administration is stopped from constructing duplicating lines to open up fields of competition with the existing industry in the area.

Thus we have two agencies, the Rural Electrification Administration, with practically a blank check to be loaned for service to unserved farmers, which authorizes the construction of steam plants and building of transmission lines from such steam plants to reach persons in rural areas who are not receiving central station service. Cooperative steam-power electric generating plants are justifiable provided the involved cooperatives are not otherwise receiving ample service at reasonable rates; but there can be no justification for the Rural Electrification Administration to provide facilities for the Southwestern Power Administration contrary to a direct denial of such facilities by Congress. There is a greater need for immediate service of available electricity to the rural people in my area than for generating plants where we have ample generating capacity. Congress now has no control over the moneys granted in a blank amount to the Rural Electrification Administration for loaning. This sum now amounts to more than $2,000,000,000.

PROPOSED SPA-REA CONTRACT

A plan has developed within my area of the Southwest in the form of a proposed contract between the rural electric cooperatives and the Southwestern Power Administration whereby the rural electric cooperatives, which have been highly successful under their present set-up as free agents, controlled and governed by their own board of directors, would be regimented under the dictatorship of the Southwestern Power Administration. The promoters of this super-cooperative propose to borrow money from the rural electrification program in Washington for the purpose of building steam-power units and transmission lines in the name of rural electrification but for the primary benefit of the Southwestern Power Administration, thereby authorizing the Southwestern Power Administration to in effect receive all benefits from steam-power electric generating units that Congress has heretofore denied them and to allow the SPA to lease transmission lines duplicating existing lines, contrary to the specific denial of Congress.

The contract provides that the super-cooperative—consisting of three or more distribution cooperatives—would borrow $9,565,000 from the Rural Electrification Administration in Washington, $4,825,000 of such sum to be used for the construction of a steam generating plant of 30,000 kilowatts capacity, and the remaining $4,740,000 to be used for the building of transmission lines from this steam plant over a wide area covered by a number of member cooperatives. The contract further provides for the Southwestern Power Administration to lease all of these transmission lines built by the super-cooperative with funds obtained from the Rural Electrification Administration for a period of 40 years, with a payment from the Southwestern Power Administration to the super cooperative in an amount large enough to retire the investment in the lines over a period of 40 years including interest on all outstanding balances. Southwestern Power Administration agrees to operate and maintain these lines, and at the expiration of 40 years these transmission lines are to become the property of Southwestern Power Administration without any additional payment.

In other words, the lines are right from the beginning constructed for the Southwestern Power Administration although section 5 of the Flood Control Act of 1944 would actually prevent construction of these lines by the Department of the Interior.

The contract further provides that Southwestern Power Administration will buy the complete output of the steam plant constructed by the super cooperative on the basis of 85-percent full-load operation. This, in the case of a 30,000 kilowatts plant described herein, would amount to 225,000,000 kilowatt-hours per year, which would mean, at a minimum price, approximately $900,000 to $950,000 per year. Thus Southwestern Power Administration has, in effect, gone deliberately contrary to the expressed will of the Congress in attempting to construct unnecessary transmission lines and a steam generating plant for the purpose of accomplishing its ulterior motive of federalizing the electric utility business.

In this contract the Administrator proposes to apply rate schedule A, which has been approved by the Federal Power Commission for cooperatives, which rate is higher than the rate now being paid by the same cooperatives for electric energy in the involved area. The demand of super cooperative is limited to 30,000 kilowatts over the 40-year period, and the contract is cancelable on the part of the Southwestern Power Administration for power and energy to these cooperatives in the event they exceed this amount of energy at any time, and the contract does not provide arrangements for additional power and energy required over and above 30,000 kilowatts.

Cancellation of the service contract from Southwestern Power Administration to the cooperatives, however, does not cancel either the sale of all the power from the steam plant to Southwestern Power Administration or the lease by Southwestern Power Administration of the transmission lines constructed by the cooperatives. Thus, cooperatives can well find themselves without any power source whatsoever while it would have to continue the sale of all the output of its generating plant and the lease of all of its transmission lines to the Southwestern Power Administration. This could readily result in the liquidation of member cooperatives and their being taken over under the terms of the mortgage with Rural Electrification Administration by that agency.

Cooperatives are required to contract to purchase from the Southwestern Power Administration immediately upon the completion of the steam plant, 18,000 kilowatts for the first year. Whereas the present load of the member cooperatives, in a strictly rural area, largely occupied by national forests, or extremely mountainous territory, is less than 5,000 kilowatts. This provision might result in cost to the member cooperative or to the Federal Government, through inability of the cooperatives to meet their obligation to Southwestern Power Ad-

ministration, thousands of dollars. It is highly improvident and if enforceable could easily bankrupt the member cooperatives.

In addition to this vicious feature, the contract further provides that the supercooperative will make contracts with its member cooperatives that will provide that their books of record, bank account, and all transactions carried on by the member cooperatives, shall be open to the Southwestern Power Administration, and virtually provides that Southwestern Power Administration will have regulation of retail rates charged by member cooperatives to the farmers and rural establishments served by the member cooperatives.

I cannot believe that the affected cooperatives within the Southwest have been properly advised and fully realize the import of this proposed contract between the Southwestern Power Administration and the Rural Electric Cooperatives within my area, which can amount to nothing less than to allow the Southwestern Power Administration to eventually gobble up the independent electric cooperatives in the southwest for the promotion of SPA's selfish aims, ambitions, and ulterior aspirations.

THE GRANDIOSE SCHEME TO FEDERALIZE ELECTRIC POWER

The entire agreement serves but one purpose and that is—to make use of funds from Rural Electrification Administration for the purpose of circumventing the clear and expressed will of the Congress in regard to operations of the Southwestern Power Administration as provided in section 5 of the Flood Control Act of 1944, and to circumvent the Rural Electrification Act of 1936 by permitting these Federal funds which are to be loaned for the purpose of serving persons in rural areas not receiving central station service to be used for the purpose of allowing Southwestern Power Administration to raid territories now adequately served.

This analysis covers only the contract for the one generating plant and its transmission lines in northwest Arkansas. The same pattern is followed by the supercooperatives and Southwestern Power Administration for similar purposes for the Western Electric Cooperative, at Anadarko, Okla., the Central Missouri Cooperative, Northwest Missouri Cooperative, the M & A in Missouri, and for two super cooperatives to be located in southern and northeastern Louisiana, and for a super cooperative to be constructed in southern Mississippi and northeastern Louisiana.

The pattern thus set for the southwest area—Missouri, Oklahoma, Arkansas, east Texas, part of Mississippi, and all of Louisiana—will immediately provide a stepping stone for the same kind of subterfuge in the area covered by the Pick-Sloan plan in the Missouri Valley; for the area covered by the CVA bill now in the Congress; for the New England States; and for the southeastern United States now being investigated along similar lines to those covered by the Southwestern Power Administration. If approved by the Rural Electrification Administration in Washington, with the acquiescence of the Congress, it will inevitably result in the expenditure of several billions of dollars in absolutely unnecessary generating plants and transmission lines.

The Southwestern Power Administration is using the good name of Mr. Claude Wickard and his fine rural electrification program to foster their grandiose scheme at any cost. This contract is just another step toward complete Government regimentation of the farmers. It will not be long until the Government will be telling the farmers how many cows they can milk and how many chickens they can feed, just as the beet and the cotton growers are now being forced to farm under Government regulations. The whole thing is wrong. My conception of government is to legislate and regulate and not to dictate and operate our American way of life.

CONCLUSION

The rural electrification program stands today in the mind of Congress as one of the most successful and meritorious activities for which Federal funds are used. Its support comes from both sides of the aisle. For example, even the Republican Eightieth Congress, a Congress noted for the deep slashes in Federal spending, raised the amount of money made available to the Rural Electrification Administration to the $400,000,000 level. This is the same amount being requested by the President for use in the fiscal year 1951. There can be no doubt Congress wholeheartedly backs the REA program.

There is another Federal agency, however, that has injected itself into the REA program. This other agency lacks solid congressional support and it has always kept itself in political hot water. I refer to the Department of the Interior, which is represented in my area by the Southwestern Power Administration. The Department of the Interior is a Federal agency that has always borne watching. Throughout its entire political history this Department has itched for an increase in its bureaucratic power. Under the banner of serving the public interest and the common good of mankind, it has instead served only its special interest—bureaucratic power and growth.

The most notable administrative scandals in the history of the Federal Government have involved the Department of the Interior. Who will ever forget the famed Teapot Dome affair? It is obvious that the political ambitions of this department know no bounds.

It has been tireless in its effort to take over the forestry service from the Department of Agriculture. It would also like to take over many of the constructive programs for soil conservation now administered by the Department of Agriculture. In addition, it wants to take over the activities of the Corps of Engineers for flood control and rivers and harbors development. It even backed and pushed through Congress section 5 of the Flood Control Act of 1944 under which it markets all power developed by the Corps of Engineers, even on rivers within the TVA service area. Under a sound national power policy this power would be marketed by TVA itself without the interference of the Interior Department as a no-good middle man.

This Department, the Department of the Interior, has always coveted the good reputation enjoyed by the Rural Electrification Administration in Congress and seeks to bring it under its domination just as it is now attempting to subjugate the Federal Power Commission, a regulatory agency of the Federal Government. Interior looks upon itself as the Federal agency that must have complete control over Federal activities and regulations relating to the generating, transmission, and distribution of power. Right now the Department of the Interior is quietly laying the groundwork for an eventual attempt to take over regulatory jurisdiction of the petroleum and natural gas industries, and it may be expected that the Department's pattern of operation may well follow a similar backdoor method for these great resources as has been followed in the case of their ruthless effort to socialize another great natural resource—electric power.

What it cannot do directly, it does by stealth and indirection. When the Congress said "No" and thereby thwarted the Department's ambitious scheme to build needless and wasteful duplicating electric facilities in my section of the country, it went underground and is now using the good name of the Rural Electrification Administration as its front organization.

Since the Department of the Interior cannot lay its hands directly on the $400,000,000 made available by Congress to the Rural Electrification Administration for making electric service available to farmers and other persons in rural areas, it is through leasing agreements getting the Rural Electrification Administration to divert funds from farm electrification to the carrying out of its ambitious program for socializing the southwestern area of the United States.

This is not, however, an issue that involves my section of the country alone. The Southeast and the Northeast as well as other sections of the country are deeply involved with the present attempt of the Department to shape policies that will be applicable all over the Nation. To realize the extent to which the Department has already moved into the East one needs only to familiarize himself with the contents of the 1951 budget document.

The Rural Electrification Administration is off base playing around with the Department of the Interior, and if it does not watch out it will find itself playing the role of Little Red Riding Hood to the wolf.

Until every farm in this country has the benefit of electric service, Rural Electrification Administration's major responsibility is to get adequate service to unserved rural persons. According to a recent REA statement, that agency still has 1,000,000 farms to electrify before the first phase of its work can be considered completed. This means that it still faces the job of getting electricity to

more than one out of every five farms in this country. Thus, it is altogether too soon for this agency to rest on its laurels and to take on the job of playing stooge for the socialistic plotters on the pay roll of the Interior Department.

The NRECA in the January 1950 issue of its magazine Rural Electrification notes that—

Some (REA) borrowers are disturbed by delays in obtaining REA approval of loan applications during recent months—comparative figures indicate that they may have reason for impatience—less loans funds have been approved by REA during the last 6 months than during the comparable period of a year before.

According to this data, only $143,000,000 in REA loans were approved during the 6 months' period July to December 1949, compared with $193,000,000 during the 6 months July to December 1948.

I know first hand about the situation faced by REA borrowers in my district. I have hereinbefore mentioned the 375 eligible applicants of Scott County, Ark., who have a loan application pending since December 1947. This loan, if ever granted, will be used to serve 375 farmers who in this second half of the great twentieth century are living under conditions that were outmoded by the end of the nineteenth century.

There is a reason why the above loan to the cooperative in my district has not been made. There is a reason why we are not completing this job of electrifying rural America faster. That reason is not the fault of Congress which is making ample funds available for this purpose. It is not because REA lacks sufficient administrative personnel or sufficient funds.

The reason traces back to pressures exerted by the Department of the Interior forcing REA to make its money available for generating and transmission loans. An examination of REA loans during the last 6 months of 1949 reveals that out of the $143,000,000 of all funds loaned more than 50 percent went for the construction of generating and transmission facilities and not for distribution lines. Loans, as a consequence, are being made to further the objective of the Department of the Interior rather than the achievement of REA objectives. REA should follow its program—not the program of the Department of the Interior.

These maneuvers by the Department of the Interior are the work of underlings and little bureaucrats working in cahoots with outsiders. The outsiders, just as back in the days of Teapot Dome, are being motivated by the purposes of private gain. They are not even the true zealots of public power.

These outsiders are only interested in making a quick buck at the expense of American farmers and taxpayers generally. They include engineering firms, lawyers, lobbyists, and those who are willing to sell the traditions of 150 years of American freedom for the jingle of coins in their pockets today.

These are matters with which the President of the United States, the Secretary of the Interior, and the Secretary of Agriculture should become familiar. I feel certain they are unaware of what is going on. Certainly, this is a situation which Secretary of the Interior Chapman should examine at the earliest possible moment. He is involved, for the good name of his Department will suffer as it promotes such shabby tricks. Meanwhile, REA Administrator Wickard in dealing with the pressure exerted upon him for making questionable loans should proceed upon the assumption that his support for an REA program honestly administered comes from the Congress; it does not come from the Department of the Interior.

I am immediately introducing a bill which has for its purpose the prohibiting of loans by the Rural Electrification Administration for the building of electric generating plants or transmission lines to be owned, leased, used, or operated by any other than Rural Electrification Cooperatives, without the consent of Congress. I sincerely trust that any such loans now pending for approval of the Rural Electrification Administration will be held in abeyance until Congress is given an opportunity to act upon this bill.

The Small Farmer and the Farm Program

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. REED of New York. Mr. Speaker, the small farmer is the backbone of our economy. He should not be sacrificed to carry out a program of corporate farm production supported by huge Government subsidies.

Under leave to extend heretofore granted, I am inserting in the Appendix of the RECORD an article by J. H. Carmical which appeared in the New York Times, Sunday, January 15, 1950:

BREAK-DOWN SEEN IN FARM PROGRAM—HUGE SURPLUSES UNDER SUPPORT HELD WEAKENING WHOLE UNITED STATES AGRICULTURAL PROGRAM—LITTLE MAN ENDANGERED—ACREAGE RESTRICTIONS BELIEVED AID TO LARGE OPERATORS WITH ASSURED PROFITS

(By J. H. Carmical)

With huge surpluses of farm products being accumulated by the United States Government as a result of price-support activities, there is fear in some quarters that the present agricultural program is breaking down.

Last week a bill was introduced in Congress to give the Commodity Credit Corporation, the Government agency that carries out price-support activities, an additional $2,000,000,000 to provide support for 1950 farm crops, since its previous authorization of $4,750,000,000 soon would be exhausted.

Under the present program, which provides for maintaining prices at an artificially high level through nonrecourse loans to farmers by the Government agency, the tendency of many farmers is to produce for the loan rather than for the disposal of their products in the regular commercial manner, it was said. Despite efforts to restrict acreage, surpluses may be expected to increase, barring some very unfavorable weather conditions. The program thus is held costly to the taxpayer, who must furnish funds for price-support activities, and also to the consumer, who must pay higher prices for both food and clothing.

In addition, the program is not proving beneficial to a large group of farmers, particularly the small producer, who has had to cut his acreage in order to qualify for benefits. While the large producer also has had to curtail, he has had a much higher base from which to cut his production, and still is able to operate on a large scale. With an assured price for his products, his profits usually have continued at a satisfactory level. In fact, it is that group which is producing mostly for the loan.

SMALL FARMER SEEN HURT

The present agricultural policy is believed also to be gradually eliminating the small farmer. Because of acreage restrictions, he in many instances is unable to produce enough to operate profitably. Consequently, thousands of small farmers are quitting each year and letting the big farmer, with his highly mechanized operation, take over.

In the past half century, the amount of labor required to produce a crop has declined sharply. To produce wheat, the amount of man labor has been reduced by about four-fifths, and corn by seven-tenths. On especially favorable terrain, where the largest tractors and combines may be used, the reduction is even greater.

Although the production of cotton is not so highly mechanized as that of grain, it is estimated that for the belt as a whole only about one-half as much man labor is required now as at the turn of the century. In Mississippi, an experiment was made that showed that by using mechanical methods an acre of cotton yielding nearly a bale could be produced and harvested with 21½ man-hours of labor in contrast to 160 man-hours required under standard, nonmechanized methods.

Present price-support activities do not take into consideration the change that has taken place in agriculture in recent years, many believe. That parity price of agricultural products is said to be based on most items, except tobacco, on conditions existing in the period 1909–14. Despite the higher prices that now must be paid by the farmer for everything that he buys, a bushel of grain or a pound of cotton may be produced cheaper under mechanization than in 1909–14. However, under the present price-support program, the Government assures the cooperating grower of roughly two and one-quarter times more for his products than in the base period.

Despite the fact that the high prices for agricultural products, especially cotton, are said to have tended to restrict consumption, it is unlikely that there will be any revision of the program that would eliminate price-support activities entirely. If for no other reason, the political power of the farm vote will insure that the farmer continue to receive benefit payments in one form or other and keep his income at a relatively high level.

President Truman, in his recent message to the Congress, pointed out that farm legislation still was not adequate and that price supports should be provided for commodities that at present are not included in the program. He mentioned direct subsidy payments to farmers to keep their incomes high while permitting the market price of agricultural products to seek their own level.

Many farmers and also the trade generally believe that the Brannan plan is unworkable, in that it would involve too much administrative apparatus and also that it would prove too costly. Under it, the prices of farm

products would seek their level and the Federal Government would pay the difference between that and the "normal prices" to the growers. In that it would insure a high income to the farmers and also lower prices to consumers, the proposal is calculated to appeal to those two groups.

A Proposed Solution to the European Economic Problem

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. DAVIS of Georgia. Mr. Speaker, I have received a communication from Mr. T. K. Fuller 3d, 124 East Pharr Road, Decatur, Ga., giving his thoughts and suggestions for a solution to the European economic problem.

I am submitting herewith Mr. Fuller's suggestions for the information of the House:

A PROPOSED SOLUTION TO THE EUROPEAN ECONOMIC PROBLEM

In view of the fact that the cost of the European aid program continues to be a heavy burden on the American taxpayer, I wish to propose a new and entirely different method of financial settlement for trading between nations.

It is an obvious fact that without Marshall plan dollars, the affected nations would not have survived, but now that the nations have made some recovery, they need to stop depending on the dollar, especially for international trade, and strengthen their internal currency systems.

I propose that a clearing-house system be established in which every nation on earth would be invited to participate. This system would make use of a clearing house similar to the one now in use in the Marshall plan, plus an import-export bank in each participating nation, although neither the clearing house nor the import-export banks would operate as they do in their present capacities. The import-export bank in each participating nation would represent the importers and exporters of that nation with the clearing house. The import-export bank in each participating nation would collect that nation's currency from that nation's importers for their imports, and pay out the currency received to its exporters for their exports.

In turn, each import-export bank would accept a debit on the books of the clearing house in the like amount that was received from its importer. This debit on the books of the clearing house pays for the import insofar as the clearing house is concerned. When the same import-export bank pays out the cash received to exporters, it accepts a credit on the books of the clearing house in the same amount that it paid out to its exporter. Thus we see that the clearing house balances its account with each nation's bank through simple debits and credits on paper, and each nation's bank balances its cash account through collecting cash from its nation's importers and paying out that cash received to its nation's exporters.

The following transaction procedure shows how an English importer and an American exporter would settle their account in a transaction, yet each would deal only in the currency of his own nation:

1. The American exporter sells $100,000 worth of American machinery and tools to English importer.

2. A. American exporter files application with American Import-Export Bank for investigation of his contract.

B. English importer goes to English Import-Export Bank and files application to import $100,000 worth of machinery and tools from the United States.

3. A. American bank approves contract and files authority with clearing house to grant credit to English bank.

B. English bank approves contract and files approval with clearing house.

4. Clearing house approves transaction and notifies respective bank of each nation. The American bank automatically authorizes American exporter to make shipment.

5. Upon arrival of merchandise in English port each bank is notified. The English importer pays his bank in pounds, and the American bank pays its exporter in dollars.

6. The International Trading Clearing House credits the American bank $100,000 and debits the English bank in pounds in the equivalent of $100,000.

Several points to be noted in this type of clearing house are:

1. Each nation uses only its own currency. No currency ever passes between bank and bank, or between clearing house and bank.

2. Because each nation's bank would depend on the cash received from importers to pay out to exporters, its exports through these channels could never exceed its imports through these channels. This should be an inducement to each participating nation to import more in order to take more cash into its import-export bank with which to pay its exporters.

3. Because the clearing house settles accounts between nations on paper, there would be no question of whether a nation's currency was convertible or not. Each import-export bank would establish enough credit with the clearing house to cover any anticipated indebtedness.

The exchange rate between nations would be decided by the governing board of the clearing house for only those goods passing through the clearing house channels. By deciding a fixed exchange rate for a definite period, quarterly, semiannually or annually, there would be a tendency to stabilize international exchange.

4. Because this type of clearing house system would place all participating nations on an equal trading basis, it would permit them to trade freely with one another.

The clearing-house system would solve the problem of trading between nations, but each nation would still have its own individual internal problems, which I believe can be solved by application of the principles of free enterprise as we know them in America.

T. K. FULLER.

The Coal Situation

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. REED of New York. Mr. Speaker, hundreds of thousands of persons—the old, the ill, new-born babies, mothers, in our northern climate are shivering and chilled to the bone for want of fuel. Thousands from these groups are now afflicted with pneumonia, colds, and kindred ailments because of lack of coal to keep them warm. The traveling public, especially commuters to and from their jobs find their security threatened by a lack of train service caused by a shortage of coal. Is there no remedy? Congress has furnished President Truman with a law to meet the emergency but to him politics far outweighs the duty to enforce the law to alleviate the distress and suffering of the aged, new-born babies, TB cases and other persons, who are the helpless victims of the New Deal political cold-coal war.

Under leave to extend heretofore granted, I am inserting in the Appendix of the CONGRESSIONAL RECORD as a part of my remarks an article by Arthur Krock, which appeared in the New York Times, Friday, January 13, 1950:

IN THE NATION—THE WORD "THREATENED" SEEMS TO BE FORGOTTEN

(By Arthur Krock)

WASHINGTON, January 12.—Though the skies over the Capital were dark today, and little frozen pellets fell for a while before they melted into rain, the weather remained mild as the President for the umpteenth time told a press conference there is as yet no national emergency in the coal supply. In other parts of the country winter continued to withhold blizzards and other violent seasonal disturbances. Hence the President was able to repeat his estimate of the situation brought on by John L. Lewis' current tactics in an atmosphere of comparative public quiet which normal weather over a considerable area would quickly shatter.

FREEDOM OF CONCLUSION

He was buttressed also in his stubborn refusal to invoke the only specific legal corrective at his command (the Taft-Hartley Act, secs. 206–210, inclusive) by the finding of his labor assistant, John R. Steelman, that any emergency is still only spotty. Even Representative JACOBS, of Indianapolis, the pro-union Democrat who urges Mr. Truman to use the law they both condemn, certifies merely to a regional emergency. Thus the President can say if he wants to that its scope is not yet national, the law having been written to leave such conclusions to the President's opinion.

Substituting the practical for the technical side of the matter, it may be true that the empty bins of many retailers mean that most individual consumers of coal have stocked up fairly well for an ordinary winter. Since Mr. Lewis began last May the complicated series of maneuvers to produce the new contract he wants for his miners, consumers have had plenty of warning to imitate the ant and not the grasshopper in the fable.

THE LETTER OF THE LAW

But there is other language in section 202 that covers the present situation precisely, and the President and his advisers would have a difficult time to disprove this before any impartial jury. This language is quoted in the following extract:

"Whenever in the opinion of the President of the United States, a 'threatened' or actual strike or lock-out 'affecting an entire industry or a substantial part thereof,' * * * will, if permitted to occur or continue, 'imperil the national health or safety,' he may appoint a board of inquiry, etc."

Thereafter the text of the law enumerates prompt successive steps open to the President before soon applying to the courts for an injunction against the continuation of the strike or lock-out.

NOT THE DAY

On the test of plain facts there is an actual 2-day-a-week strike in the coal industry; and probably no one in the administration, though playing the trickiest kind of politics with the Taft-Hartley Act, would have the face to assert that this is not compliance by the union miners with the plans of Mr. Lewis. On a further factual test this condition definitely affects an entire industry and plainly threatens to imperil the national health or safety. So that Mr. Truman would be within the letter as well as the intent of the only legal instrument he has, or can get at this session, if he invoked it.

Nobody asked him today about that authority to meet the plainly existing threat. There is to be a big reception for Members of Congress tonight by the Democratic National Committee, and the conference was conducted in a manner to get it over quickly so the President could keep his early engagement. Social obligations may not seem a sufficient explanation for cursory treatment of the coal emergency, especially to persons and industries—including the coal-burning railroads whose service has been sharply reduced by the Interstate Commerce Commission—whose bins are nearing the point of total depletion. But Mr. Truman was giving short and uninforming replies to questions, and it was clear he would give short shrift to any effort to go into the coal crisis more deeply.

RESERVES AT VANISHING POINT

Meanwhile, for 3 days a week the miners are digging about 9,000,000 tons, which go fully into consumption, and the customary 30-day reserves of the season are going below 15 because of the 2-day strike. Beyond this exhibition of law being flouted by Mr. Lewis, and its flouting tolerated by the Chief Executive of the Nation, there is the great social and economic risk which is assumed by the union and by the Government.

Yet those advisers of the President who persuaded him to adopt his general and specific policies of favoritism toward union labor at the expense of other population groups are as deeply convinced as they ever were that this course will keep the administration indefinitely in office, and that the White House attitude toward the coal emergency is an integral part of it. The other day when the headlines announced that Republican Senators were demanding use of the Taft-Hartley Act a principal among these advisers remarked: "Stupid as ever. Can't they see they are playing right in our hands?"

Winter may be in a mood to make the game safe for a while longer. Or possibly Robert N. Denham, head of the independent law enforcement office of the National Labor Relations Board, may use his power to seek the injunction the President declines thus far to seek. Or Mr. Lewis may conclude to put his miners back on steady work. The President is leaving it at that.

Water Conservation Program for West Texas

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. JOHNSON of Texas. Mr. President, on November 22, 1948, several hundred forward-looking west Texans met in Fort Worth to launch a most important long-range water conservation program. The occasion was the annual directors' assembly of the West Texas Chamber of Commerce.

The keynote of the meeting was set by the official slogan, "Dam west Texas or west Texas is damned." Over and over again, prominent west Texans made clear their determination to solve the water shortage which has for too long been a millstone on the progress of a potentially rich region.

High light of the meeting was the visit and address by Hon. William E. Warne, Assistant Secretary of the Interior, who outlined what the Department of the Interior through the Bureau of Reclamation is doing and can help the people of Texas do to solve this perplexing problem.

Secretary Warne's remarks are of great interest, I believe, and I ask unanimous consent that the text of his speech be included in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy to be in Fort Worth to discuss the conservation and use of water, a subject of vital concern not only here but throughout the entire Nation. Over all of the United States increasing water demands are outstripping developed supplies. In Texas, however, shortages are growing particularly acute. It is not a new problem, but it is one that is becoming increasingly important. This is recognized by your representatives in the Congress with whom I have discussed the Texas water situation many times in recent months.

Because of grave concern about the problem, Senator LYNDON JOHNSON early this year requested a study of the situation and the views of the Department of the Interior on the proper development of this valuable resource in Texas. An appraisal of the type and magnitude of the problem in different areas of the State was presented together with a suggested program in which the Department's services might be used to aid in finding satisfactory solutions.

Senator JOHNSON believes that the interests of your State could best be served by developing water resources through comprehensive programs for each river basin or for related groups of basins. In view of Interior's experience with western water problems and in the development of projects to solve those problems, we consider this view both realistic and farsighted. As conservationists, engineers, and builders, we in Interior endorse the conclusion without reservation. We advocate strongly the making for Texas of integrated economic and engineering plans with river basins as the basic unit.

I understand that the informal report of the Interior Department to Senator JOHNSON received wide circulation among those most concerned with development of the State's water resources. I am informed, too, that the views have been widely approved among those genuinely seeking such development in the best interests of all the people.

The essence of the statement was that the situation in Texas is by no means hopeless and that the Department of the Interior desires to work with you to achieve maximum benefits through integrated, multiple-purpose river basin developments.

The laws under which Interior operates in the prosecution of these programs for resource conservation and development were designed to meet western conditions. In this, the first year of the second century of service of Interior to the Nation, these programs are moving forward as never before and they are accomplishing miracles along the Missouri, Columbia, Sacramento, Colorado, Rio Grande, and other western streams. That such water development work is today at a maximum in other western States and is at a minimum in Texas forms another phase of our problem. Unless Texas is to fall behind and to permit her needs to outrun her water development, this imbalance should be corrected soon. There are several reasons for the lack of balance to have been developed. Among them is the hard physical fact that the high plains have traditionally been the most difficult of our areas of water deficiencies in which to find answers to the complex problems that are posed. But in Colorado, through a trans-mountains diversion project, a solution in a high plains area was found. And in North Dakota and South Dakota, through the Missouri basin project, a solution is being provided. In Nebraska and in Kansas, as a part of the basin-wide plan for the Missouri River, small streams are being dammed and their waters used by towns and farming areas to yield maximum benefits. Power is being generated at many multiple-purpose dams to help build a sound economy for the Missouri basin area and at the same time to strengthen the economic feasibility of the project. All of this activity elsewhere in the high plains demonstrates that it is possible when local, State, and Federal experts put their heads together to find solutions even for difficult water problem areas like west Texas. So far it has never been possible for solutions to be provided for the major problems by local leaders working alone, by State officials working alone, or by the Federal departments working alone. The cooperation between the various levels of government that has been achieved in the Missouri River basin is needed here.

Although the primary interest of this meeting is centered about the problems of west Texas, difficult water problems are not limited to the western part of your great State. There is desperate need for flood control along the lower streams on the Coastal Plain. The great opportunity for power generation that has been seized by the Lower Colorado River Authority and that is being capitalized by the Southwestern Power Administration exists elsewhere as well. Many other phases of the general water problem are presented in other parts of the State. Texas is not poor in water. The outflow of Texas streams to the Gulf of Mexico approximates 43,000,000 acre-feet of which at least 35,000,000 acre-feet originate in Texas. This amount of water, if it all could be controlled and used, would provide the municipal water needs of all the people of North America and leave enough to fill 325 reservoirs like Lake Waco. Of course most of Texas water falls in the humid parts of the State and is not available for use to meet the problems of west Texas. But let us narrow the focus to west Texas.

Unlike some other sections of the State, much of west Texas has meager ground water, to supply from that source only a small fraction of its water needs. Moreover, in west Texas areas where underground supplies were believed to be adequate, the water table is going down at a dangerous rate. As your population and industry expand, as agricultural production grows, more demands are made on the water supply to meet the requirements for human and industrial consumption, and for irrigation. As a consequence, you must look to your streams to obtain the additional water that is needed. Unfortunately, the run-off of the rivers in west Texas varies widely from year to year. The excess flows of wet years must be stored in reservoirs and held for use in times of drought. This situation is not unique in west Texas. We meet it throughout the High Plains, and generally throughout the West.

More than enough water rises in west Texas to provide the needs of your cities and industries. On the average, in excess of 2,000,000 acre-feet of water leave west Texas

each year through the Red, Brazos, and Colorado Rivers and their tributaries. This water is wasted. Not only would it be useful in west Texas but when it leaves you it constitutes a danger to lower reaches of the Texas valleys. It adds to flood hazards downstream.

Available water analyses indicate that much of this water is of poor quality for human consumption and industrial use because of gypsum and salt content. However, it is thought that through appropriate means much of this water can be used for irrigation. In any event, according to my preliminary information, about 1,000,000 acre-feet of water could be made available for your towns and cities and for industries if the wasted waters were captured and kept in west Texas. This is a very large quantity of water and will meet your needs and provide for growth for many years to come. So the immediate problem in west Texas comes down to lack of storage and distribution facilities for this water that is available and that is not now used.

That reduces your problem to one of finances and engineering. How to solve it is the question that brought all of us here tonight.

I know how similar problems have been solved in other sections of the West. Not just in isolated instances but over and over again along one river and another, through decade after decade, similar water problems in the West have been solved by that method of local, State, and Federal cooperation that is provided in the reclamation law, which is administered by the Department of the Interior through its Bureau of Reclamation.

In some parts of Texas some individuals call this "reclamationism". Or I should say that I guess that they mean "reclamationism" when they beat the tables and yell, "We don't want any program with an 'ism' attached to it." They surely do not mean "patriotism," which has the unfortunate ending. So I must conclude that they mean to say they favor no program with "reclamationism" incorporated to it. By such generalized attacks, usually intended to cover up opposition to public transmission of hydroelectric power or family-sized irrigated farms, these people have become ardent advocates of the continued disuse of your water. In that, certainly they operate against the best interests of the people who need the water to insure the growth and development of farms, homes, counties, and the great State of which you all are a part.

As the branch of the Federal Government historically charged by the Congress with the responsibility for assisting in developing and utilizing western water resources, the Department of the Interior is prepared to assist you.

You know that investigations are now in progress and that next March the Bureau of Reclamation will give you an analysis of the problems of control and use of the water in west Texas. This analysis will provide sufficient information for you to determine the extent and character of such additional assistance as you wish from Interior and the Federal Government.

We have already partially discharged our responsibility to the Panhandle-Plains area by investigation of the Canadian River project. The report on this project, which would furnish a dependable water supply for 11 cities in that section of the State, will soon be sent to the State of Texas for formal review after which it will be transmitted to the President and to the Congress. Here is being developed a new type of project to meet a set of circumstances that is peculiar to the area. It may hold suggestions for other parts of west Texas.

Acting on the request of the people of these 11 cities, we will, if given congressional authority, assume the further responsibility of building this important project on a sound amortization plan which in the end will see the Federal loan repaid by the municipalities as they use the water which will be impounded for them. In my opinion, this is sound economics, both for the local area in your State and for the Federal Government. The people will use Federal funds for a few years, then they will have a wonderful, continuously useful project of their own. The United States will get its money back through appropriate repayment and many times in addition through the new strength and prosperity of the Panhandle cities.

The investigation recently initiated by the Reclamation Bureau in Texas involves a considerably larger area, with many more complex problems than those of the Canadian River project area. This investigation covers that part of west Texas in the upper basins of the Brazos and Colorado Rivers, extending from Odessa on the west to Cisco, Ranger, and Eastland on the east; and from San Angelo on the south to the boundary between the Brazos and Red River watersheds on the north.

The basic problem in west Texas is one of conserving water and making that water available to the people who sharply feel the shortages now and, unless something constructive is done, must suffer them more acutely in the years to come.

Our investigation and report will be directed toward solving the most pressing problem which is to provide water supplies for your cities and industries. It will also include provisions for the development or irrigation, where feasible, by using surplus water not required or not suitable for municipal and industrial uses. Flood-control features will be incorporated in the plan where justified, as will any other appropriate consideration, including fish and wildlife conservation, and recreation.

It is our duty, and it is in your interest, as well as in the interest of Texas and the Nation, to provide for the fullest economic use of west Texas water. In this regard we recognize that municipal and industrial requirements have the highest priority, both under State laws and as a matter of national concern. In our planning we therefore must and will provide for other water uses only to the extent possible without lessening supplies to meet your primary requirements.

There is lots of experience behind those who undertook this task.

The reclamation program is 47 years old. It has made major contributions to the wealth and growth of the Western States. Federal projects have developed areas that have built and that now support such cities as Boise, Idaho; Yakima, Wash.; and Phoenix, Ariz. Scores of projects have been completed and these now provide irrigation water for nearly 5,000,000 acres of land. They also provide power for such growing cities as Los Angeles, Portland, Seattle, and Spokane. Some of them include provisions for municipal and industrial water which they supply directly to such cities as Salt Lake City, Utah, and indirectly to cities in southern California from San Diego to Pasadena.

The Bureau of Reclamation can point to a time-tested example of its policies and work here in Texas. I refer to the 155,000-acre reclamation project on the Rio Grande in Texas and New Mexico near El Paso. This project was constructed nearly 35 years ago. It cost more than $23,000,000. The value of the crops produced under irrigation on the project lands from 1914 through 1948 has totaled more than $400,000,000, and in 1948 alone $43,000,000. Only last month the Department of the Interior and the city of El Paso executed a contract that will permit that municipality to use spare river flow in the project area to meet its growing municipal needs. Thus we have cooperatively expanded again, as we have many times, the usefulness of a fine project and made it meet a new and growing need that could not have been anticipated by anyone a generation ago. These projects live and grow and serve with increasing effectiveness through the years.

No one knows what the life span of a well conceived and executed water project may be. A project that one of our engineers investigated in China was 1,500 years old, and a project near Damascus in Syria is still served by a dam that was built by Caesar's legions.

Some land in the Rio Grande project area was first irrigated 300 years ago when the Spanish conquistadores and padres first used El Paso del Norte.

There is every reason to believe that the projects that have been built under the reclamation law will serve well for generations to come. We do know that in the time since the first of them was built no insurmountable problems have been developed between the Department of the Interior and the people of the project areas. I am certain that none will.

I personally have worked in this field for nearly 15 years. I have visited all of the operating projects and most of those now being constructed. I have met with scores, even hundreds, of groups representing the people of these project areas. I have met with them in schoolhouses and grange halls, where they held their local meetings, and I have met with them in my office in Washington. We have discussed many problems and have exchanged experiences. I never held nor attended such a meeting at which there was a hostile atmosphere. The reason for this is that there has consistently been an attitude of cooperation on all sides.

In all of these meetings I have never had anyone who was living on one of these projects tell me that the Federal Government had tried to deprive him of his water right. In truth, the Bureau of Reclamation has not tried to deprive any of the people being helped through or affected by the reclamation program of any right, water or otherwise.

I make this personal reference because a cult has grown up in the West, vociferous much beyond its size, which would have people believe that there was a mysterious threat in the reclamation law to the rights of the individual to use the project water. It seems peculiarly left-handed and disingenious to me that the people of the West should be asked to believe such rot. Paid propagandists apparently will distort anything to attempt to gain an end. Actually the reclamation law is the only Federal water-control enactment which directs that its program must be carried out under the State laws by which water rights are perfected.

One more explanation. It is the policy of the Department of the Interior and of its Bureau of Reclamation to turn over for local operation water projects that are built under the reclamation law. Of 65 irrigation projects now in operation, 45 have been turned over to the water users to manage. These include such large and important projects as the North Platte project in Nebraska, the Boise project in Idaho, and the Salt River project in Arizona. These major examples of Reclamation's operations are conducted entirely by water users' organizations. The control is local and is as responsive and responsible to the people of the project as a city government is to its electorate. I point these facts out because as you consider great plans for meeting this complex and wide-flung problem in west Texas you will want to know whether your projects will be locally controlled.

In addition, the Department of the Interior long has recognized the importance of conducting its operations near the affected people. This Department has been a leader in decentralization and is actively moving toward even greater shifting of planning and operating functions to the field. About a

year ago the Department established a Southwest field committee with headquarters at Albuquerque. This committee is composed of the top regional officials of each of the Interior agencies that operate in the region, and the chairman, with a small staff, reports to the Secretary in Washington. The Southwest region includes Texas, Oklahoma, Arkansas, and parts of Colorado, Kansas, Missouri, and New Mexico.

The Bureau of Reclamation, as you know, maintains close relations with local people. In the current west Texas investigation the Department of the Interior is represented locally by Reclamation's regional director, Mr. Howard Robbins, who has offices in Amarillo. He has conferred constantly with your leaders in the course of the present work and he will continue to do so until the assignment has been completed. He and all members of his staff and the staffs of all of the other Interior agencies in Texas are pledged to give you all the engineering and technical assistance that you need and desire.

After Interior's report on the west Texas projects has been prepared, all other interested agencies of the Federal Government, as well as those of the State of Texas through your Governor, will have full opportunity to review the report and comment on its findings.

I would emphasize, as well, that the reclamation program is conducted in accordance with well conceived fiscal requirements. The Federal Government finances the construction and requires repayment over a period of years by those who are the beneficiaries. Power that may be generated is sold with two objectives in mind in setting the rates; one, to carry with interest the cost of producing power and to repay a fair share of the total project cost, and the other to enable the energy to be sold at the lowest practicable rates so that maximum benefits may be extended to the people. Irrigation costs, for their repayment, bear no interest charges, and irrigation repayment contracts run for a maximum of 50 years. The costs of providing municipal water are repaid with an interest charge, where it is appropriate, that does not exceed 3½ percent. The cost of providing for control of floods in these projects is without requirement for repayment. In any particular case, the Congress may provide for special terms to meet peculiar conditions.

The first requirement is for an engineering plan of projects to meet the needs. The next is an economic appraisal of the proposed undertakings. Then follow consideration of the plans by the local people, the State, the Federal agencies of interest, the President, and the Congress. When the projects are authorized, appropriate contracts are negotiated between Interior and the water users, and the conditions of repayment are then fixed. Appropriations next are sought for construction, and the job is as good as done. I would not fool you into thinking that all of this requires only a few weeks or months. It takes time. I have seen a good many projects carried through this mill in my 15 years of service, so I know projects can be completed once the engineering surveys have been started.

Through the years the repayment record of reclamation projects have been good. Delinquencies in payments are almost negligible. At the same time, there has been no harsh treatment of project water users. In times of real emergency, special provisions have been authorized by the Congress, but these have rarely been required excepting during a part of the period of the depression.

The demand and necessity for conserving waste water in Texas is here, and the value of impounded supplies is known, not only by the rank and file, but by the big industries that have heavy investments in this section. With the great ground water reservoir in the high plains of Texas being depleted at a rate many times the natural annual rate of recharge, a problem has been created that it would be folly to ignore. If present trends continue, I am informed, some localities will be seriously affected within 10 years. The unused surface waters must be used to put out the fuse that has been lit on this time bomb, and to bring into safe balance the use of the ground water resource. You are fully aware of the fact that the economic loss being sustained in this area due to a lack of water can be overcome only by dynamic action.

I have been advised that only recently an opinion was given that Texas water problems are so acute that time does not permit perfection of a total, well-conceived plan of development. It is ironical that in the face of serious water shortages, coupled with ever-expanding demands for increased supplies, it is implied that the services of experienced engineers and careful investigations and multiple-purpose planning should be ignored. This is the time when west Texas can least afford to make a careless, piecemeal approach to its water problem. This is just exactly the time when comprehensive planning, expeditiously done, will bring the greatest returns.

Texas only now is entering its second stage of development. Until recently your greatest sources of wealth have been raw materials. Your cotton, wool, and mohair have brought relatively little manufacturing. Only a small part of your cotton production and even less of wool and mohair are consumed by Texas mills. You are justifiably proud of your cattle, but leather and shoe manufacture is another industry that has been only small expansion within the State.

With continued development there should come a multitude of new industries. Water and power will bring them. As more water is impounded, Texas will reap great rewards in the field of chemurgy. In west Texas, once you have stored water now wasting, once you have your distribution systems to serve the cities and the irrigation projects, once such power as may be generated is made available, you will have overcome the obstacles standing between you and an even greater era of prosperity than the one you are now enjoying. There will then be a clear track into the future.

With characteristic courage and vigor you have gone about the job of seeing what can be accomplished in the full development of the water resources of this area. Through your Senators and representatives in Congress and through your community leaders, we in the Department of the Interior know that your goal is to sponsor projects that will be wealth-creating and that will contribute to permanent growth. We believe that the west Texas projects will provide a sound investment for our energies and for Federal funds; that will strengthen the economic security of this region and of the entire Nation. Speaker RAYBURN, Governor Shivers, and members of the Texas congressional delegation have shown a keen interest in this water problem. I am sure that their cooperation will continue. The Department of the Interior can bring to the solution of this problem the necessary technical know-how.

At times like this, I recall a wise and revealing comment made many years ago by one of the great water planners of southern California, my home. A hot debate was raging over whether the fledgling city of Los Angeles should build its first huge aqueduct. Mr. William Mulholland was the engineer-adviser. Finally the question was put to him. Would such a stupendous project be needed? He said, "If you don't build the aqueduct, Los Angeles will never need it." Everyone saw at once that this was true. The aqueduct was built. The water that it brought created the growth that required the capacity of that aqueduct. Since then two additional and more ambitious aqueducts have been built, and Los Angeles is now grown into a metropolis.

I am sure that we of the Department of the Interior and you west Texans will go forward together in understanding and good will through the difficult process of planning and constructing the projects that you similarly need so badly. You have recognized the need for comprehensive studies, leading to integrated design and construction of projects in the long reaches of your river basins and in behalf of all the people.

Speaking for myself and for the personnel in the various agencies in the Department of the Interior who are now engaged with your problems: We are proud to have been asked to assist in this program. I am certain that a solution acceptable to all can and will be found.

The Upset Down Under

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Morley Cassidy from the Washington Star of January 16, 1950:

THE UPSET DOWN UNDER—AUSTRALIA, NEW ZEALAND REVOLT AGAINST PROSPEROUS SOCIALISM—PEOPLE WANT CHANGE AWAY FROM REGULATIONS AND ARE PREPARED TO PAY HIGH PRICE FOR IT

(First of a series)

(By Morley Cassidy)

SYDNEY, AUSTRALIA, January 16.—Revolution is all around you, these bright blue summer days in the Antipodes.

It is one of the strangest revolutions in history. It defies every rule in the book.

"Stick around," says the newsstand man at King's Cross, the Times Square of Sydney. "You're going to see some changes around here. And quick."

Changes? Who would want to change things in Australia?

Australia can look around itself these days, from the great cities of Sydney and Melbourne to the sheep stations of its own far west, 2,000 miles away, and see abundant evidence that it is one of the world's luckiest lands.

It is in the middle of a boom, perhaps the biggest it has ever known. Since the war's end it has been riding a crest of flooding prosperity.

Half of Australia, right now, is on its way to the beaches, or just coming back from 4 weeks' holidays. The other half is at Randwick or some other race track, trying to outguess the horses.

There is money in every pocket. Sheep ranchers, counting their holdings in thousands of square miles, are getting 60 cents a pound for average wool; 8 years ago they were getting 10 or 11. Beef growers are doing as well. Dairymen have the world bidding for their butter and cheese.

Everybody has a job. There are 23 columns of "positions vacant" want ads in the Sydney Herald. Three people are advertising for work.

Wages are the best Australia has ever known. The basic wage of 6 pounds 4 shillings (about $13.90), which used to be high, is now a joke. Bright lads now are offered that to start and promised a bicycle as a year-end bonus. The Australian pound is valued at about $2.24. Before the recent devaluation, its exchange rate was about $3.23.

Over in New Zealand, 1,300 miles away across the Tasman Sea, the story is the same. There, as here, prosperity is bolstered with the most advanced social services in the world.

PEOPLE ARE IN REVOLT

If there is any country in the world—outside the United States—where, one would think, people should be happy and contented, it is in these two dominions.

But the peoples of both countries, today, are in revolt. They want changes, and are prepared to pay a stiff price to get them.

Within the past 6 weeks, both New Zealand and Australia have fired the governments under which all this prosperity has come about.

In New Zealand, the sedate and tranquil little England of the South Seas, the voters marched quietly to the polls and threw out the socialistic Labor government of Prime Minister Peter Fraser, which had been planning and creating a Socialist utopia for 14 years.

In Australia, they voted more rambunctiously, and with more grim bitterness on both sides.

The result was the same. The Labor government of Prime Minister Joseph B. Chifley, committed to a full program of socialization on the British model, which had carried Australia through 8 years of war and peace, was thrown out of office with an enthusiasm which leaves it, even today, stunned and mystified.

OUTWARD EXPRESSION OF REVOLT

These elections, startling as they were, are only the outward expression of a revolution—or, as the Marxists would say, a counter-revolution.

In Australia, particularly, every man in the street knows that last month's elections were only the first step on a hard, new path.

Its new government, headed by Prime Minister Robert G. Menzies, today is mapping the step-by-step program that it will pursue in the new direction Australia has chosen; and it knows even better than the man in the street that it faces a hard task, and bitter fights.

Already, in its first 2 weeks in office, it is faced with a waterside strike of dock workers whose union is Communist-controlled. As this is written, 30 vessels are standing idle over a seemingly frivolous complaint involving the first-aid men for the stevedore crews.

There will be more such strikes, many more. There will be industrial disorders, in all probability, on a scale and of a bitterness which even Australia has not seen before.

AUSTRALIANS UNDISMAYED

The prospect does not dismay Australians. They weighed this chance when they cast their votes. They voted to run this risk, with their eyes open.

Seldom has any party, anywhere, stated its purposes more clearly, and with less mumbo-jumbo and bait to unthinking voters, than the combined Liberal and Country Parties in the elections just past.

Every voter was told, in the firmest possible language, that a vote for the Liberal-Country Party ticket would be a vote for free enterprise against the Socialist state.

He would be voting for the outlawing of the Communist Party, and the purging of Communist trades-union officials.

He would be voting for a firmer hand in dealing with unjustified strikes which have crippled Australian industry. He would be voting for a program aimed at more production through wider use of such devices as incentive payments, anathema to the Socialist state.

He would be voting against a program of full employment based on public works; he would take his chances on the full employment growing out of healthy, productive industries.

VOTING TO DESOCIALIZE

He would be voting, finally, to desocialize much that has been done in the past 8 years—to fight side by side with the banks (imagine!) in repealing the legislation aimed at creating a state banking monopoly; to restore competition between national and private air lines and shipping companies, to wipe out the Government monopoly in FM broadcasting and television.

And in exchange, he got only these few promises of concrete benefits.

The social services (many of them first introduced by the Liberal Party) would be retained, and the benefits would not be reduced.

Their cash value would not be raised, but their real value—and the value of all wages—would be increased by putting value back into the pound.

The child endowment for families would be extended to give 5 shillings (about 60 cents) a week for the first child. (All others are already receiving 10 shillings.)

In industrial relations, the emphasis would be on ending class warfare through firm insistence on arbitration, promotion of consultations between employers and employees, and restoration of union democracy by the legal requirement of secret ballots for union elections and strike calls.

VOTED TO RETURN TO OLD PATH

Australians, in these days of full employment and mass prosperity, had every reason, it would seem, to vote for more of the same.

They didn't. They voted, instead, for a return to the old path of free enterprise and competition, a firmer hand with strikes, an end to Government monopolies.

And their vote left no room for argument. The united Liberal and Country Parties here, with an agreed joint program, polled 2,127,268 votes (at the latest count, about 99 percent complete). The Labor Party polled 1,896,986. These figures almost exactly reversed those in 1946.

In 6 years, the Labor Party had declined from 50.2 percent of the popular vote in 1943 to 47.9 in 1946, and now to 40.9 percent in 1949.

And in New Zealand, where the issues were almost identical, and the Labor Party even more firmly entrenched, the results were the same.

Why?

I have been asking that question of hundreds of people, in the course of nearly 5,000 miles of traveling across Australia, from Darwin in the steaming north to Sydney, Melbourne, and Canberra, in the southeast, and across the Tasman Sea to Auckland and Wellington in New Zealand.

TWO ANSWERS HOLD CLUE

Two typical answers seem to hold the clue.

Here's a truck driver in the outskirts of Newcastle, the Pittsburgh of Australia, where the great Broken Hill Proprietary processes most of Australia's steel:

"Why," he says, "it's this socialization. This Chifley bunch was out to take over everything, starting with the banks.

"Next would come steel. And then road transport—they've already hinted at it.

"I've got my own truck, and my eye on another. I could find work for a fleet of them. You think I'm going to nationalize myself into a bleeding government driver at 1-pound-10 (about $3.35) a day?"

And here's a young dairy farmer, with 23 head of Ayrshire cattle, on a farm near Camden, New South Wales—a modern little town with soda fountains in the heart of the eastern plains.

"I was beginning to think I'd been all wrong about things," he says, keeping one eye on the modern milk-cooling machine.

"I had 5 years in the war, and I was under the impression we were fighting dictatorship. At least, that's what I was fighting, myself."

FOUND DICTATORSHIP AT HOME

"And then I came back here to find that's what we were getting here at home. The State trying to run everything—telling you what to plant, and who could get machinery, and all that.

"Maybe I'm misinformed, but I don't see any difference between dictatorships. Some are left, some are right, but I was fighting against dictatorship, period.

"Now we're rid of it here, and you'll see Australia bounding ahead like a kangaroo."

These views, in a hundred variations, seem to me to reveal the full significance of the elections in New Zealand and Australia which have surprised the world.

The first conclusion, so widely and vigorously expressed by the voters that it cannot be escaped, is simply this:

In both Australia and New Zealand, the one great issue was the Socialist state and its program of a planned economy.

Out of this grew a host of secondary issues on which feelings ran high—in Australia, communism's part in the planned economy and how to wreck it, continued butter, tea and gasoline rationing, attributed to Socialist misplanning, and dawdling in last year's coal strike; in New Zealand, high taxes, high living costs, mismanagement of government-run business enterprises, the fumbling efforts to turn an agricultural country into a land of industry.

LABOR PARTY STOOD ON RECORD

In both countries the Labor Party, pledged to a full program of socialization, stood on its record of achievements. In New Zealand this was a 14-year record in which the "welfare state" was firmly established, and state management of industry tested in many fields.

In Australia, there was an 8-year record, including a fine war-time accomplishment, sound handling of finances, and a beginning—hardly more—of the socialization of industry.

In both countries, the vote was so conclusive as to show a genuine revolution in popular thought.

Whether the Socialist state had had time to prove its possibilities, as in New Zealand, or had given voters only a taste of what was to come as here, the voters wanted a return to free enterprise and the fuller production of all the necessities of life which, they seem convinced, free enterprise will bring.

The second conclusion, noted by most politicians and confirmed by scores of conversations, is less obvious but perhaps more significant. It is this:

REVOLUTION OF YOUTH

This return to free enterprise, has been primarily a revolution of youth.

The young Camden dairyman, back from the war, speaks what apparently is in the minds of hundreds of thousands of others in their twenties and thirties. It is a fact over which labor's leaders, too late, are grumbling.

"These young fellows," says a Melbourne railroad man, "have had it too easy. People begging them to go to work for £10 (about $22.40) a week, and all that.

"They take the money, and then complain because they can't get all the petrol they want for their motorbikes. They don't realize how their daddies had to fight to get things as they are."

Be that as it may, labor and socialism—the two here are identical—have become, in Australia and New Zealand, touched with age and a flavor of stodginess.

Their leaders, almost all, are oldsters whose doctrinaire political philosophies have lost all elasticity. The stern party hierarchy represses younger, more flexible men.

SEVENTY PERCENT EX-SERVICEMEN

By contrast, the opposition in the recent election—the men who will hold 74 of the 123

seats in the new Australian House of Representatives, and 46 of the 80 in the New Zealand—are, on the average, 15 to 20 years younger.

Of the Liberal candidates for the Australian House, 70 percent were ex-servicemen. The youngest was 22. More than 50 percent were between 30 and 40.

Australia is a young country, far younger than the United States. It feels its strength in these postwar days in much the same way that America in the burgeoning nineties began to see a vision of what it would become.

Its young muscles, inevitably, chafe at the restrictions of the planned, regimented, noncompetitive state. So now it has thrown them off. How it did it, and what lies ahead, is another story.

Minority or Majority Rule

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. BREHM. Mr. Speaker, minority pressure groups are attempting and in some instances are dictating governmental policy.

Many of these groups apparently have no concern as to the ultimate results which the enactment of their pet legislation will have on the economy or welfare of the Nation as a whole.

Seventy-four new Congressmen came in with President Truman at the beginning of this Eighty-first Congress. Many of them honestly believe that they received a mandate from the people to enact the entire Fair Deal program.

Maybe they are correct in this assumption—but in my opinion 49 percent of the eligible voters does not express a mandate of all the people. If those eligible to vote continue to stay away from the polls—these minority pressure groups will completely dictate Government policy.

A survey of the last election was made in one typical Ohio county and it shows the percentage of various groups that did not even take the trouble to vote:

	Percent
School teachers	11.5
Auto dealers	37.5
Independent grocers	37.0
Clergymen	32.65
Independent druggists	26.67
Members, chambers of commerce	24.57
Physicians	19.58
Rotary Club members	14.01

If this class of citizens refuse to express an opinion, we will lose our freedom by default.

I would outlaw legislative activities of all paid lobbyists except such testimony as they might care to make on the record—before committees, hearing proposed bills, or letters sent over their signature.

I would disfranchise all eligible voters for a period of 4 years who failed to register and vote in 2 successive national elections wherein Members of Congress were up for election, unless they furnished a reasonable excuse, properly sworn to, as to why they failed to vote. If they then failed to vote at the next national election following this 4-year period, they would be disfranchised for another 4 years.

If we had a clear-cut issue before the people and a majority of all those eligible to vote made a choice, diagnosis would be easy. If a majority of my people then voted for this new socialistic order, I would know that I had been born 30 years too soon and would certainly step out of Congress. However, when less than one-half of those eligible to vote in a county, give a majority to President Truman and also a majority to the Republican Congressman who represents that county, diagnosis of the majority's views is difficult.

I want a majority opinion of all those I represent. What I now have is a majority opinion of minority groups. I have not always agreed with them. Still if they are the ones who go to the polls and express an opinion—I must eventually reflect their opinion in my voting. I certainly cannot reflect an opinion as that of the majority—especially if the majority do not vote.

Address by Hon. Edwin C. Johnson, of Colorado, Before Federal Communications Bar Association

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on January 12 before the annual meeting of the Federal Communications Bar Association, at the Mayflower Hotel, in Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CARRYING COALS TO NEWCASTLE

It is with some trepidation that I come here to speak to this gathering of communications notables, for no one realizes more than I that here we have the collective brains of the communications world. Present we have the Commissioners—and their staff; we must not overlook their staff. Out there sit the lawyers, calm and collected with their legalistic harpoons well concealed, who not only convince their clients that a Commission decision is illegal, incorrect, or stupid and should be fought through the highest court in the land in the interest of equity and justice, but get paid for it. So tonight, I have the dubious honor of telling the folks who make the wheels spin just how the spinning is done.

To discuss the problems in communications—common carrier and broadcasting—before so distinguished a group is, I know, foolhardy. But as you also know, Senators are inclined that way, and for a Senator to evince deep interest in radio matters requires an even greater degree of foolhardiness. Anyway, here I am.

First off, let me say I expect to be misunderstood. Everytime I say anything about radio, and particularly about color television, I read at least a half-dozen versions of my statement. I ascribe that merely to the fact that each person likes to read into what is said what he wants to hear. Maybe it's because Congressmen use too many weasel words when they bare their souls but it is beyond me how one can be positive in the radio world today with its constantly expanding technical horizons. Particularly does that apply in the field of communications. As a result of developments or discoveries in the laboratory, what one says today may well be fallacious tomorrow. Tonight, I intend to stick closely to broad policy matters which ought not be affected by the progress of the art.

Our Senate committee is interested—vitally interested—in communications policies. Since we have many other duties and many other problems, I ask you to be patient with us. I repeat, we are interested enough to give the matter a lot of our time and our energy; we are interested in the application of the laws which we have written; in the policies formulated by the regulatory agency; in its day by day administration; in its attitude and reactions; and in the efforts the industry makes to keep the Commission, and the Congress, on what it regards as the straight and narrow path. The trouble is, of course, that while everybody agrees that the proper yardstick for the operation of utilities and broadcasting is "the public interest" it seems to make a whole lot of difference in which corner one sits as to what constitutes the public interest.

In an address at Amherst College last month the Chairman of the Commission hit this nail squarely on the head when he quoted the late Justice Harlan Fisk Stone to the effect that "the issue * * * is between the conflicting interests of the individual and of society as a whole. * * * There comes a point in the organization of a complex society where individualism must yield to traffic regulations, where the right to do so as one will with his own must bow to zoning ordinances, or even on occasion to price-fixing regulations. Just where the line is to be drawn which marks the boundary between the appropriate field of individual liberty and right and that of Government action for the larger good * * * is the perpetual question of constitutional law."

Justice Stone's eloquent language states the problem which Congress and the Commission must deal with constantly, frequently against the violent opposition of the legal fraternity.

We in Congress regard the Commission as an extension of ourselves; we regard it as the arm of Congress created to administer the details and weigh the arguments which Congress has neither the time nor the facilities to do. To evaluate the work of the Commission, however, does not require a profound legal background; in fact, the act does not require that one be learned in the law to be a commissioner. So to the extent that the Commission performs legislative acts, we in Congress feel that not only are we competent to evaluate its actions, but that we have the constitutional duty of exercising a close supervisory interest in them.

And like a fond parent who desires his children to grow up to amount to something, we occasionally exercise strong and purposeful parental guidance when we feel that things are not going along as they should. There are two schools of thought nowadays with respect to bringing up children: the so-called progressive education system which follows the Freudian precept of not interfering with the child and allowing it to express its inner urges whatever they may be and never, never restricting or curbing its excesses, and then there is the old-fashioned school which still adheres to the philosophy that to spare the rod is to spoil the child. With respect to the Commission, most of us in Congress, being practical, find ourselves half-way between these extremes.

Seriously, this is a vital problem. The last two decades have witnessed a vicious totalitarian trend which insists that the quasi-judicial, quasi-legislative arms of Congress are administrative agencies under the Executive. The results have led to a prostitution of the original purpose of Congress in the creation of such agencies as the Trade Commission, the Interstate Commerce Commission, the Power Commission, the Communications Commission, and similar commissions. Under strong Presidents and complacent Congresses these agencies have not only come hopefully to regard themselves as arms of the executive, but they actually perform their functions as if they were part and parcel of the executive. Unfortunately too, the citizens who come under the regulation of these agencies have accepted this new theory—to their sorrow and ultimately to the eventual loss of their fundamental democratic rights.

Frankly, we in Congress believe these dangerous trends must be reversed and the constitutional powers of Congress restored. However, we cannot make much headway unless we have the cooperation of such groups as yours who should be vitally concerned with the totalitarian aspects of the present trend.

It must be obvious that there is great possibility of mischief if the arms of Congress finally become so wedded to the executive as to become inseparable from it. The agencies, under such a system, are bound to carry out the programs and policies of the particular administration in power rather than adhere to a strict and literal interpretation of the statute under which they operate. The viewpoint of an important party leader then becomes more compelling than reliance on the protection of the law. The rights of citizens to bring about changes through their legislative institutions are subrogated; to get something done frequently requires only influence in the proper places with the party in power. In such a political climate it is who you know and not what is equitable which counts. Not only is such a system intrinsically dangerous and a subversion of the original idea of the founding fathers, but it is bound to lead to the creation of a powerful and all-controlling centralized government. It must be resisted, even by those who gain temporary advantage from it for themselves and their clients because in the end it will swallow up even those who profit from it.

I am frank to admit that we in Congress are partly to blame for this unfortunate trend. We have been complacent when we should have been deeply concerned. We can do something about it and we should meet the issue head-on.

For myself, I believe that the existing system of giving the Executive the appointive power to the commissions which are arms of Congress is basically unsound. It is only natural that those who owe their jobs to the Executive would be reluctant to oppose Executive policy and suggestion. Perhaps, if the appointive power were vested in the Speaker of the House, with the Senate confirmation requirement remaining as at present, these important quasi-judicial, quasi-legislative agencies really would attain the independence so vital to democratic government. Moreover, there should be unified standards of tenure, salaries, cessation of office, selection of chairmen, and powers and duties of commissioners in all the independent agencies instead of the present hodgepodge. There should be a more formal and searching annual accounting of commission operations to the people, through the Congress. I am wedded to these principles because I believe in democracy and fear totalitarianism, and I offer them as suggestions which should concern you lawyers in the administrative field.

It is important to emphasize that recent studies and proposals for streamlining the Government, such as the Hoover Commission report, valuable and informative as it is, have a basic weakness. In the interest of unification and streamlining, the emphasis has been to bring about a tightly knit structure of Federal Government functioning under the Executive. Such recommendations stem from the managerial concept followed in big business of having, above all, an efficient administration. But it overlooks and actually denies the fundamental basis of our democracy because it sacrifices and impairs the rights of citizens to participate directly in their Government. Without disparaging loyal, able, and devoted civil-service employees, all of you know that bureaucrats, good and not so good, earnestly believe they know what is good for you; and if you don't like it, that's your misfortune. No Congressman or Senator dare tell his constituents that he knows their problems better than they. Democracy does not work that way.

The history of communications comprises a fascinating panorama of the progress of mankind. From the dawn of civilization, each improvement and advance in the means of communicating more effectively with one's fellows has added to man's spiritual and economic progress. Despite this century's progress in communications, all of us here know that in some respects we are only on the threshold of developments which will mark a new advance in man's climb toward his ultimate destiny.

And since our country and our people are in the forefront of each new development, it is important that we cling tenaciously to high standards and religiously follow those vital precepts which insure continued progress and full freedom of communications from both political and selfish private domination. The modern dictators have taught us that the primary essential step toward seizing control of a country is to take over communications.

Even in this country which is genuinely devoted to democracy we have gone far in some fields by putting Government into many activities that might be better done by private initiative. If this country would hold its position of world leadership, the private-enterprise system not only must survive, but it must be made to flourish and expand since it has proved to the world that it holds the best record for bringing the greatest good to the greatest number. Without the shining example of the free-enterprise system of this democracy, a dismal prospect indeed would face the world. Free enterprise and democracy are inseparable; one cannot function at its best without the other.

Therefore, my criticisms and suggestions are not those of one who regards further Government controls as beneficial, or socialization of enterprise as the dawn of a great new era for mankind. On the contrary, I fear such steps and no one regrets more than I do whenever industry adopts policies which inevitably compels more stringent controls.

Communications is peculiarly vulnerable to the creeping paralysis of bureaucratic control. In the first place, it is a licensed industry. Some think it ought not be licensed, but common sense and the nature of the art make it difficult for me to agree with them. Frequencies are limited, and even if they were not, the economics of the situation limits the number of licenses, and public utilities and broadcasting must be a regulated monopoly to render good service. Incidentally, we ought to be happy about this on both counts. I have recently visited areas where the economy won't support two stations but where two dozen or more stations are operating, simply because every politician thinks he must own a radio station to air his particular political views. If each Member of Congress and each member of the President's Cabinet plus the horde of political leaders in each State owned a radio station, what a racket there would be—in both meanings of that ugly word. And all of you know that such a situation in another neighboring country lies behind the difficulties experienced at the recent NARBA conference.

Licensing implies, and in fact requires, adherence to very definite standards based upon the public interest. To those who argue for standards which should be limited to electrical interference I say "bunk." Such advocates live in a dream world of fancy, not fact. That is their idea of free radio, but it isn't mine. In my judgment, radio wouldn't be free very long if their interpretation were followed. Reasonable men differentiate between private privilege and the public good. Under such criteria, it is plain that the licensing agency has a duty to see that the license is used always in the public interest. Otherwise it becomes not a license but a special prerogative and the so-called licensee the possessor of a facility which belongs to all the people but over which the people have lost control.

That isn't freedom; it isn't even competition. It is special privilege of the worst kind with all of the faults and errors inherent in absolute monopoly. Under such a system, the public would get what the licensee deemed fit; under such a system radio would deteriorate to just what it is in some other countries where the only standard is the political pull necessary to acquire a license.

Of course, regulations can be made arbitrary, capricious, onerous, and burdensome, or even static in the interest of those who profit by the status quo. But they are more likely to become that way only when the licensee is doing a minimum job. When the licensee persists upon skating on thin ice, always seeing how little he can get by with, he strengthens the hand of a bureaucratically inclined agency. It is faulty and sloppy operation that brings on a blue book; it is clever deals that brings on an AVCO rule; it is monopoly practices that bring on network regulations. Licensees and their lawyers constantly cry about the Commission and its greed for more power but the most effective way to pull the Commission's fangs—if fangs it has—is to do such a good job of broadcasting that there is little for the Commission to do except formulate technical regulation.

I am viewing with alarm quibbling against imaginary restrictions and I am not criticizing radio, for American radio has done a magnificent job. There are 10 to 1 more fine radio stations performing a great public service in this country than in all of the rest of the world combined. There are licensees—and a lot of them—whose sole aim is to render a great public service and they have profited handsomely by adhering to that policy. The tragedy is that this is not better known and better understood and appreciated. We only hear about the few chiselers who either aim to get a license so that they can peddle it at a profit, or who regard a license as a potential bonanza to be exploited for all it is worth. They give radio a bad name, and as long as they exist the regulatory agency will have the backing of public-spirited citizens to pursue arbitrary and distasteful policies if they deem such a course necessary.

We will always need a strong, alert FCC whose sole passion should be to regulate the industry in the public interest. I have not hesitated to criticize the Commission and its policies when I thought criticism was justified and to praise it when its work has been noteworthy. It is my particular congressional responsibility to maintain constant watchfulness of its operations.

The Commission should continue its wise policy of constantly raising its sights and stature. It is required to sit in a judicial

capacity on many matters and its best friends in Congress would like to have it attain in its proceedings the dignity and stature of the judiciary. We do not believe that the Commission as a body or individually should discuss or receive ex parte testimony in contested cases, either from its own lawyers or from counsel for one of the litigants. A proper observance of courtroom ethics and procedure would make false the back biting, the petty innuendos, and the snide remarks of its critics.

Our biggest complaint on Capitol Hill is the long delay in processing cases. I do not need to tell you lawyers that delay in many instances is more deadly to an applicant than a flat but prompt rejection. I dealt at some length with that problem in my report on communications to the Senate last April and I hope that I will have a brighter picture to present next April. Late last year, the Senate Committee on Interstate and Foreign Commerce requested and received a complete report on the status of the Commission's unfinished work. When we check again we are going to know definitely and clearly just how rapidly and how competently it performs at least one of its most important functions—the handling of broadcast cases.

Some of us think that the time has come for the Commission to overhaul its rules and regulations; to discard some procedures and revise others. We think that perhaps the network regulations require further scrutiny in the light of changing conditions. We think that the Commission might be able to do more in the purely scientific and technical field and that it could do more if some antiquated and unnecessary functions were dispensed with. Even though the majority of the Commission's engineering staff is engaged in monitoring and field engineering, there is some question as to how necessary this work really is now. We ought to know a good deal more about accounting practices in the telegraph and telephone field. Too, a revision of the tariffs in the common carrier field might well result in tremendous savings to millions of users throughout this country.

My views on the question of super power for standard radio broadcast stations are too well known to require elaboration here. I mention the subject only because I hope that the Commission will shortly provide for duplication of clears since the people of this country need more frequencies desperately. Certainly, it has the authority to do so. The maintenance of clear channels is an anachronism in modern radio practice. Unfortunately the clears cannot render the local service that many areas deserve hence they do not serve well. It is archaic to contend any longer that clear channels serve a useful purpose in the United States and the best proof is that the networks now frankly admit that their own seaboard clears might be duplicated without harm to them.

The question of power, of course, is a policy matter for the Congress to decide, since the vital issue of domestic monopoly and international comity are involved in it. We might have been in a much stronger position at Montreal in our efforts to reach a conference agreement had we first eliminated the problem of the clears. Most certainly then we could have dealt with cleaner hands with our Latin-American neighbors. I do not condone for one moment any attempt by any Nation to hold a pistol to our heads, and least of all by one whose entire economy depends on our friendly cooperation.

The United States ought to give serious consideration to the sensible proposal to assist Cuba and the whole Caribbean area in converting their local radio from AM to FM. FM renders better service than AM in areas where static interference is serious and where the area to be covered is not continental. Moreover, its use would eliminate pressing frequency problems and AM interference for us since there are ample FM frequencies. Rather than destroy or impair through a veritable babel of competing programs on the same frequency many of our splendid standard radio stations, which have been operating long and faithfully, it might pay us to make a loan or grant for the installation of FM stations, plus the replacement of all existing AM receivers with FM sets. This is a problem which should be studied seriously on behalf of all the smaller Central American countries where radio communication facilities are sparse or nonexistent. FM is an ideal instrumentality for the Tropics.

I am sorry there has been unavoidable delay in reaching a final decision on the color-television question. But I believe that the Commission's present hearing has been justified by the new interest it has aroused in this art. It is taking more time than anticipated, but a sound decision is more important than a speedy one. I have every confidence that the decision of the Commission will be a correct one, because I know that every member is aware of the vital importance of the question with which they are dealing. They must make sure that what they do is sound and permanent. The essential thing is a decision for the long pull; not something that will please a few powerful economic interests for today's profits. With respect to this matter the Senate Committee on Interstate and Foreign Commerce will have the advantage of a technical report by a committee of five impartial scientists, headed by Dr. Edward U. Condon, on the engineering practicality of color-television development. I am confident that report will fortify and bolster the Commission's decision that we are ready for color television now.

Television is a magnificent art which promises to bring finer entertainment and more information to the people of the United States. Its impact upon our culture and life socially and politically can hardly be evaluated. When the American people purchase 2,500,000 sets in 1 year they deserve and have every right to expect the best science can offer.

It is in the public interest, therefore, to promulgate quickly broad and sufficiently general standards for color so that this delightful improvement may be developed naturally in the traditional American, free enterprise, nonmonopolistic manner. Since it is generally agreed that color is practical, most emphatically the public interest would not be served by waiting until 30,000,000 families have invested upward of $6,000,000,000 in black and white sets before switching to color.

I hope, too, that the Commission will approve at the same time standards for the immediate commercial utilization of a large number of channels in the ultra-high-frequency band so that a realistic Nation-wide competitive system of television may be developed.

Certainly the public interest requires such an allocation. Easily identified selfish interests are laboring day and night to lift the freeze now and do nothing more. When the proposed 42 UHF channels are allocated on a city-by-city basis throughout the Nation and standards for their use promulgated there will remain no reason for continuing the present freeze on VHF licensing and, of course, it should then be lifted and not before.

All in all, the year ahead in communications promises to be fruitful, exciting, and eventful. Our Senate committee will pursue its studies on the operation of Federal communications systems in an effort to determine their necessity and desirability; we shall explore the entire question of frequency use with the purpose of making a more effective utilization and a more equitable distribution; we shall continue our studies of the serious and pressing problem of domestic and international record communications carriers with the hope that steps can be taken to combine their facilities with the purpose of bringing about lower costs and better service and at the same time improve this country's military and official position in common carrier communications; we shall continue to give attention to legislation which passed the Senate last session designed primarily to improve the administrative and quasi-judicial functioning of the Commission; and above all, we shall try diligently to meet our full congressional responsibilities by maintaining a policy of cooperation and watchfulness.

Commentary and Recommendations Upon the McKinsey & Co. Survey and Report Covering the Port Patrol Division of the Bureau of Customs, Treasury Department

---

EXTENSION OF REMARKS

OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. RAMSAY. Mr. Speaker, under unanimous consent, I include the following commentary and recommendations upon the McKinsey & Co. survey and report covering the Port Patrol Division of the Bureau of Customs, Treasury Department, respectfully submitted by Lodge No. 981, American Federation of Government Employees, to better serve the public welfare and security:

A FACTUAL RÉSUMÉ

The Port Patrol Division is one of the most important units within the customs service.

It is an armed police force, strategically stationed 24 hours each day at piers, airfields, and in radio cars on mobile patrol as a bulwark protecting the welfare and security of the American people.

In times of war it is as important as is our merchant fleet itself. It stands guard against the sabotage of bombs and incendiary devices, or other forms of sabotage, and against the operations of espionage rings.

In times of peace its services are legion and range from the detection of counterfeit money to the apprehension of narcotic smugglers. It protects the Government revenue. It safeguards the public health from various diseases which could be brought into the country with parrots, monkeys, or other animal life. It stops illegal entry of plant life which could bear destructive insects with it.

The narcotic control work performed by the port patrol is exceedingly important. The illegal narcotic business is detestably vile. It wrecks homes and families through addiction, produces murderous criminals who ruthlessly take other lives through gangsterism, spawns vice dens of degenerates and prostitutes and causes financial losses that are appalling.

Standing at the many doors of entry into our country, the port patrol seizes in single operations the large shipments of narcotics that are intended to supply thousands of individual peddlers.

The personnel of the port patrol is rightfully proud of its 40-year record of achievement and believes that a study of this record will always be illuminating and produce many surprises.

Any reorganization of such an important unit as the port patrol is attended with grave responsibility to the American people.

The National Customs Service Association is an employee organization that includes very few port patrol officers within its membership. The vast majority of the membership performs duties in the customs service that have no resemblance to the duties performed by the port patrol officers. This organization has, however, filed with the Congress a commentary and a set of recommendations upon the McKinsey report.

Lodge No. 981, the port patrol officers' representative organization, believes that a commentary compiled by the officers who rub elbows with the most lawless, yet the shrewdest, criminals and who have actual contact with the problems of this work, will be a definite contribution to the public welfare and security.

Concern is felt about many of the McKinsey recommendations which require only administrative acceptance to become effective. A lack of understanding of the deterrent effect of our work seems to prevail. The value of our work cannot be measured in the number of seizures alone. Three pertinent questions must be considered. What would happen if all port patrol officers were removed? What will happen if too few port patrol officers are there? What will happen if demoralizing working conditions destroy morale and efficiency?

In the interests of the public welfare and security, Lodge No. 981 respectfully requests your consideration of the following commentary, covering chapter VIII of the McKinsey report:

FROM THE M'KINSEY REPORT—PROTECTION, INVESTIGATION, AND ENFORCEMENT

"(a) Reduce the amount of merchandise guarding where study indicates other agencies should do more of the work."

We believe that a very important fact is being overlooked here.

During the time that a vessel is berthed at a pier, illegal merchandise or narcotics may easily be secreted on the pier, hidden with the cargo. We believe that the port patrol officer should remain at the pier as long as any cargo rests on the pier. If he is removed when the vessel sails, the door is opened for the entry of any such secreted merchandise or narcotics. There is no other agency sufficiently trained or authorized to perform this enforcement work. The agencies employed to reduce pilferage cannot be held responsible for the law-enforcement work of the port patrol.

"(b) Increase the mobile patrols where practical, thereby reducing costs."

Our contribution to the public welfare and security is the justification for our existence. Any worth-while contribution demands fixed posts of duty with very little shifting of personnel. The need of flexibility should only occasionally arise. The mobile patrol can spot check locations where there is no port patrol officer on a fixed post. As an adjunct to an officer on a fixed post, the mobile patrol is valuable, rendering assistance during the paying off of an entire crew or when large numbers of longshoremen are leaving the pier at one time. The mobile patrol is also valuable in spot checking areas of a large port where a fixed post is not practical. This spot checking cannot be otherwise than haphazard, however. They must be present at an unguarded location at the exact time that an illegal landing of merchandise or narcotics is being attempted. The persons who engage in the illegal narcotic traffic are smart enough to quickly learn to wait until the mobile patrol has spot checked their location and departed for a check at another unguarded location, realizing that they would then encounter no obstacle to their illegal landing.

We believe that the mobile patrol should never be employed as a substitute for the fixed post of duty. The amount saved would be so relatively small when measured against the great damage that may result, as to make it hardly worth while.

"(c) Expand the use of modern equipment and training to make patrols more flexible and effective."

We endorse the proposal that has been made to send the port patrol officers to the school operated by the Federal Bureau of Investigation if possible. We believe that such instruction would enable the port patrol officers to take better care of themselves in emergencies and enable them to render more efficient and better enforcement work.

"(d) Change New York roll-call practices. Test out operations with no roll call. Until results of test are known, decentralize roll call and require supervisors to prepare themselves to drive cars in order to facilitate speedier coverage and inspection of personnel."

The National Customs Service Association suggested a half hour lunch period in their commentary. This is impractical. The time allowance is too short. It would be very difficult to relieve all the port patrol officers who are assigned singly to many miles of New York and New Jersey dock areas. To permit a fixed post to be uncovered during any period of time would eradicate the benefit gained in the 8 hours that the port patrol officer was on duty.

"(e) Standardize vessel searching practices to achieve more uniform coverage and practices."

We believe the results obtained in the Port of New York indicate a superlative efficiency. We believe that more efficient enforcement can be obtained, however, through an interchange of information between ports relative to suspected vessels or persons. Some such information is presently supplied to the officers engaged in searching vessels, and to the customs inspectors by the investigative agency of the customs service. Such information is rarely known, however, to the port patrol officer on a fixed post or on mobile patrol. We believe that this information should be supplied to all port patrol officers by the investigative agency of the customs service and should be expanded if possible.

"(f) Deployment of personnel according to the work load to obtain greater uniformity and lower costs."

Such deployment of personnel other than the port patrol may be found advantageous and practical. Relative to the port patrol, however, we reiterate our previously expressed belief, that all locations where a vessel is berthed or where any cargo remains should be covered with a fixed post 24 hours each day, and the deployment of port patrol personnel should be avoided.

The fixed post is a door of entry into our country. The deployment of a port patrol officer from a fixed post opens this door of entry to anyone who may be waiting for such an opportunity.

ORGANIZATION

"(a) Establish two assistants to the deputy commissioner to allow for closer supervision and better coordination of customs enforcement work."

We wholeheartedly agree with this recommendation of the McKinsey Co. Lack of coordination between the various ports has greatly decreased efficiency. Seafaring men repeatedly express their belief that the port of New York is a more difficult customs port than other ports.

OUR CONCLUSIONS

If it is earnestly desired to maintain a strong and valuable wartime security link, if the public health is to be efficiently protected from foreign disease, if agriculture is to be screened from destructive insects, if Government revenue is to be adequately protected, if narcotic addiction and gangsterism is to be suppressed in any degree, if vice dens of degeneracy are to be eliminated in any measure, and if the general welfare of the American people is to be safeguarded the port patrol should be strengthened and not weakened.

The port patrol officer holds a position of trust and responsibility. He is exposed to various hazards, personal dangers, and occasionally to death while enforcing the laws enacted by Congress. His personal contacts while on duty include seamen of all nationalities as well as American citizens of all social standings. He is the representative of the United States Government and must avoid incidents that would lead to international correspondence. he must employ tact, and be able to transact his business with highly educated persons in such a manner as to reflect credit to his Government. In contrast, he must reflect firmness and strength to the loathsome narcotic smuggler. This calls for the exercise of a wide latitude of independent action.

It must be apparent that a very high type of person is required to fulfill the duties creditably and efficiently. A more appropriate civil service classification, a greater recognition of the hazards and individual integrity and a more equitable procedure of promotion and disciplinary action will aid greatly to attract the type of personnel required for this important work.

There are approximately 1,000 port patrol officers in the entire United States. They constitute a very small group that is rendering very valuable service to the American welfare and security. All the savings that can possibly be effected within the port patrol is relatively small to the national or Customs Bureau's annual budget and should be seriously studied against the type and many services rendered by the port patrol.

Local Level Selective Service Administration

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. CUNNINGHAM. Mr. Speaker, during the late war, Iowa was fortunate in having many patriotic and able citizens who gave unstintingly of their time and effort as members of local selective service boards. Among these was Mr. Vernon Denman, of Des Moines, Iowa, who served 6 years as member and chairman of a local board. Mr. Denman recently wrote a letter to the adjutant general of Iowa, Gen. Charles H. Grahl, outlining in detail the problems with which his local board was confronted, and how they were solved. Believing the letter would be helpful to all local board members in event that it becomes necessary to expand our armed services through Selective Service, and under permission granted me, I include in my remarks in the RECORD the letter of Mr. Denman to General Grahl:

OCTOBER 10, 1949.

To: Gen. Charles H. Grahl, State director of selective service, Des Moines, Iowa.

From: Vernon Denman, chairman, local board, No. 13-77, Des Moines, Iowa.

As promised some few weeks ago, I have prepared a brief symposium of public relations experienced during about 6 years as a

member and chairman of a local selective service board from the beginning to the end of the act of 1940. Should of necessity the personal pronoun I appear too frequently, please overlook and charge the apparent blunder to the inadequacy of the writer.

Very early in the fall of 1940, it was realized by myself that home front morale was and would continue to be an important factor in the successful conduct of the war. Complaints registered with the Commander in Chief, and other top men charged with heavy responsibilities, be they real or imaginary, could only confuse issues and waste valuable time of such important people, thus, to avoid as much waste as possible and to promote and to improve local morale of both employers, parents, and selectees, a special service was added to the task set aside for the chairman of the board.

As we have discussed this subject before, we have agreed that the following program could very well work both on a State and National basis, just as well as it did in the narrow limits of a local board. It is, therefore, with this thought in mind, that a more extensive use of the plan might be made should the Nation again become involved in a shooting war, that this paper is written.

No form of government survives long without the confidence of the people, in the strict honesty of purpose, in those who are engaged in the administration of that government, providing of course, the people are not by force compelled to admit confidence. Therefore, confidence must be won by actions and deeds and methods. Further, the better informed interested persons are, the less danger of complaints and misunderstandings and the easier to reach an amicable solution to all problems.

How can the Government teach the public as much as possible the mechanics of selective service? First, by intelligent and reliable releases to both the press and the radio, but far more important and satisfactory is for individual board members to take the time to explain the applicable rule or rules to the dissatisfied patron. Most people resent being called before a local board to air their positions. When inescapable that a person must appear, the board should go out of its may to make a hearing pleasant and to avoid embarrassment to that patron, almost at any cost. Harsh words should never be used and the show of authority should likewise be intolerable. When situations arise that are beyond the control of the local board or the State director, prompt solutions must be sought. If a local board member is out of line, then he should be removed and the press should be informed. When the State director or any member of his staff or the National director or any member of his staff become unreasonable or politically inclined, the local board should immediately inform the people via the press and cause removal of such person or persons.

The local boards build and acquire confidence by giving information, that is, all unrestricted information to reporters for the press and by talks to clubs, meetings, and individuals.

People generally have given the word "induction" an abhorrent meaning. They have associated the words of force, compulsion, and unwillingness to the term "induction." They are not very far wrong. Men should be conducted into service. Understandable leadership was never more important or imperative than when men are for the first time entering the armed services of the country.

How best, then, may the above be achieved? The suggestions following are based on several years of actual experience. Here, again, the local board must be well informed and willing to devote considerable time to their assignment.

Invitational meetings should be held to relate to new soldiers the complete story about their new life, especially the trials to be met for the first 3 or 4 days in service.

The invitation should include the parents, the wives, if any, and all friends they care to bring with them. The time of the meeting should be 3 p. m. the day before departure, providing the departure date is not on Monday, Saturday, or Sunday—those afternoon meetings are never successful. Invitations to others, as well as to the men themselves, increase the attendance of the men. An attempt to compel attendance should never be tried.

The meetings should never exceed 45 minutes in length. No speaker should talk more than 10 minutes. The chairman of the local board should conduct the meeting whenever possible. A variety of persons appearing before the audience creates interest. A jovial attitude and presentation of information is desired.

Other organizations should not attempt such meetings. They are doomed to failure. They cannot and never have followed through. An incomplete job is worse than no job at all.

The local board should obtain from the processing Army or Navy post an exact procedure, hour by hour, for the several days required to process a new recruit. This should be prepared under the direction of the commanding officer at the post or base with the cooperation of the chaplain. This permits the parents and wives to live the routine of their loved ones and eases the ties that have been broken. This paper should require not more than 10 minutes to read and should be read by some well-known citizen of the community.

An interesting speaker should then be given 10 minutes to present his subject.

The chairman of the board should then discuss more personal problems, such as, what to take with them, train time and conduct en route to post or base, and the need for officers and enlisted men. Minimize all fear of the needles and fantasies of processing. Warnings against the evils of mingling with women of the red-light districts. Explaining the purpose of USO and all other general information possible. This should not exceed 10 minutes. The final 15 minutes should be devoted to a question-and-answer period. If at all possible, a short social time should be had at the close with some group serving coffee and doughnuts.

It is highly important that the chairman of the board should be at the depot at least 1 hour before train time. Many questions are asked and should be answered. No depot employee should be permitted to march the boys to the train. Last-minute farewells are nobody's business except those who are being separated. A 10-minute warning should be made of departing time, men should not be required to board trains more than 3 or 4 minutes prior to departure. The chairman should board the cars to see that every man has a seat. He should see to it that the trains are clean and that drinking water and ventilation are available. Freedom of movement on the part of the departing boys should not be restricted prior to boarding time.

If the chairman resides within a short distance of the processing station, he should visit each class on the evening of the second day in camp. The board should obtain rules governing the visiting at camps by relatives of the soldiers and should keep their clerks fully informed so they can be of immediate help to all such people.

The chairman should, if at all possible, make himself available for visiting time with men home on furlough and should compliment the men if they have been elevated in rank. A local board that is willing to encourage new soldiers soon becomes well known and appreciated by the parents of the boys.

It is unnecessary to mollycoddle the boys. Far more to be desired is a sincere interest in their welfare and a genuine sympathetic and natural understanding of their emotions and an attempt to lead them toward a more cheerful future than they anticipate.

More detail can be provided if wanted. It is a further suggestion that the Office of the National Director of Selective Service could, during this quiet time, explore the possibilities of adopting the plan on a national scale and be prepared to instruct local boards in its operation, should the need arise. My limited services in the furtherance of the idea are at your command.

It has been my observation during the years I've been a member of a board that those men who have had service in some branch of our armed forces have been the most understanding, the most willing to devote time and energy to the duties of a board and the best all-around members from any standpoint.

Therefore, in selecting a membership for all local boards it would be advantageous to the Government if at least one former serviceman was chosen as a member. There may be a few exceptions to this suggestion but very few.

Respectfully,

VERNON DENMAN.

George Washington Carver: Pioneer in Human Rights

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, a few days ago the city of Pittsburgh concluded a week set aside in the memory of the great American, George Washington Carver. At the end of that week one of our colleagues, the distinguished junior Senator from Iowa [Mr. GILLETTE], was the principal speaker at a memorial service conducted at Trinity Cathedral in Pittsburgh. Senator GILLETTE's address was a stirring tribute to the splendid contributions Dr. Carver made to our national life, both in the field of scientific investigation and in the living example he set for all to see by the conduct of his own life. I feel strongly that the Congress will be interested in what Senator GILLETTE had to say, and I therefore ask unanimous consent to have his speech, "George Washington Carver: Pioneer in Human Rights," printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is truly a great honor to have been asked by the National Achievement Clubs to address this congregation of citizens gathered to celebrate a service in memory of Dr. George Washington Carver. Your president—Dr. Alma Illery—your national officers, your board of directors and all the members of the National Achievement Clubs deserve high praise for your sponsorship of these memorial services for one of our great Americans. I consider it a privilege to share

with all of you present today in this beautiful cathedral this brief moment of tribute to a man whose life and accomplishments have made so profound an impression upon our century.

For me it is also a personal gratification to participate in this occasion, since for many years I have followed with deep interest both the career and the scientific achievements of Dr. Carver.

In Iowa, you know, we are rightfully proud that one of our great universities, the Iowa State College of Agriculture and Mechanic Arts at Ames, served as the springboard from which George Washington Carver leaped forward into his long and fruitful life as an agricultural scientist, as a discoverer of manifold secrets formerly hidden in nature, and as a pioneer in the art of human relations.

Of course, we make no undue claim for having been responsible in Iowa for the magnificent contributions to human welfare which Dr. Carver made in the course of his life. When George first came into Iowa on his search for knowledge, the seeds that were to make him one of our country's outstanding men had already produced a sturdy young tree.

Ames only gave direction to his natural talents as a "plant doctor," as people called him when he was still a child. Iowa gave him staunch friends like James G. Wilson, his professor at Ames, who later became Secretary of Agriculture, and like the many others who, once they came to know George Carver, remained his steadfast admirers.

Anyone who has read the story of the life of George Washington Carver knows that within Carver himself was the will power, the strength of purpose, and faith in himself and in his God, that were the real reasons why he was able to attain his goal and to serve his people. Sufficient obstacles were thrust in his way almost at birth to have stopped most any child before he even started life. An orphaned son of slaves, a puny, weak child, with an early speech impediment, a member of a downtrodden race, he could count on little but the qualities in his own heart and brain to overcome the obstacles before him.

His attitude toward life has been summed up as follows: He wanted to be exactly what he was and to develop along the road which his nature called him. What he did not want was to be told that he could go only so far but no farther. So he simply set out to go where he was going as if there were no possibility of his being stopped. This inner certainty was his greatest strength—yet it was not his only strength.

Even as an orphan wandering from town to town doing odd jobs as cook and launderer, at an age when most boys are living at home and going to grammar school, he showed an astonishing sense of independence—to such a degree that he always refused charity, feeling that people were kind, but unreasonable, to give something for nothing.

The driving force in his life was his unquenchable desire to know and his unalterable certainty that he could do whatever he set out to do.

His twin love of nature and of art formed a unity in his mind and permitted him to become both a fine painter and a scientific experimentalist. Nor was there ever any conflict in his mind between the presumably opposing doctrines of science and religion. Dr. Carver was deeply religious from childhood. His intimate association with nature, as well as his own personal misfortunes as a child, led him to prayer. And, according to his own testimony, his greatest discoveries in science were revelations from God. Of course, he did not merely sit down and wait for the Divine Power to place new ideas in his head. He went ahead to accomplish all that a man could—then resorted to simple faith. His faith and his natural genius, therefore, formed a single whole.

In the language of psychology, we may say that George Washington Carver had an integrated personality. He was not plagued by inner doubts or subconscious confusions. Life, he saw, was only meaningful as a whole, composed of God, nature, and man.

With this conception, how could he fail to regard human rights as ordained by God? His natural religious ardor would have led him to champion the rights of man, even if he had not been born a member of a race to whom the basic rights of man were being denied.

George Carver was a quiet man of simple dignity. He expected others to respect his dignity as he respected theirs—and was deeply hurt when, as was far too often the case, he was rebuffed or scorned. Yet he always hid his hurt and went quietly ahead spreading knowledge among the people as he believed it his mission to do.

His own character and manner were a moral influence as good for the soul of humanity as his scientific accomplishments were for its material existence. He lived what he preached to others. He never was highly paid. He refused many lucrative positions that would have forced him to leave his work in the South. He did not patent his discoveries, but allowed others freely to realize whatever commercial gain they could from his experiments.

Dr. Carver has been called the greatest single force since the turn of the century in creating racial understanding in this country. I regard him as a pioneer in the field of human rights.

Sixty years ago when he accepted Booker T. Washington's invitation to go South and teach agriculture at Tuskegee Institute in Alabama, Dr. Carver knew to a certain extent what he would be confronted with. But I imagine he was enormously shocked by the reality of the South in the 1890's. The economic, social, and racial conditions he found were far different from what they are today. I think a strong case could be made to show that a very large portion of the credit for the immense improvements in the South during the past 50 years should be given to George Washington Carver.

Applying his integrated and unified view of life to the problems of the South, Dr. Carver took one look at the eroded land, the worn-out soil, the low state of the economy, the one-crop system, the tenant farmers bound to the landowner, the cotton growing up to the cabin door, the poor whites and the poor Negroes alike in debt all their lives to the landlord, Jim Crow-ism reigning supreme—and he declared that the fertility of the land and the abundance of unskilled labor had been a curse, not a blessing. At the root of the problem was the complete dependence on cotton, the one-crop system. The solution, for the economy and for the relationships of the whites and the Negroes, was to free the South from its absolute subservience to King Cotton, and thereby free the people from the vicious circle of poverty, serfdom, illiteracy, and prejudice.

In other words, Dr. Carver pioneered in the field of human rights from all sides at once—religious, moral, economic, social, educational, racial, cultural, and economic. He sought to create the material and moral climate in which man's dignity would be respected by other men.

He persuaded farmers to grow vegetables and other foods in their own gardens, so as to liberate themselves from perpetual debt to the landowner's commissary. He taught housewives new recipes to make these foods palatable. He gave lectures with demonstrations throughout the South in order to teach agricultural science to people who could not read. He invited people to bring their problems to his laboratory if they could not write him letters. He corresponded with thousands of people by mail—his average receipt of mail was 150 letters a day.

As an artist—a painter of flowers and plants—he knew the importance of beauty in men's lives. So he taught his people to decorate their homes, and developed new stains and dyes from the earth and the plants of Alabama cheap enough for poor farmers to buy and use in beautifying their homes.

His accomplishments in experimental agriculture are too well known to need recounting. The development of the peanut alone nearly revolutionized southern agriculture. His research into new crops led him naturally to a search for new markets for these crops—and it is interesting to note there is at this time a subcommittee of the Senate Agriculture Committee which is engaged in precisely the same kind of work as Dr. Carver began years ago; seeking new ways to utilize farm products.

On the social plane, Dr. Carver's pioneering work in agriculture was to lead to the growth of a middle class in the South, a broad stratum of society which is secure in its position and which is automatically maintaining a balance between the social extremes inherited from the past. Without this development of an independent and substantial middle class, Dr. Carver knew, the system in the South would remain feudalistic, divided between masters and serfs.

In the sphere of race relations as such, Dr. Carver's contribution though more intangible, were no less real. In his work at Tuskegee and in his travels around the country, he helped white men as well as Negroes. He had a rare knowledge of human nature that told him that a person who does not answer another's plea kills him in his heart. His discoveries and his assistance were freely given to every man.

George Washington Carver was one of the first men to understand that the Negro problem was not the only southern problem. He knew that men of both races lacked the same things, and that this lack made their relations with each other even more complex and difficult.

Of all the many things that have been written and said about George Carver, I think one statement by Dr. Moton, who followed Booker T. Washington as head of Tuskegee Institute, sums up most succinctly the role of Dr. Carver as a pioneer in human rights: Dr. Moton said: "He has been an inspiration as a teacher and exemplification in his own person of the possibilities of the race. Thousands will be his debtor in race understanding who will never know his name."

We have come a long way from the days of the post-Civil War South. The present trend in this country, and in the world at large, is toward guaranteeing full human rights for all men. No one who remembers even part of what has been accomplished in the past 50 years in the United States in creating the physical and moral conditions for better human relations can remain pessimistic. Where 50 years ago there was perhaps only one Negro scientist working in the laboratory and the lecture hall for the benefit of his people and of the whole country, today there are thousands. It would be exaggerating to say that among them are more George Washington Carvers—there has been and will be only one like him. But the pioneering stage is past, and where Dr. Carver led, thousands can now follow.

Before closing, I should like to offer a thought that has been in my mind since I spoke Thursday of this week in my office with a fine, intelligent and highly educated African leader from Nigeria, who received his education in our American universities and who is today striving to lead his people to freedom and economic progress.

Just as Dr. Carver devoted his life to service to his people in the South, bringing them

knowledge by which to liberate themselves and the whole South from a one-group economy and a feudal-type master-serf relationship, so the future of many young Negro scientists and qualified experts in the 50 years lying ahead in this century may be to bring the knowledge they have obtained in America to the aid of the people of Africa.

A new field, such as under the point 4 development program, may soon be opening for a new type of missionary in Africa—for missionaries of civilization bringing not only religious teachings but medical, technical, agricultural and other knowledge, training people in cultivation of the land and in manufacture of products.

Who can better bring the light of knowledge and the incentive to progress to the peoples of Africa than the Negroes of America who have surmounted all obstacles, human and otherwise, set before them since their ancestors were brought to America as slaves? Many American Negroes may find a great and significant future in carrying the word to Africa.

The renascence of the African Continent, under the guiding hand of qualified Negro specialists, doctors, scientists, and technicians from America would, I believe, have an important byproduct in this country—it would simultaneously mean a quickening of the progress of the Negro people in the United States itself. As Africa develops and liberates itself from the outworn colonial system, there will be even less excuse than now for the type of willfully ignorant attitude of some Americans toward their fellow Negro Americans. When Africans are free and progressing, American Negroes—Afro-Americans—will be that much freer and that much farther along the road of their own progress.

What Dr. George Washington Carver saw as his mission in the 1890's—to aid his people in the southern United States—may appear to some young Negro Americans today as the model for their mission in the second half of the twentieth century.

It is now abundantly evident that the pioneering of George Washington Carver has accomplished already far more than the modest aims he set before himself. Everywhere in America today the trend is toward the elimination of those barriers that have prevented the Negro people from fully exercising their rights as human beings. I can imagine only one greater reward for Dr. Carver's pioneering efforts—and that would be if not only the Negro people in this country but also those in Africa were to achieve the full measure of their God-given dignity as men born to be free and equal.

The Modern Challenge to Business Leadership

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. O'MAHONEY. Mr. President, it was my privilege, on January 10, to be permitted to talk to the Boston Board of Fire Underwriters at their annual meeting in the city of Boston, Mass. I ask unanimous consent that the text of my remarks may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This is really a talk about the cooperation of business and government. It is a talk about the preservation of a democratic capitalistic system, about the establishment of an expanding domestic economy designed to promote the fullest utilization of all our human and natural resources. It is a talk about the preservation of the system of private property and the winning of world peace.

Not since the business leaders of the Thirteen Original Colonies voluntarily assumed the task of promoting the ratification of the Constitution of the United States has a greater challenge been presented to business leadership than that which is now offered. The commercial classes in 1788 knew that a stable national government was needed to prevent the economic and political ruin of the newly liberated American States. They financed the campaigns for ratification up and down the colonies, and, so great was their desire for a national government which would provide a rule of order under which the economic system could work, that they did not hesitate to throw their support behind the pledge that the first Congress would draft a Bill of Rights. It is not too much to say, therefore, that the commercial classes in the closing years of the eighteenth century were a most important factor in the establishment of the new Federal Government which, in our time, has twice saved the world from the reestablishment of central political tyranny.

It is altogether appropriate that we should discuss the modern challenge to business leadership in the city of Boston, because it was here on January 9, 1788, that the Massachusetts Convention assembled under the presidency of John Hancock to ratify the Federal Constitution in a resolution, which also supported a Bill of Rights. Because of what was done here in Boston with the cooperation and support of business leaders and in the other States which ratified the Constitution, 10 amendments were submitted to the States in the first session of Congress, protecting the individual rights of the people as individuals, and asserting their superiority over government.

The business classes of our time face a new challenge, which arises from the fact that excessive economic authority has accumulated in private hands in such a manner as to weaken the economic authority of the States and cause the expansion of the powers of the National Government. This generation has seen the erection of the totalitarian state, because, as in Italy and Germany, the concentration of economic power had become so great that the people, unable to provide employment for themselves, yielded to the false persuasions of Fascists, Nazis, and Communists that the all-powerful state would supply the answer to their problem.

We know that it does not supply that answer. We know that the totalitarian state exists only by the use of force, that it utterly destroys the liberty of the individual, and makes him economically as well as politically the slave of the state.

INDIVIDUAL FREEDOM IS AMERICAN GOAL

The people of America do not believe in the all-powerful state, but they do believe in individual freedom. They are as devoted today to the principles of the Bill of Rights as were the colleagues of John Hancock in the Massachusetts Convention of 1788. They believe that the authority of both political organizations and economic organizations proceeds from the people and they have not hesitated to contribute in unprecedented measure of their blood and treasure to the preservation of this ideal of human liberty. It is the desire of an overwhelming majority of them to do what lies in their power to win permanent world peace and to maintain a stable economic system in which the individual shall continue to have opportunity, not only to support himself, but to improve himself also.

The people know that these two great objectives are inseparable. There are no class divisions in America, so far as this great national purpose is concerned. Those who are engaged in agriculture or in industry, those who serve in the professions or in business, all believe in the traditional American ideals of popular sovereignty. Leaders in business and in government who desire to preserve this ideal, if they are to be successful in that effort, must first of all analyze the cause of the great crisis in which the world now finds itself. First of all, therefore, we must banish from our minds the false notion that World War II is over. Only the shooting has stopped. The peace treaties have not been written. Armed forces are still marching throughout the world. Our own troops are still in Europe and in Asia. A terrible armament race, the atom-bomb race, more appalling than any competition in armament that ever took place, is demanding a larger and larger proportion of the productive capacity of men. There are some who feel that a third world war is inevitable, although they must know that such a conflict would threaten the total destruction of civilization. It was Einstein who, when asked what the weapons in a third world war would be, replied that he could not answer, that he could only predict that the weapons of the fourth world war would be stones and bludgeons.

If the American aspiration for permanent world peace is to be realized we must not fail to maintain here among our own people a stable and expanding economy. For my own part, I believe that the maintenance of such an economy is incomparably the greatest task that our people were ever called upon to perform. We can make no contribution to world history that will exceed in value the certain establishment here of an expanding economy of opportunity for all the people.

If we do this, there is no iron curtain anywhere that will prevent the knowledge of our success from reaching the minds and hearts of people everywhere.

Surely, we know now that war has no victors. We destroyed our enemies in World War II; we crushed Hitler and Mussolini and the Japanese ruling class, but we have not yet begun to pay for that triumph. The national debt is still on a pinnacle of $250,000,000,000. We are paying $5,500,000,000 this year to meet the interest on this debt. The care of the veterans who fought in two world wars is costing $6,000,000,000 annually. Even though the President is refusing to expend the sums appropriated by the Congress for a 70-group air force, national defense this year will cost almost $13,000,000,000, and other billions have been made available for the economic rehabilitation and the arming of western Europe, thus accounting for almost 80 percent of the total cost of this Government. So the people here and throughout the world, hoping and praying for peace, with no personal desire except for liberty and opportunity, are condemned to pay for old wars and prepare for new ones.

MUST TRY THE WAYS OF PEACE

Is there no alternative for this futility? I think so. I think we should deliberately try the ways of peace. Surely the people of America, who have already demonstrated how freedom and opportunity can raise the standard of living of all the people to higher levels than have even been approximated in any other land, or at any other time, can find the answer in their own history. The only trouble is that we have not learned

how to prevent depression. The Kremlin is not planning aggressive war, because it is convinced that the capitalistic system is bound to go down in another economic crash which will create the vacuum into which communism can march unopposed. That is the challenge the modern world presents to business leadership—the achievement of an economic system constantly expanding and always affording opportunity for each oncoming generation.

It is an end which can be attained only by the united action of all our people. The whole is greater than any of its parts. None of the parts must imagine that it alone can prosper at the expense of any of the others. We all stand together or we shall fall together in this great struggle for freedom. We cannot here afford class conflict, for under the American ideal there are no classes. Farm and factory are interdependent. The worker and the manager alike are equal citizens of the United States. There are no classes in the armed forces which we sent to war. There can be no classes in the civilian army that must produce for peace. Production won the fighting war. Production will win the cold war. Production and only production can win permanent peace. Just as during the actual conflict all classes of Americans united without regard to their special interests, so now we must unite if we hope to hand on a peaceful world to the next generation.

We shall, however, find it difficult to perform the economic service which we and all mankind need, if utter disaster in a new scientific war is to be avoided, unless we understand the forces which created totalitarian communism. It calls itself the dictatorship of the proletariat. If there were no proletariate there would be no dictatorship. What, then, is the proletariat? It is the portion of society which is unable by its own capital and its own labor to produce the things that are necessary to maintain life. Though he may be politically free, if he is not also economically free the individual is a member of the proletariat and we must never forget that the proletariat is the raw material out of which communism is made. When the masses are unable to support themselves they turn to arbitrary government. The proletariat is the product of industrial collectivism."

THE DANGER OF A PROLETARIAT

The most important lesson that American leadership can learn, whether in business or in government, is that modern technology has created industrial collectivism through the ownership by a small segment of society of the means of production upon which all society depends. To save capitalism and the free-enterprise system it is necessary to make certain that we shall not permit the creation of a dominant proletariat in the United States. That means we must foster and expand the ability of the masses of the people to own property, including property in their jobs. The workers must have a stake in modern industrial organization. Those business leaders who have adopted the annual wage system or a profit-sharing plan have adopted an admirable means to promote industrial unity in which capital, labor, and management are all partners. Thus can organized enterprise keep itself free of Government control. Government regulation must not be confused with Government control. Regulation merely provides the rule under which free enterprise operates. Government control, on the other hand, is the assumption by public authority of the power to direct enterprise. The former is in complete harmony with the American tradition. The latter is the road that leads to national socialism and communism.

Let no one forget that the Constitution, which was ratified here in Massachusetts 162 years ago, in its first article gives to Congress the plenary power to regulate commerce. One of the primary reasons why the commercial classes of the Thirteen Colonies supported the Federal Constitution was because they recognized the indispensable necessity of establishing a general government to provide a rule of order for the conduct of commercial relations among the States and the people thereof.

KEEP OPPORTUNITY FREE

It is worthy of note that among the recommendations made by the Massachusetts convention for the amendment of the Constitution was that a provision should be adopted to prohibit Congress from creating any commercial monopoly. The Massachusetts founding fathers wanted no national monopolies to restrain trade and commerce in the States. They wanted freedom. Monopoly is the foe of free enterprise now as it was then and no amount of rationalization can make it otherwise. If opportunity is to remain free, then obviously restraint of trade and commerce must continue to be prohibited. It is because the United States had had an antitrust law while, on the other hand, the nations of Europe have permitted and encouraged monopolies, that we in America have outstripped all the nations of the world in productive enterprise. If we are to preserve free enterprise we must keep opportunity free. No group can contribute more to commercial freedom than can the leaders of business, and by their own choice they can avoid the practices which suppress competition.

A large enterprise is not necessarily a monopolistic enterprise. A large country needs big business, but no business, large or small, should be permitted to restrain the operations of any other business or to close the door of opportunity to any new business. If we desire to maintain competition, it is essential to recognize the difference between the business which is managed by its owners and the business which is owned by one group and managed by another. The latter, because it uses the collective capital of hundreds of thousands and the collective labor of other hundreds of thousands is a collectivist enterprise, altogether different from the small enterprises which are managed by their owners. Collectivist enterprise under private managers is but slightly different from collectivist enterprise under public managers. If we are not careful to see that the small owner-operated business is not pushed off the lot by private collectivism, it will be difficult indeed to avoid public collectivism.

Another fact which must be clearly understood if an expanding economy of opportunity is to be maintained, is the difference between agriculture, upon the one hand, and industry and commerce upon the other. Agriculture is still carried on by individuals in their individual capacity. Commerce and industry, which in the days of Hancock was also individual enterprise, is now carried on primarily by organizations. Agricultural prices are made in a free market. Industrial prices, on the other hand, are frequently fixed by combinations and understandings. The farmer sells his produce in a free market, but buys the things he needs in a controlled market.

The preservation of the free-enterprise system does not require that Government should not undertake any operation that might be carried on by private groups. There are some operations which serve the public interest best by being carried on by Government. Water systems, for example, once were privately owned and operated. That is a thing of the past like the operation of toll bridges. It is now generally recognized that the construction of public highways, airports, the control of floods, the operation of harbor facilities, the elimination of water pollution, etc., are all proper functions of Government. And, incidentally, public expenditures for these purposes create business.

PRODUCTIVE EXPENDITURES GOOD FOR BUSINESS

Economy in Government is highly desirable. Waste of public funds is indefensible, but it must never be overlooked that the indiscriminate slashing of Government expenditures can do more harm than good. Productive government expenditures are good for business. For example, rural electrification has created new markets for business and new opportunities for labor. Like public highways and modern airports, electricity on the farm contributes to what we most need, an expanding economy of private owners. The same is true of reclamation in the West, creating as it does new communities that add to the national income, increase purchasing power and provide revenue for local, State, and Federal Governments.

It is impossible to understand the Federal budget unless we compare it with the budgets that preceded the war. In 1939, the last year before the Government began to prepare for war, the total national budget was only a little more than $10,000,000,000, as compared with the estimate of forty-two billion four hundred million submitted by the President yesterday. But in 1939 only 29 percent of Federal expenditures had any relation to war. The rest of the ten billion budget of 1939, that is to say, 71 percent, went for the normal functions of Government and objectives which were designed to foster and stimulate business and improve the standard of living. Today, however, the situation is exactly reversed. Seventy-one percent of the forty-two billion four hundred million projected for fiscal year 1951 will go for war-connected expenditures, and only 29 percent for the normal functions of Government.

If anyone believes that expenditures to support the so-called welfare state are causing the much-discussed deficit, let him remember that only 6 cents out of the 1951 budget dollar will go for social welfare, health, and security, whereas 13 cents will go to pay the interest on the national debt. A balanced budget is, of course, highly desirable. Waste of public funds should be completely eliminated, but the task of Congress, when it examines the budget, is to be certain that it shall not unnecessarily cut the productive outlays that foster and encourage business and that it shall not weaken the capacity of the Government to preserve the national defense and to carry on the struggle for peace.

TO SAVE SYSTEM OF PRIVATE PROPERTY

Government as well as business has a function to perform to preserve the system of private property. It must, for example, reform the tax laws so as to provide incentives for the investment of private savings. War taxes which were designed primarily to obtain revenue with which to conduct the fighting war no matter what the cost must now be revised so that we may have a peace- and prosperity-promoting tax system. The Government at Washington is working to that end now.

The challenge to business is likewise a challenge to promote the investment of private capital by consciously doing away with impediments to private investment in competitive enterprise which too often are erected by business itself. No one knows better than the business leader how valuable competition is. No one knows better than the business leader the temptation to exploit the consumer by fixing prices, dividing territory, restraining production. Combinations and agreements to restrain trade and hamper competition have always been known to the business fraternity. That's why we enacted the antitrust laws with the support of all political parties. Business leadership, I am persuaded, can do more than Government to preserve competition.

It can do more than Government to promote the sense of partnership with labor. It can do more than Government to bring about fair dealing with the consumer. To sum it up, business leadership can do more than Government to preserve the system of private property. That is the challenge which modern times presents to the business leaders of America.

Read the story of the Massachusetts Ratification Convention of 1788. Learn there the manner in which the colonists united in the face of a great crisis to create a political system based upon individual freedom. If we read that story and respect it, we shall not fail in creating a stable economic system here in America based likewise on freedom and one which, like our political system, will be copied throughout the world without war because a free capitalistic system can do more for mankind than any other system.

FEPC

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD two editorials, one which appeared in the St. Paul Pioneer Press for January 3, 1950, and one which appeared in the St. Paul Dispatch for January 5, 1950.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Paul (Minn.) Pioneer Press of January 3, 1950]

UNPARALLELED STALLING

There is no legislation in the Nation's history on which there has been more of high-sounding verbal agreement than is the case with civil-rights legislation. Despite that, however, there is no legislation which has been as stubbornly stalled, postponed, and talked to death. Political parties have agreed and their platforms have pledged laws to stamp out racial discrimination, but that is as far as it has gone. There has been no action.

Democratic and Republican Party platform pledges have for years included Federal anti-poll-tax and antilynch laws. Last year the platforms of both parties even came out flatly for the most controversial of all civil-rights legislation—FEPC, designed to abolish discrimination in employment through legal decree.

The Democratic Party's southern wing is reported to be even more bitterly opposed to FEPC legislation than to their old-time filibuster targets, antilynch and anti-poll-tax measures. And revision of the Senate's cloture rule made last March will actually have the effect of making a filibuster harder to break than before.

Anti-poll-tax bills have passed the House 5 times in the past 8 years, each time by a two-thirds margin. Each time, however, all it took was a threatened or an actual filibuster in the Senate to kill the bill. Antilynch measures have had a harder time. There is broader feeling that they set what might be more dangerous precedents in entering local law enforcement situations. Yet, on at least three occasions, antilynch measures have been passed in the House, and they have gotten out of committee oftener than that. The Senate was always the final, immovable obstacle.

FEPC legislation, now spreading to a steadily growing number of States, actually had its biggest boost at the national level, when an Executive order of June 1941 banned discrimination on hirings to fill war contracts, as well as in Government employment itself. The Commission and its enforcement of rules went out of existence in 1946. Yet FEPC bills came out of committee in both House and Senate last session. They had done so, however, on three earlier occasions, and refinements of the congressional stalling technique disposed of them each time.

It is going to be increasingly difficult to continue repeating pledges that appear made only to be broken. That has been the history of solemn promises as to civil legislation from both parties. Sooner or later, a campaign pledge so often repeated will have to be fulfilled. President Truman and his party followers should know that; so should Republicans, at State and National levels.

[From the St. Paul (Minn.) Dispatch of January 5, 1950]

GAINS FOR TOLERANCE

The number of States adopting fair employment practices legislation increased from 6 to 10 during 1949, the National Association for the Advancement of Colored People notes. It is a healthful sign for racial tolerance in America, but it goes far beyond that. It strikes at the very root of economic discrimination which has kept racial groups from working, voting, and providing for the future.

One of the outstanding gains for practical democracy is the opening of the National Guard in Minnesota to Negroes. Similar action has been taken by California, Connecticut, Illinois, Washington, Oregon, Pennsylvania, and Wisconsin. And because of the backing of the Federal courts, many Negro citizens throughout the South have continued to exercise their franchise rights. Wisconsin and Illinois have passed laws to end discrimination in the public schools.

But the failure of Congress to enact Federal civil-rights legislation and the failure of such legislation in several States, were condemned by the group. In spite of New York's FEPC law—to cite one example—one out of every five members of minority groups have reported that they have experienced some sort of discrimination. While the FEPC laws work out admirably as a rule, there can be a measure of prejudice they cannot touch. That prejudice is a matter of the individual conscience.

Lynchings already have been dealt with by the Tuskegee Institute, which reports one less authenticated lynching than the NAACP—or three to the NAACP's four. Whatever the outcome of this disagreement, the score during 1949 was heavily in favor of the elimination of the bars in society, industry, and the professions, on the basis of color. The year has made measurable gains for tolerance, regardless of the dilatory tactics of Congress.

City of Hope Award Dinner Honoring Ellis A. Gimbel

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my remarks at the City of Hope award dinner, held in the Bellevue Stratford Hotel, Philadelphia, on Wednesday evening, December 7.

At that time, a Torch of Hope award was made to Mr. Ellis A. Gimbel for the magnificent work he has done in supporting the City of Hope Sanatorium and Research Center. The whole Gimbel family is symbolic of the achievements of our system of free private enterprise and of the sense of responsibility our leaders have for the bettering of the American way of life. It was indeed fitting that Mr. Gimbel be awarded the Torch of Hope award, for his aid to the City of Hope has been significant in helping to make the City of Hope a really great institution—one that has been formed to give medical aid wherever it is needed, without any restrictions whatsoever as to color, creed, or religion—an institution that is working for the benefit of all in the true American spirit.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I can imagine no greater tribute to the man we are gathered here to honor than is implied in the award he is being given tonight as noted on the front page of your invitation to this dinner.

In the invitation we are informed that a Torch of Hope award is being presented to Mr. Gimbel—a most distinguished Philadelphian who has just received the congratulations and good wishes of his fellow citizens on having successfully attained his eighty-fourth birthday.

America was still mourning the assassination of Abraham Lincoln, the Civil War had just ended, and Johnson was President of the United States when Ellis Gimbel was born.

Mr. Gimbel has lived through the most turbulent and critical days this country and the world ever have known. He has seen this Nation twice plunged into the horror and destruction of world wars on the successful outcome of which the survival of our civilization depended. He has seen a great depression which left its scars and its bitter memories with us. He has seen us rejoice over military victory in World War II won at a frightful cost in blood and resources only to be confronted with the sobering realization that peace has its price, too—and the price is not cheap—the realization that we must work as hard and as long, and we must be as united and as vigilant to win the peace as we were to win the war. He has observed the death of the League of Nations and the first groping steps of the new United Nations.

He has witnessed man's discovery and use of the deadliest weapon ever known—the atom bomb.

He has lived under 17 Presidents of the United States and heaven knows how many United States Senators, and still his outlook on life and his achievements are such that, at an age 14 years beyond the biblical three-score and ten, he is selected from among millions of his fellow citizens as the first winner in this eastern half of the United States of the Torch of Hope national award.

All I can say is, There is a man.

Of course, to those who know Ellis Gimbel the award will not come as any surprise but as one richly deserved. Hope is akin to faith, and the great Gimbel enterprises, both commercial and private, have been built on a foundation of unshakable faith in America and its future.

And all in all the years of Mr. Gimbel's lifetime, despite their occasional black days, have not been bad years as Mr. Gimbel would be the first to tell you. We have made great material advances in America during his life.

The lot of the average American is far better than it was. We have raised the living standards of our people far beyond what anyone would have believed possible when Mr. Gimbel was a boy. We have made great progress in the fields of tolerance and understanding and cooperation among racial and religious groups. We have attained a new awareness and appreciation of the dignity of man and the importance of individual liberty.

But our most important advance of the last half century or so, in my opinion, has been the widespread recognition of our responsibility to others who are less fortunate.

This is strikingly true in the field of government.

During Mr. Gimbel's lifetime, he has seen a change in America's attitude toward its responsibilities in world affairs, from a policy of extreme isolationism to one under which, through various Government programs, we are aiding freedom-loving people everywhere and our best interests as well. He has seen the enunciation and beginnings of a program that contemplates utilizing private capital, aided by government, in helping to develop the presently inaccessible or commercially unprofitable and still undeveloped natural resources of other nations throughout the world.

At home, he has seen the establishment of workmen's compensation, of unemployment compensation, of old-age and survivors' insurance, commonly called social security, of aid to dependent mothers and children, to the blind and handicapped and disabled. He has seen government and private medicine working together for the eradication of many diseases and he has seen us winning that fight on many fronts. Today these programs and this concept of responsibility to others less fortunate is deeply ingrained in the American people—and it all has happened during Mr. Gimbel's lifetime.

But there are things which government cannot and ought not to do. We, as private citizens, also have an obligation to those who are less fortunate.

Mr. Gimbel is a businessman—a merchant—and an eminently successful one. If we try to analyze why he and members of his family have been so successful in the merchandising field, we discover that their success has been due in large measure to their faithful adherence to a concept that was laid down by Mr. Gimbel's father, Adam Gimbel, when he started the Gimbel store.

That concept was one of service—service to the community. The old concept of a department store was that it was merely a merchandising mart. The Gimbel family were pioneers in changing that concept. They conceived of their stores as quasi-civic institutions. They accepted the responsibility of community leadership for worth-while projects. They gave a part of their facilities to provide accommodation for deserving groups that had no place to meet. They established a woman's center, where women's clubs and organizations could carry on their activities for the benefit of others less fortunate.

The many projects they have sponsored and aided would require several pages merely to list. I can think offhand of their wartime activities on behalf of our servicemen, of their assistance to projects for feeding the hungry abroad, of their sponsorship of the greater Philadelphia exhibition, of their work on behalf of the blind. Virtually every charitable, welfare, and educational group in the city has sought—and received—their aid at one time or another. And by following this policy they have prospered, as they should.

But Mr. Gimbel has not aided others who are less fortunate merely through the activities of his store. In his long career he has helped many in his capacity as a private citizen. He was first to establish Educational Week for the Blind, Hard-of-Hearing Week, and Orphans Day at the circus.

His latest project—one in which we all are interested—and the reason for our being here this evening is the City of Hope. Others will tell you in detail about this magnificent institution, how it was founded, the good it accomplishes, and how it operates.

It is sufficient for me to mention here only that it is an institution of which great things may be expected. Run along completely modern lines, it gives promise of becoming one of the outstanding sanatoriums and research centers of this country—and it will become that if we give it our support. It is an institution which recognizes no barriers of creed or religion, which recognizes only illness and need, which offers the best of medical care free.

It is performing a great work in the care and cure of persons suffering from chest diseases. But it, and other institutions of its kind, are still inadequate when compared with the need. The city of Hope must expand its facilities to care for more people—and even more important, it must have the funds for research—the kind of research that will enable man to cut down the death rate from killers like tuberculosis as we have conquered other premature killers of mankind.

I can think of no more fitting person to receive this award of the Torch of Hope than Mr. Gimbel. By his own example and unselfish help of those in need he has given hope to many of his fellow citizens. I would like to say a few words also about Mr. Eddie Cantor, one of America's top ranking comedians, who is representing the Hollywood film colony at this dinner in Mr. Gimbel's honor. Mr. Cantor deserves to be honored also for the numerous unselfish contributions of his incomparable talents in the furtherance of many charitable efforts extending over a period of 30 years.

Both men exemplify the spirit of brotherhood—of concern for the less fortunate—a spirit that, despite the destructive wars and violence and oppression we see in the world is still the distinguishing characteristic of this great age—at least in this great country.

To you, Mr. Gimbel, I hope you will carry the Torch of Hope for many, many years, and I know you will continue to derive your greatest satisfaction in life from helping your fellow man.

As long as men like you are active in the kind of projects to which you are contributing your time and efforts and money, despite the many grim and difficult problems facing us, I am confident we shall find much to be hopeful about.

Thank you, and thank all of you for your presence here tonight.

History and Its Meaning to a Community

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "History and Its Meaning to a Community," by Dr. Lewis E. Theiss, for many years head of the Department of Journalism at Bucknell University, which appeared in the Lewisburg Journal, of Lewisburg, Pa., on January 5, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HISTORY AND ITS MEANANG TO A COMMUNITY

(By Dr. Lewis E. Theiss)

In a letter to a friend of mine, Hervey Allen, the novelist, recently remarked: "A nation that forgets its history may have to relive that history." That is a truth worth considering. In recent weeks the William Maclay chapter, Sons of the American Revolution, has been calling attention through its weekly broadcasts to the history of this region. Scalpings, murders, massacres, burnings marked that history. How would you like to go back to pioneer days and be forced to go through such horrors? If you forget them, you may have to go through worse.

Impossible, you say? Not at all. The Revolutionary War was as nothing compared to World War II. Bernard Baruch, in his recent list of significant happenings of the last 50 years, mentioned what he called the "unnecessary war," by which he meant the Second World War. "Preventable," he said, "if proper steps had been taken. No lessons learned from it or the First World War." If that is true, we sacrificed some hundreds of thousands of fine American youths on the altar of ignorance—ignorance of history, of the true meaning of history.

The reason why we should study history is mainly so that we may be guided by it, so that in future we may avoid the mistakes of the past. Therefore, it is something more than a desire for information that should induce us to study our history. Such study is a patriotic duty we owe to our Nation.

How are we going to bring history home to folks? How make them conscious of the inner meaning of history?

First, by improved teaching of history in our schools; by localizing history; by applying it to the lives of those who study it. The high prices of today, the housing shortage, the terrific taxes, the increasingly lower standard of living—all have a new meaning when coupled with history. Folks should be made to learn the lesson of cause and effect. History teaches that.

In every way possible we should encourage the study and understanding of history, the acute consciousness that certain causes inevitably lead to given effects. We can erect lasting memorials to refresh our memories. We can create and foster patriotic societies that help us to remember the past and learn its lessons. We can use newspapers, magazines, the radio, the lecture platform. In every manner possible we can and should emphasize the lessons of history. The big thing is not to let folks forget.

No one wants another war, another depression, another disaster of any sort. But unless we remember our history and the lessons it teaches, we shall surely blunder into the very thing we dread. The thing to do is to remember our history now, before we go any further along the road that leads to disaster. If we use our heads it won't be necessary to repeat the Revolutionary War or World Wars I and II. It won't be necessary to go through another depression. So let's keep the past, with its lessons, vividly in mind. Let us apply history to our lives as we have never done before.

Opposition of Prince Hall Masonry to Communism

EXTENSION OF REMARKS
OF
HON. ELMER THOMAS
OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD copy of a statement relative to Prince Hall masonry and the opposition of such organization to communism as issued by the Grand Masters Conference of Prince Hall Masons.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PRINCE HALL MASONRY REEMPHASIZES ITS OPPOSITION TO COMMUNISM

(A statement issued by the Grand Masters Conference of Prince Hall Masons)

Prince Hall masonry enjoys and protects one of the noblest heritages that has come down to any group of Americans in the history of our beloved land. Generated and nurtured as it was by a free Negro who in pre- and post-revolutionary days was a courageous champion of human rights for all mankind and an indefatigable proponent of the brotherhood of man and of truth and justice, Prince Hall masonry has for 165 years adhered strictly to the lofty concepts held by America's first Negro Mason. Prince Hall, a man of learning, a businessman, a preacher, a soldier in the Revolutionary Army of George Washington, builded so well and enduringly that generation upon generation of Negro Americans have willingly and proudly followed in his footsteps, guided and directed by those great principles, spiritual and masonic, that guided and directed him.

Prince Hall, in harmony with his contemporaries, envisioned an America destined to be great because of its advocacy of such ideals as freedom to worship, think, act, and speak; freedom from tyranny and oppression; freedom of the people to have and maintain a government of, by, and for the people. To these ideals, Prince Hall devoted his life and since human bondage was as yet an item in the economic system of the young Nation, his added task was his labor for an America free of discrimination and differences based upon ethnic considerations. His followers labor on in his footsteps, quietly but persistently, without fanfare but with determination—with undiminished faith that the same God that brought answers to the prayers of the devout Prince Hall will, as ever, right all wrongs.

As an institution, Prince Hall masonry now represented in 37 States and the District of Columbia, by 38 Prince Hall grand lodges, has consistently stood for the best things in American society. It has been and is stanchly opposed to any and every attempt of foreign or alien ideologists to invade our way of thinking, acting, or living. Especially is it and its votaries categorically opposed to totalitarianism, communism, fascism or any like ism having for its purpose a change in the true American concept of government. Although we recognize the fact that American democracy has not as yet attained the high ideals of our founding fathers, that imperfections still exist, Prince Hall masonry is happy to reaffirm its traditional position and to continue to labor assiduously for the attainment of those high ideals and for the elimination of imperfections, such labor to be done within the framework of our present Government.

The contribution Prince Hall masonry is making in the current fight against communism and its nefarious doctrine is considerable and is being increased daily. Prince Hall masonry calls upon all its followers wheresoever dispersed around the globe, to be on the alert against the infiltration of communism into Negro groups. There can be no divided allegiance. There is room but for one ideology in the minds, hearts, and souls of all the people of this Christian Nation, and that is Americanism—the great light that illumines the paths of all of us, black and white, Jew and gentile, rich and poor.

Prince Hall masonry pledges itself anew to live and die for the ideals and principles that have made our Nation the greatest on the face of the globe.

CONFERENCE OF GRAND MASTERS OF PRINCE HALL MASONS,
By AMOS T. HALL, *President*.

Pearl Harbor Anniversary

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, the lesson Pearl Harbor taught us 8 years ago—the lesson that the United States must take responsibility in world affairs, that it can no longer be isolationist in any respect—was a lesson we learned the hard way, but one which we cannot ever forget. The preservation of world peace depends to a very great extent on the willingness of the American people to bear their full share of responsibility.

On December 7, 1949, I had the honor of addressing the Pearl Harbor anniversary memorial meeting, sponsored by the Veterans of Foreign Wars Women's Council, City of Hope, at Convention Hall in Philadelphia. I ask unanimous consent to have the remarks I made at that time printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Eight years have passed since the tragedy of Pearl Harbor taught this Nation its bitterest lesson.

Tonight we are gathered to pay reverence to the memory of the men and women who lost their lives in that sudden and despicable attack by a supposedly peaceful nation—an attack that plunged us into the bloody maelstrom of World War II.

We, in Philadelphia, are not alone in honoring tonight these gallant dead. Elsewhere in the Nation, in scores of cities and towns and villages, exercises similar to these are being conducted.

As of this night there has not been erected some great national physical memorial to those who lost their lives at Pearl Harbor. Probably it is more fitting that their memorial should be in the minds and hearts of their countrymen. Let them be remembered not so much in bronze or marble, but in the more imperishable and durable shrine of the spirit.

Let what happened at Pearl Harbor on the morning of December 7, 1941, live forever in the memory of the American people—a constant reminder and warning against complacency, against unpreparedness, against turning our backs on the rest of the world, and closing our eyes to the dangers that beset us.

If this can be their memorial—passed on from generation to generation of the American people—then, while many here died needlessly they did not die in vain.

Pearl Harbor was the end of an era in America. I believe historians will mark it as a turning point, a milestone from which there can be no turning back. Before Pearl Harbor there were many in this country who refused to recognize that we were part of one world, that war and tyranny in any part of the globe were our concern. Before Pearl Harbor there were many in this country who believed we could draw back into an armored shell and sit the war out until all of our potential allies having been conquered and subjugated, the forces of tyranny and oppression could, at their leisure and at a time suitable to them, turn their destructive weapons against us.

Today, the great majority of the American people are facing the difficult, discouraging and costly job of preserving the peace. The great majority of the American people are accepting the burden and responsibility of world leadership for peace. It is a responsibility we did not seek, but it was a responsibility we could not avoid if we wished to preserve our freedom.

There are in some quarters voices raised against the cost to us of preserving world peace—voices which say: "Let's get out of Europe; it's no concern of ours," "We must reduce taxes by cutting out foreign aid to freedom-loving people"; "Build up our own defenses and nobody will dare attack us."

These, fortunately, are not the voices of the overwhelming majority of Americans.

The struggle for peace is a continuing one. Peace must be worked for unceasingly. There can be no let-up. Peace must be preserved and won, like liberty, by each generation.

As we make progress in the struggle—as our potential allies grow stronger, more able to stand on their own feet, capable of supporting their own economies, the financial cost to us of preserving the peace will become less. But the need for constant effort, patience, tolerance, understanding, and a genuine willingness to cooperate on our part and on the part of our allies will be as great as ever.

I think it is apparent to everyone, that we are winning the fight for peace; that, with the help of the Marshall plan, the Truman doctrine, the North Atlantic Pact, the Economic Cooperation Administration, and the Greek and Turkish programs, we are making genuine progress.

Our potential allies daily are growing stronger. Totalitarian expansion has been stopped, at least for the moment, in its tracks.

But we must not relax or ever again grow complacent. Those who gave their lives at Pearl Harbor should be a constant reminder and warning to us of the dangers of complacency.

And so tonight, as we pay reverence to the gallant Americans who died at Pearl Harbor, let us dedicate ourselves to the difficult task of winning the peace, whatever its material cost, so that young Americans may never again have to shed their blood in far away places.

If we will really remember Pearl Harbor, it can never happen again.

"O Liberals!"

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "O Liberals!" written by Bruce Barton and published in various newspapers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"O LIBERALS!"

(By Bruce Barton)

As a general rule I want the bureaucracies in Washington to do less than they are now doing, not more. But there is one slight assignment that I now suggest to the Federal Trade Commission.

This commission, as you may know, has, among its other duties, authority to police the use of words and claims in advertising.

If, for example, you are advertising that your product will cure cancer, the Commission will order you to "cease and desist." You are not allowed to say that your margarine is butter, or that you have made your produce something new and wonderful when all you have really done is to change the wrapper.

My suggestion is that the FTC broaden its activities to the point of examining some political labels. And particularly the word "liberal."

This used to be a noble title, with an exalted but definite meaning. It described a man who loved his fellow men enough to sacrifice something valuable for them—his money, his safety, or his life.

Socrates was a liberal and his reward was the poisoned hemlock. Christ was a liberal and His liberalism meant the cross.

Joan of Arc was a liberal. Abraham Lincoln was a liberal. Eugene Debs was a liberal. They knew that true liberalism is a costly and dangerous business and they were not afraid to pay the price.

But the glorious word has fallen upon evil times. Vicious, cruel men have seized upon it as a cloak to hide their infamy. Mussolini started as a liberal; so did Hitler. Stalin is the heir to Lenin, who loved the proletariat so much that he did not hesitate to liquidate millions of the middle class.

Here at home liberalism is the cheap and easy path. Proclaim yourself a liberal and you are not crucified. Instead, you become a Governor, a Senator, a columnist, a radio commentator—at high pay. You do not even have to abide by such old-fashioned bourgeois obligations as contributing to hospitals, colleges, community chests. You can retain your title without sacrificing anything at all.

When I was first married I lived in the same apartment house with an idealist. He dreamed large dreams, gave lectures, and wrote books—and looked down on me because I was earning a living in trade.

I felt a little abashed in his presence until summer came, and he and his wife went to the country. They left their cat behind to starve. My wife and I, despised reactionaries, had to feed the cat.

I say to liberals: Before you look down on me, I want to know, have you sacrificed anything for your liberalism?

Or are you merely a money liberal—advertising yourself for revenue, or running for office so that you can be liberal with other people's dough?

"O Liberty," Madam Roland exclaimed, "how many crimes are committed in thy name."

She might have said, "O liberals."

Tributes to Florida by Vice President Barkley and J. Myer Schine

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. PEPPER. Mr. President, while Florida is accustomed to playing host to the dignitaries of the world, my State had the unique honor of being visited twice in December by the distinguished Vice President of the United States. On the occasion of his visit to the Boca Raton Club, one of the premier resort hotels of the world, Vice President BARKLEY took occasion to say that—

Florida is becoming a living symbol of the achievements possible under the American way of life, and as we advance further toward our national goal the State will become of increasing importance in our economy.

Another distinguished American who has evidenced his faith in Florida is J. Myer Schine, owner of the Boca Raton Club, the Roney Plaza, McAllister Hotel and other Florida properties, and also the Ambassador Hotel in Los Angeles and the Ritz Carlton in Atlantic City. Mr. Schine preserves the highest traditions of hospitality in his hotels and has on many occasions confirmed his confidence in the future growth and soundness of Florida. He feels that "Florida in the Fifties" will be a noteworthy period in the growth of my State.

I ask unanimous consent to insert in the RECORD a statement made by Vice President BARKLEY on the occasion of his visit to Boca Raton, and also a statement made by J. Myer Schine high lighting his views on Florida's future.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

BOCA RATON, FLA., December 7.—Florida is becoming a living symbol of the achievements possible under the American way of life and as we advance further toward our national goals the State will become of increasing importance in our economy, ALBEN W. BARKLEY, Vice President of the United States declared here today.

"Too much emphasis has been placed on the strictly pleasure aspects of Florida," said the Vice President, "that not enough has been given to the steady population increase of the State, its high rank as an international airport serving Latin and South America, its status as one of the Nation's great fruit and vegetable baskets and the tremendous opportunities ahead.

"Florida may yet surpass even the dreams of the early pioneers, the Flaglers, the Carl Fishers, the Merricks and the others who had great visions of beauty and the highest in economic life combined here in this sunnyland."

On his first visit to Boca Raton, the Vice President said the simplicity and magnificence of this great resort challenges the imagination." He said that while he had visited Florida many times he had not realized the achievements made at Boca Raton in combining the natural beauty of Florida, with a classic of architecture and comfort.

Mr. BARKLEY said that only recently he had talked with J. Myer Schine, owner of Boca Raton and other Florida properties and was greatly interested in his plans for expansion, and his confidence in Florida. "Those who question the future of our great United States," said the Vice President, "should have the opportunity to see Boca Raton and other great Florida properties standing as living evidence that our country has just started."

NEW YORK, N. Y., December 31.—While foreign objectives will offer keen competition for American travel expenditures in 1950, the outlook for domestic resorts is exceedingly good and those which place new emphasis on comfort, service, and courtesy will enjoy banner seasons in all sections of the country.

This statement was made today by J. Myer Schine, owner of large resort properties in Florida, Atlantic City, and California, on the basis of bookings for the current 1949–50 winter season in Florida and interest evidenced in summer vacation plans. Mr. Schine owns and operates the Roney Plaza and Gulf Stream, Miami Beach, Fla.; McAllister, Miami; Boca Raton Club, Boca Raton, Fla.; Ritz Carlton, Atlantic City; Ambassador, Los Angeles; and other hotels.

Predicting that higher standards in accommodations and service in hotels and on transportation lines serving resorts and travel objectives can be expected in 1950 and the years ahead, Mr. Schine said that vacationists are showing a tendency to select their play places with more than usual care.

"The trends of the times—the uncertainties and the confusion of national and international affairs—are reflected in vacation demands," Mr. Schine declared, "as people more and more seek travel objectives away from the beaten paths." He cited the emphasis placed on beach facilities, room locations for quietness, and sports opportunities in inquiries coming from prospective patrons.

Mr. Schine believes that the trend of the times point to a period of sound growth in Florida more advantageous than the boom periods of the past. He feels that Florida in the fifties will be noteworthy from the standpoint of new economic growth, new play areas, and new attention from many parts of the world.

"While Florida has been much in the limelight for its winter sports," said Mr. Schine, "comparatively few people realize the tremendous progress made by the State. From a rank of thirty-third in State population in 1900, Florida now ranks as the twenty-first State in population, and growth continues. From a seaside village of 1,600 in 1900, Miami has grown to 172,000 permanent population and the tide of winter visitors swells that number many times."

Pointing out that the new emphasis on leisure time and retirement funds will prove most advantageous in drawing both visitors and permanent residents to Florida, Mr. Schine continued:

"While many sections of Florida hold advantages for those in search of playplaces, vacation objectives or homes after retirement, the 75-mile area along the ocean front on the east coast, which includes Miami Beach and Boca Raton, is one of the only areas in the world, outside of Egypt, offering

all-year bathing. It is already one of the outstanding of all recreational objectives. As the nearest Florida point to the Gulf Stream the Boca Raton area has less rain than surrounding areas and a steadier climate.

"Florida has undergone two important eras in its modern development since 1900 and the year 1950 will mark the beginning of the third and most important. The first era was marked by the advent of the railroads and the building of hotels, notably at Palm Beach. The second era was marked by the coming of the motor age, winding up with Miami as one of the leading ports of foreign trade by air. My own confidence in Florida is increasing year to year as evidenced by many investments in the Sunshine State."

Ninety-nine and Six-Tenths Percent Loyalty

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial which appeared in the Washington Post of January 12, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NINETY-NINE AND SIX-TENTHS PERCENT LOYALTY

Figures from the FBI continue to attest to the loyalty of virtually all Federal employees. Latest statistics show that of the more than 2,700,000 Government workers investigated, 99.6 percent have been cleared. In 10,359 cases which the Loyalty Review Board turned over to the FBI for full field investigation, discharges were recommended in only 139 instances, though undoubtedly some other persons resigned voluntarily. These figures are eloquent contradiction of the Communists in Government charges that emanate from irresponsible sources. Not only that, but they speak well for the general moderation which, with a few flagrant exceptions, has characterized the conduct of the loyalty program.

All of this is reason why, if the screening of new employees is continued, as Chairman Richardson of the Loyalty Review Board recommends, it now should be possible to provide the safeguards the program lacks. The conspiratorial designs of the Communists give justification for some sort of checks in sensitive jobs. But this check has merit only as it is restricted to jobs of real importance to security and as it gives the greatest possible protection against rumor-mongering, malice, and circumstantial evidence.

Particularly is this definition necessary if the discretionary powers of heads of sensitive agencies to fire irresponsible employees are to be increased as the administration proposes. No one has a vested right to a Government job, least of all in a sensitive agency. But there is a world of difference between irresponsibility and disloyalty. Unless precise standards of procedure are drawn up, there is grave danger that security risks will be stigmatized as disloyal.

Such standards ought, in our opinion, to provide for the transfer of security risks to nonsensitive jobs wherever possible. If discharge of irresponsible employees is necessary, it should be on grounds of inefficiency or incompetence so that there is no possible stigma of disloyalty. Beyond this, it ought to be basic for all necessary loyalty investigations to include a full statement of the evidence, including a chance for the defendant to challenge his accusers. If the evidence is not of the sort that will stand up in court, then it is highly questionable whether it ought to be the basis for branding anyone as disloyal.

Every Man With an Income of $12,000

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Phillips County (Mont.) News:

EVERY MAN WITH AN INCOME OF $12,000

We do not presume to class President Truman with a ruthless buffoon like the late Huey Long but it must be admitted that Truman's latest pipe dream offering a minimum income of $12,000 for everybody may be likened to the late Louisiana rabble rouser's proposal to make every man a king. Like a good many other things, the king business isn't what it used to be but it still involves the right to order common folks around—at least in countries where royal working conditions are still considered reasonably closed shop and healthful. What Huey conveniently ignored was the fact that if he debased the king racket and crowned everybody, there'd be no common folks left to boss and the job wou'dn't be worth a mouthful of ashes. So it is with Truman's $12,000 minimum wage; it can be achieved by further debasement of our money, but if the $12,000 buys no more than $1,200 now we might as well have the $1,200 in more valuable currency.

We are currently having a dose of this kind of economics. Average wages have doubled, roughly, in 10 years and so has the cost of living, very roughly. So, who's any better off in actual cash? Corporation profits have doubled on paper but in dollars that doesn't buy any more than the workman's wages. Some of us often overlook that.

When pre-Nazi Germany ran her financial system with a printing press, beer got up to a million marks a stein. That is about $235,000 a glass in prewar money and a thin dime in pre-Nazi money. For a billion-mark note you got your change in a bushel basket and nobody counted it because it wasn't worth anything. With that kind of money we can create a $25,000 minimum income if we wish, but if at the same time the family car and grocery bill go up in proportion, does that make the posy smell any sweeter? There's an odor, all right, but it isn't a rose.

In addition to the famous good nickel cigar, what this Nation needs as much as anything right now is a few courageous statesmen willing to tell the public in simple words where this dizzy type of economic thinking is leading us. What it holds in store, for instance, for the savings of the thrifty; what it means to the old person living on a fixed pension. We need to ponder a little on the fact that what a dollar will buy means more than how many we get; that it's not what you pay, but what you get for what you pay, that counts.

According to our notion, any political or economic philosophy which promises to double everybody's income while at the same time doubling his outgo is as phony as a brass dollar. It's time, possibly, that we paid some attention to what is being done to us as well as for us.—J. R. L.

Education

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the resolutions on education adopted at the eleventh constitutional convention of the CIO on October 31 to November 4, 1949.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

Resolution 18

Federal aid to education

Equality of educational opportunity and the continuing improvement of education are imperative if democracy is to survive in the United States. Our Nation must spend enough funds so that this equality is available, as guaranteed, to every child regardless of race, color, creed, or geographical location. Education in the United States today falls short of this standard in a number of respects.

American children are suffering a tragic injustice because of the inequality in educational services provided by the various States, and this is most glaringly demonstrated in the contrast between the facilities in the low income Southern States and those in wealthier industrial States; while within the Southern States, segregated schools for Negroes receive a fraction of the amounts, small to begin with, that are appropriated for white children. Schools for children in rural areas are receiving little more than half the expenditure per child that is being received by children in schools in urban areas.

In spite of an all-out campaign to raise teachers' salaries, teachers today are receiving in real wages only a little more than they were being paid in 1939.

And at least 2,000,000 American children of school age are not attending any school.

All competent studies show that the Nation will need school buildings for at least seven and a half million additional children during the next 6 years and that local and State schools groups cannot possibly finance a school-building program of such magnitude.

In both the Eightieth and Eighty-first Congresses, the United States Senate passed a Federal aid to education bill which would provide approximately $300,000,000 in Federal funds for aid to the Nations' schools. Twice, reactionary forces in the House of Representatives and lack of aggressive leadership to support the Senate bill have killed this legislation: Now, therefore, be it

Resolved, We urge the enactment by the Eighty-first Congress of legislation—

(1) To provide adequate Federal aid for education so that, together with appropriations by the various States, improved facilities on every level of the educational system, from nursery to university, shall be assured, so that every child shall have a good

education, every class a good teacher, and every teacher a good salary;

(2) To provide, in accordance with the principle of Senate bill 246, that the individual States shall make the decisions as to whether nonpublic schools shall be eligible for Federal aid and as to the kinds of services that shall be covered by Federal grants;

(3) To provide that at least 75 percent of funds appropriated go directly for teachers' salaries; and

(4) To provide at least $3,000,000,000 in Federal funds over a period of 5 years for a comprehensive, Nation-wide school-building program;

(5) To apply the full benefits of this program and the legislation above recommended to Puerto Rico as an integral part of the American economic unit.

Resolution 19

Labor extension service program

In a democracy education must be a continuing process which extends throughout adult life. American farmers have long enjoyed millions of dollars worth of educational benefits through the Federal Agricultural Extension Service, while management representatives can avail themselves of services provided by publicly supported universities and other institutions. But in the United States, public educational services for the nation's wage earners, other than the purely vocational, are almost entirely lacking.

Bills to establish a Labor Extension Service in the United States Department of Labor have been introduced in the Seventy-ninth, Eightieth and Eighty-first Congresses, in an effort to provide the Nation's wage earners with a federally supported labor extension service operating through the cooperation of unions and universities within the States.

Early in the first session of the present Congress the labor extension service bill was approved by the Senate Committee on Labor and Public Welfare, but it has remained on the Senate Calendar without action for 8 months. Hearings on the bill have been held by the Subcommittee on Labor without action following from the full House Committee on Labor and Education: Now, therefore, be it

Resolved, We demand the immediate enactment by the Eighty-first Congress of the labor extension service bill (S. 110 and H. R. 1380); and

All affiliated international unions, councils, and local industrial unions are urged to support a campaign to enact a labor extension service bill by resolution, publicity, and communications with Members of Congress, and cooperation with the financial assistance to the National Committee for the Extension of Labor Education, which is coordinating the drive for its enactment.

The full benefits of this program and the legislation above recommended shall be applied to Puerto Rico as an integral part of the American economic unit.

Resolution 29

Children

We reiterate our belief, expressed in Resolution No. 34 at the tenth constitutional convention of the CIO in 1948, that the first right of citizenship in a democracy is to grow throughout childhood in good physical, emotional, and social health and security.

We affirm our pledge to help achieve this right through policies and measures that will insure our next generation of citizens a better start in life than we or any earlier generation has had. This objective motivates our entire program. Higher wages, social security, better housing, and our other goals all are directed to providing a better life for our families. In addition, special measures for children are required: Now, therefore, be it

Resolved, That the CIO, through its national, State, and local organizations, continue to lend its full support to—

The expansion of maternal- and child-health services until they are within reach of all mothers and children who wish to make use of such services, with special emphasis immediately on the expansion of health services for children of school age.

The expansion of public child-welfare services throughout the country which will give skilled help to orphaned, neglected, and delinquent children; to children of working mothers; and to communities in planning and directing wholesome recreational programs for their youngsters.

The expansion of research in child life which will help parents to a better understanding of what makes for healthy, happy childhood.

Federal aid to education and school construction, and State and local measures to assure opportunities for a good education to all our children.

Elimination of harmful child labor through improved Federal and State laws, strong labor law administration supported by adequate funds, and more fact-finding on child labor and youth employment problems.

Strengthening of public employment office systems so as to improve and extend counseling, placement, and follow-up services for young people.

The Midcentury White House Conference on Children and Youth, called by the President for the first week of December, 1950, when all citizens and organizations "to whom a child is important in himself and as the hope of a better tomorrow" will have an opportunity to forge new and better plans for assuring to all children that first right of citizenship in a democracy—the right to grow in good physical, emotional, and social health and security—to which we subscribe.

The work of the United Nations to bring better food, medical care and protective services to children in war-stricken and underdeveloped countries.

Shortage of Hospital Facilities for Veterans in California

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. McDONOUGH. Mr. Speaker, California veterans have encountered constantly increasing difficulty in getting the services to which they are entitled from the Veterans' Administration due to an insufficient number of VA offices in California to handle the veteran claims, and an acute shortage of adequate hospital facilities to provide medical treatment.

The veteran population of California today is estimated by veteran service organizations at 1,750,000, and even the accepted estimate used by the Veterans' Administration places their number at 1,355,000. But only 20 Veterans' Administration offices are available to serve California veterans as compared to 55 VA offices which are provided for 1,310,000 veterans in the 6 New England States, and the 41 offices which have been established to serve 902,000 veterans in Texas.

The need for immediate establishment of additional Veterans' Administration offices in California to render proper service to California veterans is evident from these figures. The following letter from Mr. Lawrence C. Stevens, director of the State of California's Department of Veterans Affairs, and the article from the January issue of the department's news bulletin graphically illustrates this critical shortage of veterans' facilities in California and emphasizes the urgent need for relief.

STATE OF CALIFORNIA,
DEPARTMENT OF VETERANS AFFAIRS,
Sacramento, January 12, 1950.

Hon. GORDON L. McDONOUGH,
House of Representatives,
Washington, D. C.

DEAR MR. McDONOUGH: In order to call specially to your attention some figures illustrative of the Veterans' Administration central office attitude in discrimination against California and her veterans, I am sending you herewith an extra copy of the January issue of the department of veterans' affairs news bulletin. On page 2 of this issue, you will find what we consider some eye-opening figures, taken from the Veterans' Administration's own reports.

I know you are familiar with our acute shortage of VA hospital beds in this State in particular. It is hoped that the information contained in this news bulletin will provide some effective ammunition in your future battles in behalf of this State's growing veteran population.

Very truly yours,
LAWRENCE C. STEVENS, *Director.*

CALIFORNIA IS VA STEPCHILD, FIGURES DISCLOSE

On what basis does the Veterans' Administration make its services available to veterans, geographically speaking?

This question, repeatedly asked by veterans in California, is prompted anew, but not answered, by a study of the latest address list of VA field stations across the Nation.

California is the second largest State, geographically, and the second largest in population, having just passed Pennsylvania in the official estimate by the Bureau of the Census. It is also the second largest in veteran population, although the VA central office in Washington ranks it third, behind Pennsylvania as well as New York.

But in the number of VA offices, California ranks sixth.

CALIFORNIA BARELY TOPS MISSISSIPPI

Here is how the States stack up in number of field stations (excluding hospitals) of the Veterans' Administration:

State	Veteran population (VA estimate)	Number of VA offices
Texas	902,000	41
New York	2,060,000	33
Pennsylvania	1,437,000	30
Ohio	989,000	28
Massachusetts	678,000	23
California	[1] 1,355,000	20
Mississippi	226,000	18
Florida	302,000	17

[1] Veterans' organizations and the State department of veterans' affairs estimate California veteran population at 1,750,000.

In the number of VA offices per veteran, California ranks almost at the bottom of the list.

California has a total of 20 VA offices, including the three regional offices in its three principal metropolitan areas. By the VA's

official estimate, there are 1,355,000 veterans in the State, as of August 31, 1949.

This averages out to one VA office for every 67,750 veterans. Using the Department of Veterans' Affairs figure of 1,750,000 veterans in California, this State has one VA office for every 87,500 veterans.

The only State definitely worse off in this respect is Illinois, with 92,308 veterans per VA office. Nebraska is also in the stepchild class with one VA office for each 79,500 ex-servicemen.

The average for all States and Territories is one VA office for every 33,408 veterans.

On that basis, California should have 45 VA offices instead of its present 20 if the VA population distribution estimates were correct. On the higher estimate of 1,750,000 veterans, California would theoretically be entitled to 52 VA offices.

VARIOUS FACTORS

Obviously, VA offices cannot be allotted by slide-rule. Distances play a part, concentration of population must be taken into account, and perhaps other factors.

For example, no State except Delaware has fewer than two VA offices, even those with such small veteran populations as Nevada (21,000) and Wyoming (40,000). On the other hand, Nebraska has only two VA offices although the VA estimates that the State has 159,000 ex-servicemen.

And Texas, vastest of the States, has 41 VA offices, for an average of one per 22,000 veterans.

EXAMPLES POSE QUESTIONS

On the other hand, the study poses these questions:

Why does little Vermont, with about the same veteran population as Wyoming, have twice as many VA offices?

Why do Michigan and North Carolina (793,000 and 410,000 veterans' respectively) have the same number of VA offices (16)?

Why, in view of the relative sparseness of VA offices in Minnesota, Nebraska, Illinois, and California (64,000 or more veterans per office), are there so many in Florida, Kentucky, and Mississippi (25,000 or fewer veterans per office), and in New England?

Another interesting aspect of these tabulations has to do with the closing by the VA of 42 small offices throughout the Nation last June. California lost two offices in that retrenchment; Massachusetts, among the best served of all the States, lost only one.

New England Power

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. SADLAK. Mr. Speaker, an unusual commentary because of its glaring foresight, faith in continuous scientific progress which has been so tremendously accelerated by World War II, is the editorial of January 11, 1950, appearing in the Sunday Republican published at Waterbury, Conn. Of course, it concerns the suggestion made by the President in his message on the State of the Union wherein he adds New England as a region "Where the benefits of large-scale public power development have not yet been experienced."

The editorial follows:

NEW ENGLAND POWER

When New England undertakes the needed expansion of electric power facilities there should be care to make certain that money and resources aren't being wasted on uneconomic hydroelectric developments which might, by that time, be made obsolescent by the advent of methods for using atomic fuel to drive electric generators.

The question of whether it is possible and economic to get appreciably large new quantities of hydroelectric power by more dams on New England rivers has been raised by President Truman. This is a matter of real importance to New England. New England needs more electric power. It needs cheaper electric power.

A Federal Power Commission survey that was made several years ago purported to show that an additional 3,000,000 kilowatts of electric power could be generated by harnessing New England rivers. That wasn't to say, however, that it would be feasible for private industry to undertake the necessary developments. This estimate contemplated Government-built installations.

The New England Council made its own survey of the situation and reported that as far as private industry is concerned any program that contemplated the production of more than 500,000 additional kilowatts would not pay off.

A third canvass of the possibilities was made by the Providence Journal last year. This disputed the claims of the FPC. The Journal claimed that 1,000,000 kilowatts rather than 3,000,000 was all that could be developed by any kind of engineering, no matter how many practical considerations were disregarded. The same study indicated that unless the projects were federally subsidized it wouldn't be practical to try for more than the 500,000 kilowatts the New England Council visualized.

From the conflicting estimates reached in the studies made so far, it is evident that there would have to be a very careful and definitive assessment by the Government before any Federal program can be undertaken. Thus it might be some years before any start will be made.

Also, from the facts already gathered it is evident that Connecticut, Rhode Island, and Massachusetts would derive most of the benefits from any large-scale Federal power projects in New England and Vermont, New Hampshire, and Maine would make most of the sacrifices. It seems likely that more years would be required to settle the questions raised by this situation.

The possibility of electric power generating plants using atomic fuel shouldn't be overlooked either. In the New England Council's report in 1948 it was stated that it would probably be "at least a decade" before atomic energy became commercially usable in this connection. But once atomic fuel has arrived on the scene it seems almost certain that the development of anything but the most efficient and economic hydroelectric installations will be out of the question.

New England, surely, has nothing to lose by going ahead with as much hydroelectric development as now appears economic from a private-industry standpoint. David E. Lilienthal, Chairman of the Atomic Energy Commission, has stated that "atomic power will almost certainly follow the course of supplementing rather than supplanting existing economical sources of energy supply."

But this much is certain. New England will want to be the first section of the country to turn to the use of atomic energy for electric power rather than the last section of the country to try the TVA formula. When the time comes for putting up atomic-powered steam turbines, we don't want to be in the course of condemning vast areas of fertile farm land and flooding our river valleys behind huge dams and paying the bills for obsolete methods and poor planning.

A Reporter Looks at Government

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. KEATING. Mr. Speaker, the penetrating research and high quality of reporting which characterizes a series of recent articles on the Federal Government commend them to the careful study of the Members. The author, Mr. Paul Martin, of the Gannett News Service, deserves our gratitude for his forthright presentation of the facts relating to bigness in government.

Under leave to extend my remarks, three in this series are included today, and two will follow tomorrow.

[From the Rochester (N. Y.) Times-Union of December 12, 1949]

FEDERAL GOVERNMENT'S SIZE: NO. 1 UNITED STATES PROBLEM

(How big is our Federal Government? How much does it cost you? What are you getting for your money? What are the possible future trends? The Times-Union presents today the first of five articles designed as a comprehensive analysis of how the Federal Government has mushroomed in the last 20 years to become the dominant factor in American economic and political life.)

(By Paul Martin)

The Federal Government has become the Nation's biggest employer, biggest merchant, biggest banker, biggest consumer, and biggest spender.

All this has developed in the course of the last 20 years.

The Budget Bureau estimates Congress will be called upon to appropriate or authorize $47,900,000,000 in the current fiscal year—a new peacetime peak.

The national debt is going upward again as the administration engages in deficit financing in a period of exceptional prosperity.

Within the last 6 or 7 months the debt has gained from around $252,000,000,000 to nearly $257,000,000,000. It will go higher still.

Approximately 36,000,000 Americans are drawing regular, direct payments from Federal, State, and local governments.

One out of every eight persons employed in the United States is working directly for the Government—around 7,600,000,000 Federal, State, and local employees.

Vast segments of our national economy are being supported by Government subsidies, paid out of the general taxes contributed by the people.

The Federal tax structure now reaches down to collect from individuals earning $1,000 a year or less.

Subsidized industries include the Nation's two largest—agriculture and construction.

There are many others—aviation, merchant marine, finance, minerals and metals, utilites, small business, new business.

Many are hidden subsidies, or protective legislation, or can't-lose guaranties.

Some are aimed at special-interest blocs of voters, such as veterans, farmers, teachers, organized labor, ranchers, miners, low-income groups, civil-liberties groups, the aged, needy, and blind.

Many State and local governments now look to Washington for support, after finding the Federal Government is usurping tax fields upon which they formerly depended for local revenues.

There have been at least 60 State-aid programs started by the Federal Government since 1933. Each has a different formula, different matching basis, and different administrative requirements.

They account for an expenditure of around $3,000,000,000 a year. There are forms galore and a host of Federal employees in each State to administer the programs.

Some come out of specific tax accounts, but the great majority drain out of the Treasury general fund.

The Government Reorganization Commission, headed by former President Herbert Hoover, found that the Federal Government, far from being an impartial arbiter of affairs of state, owns or operates or has a commanding financial interest in at least 100 important business enterprises—many in competition with private industry.

The Government's direct investment in these enterprises is in excess of $20,000,000,000, with authorized commitments to supply another $14,000,000,000, if necessary.

Said the Hoover Commission:

"The Government guarantees, directly or indirectly, about $90,000,000,000 of deposits or mortgages, and life insurance written by Government agencies approaches $40,000,000,000."

These agencies have at least 300 offices and branches scattered around the country.

In the power field alone the Government up to June 30, 1947, had built 56 hydroelectric or steam plants and had another 37 generating plants under construction. Congress had authorized for construction an additional 79 plants. And the Government owned 14,000 miles of power-transmission lines.

The Hoover Commission estimated it would cost $30,000,000,000 to build the new plants authorized for construction, not counting the ones already built or in progress.

No one, apparently, has ever been able to define clearly and comprehensively the full extent of Government subsidies, open or hidden.

The Hoover Commission, for all its task-force reports and expert research consultants, couldn't tote up the score.

The Committee on Reduction of Nonessential Expenditures, headed by Senator HARRY F. BYRD, Democrat, of Virginia, asked the Budget Bureau to report or estimate all Federal subsidies to business and farmers from 1934 to the current fiscal year.

The Bureau came up with these estimates:

Agriculture	$11,500,000,000
Business, through RFC	3,500,000,000
Maritime	450,000,000

But the Bureau excluded from its subsidy definition (1) Federal grants to State or local governments; (2) pensions, retirement benefits, and public assistance; (3) payments to foreign governments or individuals; (4) subscriptions to international organizations; (5) loans and loan guaranties.

Obviously the report was far from complete.

Yet it gives a partial picture of how the Federal Government has mushroomed in the last 20 years to become the dominant factor in American economic life.

[From the Rochester (N. Y.) Times-Union of December 13, 1949]

NORTH, EAST ARE PAYING FOR RESHUFFLE OF WEALTH

(Why are tax dollars of the North and East flowing south and west and overseas? Are the industrial States losing out in Federal-State-aid programs to the agricultural regions? Here is the second in a series of articles designed to give a comprehensive picture of the power and influence of government today, and how it redistributes the wealth of the land.)

(By Paul Martin)

The Federal Government today is carrying out what amounts to a gigantic redistribution of the wealth of the land.

This is being accomplished not only on a personal basis, by leveling off incomes and inheritances of individuals through stepped-up tax rates.

It is taking place on a State and regional pattern, through Federal-State-aid programs; and grants, loans, and subsidies to industry and agriculture.

The greatest percentage of Federal grants-in-aid goes to States which pay the lowest pro rata share of Federal taxes.

During the 1948 fiscal year, 34 States plus the District of Columbia, the Territories, and possessions, received back more in Federal grants than the pro rata share of taxes they paid to support these State-aid programs.

These States and Territories paid in proportionately around $650,000,000 for allocation to State-aid programs; got back around a billion dollars.

All States west of the Mississippi River and south of the Mason and Dixon's line received back more than the pro rata share of what they contributed except one—Virginia.

New York got back the same amount as Texas, and paid in four times as much tax money to support these programs. Connecticut put in twice as much as the State got back. Illinois invested $40,000,000 more than was received in return.

Here's how these States stood in the 1948 Federal-aid programs:

New York was on the bottom of the list for all States—a 43-percent return on tax money which New Yorkers paid to the Federal Government.

Connecticut was third from the bottom. New Jersey and Illinois were in fifth and sixth places respectively.

Over the long haul; from 1933 to date, New York has got back only around 6 percent of her total Federal taxes in the form of State-aid grants.

Connecticut received 7 cents on the dollar. Illinois and New Jersey got back about 10 percent each.

Tax moneys of the industrial North and East are flowing south and west and overseas.

Each new social-welfare program that is proposed will tend to accelerate this redistribution of the wealth.

These include Federal aid to education, compulsory health insurance, expanded social security, hospital construction, insurance against temporary or permanent disability, public power, and home relief.

The economy of the South and West are expanding into diversified agriculture and industry, through Government grants and loans, tax incentives, wage differentials, defense planning, and political influence in the administration and Congress.

During 1947 the South obtained 17.3 percent of its total income from Government sources, compared to 13.8 percent in the non-South.

Per capita payments rose 250 percent in the South between 1929 and 1947, compared to 184 percent for the non-South.

Manufacturing in the TVA region alone between 1933 and 1946 jumped by 140 percent, compared to 98 percent for the Nation as a whole.

Between 1940 and 1946 bank assets in the South rose 231 percent compared to a gain of 131 percent in the North.

The Golden West also is sharing in this Government-directed boom through loans, grants, wool support, silver and gold purchase, stock piling of minerals and metals, reclamation, irrigation, public power, reforestation, public parks and lands, and a natural gravitation of population.

Senator RALPH E. FLANDERS, Republican, of Vermont, member of the Joint Economic Committee of Congress, once declared that every State west of the Mississippi is living on a Government dole.

Meanwhile, what has happened in the North?

During the last 10 years the Nation as a whole gained 204 percent in income and productivity.

But New York State gained proportionately 191 percent—13 percent below national average.

Connecticut gained 174 percent—30 percent below average. New Jersey hit 175 percent—29 percent below average.

Illinois barely topped the national average with 205 percent.

In 1939 the average income of New York State citizens was 50 percent above national average. By 1948 it was only 34 percent higher than the national average.

A study of the Middle Atlantic region, including New York and New Jersey, by United States News and World Report, shows that between 1940 and 1946 these States lost proportionately 3 percent of all United States population, 5 percent of factory workers, 6 percent in value added by manufacturing, 24 percent of all bank deposits, and 42 percent in value of home building.

A similar study of New England States over the same period shows they lost proportionately 2 percent of population, 6 percent of home-building value, 8 percent of value added by manufacturing, 13 percent of factory workers, and 23 percent of bank deposits.

There were 37,000 production workers employed by textiles alone in Connecticut in 1939 compared to 35,000 in 1947.

New Jersey is losing out gradually in two important industries—chemicals and electrical machinery.

[From the Rochester (N. Y.) Times-Union of December 14, 1949]

TAXES FEED 36,000,000 ON GOVERNMENT PAY ROLLS

(Where do your tax dollars go? Who are you helping to support? How much is the Federal Government spending today? Here is the third in a series of articles designed to give a comprehensive picture for the first time of how the colossus of government reaches out into every State and every walk of life.)

(By Paul Martin)

How big is government today, and what is the extent of its power?

Here are some indications:

Approximately 36,000,000 Americans are drawing regular, direct payments from Federal, State, and local governments.

One out of every eight employed persons in the United States is working directly for the Government—or 7,600,000 Federal, State, and local employees.

Total Federal, State, and local spending will run close to $70,000,000,000 in the current 1950 fiscal year. This means around $30,000,000,000 in farm or business channels, around $40,000,000,000 to individuals.

The total Federal spending in prewar 1940 was $10,000,000,000, and even then the Nation was girding for an emergency. In the 1930's the first $4,000,000,000-a-year budget was considered a back-breaker.

The total 1950 budget has been estimated at $47,900,000,000 in total appropriations and authorizations.

The Federal Government has become the most dynamic factor in the entire American economy. It dominates business, agriculture, and foreign commerce. It exercises a powerful influence over what State and municipal governments are able to do.

If Federal loans, guaranties, and subsidies were withdrawn immediately, the national economy would suffer extreme shock.

Around 33 percent of what the average citizen earns today goes into a combination of Federal, State, and local taxes—many of them hidden taxes.

To keep the Federal Government going, we are spending annually around six billion for new material, supplies, and equipment.

The administration since VJ-day has or will export around thirty-two billions to keep communism out of Europe and restore the economic balance of the western world.

The Federal Government has accumulated an inventory of more than thirty billions in military or civilian supplies. This includes more than two billions invested in rolling stock alone, trucks, automobiles, staff cars, etc.

Uncle Sam pays more than $1,000,000,000 every year for transporting public property, mostly over the railroads.

There is a shelf of planned public works in excess of one hundred billions, which might be put under construction in event of a depression.

For all contemplated multiple-use water projects, an expenditure of thirty billions would be required. These activities keep 100,000 on the Federal pay roll alone, plus additional thousands under private contractors.

Agricultural activities of the Government has mushroomed from 22,000 to around 100,000 employees in the last 20 years. There are nine separate agencies providing Government credit to farmers on different terms and for different purposes.

Veterans' Administration will spend around six billions this year to aid directly more than 5,000,000 individual veterans, exclusive of the GI insurance dividend.

The Hoover Commission found VA was publishing 88 different technical manuals, 665 different technical bulletins, and over 400 circulars of various kinds.

Where does the money go?

The Budget Bureau says 81 cents out of your tax dollar this year will go to support four big areas of Federal interest—defense, international affairs, veterans, and debt service.

In 1939 the Federal Government spent $83 for every man, woman, and child in America. This year the Government will spend upwards of $287 for every single individual and there are around 17,000,000 more of us.

Here's where the money goes:

For 1939:	
Defense	$8.00
International	.15
Veterans	4.00
Debt service	7.00
All other	49.00
For 1950:	
Defense	98.00
International	46.00
Veterans	38.00
Debt service	37.00
All other	68.00

Total funds to be spent or obligated by the Federal Government in the 1950 fiscal period will be distributed in approximately this fashion:

Salaries: Ten and two-tenths billions for three and seven-tenths million Federal employees, including the military.

Services: Two and four-tenths billions for communications, transportation, rents, etc.

Goods: Ten billions including two and five-tenths billions for construction, one and seven-tenths billions for aircraft.

Benefits: Seventeen and three-tenths billions for subsidies, pensions, and grants, including more than two billions for welfare and old-age pensions, one and six-tenths billions for the unemployed.

Farmers: Direct payments in excess of a half billion, plus crop loans and purchases which may exhaust the near-five-billion borrowing capacity of commodity credit corporation.

Foreign governments: Five and six-tenths billions to be spent mostly in United States markets.

Debt: Five and five-tenths billions for interest alone, nothing for debt retirement.

Loans: Two billions to farmers, real-estate operators, businessmen, veterans.

Where are the Federal employees located?

The greatest number, of course, are in the District of Columbia, or around 220,000. But the State of California alone has 205,000 Federal workers, runs the district a close second.

There are three States with more than 100,000 Federal employees each—California, New York, and Pennsylvania. Illinois, with 99,000, is close to the mark.

Control of Alcoholic Beverage Industry

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

DIVISION OF ALCOHOLIC BEVERAGE CONTROL,
STATE LIQUOR AUTHORITY,
New York City, January 11, 1950.

Hon. ANTHONY F. TAURIELLO,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN TAURIELLO: The New York State Liquor Authority today adopted a resolution (copy attached) which summarizes our position on an issue that we consider timely and important. Although this resolution is self-explanatory, it seems worth while to mention here certain facts and principles that are germane and probative.

We approach this subject from the standpoint of public servants entrusted by the government of this State with the difficult task of administering the restrictions, regulations, and provisions of the ABC law which, by the terms of that statute, were enacted in the name of the protection, health, welfare, and safety of the people of the State.

We refrain advisedly from recommendations of specific legislation by the Congress because we have no peculiar qualifications by virtue of our office or official experience to determine what taxes should be imposed or the amount thereof.

We recognize clearly that the American citizen who consumes alcoholic beverages and who ultimately pays whatever taxes are collected on these commodities, has merit in his position when he insists on fair, equitable, and just treatment. We feel that he has been paying the heavy excise taxes on these commodities originally as a contribution to the winning of the war, and, subsequent to that accomplishment, with a feeling of resignation engendered by his observations that, while such discriminatory taxes as those on baby oil and ladies' purses are being collected, he should not object too strenuously to his lot. But we have no commission, privilege, or intention to represent the taxpayer or to plead his cause, however just, since such action is not within the scope of our official duties.

Nor do we undertake to advocate the cause of the industry whose members pay to the Government and then pass along to the consumer the taxes imposed by law on their businesses. We agree, of course, with their belief that any tax which destroys a lawful business or fosters its illegitimate competitor is unwarranted, unjust, and unrealistic. Again, we have no commission, right or intention to present the case of the alcoholic beverage industry or to state its position, however meritorious, since to do so would take us beyond the prerogatives of our office.

Yet, sensible to our official obligations, we are deeply concerned with the social evils that are privy to the illicit manufacture and sale of alcoholic beverages. We find cause for concern in the figures of the Alcohol Tax Unit of the United States Treasury Department reflecting the seizure by that agency alone during the fiscal year 1949 of 8,008 stills and 3,661,432 gallons of mash. Compared with figures reported by the ATU for the fiscal year 1948 in those two categories (6,757 stills and 1,710,833 gallons of mash) it will be seen that increases of 18.5 percent in still seizures and 114 percent in mash seizures have occurred. These figures give expression to the fact that the consumer demands alcoholic beverages and that, although he is willing to buy them at high prices when he can afford to do so, he will buy the illicitly produced, non-tax-paid produce when he is confronted with the alternatives of abstinence or excessive price. Of interest on this point is a comment by Mr. Virgil W. Peterson, the distinguished operating director of the Chicago Crime Commission and an expert on law observance and law enforcement. Writing in the July-August 1949 issue of Northwestern University's Journal of Criminal Law and Criminology, Mr. Peterson asserted:

"In America the tendency is present in large segments of the population to consider it a constitutional right to disregard any law or legal restrictions which may not meet with an individual's approval. Consequently, a tightening of the closing hours in some cities has resulted in open and notorious violation of the closing hours with attending political and police corruption. High taxes have frequently resulted in bootlegging."

Prohibition by price excesses is potentially as destructive a force as prohibition by decree. Both cause irreparable injury to legitimate business and good government. The havoc wrought by national prohibition can be correctly appraised only with the passage of years and through the verdict of history. To those who have devoted themselves over the years to the cause of good government, to combating the kidnaping wave of the early thirties, and to smashing the industrial, vice, and other rackets in later years, it is clear beyond doubt that prohibition spawned the greatest conglomeration of vicious criminals and aggravated crime that our country ever experienced. All of us, regardless of experience, know that prohibition not only failed to accomplish its stated objective but in addition so tarnished the luster of government itself and so corroded its framework that the after-effects will long remain to be seen. Public servants, students of government, and lawmakers in particular should never lose sight of these facts, nor should they underestimate the lessons they teach. Public opinion must be kept on the side of law observance and behind law enforcement.

During the 16 years of its existence the New York State Liquor Authority has sought to attain the objectives of our ABC law by insisting on strict compliance with rigid standards in the hope that this policy and procedure would induce honest, honorable, and respected business people to participate in the business of supplying legitimately produced, potable, tax-paid alcoholic beverages for the moderate and temperate use of the consuming public. We feel that this effort has been rewarded and that a high percentage of the large number of carefully screened persons who have been licensed to engage in this business in this State have exercised the privileges conferred thereby in a responsible and meritorious manner. We believe that any effort to brand these licensees otherwise than as legitimate business people serving a public need and demand would appear to be highly inconsistent with the objectives of liquor control and would be prejudicial to the efforts of the States to attain those objectives through insuring high standards of compliance with the letter and spirit of the law by licensees who are themselves law-abiding, self-respecting, and capable business people.

We trust that this statement of our position is constructive and that it will be of value to you and your colleagues in resolving the direct and related issues that are involved. Should you feel that we can be otherwise helpful, please feel free to command us.

Very truly yours,

STATE LIQUOR AUTHORITY,
JOHN F. O'CONNELL,
Chairman.

RESOLUTION

Whereas under the powers refunded to them by the twenty-first amendment to the Constitution of the United States, 46 of the individual States have enacted laws to control the alcoholic beverage business; and

Whereas although variously expressed, the purpose of these laws is to protect the health, welfare, safety, and morals of the people of those States by fostering and promoting temperance and moderation and respect for obedience to law; and

Whereas this objective depends for accomplishment upon a sound law effectively administered; and

Whereas to be sound in concept and susceptible of effective administration, particularly as to acts that are not intrinsically wrong, penal statutes, including those relating to liquor control, must be in substantial conformity with public thinking; and

Whereas taxes on alcoholic beverages which are so excessive as to cause public resentment create a condition tolerant of the bootlegger and the bootlegging business and thereby compromise temperance and moderation and undermine respect for and obedience to law: Now, therefore, be it

Resolved, That the New York State Liquor Authority respectfully urge all members of the delegation of this State in the Congress of the United States to consider these facts carefully and to weigh them judiciously in their deliberations on proposals to reduce the high excise taxes which were imposed as wartime measures.

(Resolution adopted by the New York State Liquor Authority in New York City, January 11, 1950.)

Multiple Sclerosis

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. MURDOCK. Mr. Speaker, in recent months I have had numerous letters from individuals suffering with the dreaded and little-known disease, multiple sclerosis. Naturally, they have written to urge me to support several bills now pending in Congress to grant funds for research in multiple sclerosis, and I have in each case assured the writer than I am indeed in favor of funds for such purposes. However, the mail brought me a few days ago another such letter, this time from a fine young woman who has been a good friend of the Murdock family for years. She has written to tell us that her doctor has now diagnosed her trouble as multiple sclerosis.

After reading her letter, I felt that I should redouble my efforts for this legislation, and I think that perhaps other Members of Congress will have similar reaction. Her letter is as follows:

DENVER COLO., *January 11, 1950.*

Hon. and Mrs. JOHN R. MURDOCK,
House Office Building,
Washington, D. C.

DEAR MR. AND MRS. MURDOCK: It was so good to see you both last summer when I stopped in Washington with Bert and his family. At the time I could have told you my tale of woe but I didn't see any point in bothering you with it since I did not realize you might become involved in the matter.

My Christmas letter sent as I left Twin Falls for Denver told of my peculiar disease being diagnosed as multiple sclerosis. How much do you know about it?

Do you know that it is the disease of which Lou Gehrig died? But of course you know of it because of Arizona's late Governor. They are the exceptions; few of the victims are fortunate enough to die. Instead we face years and years ahead of paralysis. Though the paralysis has not yet set in for me it may come gradually or I may not be able to move a single muscle by tomorrow. A year ago right now I was completely numb from the tips of my toes to my diaphragm. Much of the numbness has disappeared but I can put my whole right leg in scalding water and not feel it. Since February 23 I have been in constant pain though the intensity varies. There are other ways in which I have been affected but this is enough for you to know how important a matter it is to me and to millions of others.

Yes, I say millions. New York City alone has over 10,000 cases. A rare disease? Not in the number of victims (it hits chiefly the healthiest between 20 and 40), but in what is known of it. The disease has been known for nearly 100 years but nothing has been done about finding out the cause or possible cure until 3 years ago next month when patients themselves, together with their families and friends, organized the National Multiple Sclerosis Society (270 Park Avenue, New York). Still the cause and cure are unknown. There is no medicine I can take—nothing to keep my health in the state it is in now or improving it, nothing to stop the disease from progressing.

Government-sponsored research in multiple sclerosis received a boost with the passage by the Senate on September 27 of S. 2591. This bill provides for the establishment of a national institute on neurological diseases, specifically citing research in MS as a purpose of the act. Will you vote in favor of this bill when it comes before the House?

As you know I have left my work as a director of Christian education. I started this week in a strictly 9 to 5 office job with the Denver Council of Churches. I have been fortunate in finding a place to live and mother and dad will join me the first of next week to make their home with me and take care of me when and if I can no longer do so myself.

Do not worry about my mental state; I have not become morbid. I seldom say as much as I have just written you. Perhaps your vote will be the difference between discovery of a cure before I become incapacitated and the present lack of knowledge on the subject.

Perhaps my next will be on a more cheerful note.

Sincerely,

FLORENCE LUDY.

Federal Fair Employment Practice Act

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I am enclosing the resolution that I have received from the board of aldermen, legislative department, city of Chelsea, Mass.:

Whereas there is now pending in the United States Congress the Federal Fair Employment Practice Act; and

Whereas the Commonwealth of Massachusetts has already adopted such an act; and

Whereas it is the sense of this board of aldermen that it is vital to the best interests of this country that such an act be adopted in line with the report of the President's Commission on Civil Rights: Now therefore it is

Resolved, That this board of aldermen go on record that it officially endorses the FEPC and urges its Senators and Representatives in Congress to use their good offices in order to successfully enact this legislation;

Resolved, That a copy of this resolution be forwarded to Congressman LANE, and Senators SALTONSTALL and LODGE.

Harry Coltun, Joseph B. Greenfield, Joseph E. Thornton, Joseph Margolis, James A. Hanlon, George J. Gallant, Daniel E. Carroll, Andrew P. Murphy, Alexander Dzengelewski.

In board of aldermen, January 9, 1950, adopted.

Approved January 11, 1950.

JOSEPH A. MELLEY, *Mayor.*

A true copy. Attest:

JOSEPH A. TYRRELL, *City Clerk.*

We Must Not Be Afraid of Change

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article by Raymond B. Fosdick, which appeared in the New York Times magazine of April 3, 1949.

There being no objection, the article was ordered to be printed in the RECORD as follows:

WE MUST NOT BE AFRAID OF CHANGE

(By Raymond B. Fosdick, former president of the Rockefeller Foundation)

When the last glacier retreated northward from what is now Connecticut, it left behind, as mementos of its visit, great boulders of rock strewn lavishly across the State. Several of them, larger than corncribs and many tons in weight, were deposited on my farm, and for 15 years I have watched one of them fight a losing battle with an ash tree. The tree evidently started in a seed lodged in a tiny pocket in the top of the rock. When I first saw it, it was a sturdy sapling that had made itself a comfortable crevice for its roots. Today its irresistible growth has torn the massive rock into fragments.

This is the law of life. The future belongs not to rigid absolutes, whether they are primal rock or unyielding social arrangements, but to the thing that can grow, whether it is a tree or a democracy.

It is strange that a principle as familiar as this should today need underscoring, but we are living in years of uncertainty and fear, and fear induces a kind of spiritual astigmatism. To be sure, in our generation, we have reason for our fears and every justification to resist the threat that creates them. But I am thinking of fear as an evil in itself and what it does to human emotions and reactions.

For one thing, fear breeds an instinctive hostility to growth, because growth means change, and in anxious hours men tend to cling to the shelter of the present or to put their faith in nostalgia for the past. But history's current is sweeping us into the future, and we cannot stand still, nor is there now any place left to go back to. The illusion that security can be found in immobility, or that safety is dependent upon the absence of change, is perhaps the most dangerous form of imbalance which plagues the minds of men.

Nothing is static in this world, least of all our ideas. Values change from age to age and the interpretation of one generation is seldom the interpretation of the next. Social conceptions must constantly be retranslated and reexpressed in contemporary idiom to accord with contemporary conditions. Even our conceptions of freedom and democracy are not static principles. The Declaration of Independence was a broader definition of freedom than that which came out of the Revolution of 1688, just as 1688 widened the freedom of Magna Carta.

Today the conception of freedom is once again taking on a larger meaning. Our generation is thinking of the threat to freedom which comes from poverty and insecurity, from sickness and the slum, from social and economic conditions in which human beings cannot be free. In many countries, including our own, this new conception of freedom is struggling to make itself articulate, and irrestible change in older points of view is taking place before our eyes.

Democracy is another conception which must also be reinterpreted from generation to generation. It is government by the people and for the people, but its limits were not finally determined by the political concepts of the eighteenth century. Rather it is a growing, dynamic faith, a perpetually evolving adjustment between freedom and justice, between individual rights and the demands of society. This adjustment, however, is never perfectly and finally attained; it remains a problem which mankind must solve again and again. "It is provided in the very essence of things," said Walt Whitman, "that from any fruition of success, no matter what, shall come forth something to make a greater struggle necessary."

Here again we have a familiar concept to which most of us would doubtless subscribe. But it needs to be underscored today because our current fear of communism is driving some of us to believe that change is somehow subversive, and that anyone who advocates new ideas is probably a fellow-traveler who should be watched. Not only the House Un-American Activities Committee but similar State committees and various self-appointed groups are creating a climate of opinion definitely hostile to those who fail to conform to predetermined standards, and suspicion is thrown on individuals and organizations who dare to think in unorthodox and nonconformist terms.

With the possible exception of John Adams' administration, there is a risk today in being a liberal that has never existed before in the history of this Republic. If you sign a petition to admit colored people to public housing developments, if you favor fair employment practices or are concerned about civil liberties, if you fight for the protection of the rights of the foreign born, if you oppose religious prejudice and Jim Crowism, if you sanction cultural exchange with foreign countries, if you aline yourself with those who are working for more effective labor unions or more adequate medical care, if you take any point of view which involves the implementation of the Declaration of Independence that all men are created equal, you are apt to be suspected in some circles as a knowing participant in the Communist front, or, at the very least, as a witless dupe of Moscow's hypnotic influences.

There is hardly a progressive organization or undertaking in the country to which the adjective "communistic" has not been applied in the last few years—from the Tennessee Valley Authority and water-power developments generally, all the way to farmers' and consumers' cooperatives and plans for rural electrification. Fingers are even pointed at organizations like the YMCA, the YWCA, and the defunct Epworth League. In many States, teachers and college professors have been freightened into steril silence, and even the pulpit has not been free from fear.

The tragedy of this business is that it plays into the hands of the Communists. It identifies Russia with the process of social change at the same time that it limits us to a bleak and hopeless status quo. It concedes the Soviet claim of concern for the underprivileged while it stigmatizes the achievement and promise of democracy toward this same goal. A prominent doctor, head of a State medical society, recently condemned the idea of the broader distribution of medical care on the grounds that it was being pushed "by Soviet agents in this country."

That is the kind of reckless statement which creates an atmosphere favorable to communism. If the idea of making available to all the people of our country the curative techniques of modern medicine is communism, if communism has a patent on the idea, then communism has something for us which we very much want. But it isn't communism. It is democracy. Its roots go back to the Declaration of Independence, long before Karl Marx was born. It is a translation in social terms of a concept that was first conceived as a political idea. It is part of our developing spiritual testament. It is in line with all that is best in our tradition and hope. It is democracy facing the responsibilities of its maturity.

Those frightened people who use the word communism so easily had better reckon with its implications. There are plenty of arguments against communism. It is a facade for a ruthless tyranny. It is a brutal hoax by which millions of confused and hungry people are persuaded or coerced to sign away their freedom in exchange for utopian promises. But to paste a label of communism on the yearnings of men everywhere for a better life, to classify as subversive those goals of equality and human service toward which our democracy is moving, is to concede to the Communists all the best arguments and make a mockery of the faith that sustains us.

It is undoubtedly part of the Communist strategy to frighten us into a position which seems to identify our democracy, not with forward-looking movements related to the hopes of men, but with outmoded patterns of social thinking. If in the eyes of the nations, America could appear as a victim of spiritual paralysis, frozen to the present, deaf to the impact of new ideas of human equality which are sweeping the world, it would be an overriding victory for Soviet policy. That is the picture the Communists are trying to paint of us, and that, unfortunately, is the picture that some thoughtless and panicky people in this country are trying, unwittingly, to help them paint.

I do not underestimate the necessity which we face in times like these of keeping the Communists clear of our Government and rooting out treachery wherever it may be found. Split loyalties or loyalties that respond to strings pulled in Moscow cannot be tolerated in positions of power. We must know who our enemies are. But this is a task requiring consummate judgment and skill. If, in a clumsy attempt to exorcise evil, we proscribe the good as well, the damage will be irreparable. To act as if the term "communism" covers all the plans and dreams of men for making this world an inviting home to live in instead of a place to freeze and fight and starve in is no more intelligent than using a steam shovel to weed a flower garden.

In our concern over what communism may do to democracy we have overlooked the danger of what we ourselves may do to democracy under the stimulus of fear. Fighting fire with fire is an easy but misleading

slogan which has betrayed more than one cause in the past. Challenged by authoritarianism, men begin to build an authoritarianism of their own; they tend to take on the mood and techniques of their opponents; they answer heresy-hunting with heresy-hunting; they become like the thing they fight. That is what fear does to people. If the tactics of the Soviets succeed in inducing us to try to stamp out dissent and to measure loyalty by conformity, if they scare us into a denial of our historic goals, then they have maneuvered us into retreating from the field before the battle has even begun.

If democracy means anything at all it means the promise of growth. Democracy is not a finished project; we are engaged in building it. There is no blueprint which covers all the contingencies that may arise, or the new ideas and patterns that may be developed in the future. There is no final and absolute form of democracy which has been handed down from some political Sinai. We have no Karl Marx in our past. Democracy is a method of evolution, a maturing way of living, a conception of human relations rooted in the worth and dignity of the individual and inspired by the developing idea of freedom.

This is what our democracy has always meant. We have given it its preeminent place in the world because we have welcomed diversity of opinion, because there has been no fixed creed to which our citizens have had to subscribe, no Siberia for our intellectual and spiritual nonconformists. Our national life has been healthy and vigorous because dissenters have been encouraged to think critically of the political, social, and economic order in which we live.

Indeed, as we look back on our history we realize that the periods when we rose to moral greatness were periods of nonconformity—when Thoreau wrote his essay on civil disobedience; when Seward appealed to the country with his revolutionary thesis, "There is a law higher than the Constitution"; when Theodore Parker from his pulpit in Boston denounced the iniquity of our war on Mexico in words that burned their way into the conscience of the Nation. "If there is any fixed star in our constitutional constellation," said the Supreme Court in the Barnette flag-salute case in 1943, "it is that no official, high or petty, can prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion, or force citizens to confess by word or act their faith therein."

It is this kind of tolerance and adaptability that makes the evolving will of the people effective in reaching new definitions of liberty and equality. It is this philosophy of growth that gives us assurance in the present crisis. The only adequate way to answer the challenge of communism is to continue the building of an economic and social system whose concrete results in terms of the welfare of mankind will far outstrip anything that communism can even promise. Democracy thus interpreted as a positive force can create new hopes and new initiatives in human life and can capture the imagination of the world.

Here is a faith worth fighting for. Stalin boasts of his "new order." We have a new order, too, based on the capacity of each generation to experience what Lincoln called "a new birth of freedom." The Communists extol the youth and virility of totalitarianism. In the evolution of democracy we have a world that is perpetually young.

I started by saying that the future belongs to the thing that can grow; a tree can demolish a rock. In spite of the present impetus of its revolutionary program, communism, by encasing itself in an iron-clad orthodoxy, is sealing its own ultimate doom. Whether the field is science or economics or literature or art or music, the Kremlin has circumscribed it with an adamantine authoritarianism. The conformist reaction which holds the intellectual and humanistic life of Russia in a viselike grip can end only by strangling the vitality of the system it seeks to preserve.

In such an atmosphere there can be no flowering of the human spirit; it withers and dies from suffocation. The Communists are fighting against the laws of nature. In their fanaticism they have forgotten, if they ever knew, that stagnation and death await ideas as well as social and economic arrangements which have lost their power to grow. They taunt us for being the supporters of a crumbling status quo, but it is they who are looking backward, they who are trying to build a status quo far more rigid and absolute than anything the world has ever seen. It is they who would put blinders on men and establish boundaries beyond which ideas and dreams shall not be allowed to go.

Four hundred years ago, Galileo shook the world with the question: "Who is willing to set limits to the human intellect?" Well, the Communists are not only willing to do it, they are attempting to do it; and in that attempt which flies in the face of history lie the seeds of their own ultimate disintegration.

There is no future for such a system, any more than there is a future for a rock stranded by a glacier. Ultimately the irresistible power of a thing that can grow will shatter it. That is why democracy, rightly interpreted, is the last best hope of earth. It is rooted in the principle of growth; it is adaptable to new concepts of social justice. It is built, not on a fixed creed or on a system of regimented concepts, but on the sure knowledge that frontiers are never stationary, that the thrust of events is steadily forward, that there are no privileged ideas around which magic circles can be drawn to protect them from competition. It is only free men who dare to think, and it is only through free thought, freely expressed, that the soul of a people can be kept alive.

Federal Scholarship Plan

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include, and with pleasure, a splendid and deserving article written by Russell Collins, and appearing in the Boston Globe of January 15, 1950, relating to some of the constructive and effective efforts of our outstanding colleague from Massachusetts [Mr. FURCOLO]:

FURCOLO CALLED TO WHITE HOUSE TO EXPLAIN SCHOLARSHIP PLAN—HOW UNCLE SAM WOULD SEND 5,000 TO COLLEGE

(By Russell Collins)

SPRINGFIELD, January 14.—The Federal scholarship plan of FOSTER FURCOLO, freshman Congressman from the Second District, received the "green light" this week when President Truman in his budget message asked Congress to provide $1,000,000 to help capable youths get a college education.

The President's request was regarded here and in Washington as the first step toward establishment of the Furcolo plan under which the Federal Government would finance the college education of at least 5,000 high-school graduates annually, on a self-sustaining loan plan.

Although the plan appeared certain of having opposition before it is adopted, Congressman FURCOLO says he is confident Congress will act favorably upon this initial phase of his bill as asked by the President.

Congressman FURCOLO attracted national attention last spring when he was invited to the White House to discuss his proposed Federal scholarship plan with the President. Veteran newsmen at Washington said they couldn't remember when a freshman Congressman had been similarly honored.

Discussing his proposal this week, following the President's budget message, Congressman FURCOLO said it is based on two major premises:

First, no qualified high-school or college student should be deprived of a higher education because of financial inability to pay for it.

Second, in its present financial condition, the country is unable to provide that education free of charge.

"The aim of the Federal scholarship plan is to enable at least 5,000 high-school students a year to complete a college education when in the absence of the Federal scholarship plan they would be unable to do so," FURCOLO told a Globe reporter in his first detailed explanation of how his proposal would operate.

"The plan also would serve the same purpose for at least 500 college students a year to continue through postgraduate work," he added.

In its present state the Furcolo bill (now awaiting action by the Labor and Education Committee of the House) refers only to college and postgraduate higher education, he said. Actually it is intended to include students who will continue their education after high school whether it be in a college or some other institution of learning.

NO COST TO GOVERNMENT

"The initial plan is based on a college period of 4 years or a postgraduate period of 4 years," FURCOLO explained. "Since many courses would not take that length of time it is probable that the Federal scholarship plan would benefit 7,000 to 8,000 students a year, rather than the figure of about 5,000 or 5,500 upon which the plan is based.

"The benefits of the Federal scholarship plan are intended to be furnished at no actual cost to the Federal Government. The Government does provide money in the initial period of operation of the plan, but this money is not provided in the form of the usual appropriation. It is with this understanding that I say the benefits are made possible by the Federal Government but still at no actual cost to the Federal Government.

"I hope that eventually the time will come when this country can offer higher education to scholastically qualified students at absolutely no expense to the student. Post-high-school education should be free to those of our students who want and are qualified to continue higher education.

"The country has not yet reached the stage where it feels able to provide higher education free of charge. Until that time comes, I advocate the expedient of what I am terming the Federal scholarship plan."

FURCOLO, himself a graduate of Yale, where he paid for his education by working, said, "We must not lose sight of the fact that the country suffers in losing the potential qualities that have not been brought to fruition simply because thousands of individuals have been deprived of educations to fit their individual abilities. It is a public problem directly affecting the welfare of the community."

TEN-YEAR REPAYMENT PERIOD

In its working details, the plan provides for money to be advanced to students and then repaid at stated intervals over a period of 10 years, beginning after the educational period.

The amount of money to be advanced to those students continuing on from high school to college studies is fixed at a maximum of $1,000 per year. College students who are going on to postgraduate schools will receive a maximum of $1,500 a year.

The maximum time period for either group is 4 years of college studies for high-school graduates, or 4 years of postgraduate work for college students.

Those granted aid for college or post-high-school studies will repay the Government at the rate of $250 a year for the first 4 years and $500 a year for the next 6 years.

Postgraduate students will repay the Government at the rate of $250 a year for the first 2 years, $500 a year for the next 2 years, and $750 a year for the next 6 years.

Repayments do not begin until the first year after the study period is completed.

In the year after such payments have been completed so that the entire loan has been repaid to the Federal Government, the student will make a gratuity payment equal to 10 percent of the total amount advanced to him by the Government.

On the above basis, the Federal Government would appropriate about $167,000,000 over a period of 14 years or a little less than $12,000,000 a year for the plan. Fourteen years after the start of the program it is unnecessary for the Government to make further appropriations because the plan has a self-sustaining revolving fund that finances itself.

STATES WOULD CONTRIBUTE

In addition to the Federal appropriations those States that accept the terms of the plan will contribute at the ratio of $100 for every $1,000 advanced by the Federal Government. After the first 14 years of operation of the plan, the total expense to the States is figured at $1,150,000 a year or $50 for every $1,000 loaned to the student. The amount per State will depend upon the population of the State. The yearly contribution of an average State would be about $48,000 for the first 14 years and about $24,000 thereafter.

The contribution of the States differs from that of the Federal Government in that the Federal Government's contribution is a loan and that of the States is an outright gift.

There is an estimated 10 percent loss on loans not repaid by students because of deaths, poor risks, and similar reasons. By the fourteenth year the yearly repayments of students come to $20,700,000. The total amount of the gratuity payment of 10 percent the student makes is $2,300,000 or again, deducting the estimated 10-percent loss, $2,070,000.

Beginning with the fifteenth year and continuing after that time, the yearly administration expenses are estimated at a maximum of $500,000.

When the plan gets under way a total of $23,000,000 will be given to approximately 20,000 college students and 2,000 postgraduate students. Beginning with the fifteenth year the Government would have a surplus of $420,000 annually to reduce the amount of the States' contributions or cover any error in the estimated costs of administration.

SELECTION UP TO STATES

FURCOLO said the method of selecting students would be determined after the program had been accepted by Congress. The selection would be left, insofar as is possible, to the individual State. The student would be allowed to choose the institution he wanted to attend. The plan would not interfere with any Federal-aid-to-education program.

After FURCOLO had outlined his bill in Congress last spring, he received a telephone call from the White House that an appointment had been made for him to see the President. He was with President Truman for about a half hour, during which the President asked him many questions about the proposals. FURCOLO admitted he was surprised at the knowledge of his proposal that the President apparently had.

President Truman told him a program to provide financial assistance to college students was close to his heart, FURCOLO said, and that the White House was giving it considerable study.

Thus, it was no surprise to the Congressman or to others familiar with the proposal when Mr. Truman this week presented his request for an initial appropriation of money to help provide college training for capable youth.

Seafarers International Union

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. DOLLINGER. Mr. Speaker, I recently availed myself of an invitation extended to all Members of Congress by the Seafarers International Union to visit their headquarters branch at 51 Beaver Street, New York City. I was pleased to have the opportunity to see the hiring hall in action, and to learn what Paul Hall, secretary-treasurer of the Atlantic and Gulf district, Al Bernstein, their international representative, and others, are trying to accomplish.

I was convinced, that because of problems peculiar to the maritime industry, the union hiring halls have injected stability into the industry and have given to seafaring men a proper dignity and security that was impossible under the previous hiring practices.

Because I was so impressed with what I learned during my visit, I wish to take this opportunity to report to my colleagues on my experiences, and to give them the facts which were made available to me.

World War II proved conclusively that a large, strong, and efficient merchant marine is absolutely essential to our national security. Were it not for the fact that we were able to keep our ships sailing when the vessels of our allies virtually had been destroyed, it is not improbable that years would have been added to the conflict. In fact, victory might not have been ours.

It is important here to remember that the hiring hall was the backbone in keeping the ships crewed and moving in wartime to all theaters of operation.

The merchant marine has properly been called our second line of defense by those who shouldered the responsibility for the successful prosecution of our war effort. Just as we must maintain an Army and Navy strong enough to meet any emergency, so must we take the necessary steps to insure the continued efficient functioning of our merchant fleet. We should take no false comfort in the thought that Allied Nations are rebuilding their maritime industries. Constantly changing political alinements mean that the ally of today might well be the enemy of tomorrow.

There is no question that the highly successful operation of our merchant marine during the war was due to the stability achieved in the maritime industry over the past years. That stability should not be threatened, unless we are foolhardy enough not to have learned anything from the past conflict.

Yet the stability of this vital industry, and the job security of the workers dependent upon it for their livelihoods—and the security of the Nation—is threatened because of a serious shortcoming in the Taft-Hartley law.

Because of the ban on the closed shop, the existence of the maritime unions' hiring halls is in jeopardy. If the view of the lower courts is upheld by the Supreme Court, the ban will not only end the current hiring hall procedure with its democratic rotary system of shipping, it will destroy the maritime unions themselves and all their hard-won gains in behalf of their seafaring members.

It is possible that failure to exempt the union hiring halls from the provisions of the Taft-Hartley law was due to a lack of understanding on the part of many Members of Congress as to the nature of the hiring hall and its manner of operation.

As I saw it, the rotary hiring system is the most equitable method of dispatching men to jobs that has yet been devised, with seamen registering for jobs as they come off the ships and then being dispatched on a first-come, first-served basis.

Under the rotary hiring system, seamen who have been issued certificates by the United States Coast Guard testifying to their qualifications to sail in their particular ratings obtain jobs fairly and squarely. When a man wants employment, he registers at the union hiring hall, where he is issued a shipping card bearing the date of his registration.

As jobs come in, they are posted on the shipping board, listing the vessels, their destinations and other pertinent data. In addition, the dispatcher calls out the available jobs and those men who are qualified and wish to apply throw in their cards. Of those throwing in, the men with the oldest cards, or those who have been on the "beach"—unemployed—the longest, get the jobs. No one is compelled to take any employment. If an eligible seaman does not want a particular job, he simply does not throw in for it. He merely waits for one more to his liking to be called out. The date of his registration and the fact that he is qualified are the only considerations determining his right to the job.

I spoke with Paul Hall, secretary-treasurer of the Atlantic and Gulf district, and with his members of the SIU, and their sentiment in favor of this democratic system of obtaining jobs was overwhelming. The older seafarers were especially vigorous in their approval and in no uncertain terms they denounced

the degrading crimp halls and the shanghaiing methods that prevailed in the industry before the advent of the union hiring hall.

Crimp halls were generally seamen's boarding houses, whose unscrupulous proprietors served as employment agencies for equally unscrupulous shipowners. Crimps fleeced their seamen-guests, sinking them deeper and deeper into debt, until they were forced to accept one of the jobs offered them as a means of getting out of debt. The seamen's wages were then used to pay off the debt and, in addition, the crimp received a commission from the shipowner. It was a vicious cycle with the seamen never getting any more than a sum necessary to dispose of his obligation to the crimp.

Shanghaiing was an even more despicable method of supplying men to ships in those days. Manpower needs of a shipowner were satisfied by coercing or kidnapping seamen by crimps and saloon proprietors who would ply them with drugs and liquor, and then hustle them aboard ship.

The union hiring hall wiped out crimps' halls and shanghaiing, and the maritime industry is better off for it.

The union hiring hall also stepped up the efficiency and stability of the merchant marine by ending the employment of "summer sailors," generally well-to-do college students with connections who were pushed through Coast Guard qualification tests so that they could go to sea for a few months as a lark. As a result of this practice, qualified seamen who made a career of sailing and whose families were dependent upon them for sustenance were deprived of employment opportunities. They were forced to sit on the beach until these part-time sailors went back to school.

The union hiring hall not only provides fair treatment for the seamen, it has resulted in considerable advantage to the shipowners themselves, for with the innovation of union hiring came a stability that the industry never before enjoyed.

The Seafarers International Union maintains—and apparently without contradiction—that the end product of a strong union and the democratically administered system of rotary shipping is a membership that is conscientious and fully cognizant of its responsibilities as an important part of an important industry.

The Seafarers point out further that the destruction of the union hiring hall would wipe out many hard-won gains realized by organized seamen over the past 10 years, and chaos, confusion and all the sordid conditions that are now part of an inglorious history would return. And there is sound basis for this prediction.

The Congress of the United States can act to avert such a calamity. I believe all legislators share with me the desire to see our Nation move forward, not backward. I believe, therefore, that it is incumbent upon us to exempt the maritime unions from the closed shop ban. It is in the seamen's, the industry's, and Nation's interest that we do so.

Federal Spending

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Henry McLemore in the Washington Star of January 16:

SAYS FEDERAL SPENDING WILL COST OUR LIBERTY

(By Henry McLemore)

Up until the time of President Truman's budget talk I was against his national health program.

I had not read more than half of the President's budget speech before I realized that his national health program was completely necessary.

With that sort of budget someone has got to take care of a fellow when he becomes ill—he certainly won't be able to take care of himself. If this budget goes through, as it undoubtedly will, most of us will never have a penny any more.

When we get a cold, or a touch of croup, or a giddy spell in our head, we won't be able to call up doctors the way we used to, because we won't have any money to pay them with. Any money we have will be long gone to such places as the Maritime Commission ($162,230,466), Railroad Retirement Board ($612,881,136), and funds appropriated to the President ($4,133,988,085).

FIGURES OUT SACRIFICE

I hate to see the passing of doctors. In many ways they have been closer to the American family than any other professional men. The family doctor was the one man you could talk to. He was the one man who would get up at all sorts of hours and come to see you. He was the one man who knew you were being alarmed over nothing, but was still nice enough to come and allay your fears.

I wonder if Mr. Truman has ever completely figured out what he is asking this country to give up.

In case he hasn't figured it all out, I'll save him the trouble, because I have.

He and his advisers are asking Americans to give up America. If a halt is not called this country will not be the United States of America. Our heritage is being poured right down the drain. And it is much too fine a heritage to come to such an end. Our heritage is based absolutely on liberty—and that's what is being taken from us every time the clock ticks.

RECORD OF GENEROSITY

Speaking as an American, I would rather have it all taken in one big bite instead of having it nibbled away. I consider it an insult to my intelligence for my Government to think that I don't know what's going on. If all we were going to lose was money, I don't think many of us would complain. This country has proved its willingness to give away money to the world. This country has an unmatched record of generosity and decency. No one ever called for help and went unanswered.

But there has come a time when we are being asked, under the guise of politics, to quit being Americans. Day by day, slowly and surely, we are being asked to give away our pattern of life for the pattern of life of the Old World. Ours was the pattern of life of the New World. This country is known as the New World. It seems to me a shame that this country should be asked to walk in the footsteps of countries which have proved themselves failures.

This country was founded on strength and in my book there comes a time when the strong should be protected as much as the weak lest there come a time when there are no more strong to take care of the weak. Excuse my philosophy, readers, but I just had to get it off my chest.

Committed

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Woman's Home Companion for December 1949:

COMMITTED

Where do you expect to be when you're a grandmother? Possibly you haven't a very definite idea but I doubt whether you expect to be in a mental hospital. Yet that's exactly where thousands of aged men and women end up every year—falsely labeled insane. Our mental hospitals are becoming a dumping ground for old people who don't belong there any more than you or I.

Says Dr. George S. Stevenson, president of the American Psychiatric Association and medical director of the National Committee for Mental Hygiene: "It is intolerable for a civilized society to permit the continuance of this situation—especially when solutions are at hand."

I have visited more than 40 public mental hospitals in recent years. I have seen rows on rows of old people waiting in numb despair for death to end their miserable existence. Few mental-hospital superintendents will deny that many should not have been there. Most superintendents are eager to have the public know the appalling facts.

When I visited Manhattan State Hospital in New York, I saw plentiful evidence of railroading. Three out of 5 of Manhattan's 25,000 patients are more than 60 years old. Most of the old people occupy the overcrowded back wards—the wards of the hopeless. They are huddled together during their waking hours in unearthly silence in gloomy dayrooms, arms folded, eyes riveted on bleak walls. At night they are herded into huge barnlike dormitories with beds so tightly packed that they almost touch one another.

They suffer from no mental disease; but they are the victims of a social disease—rejections Dr. John H. Travis, Manhattan State's superintendent, readily admits that his institution is no place for these people but adds that he is powerless to stem the tide of unjust commitments.

In my rounds of mental hospitals from New York to California, north and south, I have seen thousands of such elderly patients. One head of a mental hospital told me: "Our chronic troubles—overcrowding, understaffing, financial malnutrition, antiquated buildings and the like—are grave enough, without thrusting the unwanted aged upon us. It is not merely a medical problem. It is an ethical problem and the fault lies not with us but with the community."

The clinical director of a large New England hospital tugged vigorously at my coat and said with repressed emotion: "Many of these old folks die within a few days or weeks after they arrive here. They don't die of any

mental or physical disease. They die of a broken heart. They feel themselves betrayed. They no longer want to live. They commit psychic suicide."

In a large midwest State hospital for the insane, I found a lovely 68-year-old woman who looked strikingly like Whistler's famous portrait of his mother. She answered my questions sensibly and with dignity. As we left, the superintendent who was escorting me through the wards remarked: "They had no more right to commit that woman than you or me. She's a widow and was living with her son and daughter-in-law. Lately she's been a bit confused and forgetful, as often happens when people get old.

"With her son working all day and his wife busy taking care of their two children and the household, nobody could give her the little attentions she needed. The family finally felt it couldn't put up with her any longer. The good homes for the aged were too expensive. Then somebody told them that the State mental hospital had to take in almost anybody, that this was the place that would take her off her family's hands.

"So they went to their family doctor, greatly exaggerated her eccentricities, got a commitment order and here she is. There are many like her here. It's a disgrace. There ought to be more suitable places for them to live out their last years if they can't do it at home."

A psychiatrist in charge of one hospital's chronic ward showed me a stack of commitment papers recently received. "These are all court orders requiring us to admit elderly persons into our hospital," the doctor explained. "We can't ignore them even if we doubt the validity of the diagnosis."

I was shocked by the casual way many of the orders were drafted. Some merely stated that so-and-so was adjudged insane and should be admitted to the State mental hospital, without further explanation. Many were evidently based on perfunctory court hearings or medical examinations by general practitioners with no special training in psychiatry.

Of course, not all the old people in our mental institutions are victims of railroading. Many are suffering from the two main mental diseases that afflict the aged: psychosis with cerebral arteriosclerosis (hardening of the brain's arteries), and senile psychosis (serious deterioration of the mental capacities resulting from the aging process).

The railroaded ones of our time are the victims of two trends that, ironically, have brought material progress to our country. One is the fact that more of us are living longer because of the great advances in health and medicine. In 1900 there were only 3,000,000 persons over 65 in the United States, or slightly more than 4 percent of the total population. Today there are 11,000,000, or more than 7 percent.

The second trend is the gradual transformation of our society from a farming to an industrial economy. American families have been moving from roomy homes in rural areas, where several generations of a single family were accustomed to live together, to small apartments in crowded cities, where the family breaks up into separate units with every marriage.

Thus as the aged among us grow more numerous, the living space for them dwindles steadily. This aspect not only makes elderly people the displaced persons of the family home but actually precipitates them into real nervous break-downs. Their presence in a cramped apartment creates problems which too many of us are not prepared to solve. We may resent the curbs on freedom of movement. Young children in the family may be hostile and refuse to bring their friends home.

Dr. David A. Boyd, Jr., well-known psychiatrist on the staff of the Mayo Clinic, says: "Many of the acute psychoses of the aged necessitating admission to a psychiatric hospital are the upshot of family quarrels. After a short hospitalization the psychosis often recedes and the family is again faced with the same problem. Too frequently they refuse to accept it and the psychiatric hospital has another permanent resident."

Dr. Boyd also notes that a large portion of our mental hospital personnel and funds is diverted to what amounts to custodial care for the aged, in place of an active curative program for younger patients, thus seriously hampering the latter's chances for recovery.

What can be done? There is no single over-all solution; but a combination of steps can effectively eliminate the evil.

Here are some suggestions drawn up after consultations with leading experts in the field:

1. The old-time respect and tolerance for elderly people must be reawakened. The pernicious notion that they are used up, ready for the scrapheap must be eliminated. This change in attitude would be an important kind of insurance policy for all of us who must in time face the problem of growing old.

2. A great deal of mental and emotional disorder—and unhappiness—among older people could be prevented by giving them a chance for continued active participation in our social and economic life. Dr. Winfred Overholser, superintendent of St. Elizabeths Hospital in Washington, D. C. has wisely observed: "To force people, formerly active, to give up completely the work they have been doing and sit at home contemplating their difficulties is very likely to hasten their complete demoralization and distintegration."

3. Public opinion and professional resistance should be mobilized against the practice of railroading noninsane elderly folk to mental hospitals. Expanded community provision for housekeeping services and home nursing could keep many enfeebled old folk at home while helping to relieve family tensions.

4. Adequate alternatives to mental-hospital care must be devised for mentally enfeebled old folks. Some States are stepping up their family-care programs, placing more mentally enfeebled patients, including the aged, in selected private homes where they can obtain individualized attention and be more content than they can in mental hospitals.

5. Many experts agree with Dr. Boyd, of the Mayo Clinic, who urges the establishment by all States of a new type of institution for mentally enfeebled old people who cannot be kept at home. These institutions, exclusively for the aged, would be built on the colony or village plan—to minimize physical dangers while permitting maximum freedom of movement.

Such State homes, says Dr. Boyd, should be large enough to be operated economically and yet small enough to provide individualized attention. The staff would include physicians with special interest in geriatrics—the treatment of old age—together with nurses, occupational and recreational therapists, and social workers. The residents would be encouraged to use the skills they still have to the utmost degree compatible with their physical reserves.

This may sound visionary to the uninformed. But such a set-up would actually cost us no more than the wasteful practice of consigning the elderly noninsane to expensive buildings equipped for active hospital treatment. It would help restore public mental hospitals to their primary function of active curative treatment. And it would help erase from our souls the stigma of tolerating such an evil as railroading the sane to "insane" asylums.

Civil Rights

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the resolutions on civil rights adopted at the eleventh constitutional convention of the CIO on October 31 to November 4, 1949.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

Resolution 20

Civil rights and the extension of democracy

We of the Congress of Industrial Organizations are proud of the American quest for liberty and the struggle for equality. We seek to implement this great heritage. We are dedicated to the responsibility for furthering economic opportunity, religious freedom, and political participation. Our ultimate goal is full economic, political, and social equality for all groups and individual American citizens in thought, expression, and action, without discrimination because of race, creed, or national origin.

Our American heritage of freedom and equality has given us prestige among the nations of the world and a strong feeling of national pride at home. There is much reason for that pride. But pride is a poor substitute for steady and honest performance, and the record shows that at varying times in American history the gulf between ideals and practice has been shockingly wide. We have had human slavery. We have religious persecution. We have mob violence. We have erected an elaborate system of legal segregation based on race. We have shown at times a complete disregard for the constitutional rights of minorities with whose ideas the majority disagrees.

Our system of segregation that the dead hand of the past has fastened upon our generation does not only establish a system of segregation enforced by the sanction of law, but it penalizes the citizen who has no prejudices. A citizen who desires his children to be educated with all the children in the community, both black and white, is forbidden this privilege by law. These laws do not only merely carry out the prejudices of some members of the community; they compel everybody else to abide by such prejudices. The effects of segregation are not confined to those who are colored. They extend to everyone; they bear vitally upon the interest of the Nation as a whole.

To be free, men must be subject to discipline by society only for the commission of offenses clearly defined by law and only after trial by due process of law. Preservation of civil liberties is the highest duty of every government, whether it be Federal, State, or local. Wherever the law enforcement measures and the authority of government are unused or inadequate to discharge this primary function of government, this authority must be strengthened.

Recognizing these facts, President Truman created the President's Committee on Civil Rights on December 5, 1946, with the specific responsibility of preparing recommendations for more effective means and procedures for the protection of the civil rights of the people of the United States.

The findings and recommendations of this committee, in the form of the report, To Secure These Rights, will rank in history as a charter for human dignity and freedom. With courage and devotion to these principles, the President has steadily moved forward in implementing them. He has requested each succeeding Congress to translate this report into legislative reality. He has implemented the report by Executive orders. Progress is being made in the Armed Forces—slow, but the trend is forward. The Department of Justice petitioned the Supreme Court to outlaw racially restrictive covenants in housing. The Department of Justice petitioned the Supreme Court during the October 1949 term to declare segregation in interstate travel illegal.

The CIO unreservedly supports President Truman's civil rights program. We are determined to secure the adoption of these recommendations on the Federal and State level. We feel that the enactment of this program will enable America in actual practice to show the world that we intend to close the gap between our stated ideals and our day-to-day practices. We firmly oppose segregation based upon race, wherever it exists, and pledge our efforts toward the elimination of segregation. Now, therefore, be it

Resolved, That the Eleventh Constitutional Convention of the Congress of Industrial Organizations hereby pledges itself to continue the struggle to achieve the full, equal enjoyment of all the rights guaranteed in the Constitution of the United States, regardless of race, color, creed, or national origin.

We recommend:

That each CIO affiliate create a Civil Rights Committee or Department on Fair Practices within its respective organizations; and that each international union seek to have incorporated in their collective bargaining agreements non-discrimination clauses particularly pertaining to hiring.

We demand:

1. The passage of Federal and State Fair Employment Practice Acts.
2. The enactment of a Federal antilynching bill.
3. The passage of Federal and State legislation outlawing poll taxes and other restrictions on the right to vote.
4. The abolition of segregation in the armed forces.
5. The passage of measures to ban segregation in interstate travel.
6. The enactment of safeguards against racial discrimination in Federal appropriations for State aid.
7. The enactment of civil rights laws in all States which now do not have such laws eliminating segregation.
8. The abolition of the Wood committee.
9. The enactment of laws protecting aliens long resident in the United States and regularizing their status.
10. The establishment of guarantees to protect the freedom of thought and the freedom of political views of Government workers and the revocation of Executive Order 9835.

Resolution 53

Due process in loyalty and security cases

The constitutional rights of the individual under our democratic American system require that he shall not be put in jeopardy or have his opportunity to earn a livelihood impaired or destroyed or have his reputation and peace of mind destroyed without a full and fair hearing subject to all the constitutional safeguards of our system of law.

It is the duty of our Government to protect the Nation against spies, saboteurs in the service or interest of foreign powers and agents acting to undermine or overthrow our Government. But it is equally the duty of our Government to make sure that the security measures employed to protect our democracy do not destroy the very democratic rights they are designed to protect. The most subtle and deadly advantage that totalitarianism can win is for democracy to destroy itself in its effort to defeat the upside-down morality of totalitarian states in which the individual becomes the creature, tool, and slave of dictatorial rule by terror. Thus would be accomplished the atomization of the masses which Hitler declared desirable and which the late Justice Rutledge denounced in declaring unconstitutional the attempt of the Taft-Hartley Act to prevent political action by workers through their unions.

The irresponsible, witch-hunting, headline-seeking proceedings of the House Un-American Activities Committee over the years have created an atmosphere of hysteria which, heightened by the cold war between democracy and aggressive totalitarianism, seriously endangers every individual's democratic rights. This hysteria does more to defeat than to accomplish the legitimate purpose of national security. We cannot be strong if every man is afraid of his brothers. That is not freedom; it is the paralyzing tyranny of fear.

Loyalty and security investigations of government employees and workers in private employment engaged in classified government contracts lack the safeguards which are essential to a fair hearing and they frequently violate the democratic rights of the individuals accused. The all too frequent use of unevaluated, unverified accusations by the security and investigatory agents in loyalty and security investigations, has brought to light the hazards to which loyal citizens are subjected without their knowledge and without opportunity to protect themselves.

Investigations, charges, hearings and dismissals carried on in this irresponsible manner have marked men and women for life, have impaired their ability to earn a living, and have irreparably damaged the reputations of themselves and their families. They have been punished without fair trial.

When applied to workers in private employment, loyalty and security investigations and dismissals conducted in this manner impair the morale of all workers in the plants, interfere with their union organizing activities and threaten their right to be effectively represented in the processing of grievances and in collective bargaining by shop stewards and union officers of their own choosing. Citizens of democratic nations who are known anti-Communist liberals, including democratically elected delegates to union conventions, have arbitrarily been barred from entry into the United States without stated cause or fair and timely hearing. Thus the rule of fear started by the Un-American Activities Committee spreads out to undermine the rights of individuals as citizens, and now, as the arms program and the atomic energy program expand, threatens to destroy the democratic unions of free workers: Now, therefore, be it

Resolved, This Convention of the CIO calls upon President Truman to create a national commission of outstanding citizens from all walks of life to make an exhaustive review of all so-called loyalty and security procedures of all agencies of the Government, and to report and recommend measures that will fully protect the democratic rights of every individual while guaranteeing the necessary measure of national security.

The procedure employed to determine loyalty or reliability in a security sense of accused persons, including the procedures employed in deportation proceedings, must be revised to provide all the safeguards of our system of law which forms the basis of protection of civil rights. The accused must be presumed innocent until proven guilty. He must be informed of the charges against him and the evidence upon which such charges are based. He must have the right to be represented by counsel and must be given the opportunity to face and question his accusers. He must not be presumed guilty merely by alleged association with alleged subversive organizations, and the listing by the Attorney General of alleged subversive organizations without full and fair public hearings must be discontinued, and any organization listed as subversive by the Attorney General shall have the right to a full judicial review.

The decision must be made by responsible and informed persons competent to distinguish between rumor and evidence and who understand and respect our democratic ideals of due process, who clearly see and respect the distinction between disloyalty on the one hand and belief in a liberal social and economic philosophy or adherence to unpopular ideas on the other, and who appreciate the value of untarnished democratic ideals and practices in the global contest between the idea of freedom and the idea of totalitarianism.

The accused person must have the right to appeal an adverse decision to the regularly constituted courts.

In every case, employees who are cleared of charges of disloyalty or unreliability in a security sense must be given notice thereof and must be reimbursed for costs and loss of income caused by such loyalty or security procedures, and notice that they have been cleared of such charges must be given to all neighbors, friends, and others who were interviewed in the course of the investigation.

We applaud the courageous defense of academic freedom by those colleges and universities which defied the presumptuous attempt of the House Committee on Un-American Activities to censor textbooks, and who have opposed the loyalty oath, and we renew our demand for the abolition of that committee.

We endorse such measures as H. R. 14 by Congresswoman DOUGLAS, of California, which proposes to define rules for the conduct of investigations by all congressional investigating committees so as to protect the rights of persons appearing before such committees.

Resolution 62

Discrimination by American Bowling Congress

The constitution of the American Bowling Congress restricts membership in its affiliated associations to "individuals of the white male sex."

The American Bowling Congress exercises a monopoly of the sport of bowling and ousts from membership individuals who participate in tournaments which it does not approve.

The American Bowling Congress has consistently refused to change its discriminatory and monopolistic policies.

Proceedings to revoke the Illinois charter of the American Bowling Congress have been urged upon the State of Illinois and upon Cook County, Ill., by President Philip Murray, Secretary-Treasurer James B. Carey, Illinois IUC President Joseph Germano, regional director of the United Auto Workers, Pat Greathouse, and CIO Regional Director Michael Mann, and such proceedings have been instituted by John S. Boyle, States attorney: Now, therefore, be it

Resolved, We commend our officers and we commend States Attorney Boyle for bringing about this action to revoke the charter of the American Bowling Congress and we urge them to continue in their efforts to rid the sport of bowling of this monopoly control and of this discrimination against Negroes.

We urge all CIO councils and international unions to discourage participation by their members in ABC leagues and tournaments, and to support bowling establishments, and leagues and tournaments where all people may bowl without discrimination.

Resolution 50

Amnesty for conscientious objectors

It is our firm belief that men who, under the compulsion of conscience, take a stand against military conscription in peacetime do not merit confinement in penitentiaries or the resulting loss of civil rights. Such treatment of a minority violates basic human and democratic principles of individual liberty and freedom of conscience. While we oppose the dangerous trend toward state control of religious and minority belief in other lands, it does not become us to make a crime of conscience in this country.

The legal machinery to stop these prosecutions has already been set up. Provisions exist in our law to get men now imprisoned released and the President has the power to grant an amnesty which would end discrimination against conscientious objectors: Now, therefore, be it

Resolved, The Congress of Industrial Organizations, reaffirming a high tradition of the American labor movement, asks that the prosecution of men solely on account of their conscientious opposition to war cease; and we urge the immediate release of those conscientious objectors currently behind prison bars.

We call upon the President to grant amnesty to all conscientious objectors heretofore convicted for violations of the Selective Service Acts of 1940 and 1948.

(Copies of these resolutions be sent to the President of the United States and to the Attorney General of the United States.)

Formosa: How To Save It From Conquest by Chinese Communists—A Filipino's Suggestions

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. McDONOUGH. Mr. Speaker, the island of Formosa is today the most vitally strategic point in the entire Pacific area. In the hands of the Communists it will break the American wall of defense in the western Pacific, exposing the American mid-Pacific and south Pacific region, the Philippines, and Indonesia to Communist strategical and tactical offensive planning.

The question is: What could be done to save Formosa from Chinese Communist conquest? The question is urgent. It must have a definite answer soon.

There is a suggestion that the United States give Gen. Chiang Kai-shek and his remaining Nationalist forces military aid. And yet it is apparent that, despite that aid, it is inevitable that the Communists will capture that island. And then, too, the United States Government is not considering giving that aid for broader reasons of foreign policy.

Mr. Speaker, an article which appeared in the Manila Daily Bulletin, published in Manila, Philippines, contains plausible suggestions to save Formosa from Communist conquest. The suggestions are of a legal and political nature whose aim is to remove Formosa from the area of fighting between the Chinese Communist and Nationalists.

Mr. Vicente Villamin, Filipino lawyer, economist and writer, the author of the article, suggests three alternatives: (a) The return of Formosa to Japan and be under General MacArthur's control by the revocation of the Cairo Declaration of 1943 upon the request of Nationalist China; (b) the granting of independence to Formosa by Nationalist China; and (3) the transfer by Nationalist China of Formosa to the United Nations for administration as a trusteeship territory.

Either one of the three alternatives, Mr. Villamin contends, would remove Formosa from the field of belligerency.

Mr. Speaker, I urge every Member of Congress to read Mr. Villamin's enlightening and timely article, which follows:

FORMOSA'S HOPE AGAINST CONQUEST

(By Vicente Villamin)

LOS ANGELES, December 8.—The immediate future of Formosa is of vital concern to the security of the Philippines. If it came under the control of the Communists, that security would become exceedingly precarious. It will be recalled that the invasion of the Philippines by the Japanese in the last war came from their military concentrations on Formosa.

What could the Philippines do in the present circumstances to prevent Formosa from falling in the hands of the Chinese Communist government? Practically nothing. And what could the United States do, as obviously the control of Formosa by the Communists would affect disadvantageously her strategic position in the Pacific area and her plans to "contain and counteract" communism in the Far East?

The situation demands a bold and immediate treatment. Formosa could be returned to Japan and thus remove it from the area of belligerency between the Chinese Nationalists and Communists—and its permanent future status left for the forthcoming peace conference to determine. Is this legally feasible?

Formosa was detached from Japanese control after the war and restored to China. This was done in conformity with the Cairo Declaration, issued on December 1, 1943, by President Roosevelt, Prime Minister Churchill and Generalissimo Chiang Kai-shek, following their meeting at Cairo, Egypt. By the same declaration, Manchuria and Pescadores Island were similarly restored. This declaration could be rescinded, resulting in Formosa reverting to Japan.

It will be noted that Russia was not represented at the meeting and did not take part in the declaration. Thus if the declaration is to be rescinded as to Formosa and the Pescadores, which were taken over by Japan after the Sino-Japanese War in 1895, it could be done by the three governments of the United States, Great Britain, and Nationalist China. And if it is to be done, it should be effected before Chiang's government totally goes out of existence.

Generalissimo Chiang is reported to be making preparations for stiff resistance to the Communists on Formosa. But military authorities are of the opinion that it would not take long for the Communists to capture that island. If they accomplished that before its political status was changed, then the Communists would have legitimate ground to incorporate the island in the new Chinese Communist Republic.

The rescission of the Cairo declaration with respect to Formosa and the Pescadores, leaving out Manchuria for obvious reasons, would not be politically irregular or diplomatically revolutionary if it were proposed by Generalissimo Chiang himself on behalf of his government. Such a proposal by him would have to be accompanied by his simultaneous stoppage of all war preparations on and the withdrawal of his government from the islands.

Another step Generalissimo Chiang could take to remove Formosa from military and political investment by the Communists would be to grant sovereign independence to that island. There are leading Chinese Formosans who have been working on Formosan independence from Japan and who would welcome now that independence from China. A Formosan Republic would, indeed, be militarily weak and vulnerable to attack by Chinese Communist invaders, but such attack, if unprovoked by Formosan action, would bring the full force of world opinion against it to the point where the Chinese Communists would most likely be convinced that they might lose much more than what they could gain in invading the new island nation.

Of course, once an independent nation, Formosa would have to pursue a policy of strict neutrality, at least until the peace conference was held and her independence firmly established. Later, she might make some arrangements with the United States, like permitting it to have military and naval bases as in the Philippines and placing herself with other far-eastern countries in a position to receive American military assistance.

Still another possibility to segregate Formosa from the area of the present Chinese belligerency would be for the Nationalist government to turn the island over to the United Nations for administration as a trust territory. That would have the effect of placing it, roughly, in a status of a country under a neutralization treaty.

The foregoing suggestions could be taken up on behalf of China after determination of who is the head of the Nationalist government—General Chiang or General Li. The latter is now in the United States, while the former is reported to be in Formosa. The two leaders are both patriotic and anti-Communist, and they would not want to see Formosa fall under Communist domination if they could help it.

Lewis and the Coal Situation

EXTENSION OF REMARKS
OF
HON. EDGAR A. JONAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. JONAS. Mr. Speaker, the failure of the President to recognize the current coal crisis, which is not only crippling one of our basic industries, but threatening to slow down or stop completely production in thousands of others, despite the pleadings from every side—is perfidious behavior—and a violation of faith.

When he steadfastly refuses to use the power given him under the special provisions of the Taft-Hartley Act, or the Constitution, he places himself in the position of a man whose actions are a direct contradiction of his professed image of longing—the welfare state. This disparity between his actions and his words should not be condoned by the American people.

The President occupies the position of a political magistracy, and while such, is in a position of great trust. It is my opinion that unless the President takes action—and immediate action—he will

be forever ashamed, as a man always is, of the things he has left undone.

The attitude of the Government since 1933—NIRA—has forced both workers and their employers into a state of conciliation which, under the leadership of men like Lewis, of the United Mine Workers, has caused an impasse which threatens to undermine not only the coal industry, but our national economy as well as our national health and safety.

Despite my rigorous efforts to prevent the complete nullification of the Taft-Hartley Act, and I consistently voted for its modification—I have studied the situation which confronts us with the cold impartiality of a neutral judge. And I can only say that I find the present attempt to sabotage the Taft-Hartley Act, one of the most dismaying betrayals of democracy that has ever been perpetrated.

Things have reached an intolerable situation when one man not only can, but does so ruthlessly control the destinies of all the members of his union, and who can, and does—either by suggestion or intimation call them out or send them back to suit his whims of the moment, with utter and complete disregard for either their welfare, or that of their families. This same disregard extends to the industry which employs them, and on to the thousands of other industries which are dependent upon it.

This man is too ambitious and too autocratic. His influence is reaching out, by way of trade-unionism, like the tentacles of an octopus until, if he is permitted to continue unchecked by some device, could create such a havoc as will leave us an easy prey to communism.

I call your specific attention to the catch-all union of John L. Lewis. Through this organization, known as District 50, United Mine Workers, and completely apart from his influence in the coal industry by operation of the UMW proper, he can cripple transportation in New York's suburban area, shut off gas in Boston, halt the production of nylon wearing apparel, disrupt the du Pont chemical works, tie up the port of Philadelphia, halt traffic on a dozen railroads, and cause cessation of labor and thus the stoppage of production in a score or more of other important industries.

What is District 50?

I must first point out what it is not:

(a) It is not a district.

(b) It is not No. 50.

(c) It is not a miner's union.

But it is an organization dedicated to the task of grabbing membership in any field or industry not securely controlled by some other powerful union. Its membership, though secret, is rumored to be less than 300,000, but it has more than 300 skilled organizers, working in 48 industries, and has established 1,200 locals in 644 cities of 45 States in the United States and Canada.

It is also reliably reported that district 50 is organizing everything everywhere; that it had contracts with 15 railroads and covers such diverse occupations as salt plants and taxi drivers, and from du Pont's chemical works to entire southern cities. In this last instance I cite Buena Vista, Va., where almost everyone who works for wages pays dues to District 50.

With Lewis and his UMW occupying such an autonomous position in so many industries, it is difficult to understand why he or they should enjoy immunity from prosecution under the antitrust laws, or why these laws should not be amended as suggested by the Senate Banking Committee, to curb labor monopolies.

We are faced with the fact that too much power is concentrated in the hands of one man and his union. We cannot revoke that power, under existing laws, but we can legislate to prevent the complete demoralization of industries like the fuel field. To allow John L. Lewis, or any other labor boss, to exercise monopolistic powers unchecked will, in my opinion, irreparably damage our system of government.

There is a limit at which forebearance ceases to be a virtue. It is impossible to overlook or disregard facts like the following:

The recent telegraphic survey made in the United States, reports widespread suffering and hardships because of the bituminous coal dispute in the 10 following principal bituminous using States: Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Ohio, Pennsylvania, New York, and Wisconsin.

The shut-down of school systems was reported imminent. Hospitals and institutions face alarming shortages. In several areas a state of emergency has been declared. Rationing has been and is being employed in others, while the machinery for rationing was being set up in the remainder of the 36 towns, all of which reported less than a week's supply of coal. All report that acute suffering has been offset only by mild weather.

Dealers in all 10 States reported they were unable to supply the needs for homes. A majority of coal dealers reported it will be next to impossible to supply home needs even though the mine work week of 5 days is restored at once. The dealers also pointed out that a delay is inevitable even though the President should decide to exercise his powers to order the restoration of the 5-day workweek, as he did in 1946.

Precedent for Presidential action is set by the fact that since the Taft-Hartley law went into effect the White House has acknowledged seven disputes in the national emergency category. Six court injunctions have been issued as a result of pleas by the Attorney General at the direction of the President. They were:

March 19, 1948: Strike of atomic energy workers at Oak Ridge.

April 21, 1948: Strike of United Mine Workers.

August 25, 1948: Strike of the International Longshoremen.

June 14, 1948: Strike of the Maritime Union workers—west coast.

June 14, 1948: Strike of the National Maritime Union—Great Lakes.

June 23, 1948: Strike of the National Maritime Union.

In the seventh case, involving a packing house strike, the White House appointed a board of inquiry, but no injunction was sought.

Unfortunately the precedents deliberately established by the Chief Executive, regarding the antics and tactics of the United Mine Workers' Mr. Lewis, may make it difficult for him to do an about-face, in his general attitude toward the UMW, especially when it might mean using the law he has tried so hard to outlaw. However, Henry Clay said in his speech on appointments and removals in the United States Senate on February 18, 1835, "Precedents which have never been reexamined can not be conclusive."

But should the President not choose to use the act he has found so distasteful he has no such excuse for the general-welfare clause of the Constitution. Under this clause he could intervene in this national catastrophe, as is his privilege when the best interests of the people of the United States are threatened.

I call these facts on the coal strike briefly to your attention:

June 30, 1949: The contract between the United Mine Workers and the operators expired. John L. Lewis put miners on a 3-day workweek without making his demands known to the public.

September 19: Lewis called a total strike of the Nation's soft-coal miners as a protest against the withholding of welfare royalty payments by some southern operators who claimed they could not meet the payments on a 3-day production schedule.

November 9: Lewis, without explanation suddenly called off this strike and all restrictions on coal production were lifted by him for 3 weeks.

December 1: Lewis, again without explanation, ordered miners back to a 3-day workweek.

He announced new contracts signed with independent coal mines and his union, but did not disclose the high-handed methods he used. In two instances he closed down mines completely, not even permitting them a 3-day workweek, and it was reported by a prominent Washington columnist that he had sworn and signed affidavits by the owners of those mines, namely the Cove Fork Coal Co. and the Elkhorn Coal Co., both in Pike County, Ky., and operated by Jack Picklesimer and Fon M. Johnson, who stated they were expected to sign contracts they were not allowed to see or study.

I quote from the column, the Washington Merry-Go-Round, in the Washington Post, which appeared Saturday, December 31, 1949, in which the statements of Picklesimer and Johnson appeared:

> We were called to a meeting at the United Mine Workers' headquarters of the truck mine operators on December 2, 1949, at 6 o'clock. We attended, and Sam Caddy, president of the United Mine Workers, District 30, proposed that we sign a contract with the mine workers which was to extend to September 1, 1951.
>
> A part of the terms were disclosed to us. Included in the terms about which we were told was a 95-cents-per-day increase in wages, a 15-cents-per-ton increase in the welfare fund payments, and a broadening and alteration of the "able and willing" clause which, we were told was to enable the

mine workers to control the production of the various mines in the country to prevent an overproduction of coal.

January 4, 1950: Despite President Truman's insistence that the coal strike had not created a national emergency, the Interstate Commerce Commission held that a national emergency did in fact exist, and ordered all coal-burning passenger service reduced by one-third by January 8. This order is effective for 60 days, and, of course, would be rescinded should the conditions in the coal industry improve.

But I call your attention to the fact that 27 percent of the total passenger service in this country is operated by coal-burning steam locomotives. The other 73 percent are either Diesels or electric, or are, as in the cases of railroads in the Southwest, have converted their equipment to use oil in steam engines.

At the time the cut in operation was ordered few of the railroads in the country had more than a 25-day supply, whereas they normally keep from 30 to 40 days' supply on hand. The railroads as a whole averaged a 19-day supply. Six or seven of the railroads in the country were reported already at the danger stage, having less than 10 days' supply on hand.

In the opinion of the Interstate Commerce Commission a 3-day workweek is not sufficient for this time of year when normally 13,000,000 to 14,000,000 tons are mined in full production. Only about 7,000,000 to 8,000,000 tons can be mined during the curtailed week, leaving a shortage of more than 5,000,000 tons. Should the country be hit by a severe cold wave, such as resulted in the deaths of 30 people over the week end, in less than 2 weeks we would have no coal at all. Our supplies would be completely depleted.

On January 6, 1950, faced by the seriousness of the coal situation of which the President refuses to take cognizance, Democratic Members of both the House and Senate pleaded with him to take action, and as a direct result have been thrown into one of the most grave situations in their history. This serves to emphasize the unworthiness and the why of his reluctance to use, and his campaign against the Taft-Hartley Act, which is gaining support daily from earnest and conscientious men who put the needs of their constituents, and the welfare of the country as a whole, above their party politics.

Their appeal came 3 days after the President, in his state of the Union message renewed his demand for the repeal of the labor statute, which would leave the country facing the same old abuses it suffered under the Wagner Labor Act passed in 1935, in which there were no provisions for checking arrogance and autocratic power, when wielded unjustly, to the detriment of the public interests, like Mr. Lewis is now exercising.

The President's reluctance to act might charitably be construed that he does not want to act in haste—or that he does not honestly believe that the crisis does exist—these reasons might be understandable—but his continued attack on the law itself is not. The law is designed, not to punish unions, but to protect the people from excessive punishment and hardships at the hands of irresponsible labor leaders, such as Mr. Lewis has proven himself to be, and from irresponsible employers and owners as well.

On January 9, 1950, Lewis pulled his miners out of the pits of two of the biggest soft-coal producers—Consolidation Coal Co., and the United States Steel Corp. By midweek this walk-out increased until about 60,000 miners in 7 States were completely idle and more than 400,000 tons of daily production were eliminated from the Nation's shrinking coal supply, and its rapidly dwindling stock pile.

This was possible under the contracts signed July 8, 1947, by 75 percent of the soft-coal operators, in which the "able and willing" clause appeared for the first time, and which was designed to write the United Mine Workers out from under the Taft-Hartley Act. This same contract increased hourly pay 44⅝ percent—the largest per hour increase granted any union in any industry since the beginning of the war. And it nearly doubled the total average increase granted both the CIO and the AFL unions. In addition the welfare and retirement fund royalties were increased to 10 cents per ton, for the period ending June 30, 1948.

The 3-day order has been denounced by the Senate Banking Committee, who declared in their report made after a survey last summer, that this order by Lewis imposing the short week, was the very antithesis of collective bargaining. They not only admit but agree that Lewis has been pursuing for months the policy of curtailing production in order to force operators to accede to his contract demands.

Neither the President, nor Robert N. Denham, general counsel of the National Labor Relations Board, whom 45 mine groups had asked to end the short workweek, made any move to take action on the demands made upon them—that they seek court injunctions to force the miners back to a 5-day week.

On January 11, Lewis ordered these 60,000 to 75,000 striking miners back to a 3-day workweek beginning the 16th. As the coal strike progresses the coal operators are filing unfair labor practice charges against Lewis and his mine union before the National Labor Relations Board. Mr. Lewis' only comment was that the only issue at present in the labor dispute is wages.

The President was again besought by Members of both House and Senate to invoke an antistrike injunction—on a regional basis in Indiana and Michigan, and in any other place where there is an emergency.

Others were busy seeking legislative weapons, and in ascertaining whether or not Mr. Lewis can be prosecuted under the antitrust laws, and whether or not they are applicable to unions such as the United Mine Workers.

Mine owners again declared that all of the off-and-on-again strikes were simply harrassment to needle them into accepting the UMW demands for a 95 cents per day wage increase from the present $14.05, and a 35-cent instead of a 20-cent tonnage royalty for the miner's pension fund, and for a further easing of the able-and-willing clause. They point out that their employees have lost, because of the strikes in 1949, more than $1,000 in wages per union mine worker.

The Southern Coal Producers' Association, in their letter to the President of January 12, asked that he instruct the Attorney General to ascertain whether or not Lewis and the UMW could be prosecuted for an illegal conspiracy in restraint of trade. They also asked that if such action is impossible under existing laws and the decisions of the courts that Congress should amend the antitrust laws so that unions and their leaders can no longer willfully and recklessly use their monopoly powers.

I quote the following from their letter:

> If a combination of employers to restrain trade and curtail production is against the public welfare, why is not the restraint of trade and curtailment of production in a basic industry by a union against the public welfare?

Not only the Southern Coal Producers found it impossible to bargain successfully with the union this year, but all others as well, who did not completely capitulate to Mr. Lewis' demands—especially as far as the "able and willing" clause is concerned in a new contract.

It is through this clause that Lewis not only hopes to evade the restrictions of the Taft-Hartley Act, but to set himself up as the marketing boss of the bituminous-coal industry as well, and through this power measure out coal to the country.

The Southern Coal producers further point out that the country's coal supply was the smallest in a period covering 25 years, and considerably under the levels when the President twice declared national emergencies. According to available statistics, the Nation's stock pile had dipped to 23,000,000 tons, most of which is in the hands of steel companies and large utilities, while most consumers had little more than a ton or two.

In November 1946, before the passage of the Taft-Hartley Act, the President first used the weapon of injunction to force the miners to end a strike, by declaring a national emergency. In March of 1948, President Truman again declared an emergency, using the 80-day Taft-Hartley injunction to end a mine strike over pensions.

On both these occasions, according to Joseph E. Moody, president of the Southern Coal Producer's Association, the coal supplies were larger than they are today, and that only once in the last 25 years has the total national supply of coal dipped below the 25,000,000 mark, and that was in June 1933—at the bottom of the depression.

If, in 1946—and again in 1948, the President could recognize a national crisis when he saw one—and hasten to corrrect it by declaring a national emergency—what is wrong with his eyesight today?

Since 1947 in the southern area alone, there have been 414 work stoppages during which 483,552 man-days were lost and

more than 2,812,000 tons of coal were lost because of these wildcat strikes—at a time when there was a demand for every ton of coal produced.

He insists there is no emergency in the face of the foregoing facts, and refuses to act—despite urgent demands from every side—but it is not reasonable to assume he will not allow himself to be aware of the following facts:

Coal producers in Pennsylvania are threatening to stop all research and experiments to produce liquid fuel from coal.

That due to wildcat strikes called by Lewis the export market has been practically lost, due to the fact they could not get the grades or sizes of coal they needed in sufficient quantities to supply their markets, and countries who have borrowed money from us to finance their rehabilitation have been forced to divert coal scheduled for other purposes to make up the deficit, which slows down their recovery program and takes more dollars out of the taxpayers' pockets.

Schools, churches, and other public buildings face the prospect of being closed even if the miners return to a 3-day workweek. Factories, industries, and manufacturing plants face shut-downs so that the coal they normally consume can be channeled into household furnaces, thereby throwing countless thousands out of work.

This year, for the first time since the war, the operators in all sections face problems created by a shrinking demand for coal and increasingly stiff competition from oil and gas.

Prices have dropped and further reductions may be necessary to prevent additional inroads on the coal market. In 1942 coal accounted for 51.4 percent of the country's supply of energy. Last year the figure was cut to 42.4 percent, and will take a further drop as industries tire of the cat-and-mouse game of Mr. Lewis which keeps them on the griddle of suspense.

These drops, coupled with the development of enormously productive new mine machinery, create problems also for the members of Mr. Lewis' union, as well as for the operators. In 1923 there were 704,793 men employed in the soft coal fields. Last year a larger quantity of coal was mined by 435,000 men. In less than 10 years it is forecast that only 250,000 men will be required to keep the country in coal.

The first concern of the public is a stabilized coal supply. There must be no stoppage of work. To prevent such occurrences there must be invoked the legal tenets compatible with the situation at hand.

It was in the public interest that the Chamber of Commerce of the United States made their telegraphic survey of 36 cities—all of which reported critical shortages—most of them having less than a week's supply.

In the face of this report the President issued a statement at a news conference that he had no immediate plans to restore full coal production by using the Taft-Hartley Act's injunction emergency powers against Mr. Lewis and his union.

Following the President's statement a further report by the Senate Banking Committee suggested a bill forbidding labor to monopolize control of industry. Such a measure, the report said, would stop the usurpation and abuse of power as demonstrated by the 3-day-work-week order. Seven Democrats and three Republicans made up the committee membership. Their report has been sent to the Senate Judiciary Committee, which attends to antitrust legislation.

Mr. Ben Moreell, president of Jones & Laughlin Steel Corp., of Pittsburgh, suggested that the 7-month coal contract dispute between Mr. Lewis and the mine operators could be settled on the lines of the agreement which ended last fall's big steel strike.

He went on record as saying:

> J. & L. wants its miners to receive the same dependable pensions, insurance, and social benefits as all our other employees, and it is willing to extend to the miners the same plan for these benefits as it now has in effect for all of our other wage earners.

You will remember that the steel strike referred to was settled through a fact-finding board, appointed by the President, which recommended that the steel workers receive monthly pensions of $100 per month, plus social insurance.

Announcement has also been made that several Federal agencies have been unable to attract bids for coal supplies, and that the Interior Department was also making a survey. It was reported that Army camps within, and surrounding the District, are virtually without coal.

Following its survey, Herman W. Steinkraus, president of the Chamber of Commerce of the United States, proposed, when the President failed to take action, that the Department of Labor be reorganized to promote peace between the worker and the boss and that this Department should then be called the Department of Labor and Management, to meet the requirements of the times, and added:

> When the Labor Department was established in 1913—to promote the welfare of wage earners, improve their working conditions and advance their employment opportunities, labor needed the assistance of the Government to correct injustices and encourage fair bargaining between labor and management. This has been accomplished.

Robert N. Denham, general counsel for the National Labor Relations Board, issued a statement revealing how an important law has been sabotaged and its principals ignored just because the President of the United States, who appoints the members of the Board, does not like the statute and is urging its repeal.

The Constitution stipulates that a President when he takes the oath of office must swear to execute the laws of the land. Civil officers and members of the boards take the same oath.

Mr. Denham had this to say about the National Labor Relations Board:

> When you have spent 10 years or so, saturated with the statutory and administrative theory that one segment of our economic society must be protected, no matter what, and that the offsetting segment of that society must be saddled with the blame for everything that happens, even though the actual offender may be frequently found in the protected group, that kind of thinking and acting is hard to eradicate.

CIO President Philip Murray urged President Truman to remove Denham from office, saying that he had again demonstrated his antilabor bias, and his unfitness for office.

Joseph A. Bierne, president of the CIO communication workers, accused Denham of stalling labor cases, which would be helpful to unions.

Al Hayes, president of the International Association of Machinists, unaffiliated, said he was "shocked" that a responsible public official of the Government "should use his high office to cast doubt on the integrity of that agency and agitate among employers to nullify its work."

Mr. Denham's reply to his unionistic critics was to the effect that he might be expected to seek a writ against the UMW which would in effect accuse them of "unfair" practices and using coercion in contract dealings with operators. He is now studying the mine operator's requests for an injunction against the 3-day workweek, production stoppage, and failure to bargain collectively.

There has been word from the coal fields that many of the men would not respond to the "request" of Mr. Lewis that they return to the mines on a 3-day basis. In many sections they have voted to stay away. They are reported both angry and impatient over the failure of Mr. Lewis to obtain contracts after a 6 months' delay with which to replace the industry-wide agreement which expired last June 30. So far 68,000 remain idle in 7 States.

"It's 5 days or nothing," one miner remarked after his Pennsylvania local had decided to stay on strike. "We're tired of going in, then going out, then going in again."

Another reason for the discontent of the miners is the mismanagement and squandering of their welfare fund. This unforeseen collapse of union benefits, coupled with the erratic work schedule imposed by Lewis, has dumped unbudgeted relief obligations on local authorities.

This fund was established in 1946, and coal was taxed 5 cents per ton to raise money for its operations. In the 1948 contract, the tax had risen to 20 cents per ton, and Mr. Lewis now demands 15 to 20 cents in addition to keep it going. This would amount to $175,000,000 to $200,000,000 per annum, and is added to the cost of producing coal, and without any guaranty to the miners that the trustees of the fund would not dissipate it again because it is still set up to operate on an unsound actuarial basis, as it was when payments were suspended on September 17, 1949.

For the benefit of the miners this fund should be put on a sound actuarial basis with the standards of benefits and the rules of eligibility clearly established, and written into the contracts covering this fund signed by the union and the operators, instead of being squandered as mad money.

Announcement has also been made by prominent members of the Senate Labor

Committee that influential Democrats will attempt to see that there is no action taken in the current congressional session to write a new labor-management law or strengthen the teeth of the present Taft-Hartley law.

Apparently this is the decision of the CIO and AFL high command, aided and abetted by President Truman and the politicians in the Democratic Party who think they have a prize issue on which to gain a bigger majority for their party in Congress in 1950.

It means that all efforts to get a two-sided law which would be fair to labor and management alike, are to be abandoned in favor of a drive to obtain at the polls a majority dedicated to the principle of special privilege and monopolistic power by single economic groups over the lives and rights of others.

For 2 years now, since the Taft-Hartley Act was passed, union-labor bosses, who brazenly promise blocks of votes—regimented by economic coercion—in return for special legislative favors, have fought against any course of mutual concessions and have insisted instead on an extreme position of all or none. They have served notice that they want the old Wagner Act, with its provisions loaded in behalf of labor unions, restored.

And this, despite the fact that labor unions have enjoyed the largest membership and their greatest gains under collective-bargaining processes that they have known in all the previous history of the trade-union movement in America.

And although President Truman has called the act punitive and one-sided a national survey of opinion is not shared generally by voters outside of labor union circles. One in six said laws governing unions are too strict. Vote of labor union members interviewed showed that 29 percent felt they were too strict; 35 percent felt they were about right; 23 percent felt they were not strict enough; only 13 percent had no opinion.

Congress then, has no reason to wait for invocation of the Taft-Hartley Act by the President before it takes action on this phenomenon of industrial dictatorship.

What the Nation must deal with is something far more serious than a temporary paralysis of industry and commerce because of a deadlock between employers and a powerful union.

Mr. Lewis has asserted a one-man control over a great industry on which a vast number of factories, plants, power plants, railroads, and private homes are dependent for fuel. He says in effect that the industry must meet his demands or cease to operate.

Even during the war he called four strikes to force his edicts—and since that time has repeatedly interrupted coal production for the same purpose.

His conviction for contempt of court for extending a strike in the face of judicial orders has not restrained him.

The immediate problem before Congress is how to go about ending dictation of the Lewis brand—the President may veto any action we might take on the matter—but we cannot escape our responsibility.

Unless Congress is willing to let both industry and the rank and file of miners go through the wringer at the autom-onous dictation of this tyrant, we must take up this problem from a more basic viewpoint than the 80-day injunction clause.

A miners' union is a necessity to keep conditions from reverting to where they were 20 years ago. But the operators must also be protected in certain details and left to exercise their managerial duties based on sound business, and with the welfare of the people, as a whole, firmly in mind.

Lewis has fought a long battle against the Government—putting himself above it. There are still those who strongly believe he should have been tried for treason in both World Wars. His record as a whole is a most unsavory one.

A world to be rebuilt needs coal—and the things it makes possible to manufacture.

We are all being enjoined by the people of the United States to substitute reason for tyrannical action, and to this end, I wish to go on record as recommending not only strong legislative restrictions, but the establishment of a permanent fact-finding board to handle all such disputes as may arise between labor and management; and that this board be nonpolitical, so that it may be free from any arbitrary compulsion, with the full power and the dignity of the Government behind it.

What Price Freedom?

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an address by Robert M. Hutchins, chancelor, University of Chicago, before the Chicago University convocation in June 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT PRICE FREEDOM?

We hear on every side that the American way of life is in danger. I think it is. I also think that many of those who talk the loudest about the dangers to the American way of life have no idea what it is and consequently no idea what the dangers are that it is in.

You would suppose, to listen to these people, that the American way of life consisted in unanimous tribal self-adoration. Down with criticism; down with protests; down with unpopular opinions; down with independent thought. Yet the history and tradition of our country make it perfectly plain that the essence of the American way of life is its hospitality to criticism, protest, unpopular opinions, and independent thought. A few dates like 1620, 1776, and 1848 are enough to remind us of the motives and attitudes of our ancestors. The great American virtue was courage.

We ought to be afraid of some things. We ought to be afraid of being stupid and unjust. We are told that we must be afraid of Russia, yet we are busily engaged in adopting the most stupid and unjust of the ideas prevalent in Russia, and are doing so in the name of Americanism. The worst Russian ideas are the police state, the abolition of freedom of speech, thought, and association, and the notion that the individual exists for the state. These ideas are the basis of the cleavage between east and west.

Yet every day in this country men and women are being deprived of their livelihood, or at least their reputation, by unsubstantiated charges. These charges are then treated as facts in further charges against their relatives or associates. We do not throw people into jail because they are alleged to differ with the official dogma. We throw them out of work and do our best to create the impression that they are subversive and hence dangerous, not only to the state, but also to everybody who comes near them.

The result is that every public servant must try to remember every tea party his wife has gone to in the past 10 years and endeavor to recall what representatives of which foreign powers she may have met on these occasions. A professor cannot take a position on any public question without looking into the background of everybody who may be taking the same position on the same question. If he finds that any person who is taking the same position on this question has been charged with taking an unpopular position on another question, the professor had better not take any position on this question, or he may be haled before some committee to explain himself.

Is this the American way of life? The great American word is freedom, and in particular, freedom of thought, speech, and assembly. Asserting the dignity of man, and of every man, America has proclaimed and protected the freedom to differ. Each man is supposed to think for himself. The sum of the thoughts of all is the wisdom of the community. Difference, disagreement, discussion decided by democratic processes are required to bring out the best in the citizens. America has grown strong on criticism. It would be quite as consistent with the American way of life to offer prizes for the most penetrating criticism of our country as it would be to offer prizes to those who have done the best job of advertising it.

The heart of Americanism is independent thought. The cloak-and-stiletto work that is now going on will not merely mean that many persons will suffer for acts that they did not commit, or for acts that were legal when committed, or for no acts at all. Far worse is the end result, which will be that critics, even of the mildest sort, will be frightened into silence. Stupidity and injustice will go unchallenged because no one will dare to speak against them.

To persecute people into conformity by the nonlegal methods popular today is little better than doing it by purges and pogroms. The dreadful unanimity of tribal self-adoration was characteristic of the Nazi state. It is sedulously fostered in Russia. It is to the last degree un-American.

American education has not been constructed on such un-American principles. In general, the practice has been to give the student the facts, to try to help them learn to think, and to urge him to reach his own conclusions. It is not surprising that the heart of American education is the same as that of Americanism: It is independent thought. American education has not tried to produce indoctrinated automatons, but individuals who can think, and who will think always for themselves. The basic principle of American Government, and one that accounts for the importance of education in this country, is that if the citizens

learn to think and if they will think for themselves, the Republic is secure. The basic principle of the Russian dictatorship is that the people cannot think or cannot be trusted to think for themselves.

The American doctrine rests on the proposition that it is the individual himself that counts. It is not who his father was, or how much money he has, or what his color or creed is, or what party he belongs to, or who his friends are, but who and what is he. So the test of a teacher is whether he is competent. The professional competence of a teacher is hardly a question on which lay bodies, or even administrators or trustees, would wish to pass without the advice of persons professionally competent in the teacher's field.

If we apply any other test than competence in determining the qualifications of teachers we shall find that pressures and prejudice will determine them. In 1928 it was said that Al Smith could not be President because he would be subservient to a foreign power; and today in many places, and if not today it may happen tomorrow, anti-Catholic or anti-Jewish campaigns may mean that teachers who belong to those churches will not be able to practice their profession.

Teachers may be expected to obey the law of the land. But it is still permissible, I hope, to ask whether a law is wise. To discriminate against teachers—to act as though they were all disloyal—and to put them under special legal disabilities seems injudicious if we want able, independent men to go into the teaching profession.

The assumption appears to be that American education is full of Reds, an assumption that is the precise reverse of the truth. All the excitement of the last few years, all the hearings, investigations, and publicity releases, have not turned up more than four or five Communist professors, even though membership in the party has been perfectly legal up to now. To require oaths of loyalty from all because of the eccentricity of an infinitesimal minority is an unnecessary and derogatory act. And, of course, it will not effect any useful purpose; for teachers who are disloyal will certainly be dishonest; they will not shrink from a little perjury.

The way to fight ideas is to show that you have better ideas. No idea is any good unless it is good in a crisis. You demonstrate the failure of your ideas if, when the crisis comes, you abandon them or lose faith in them or get confused about them to the point of forgetting what they are. The American idea is freedom. Freedom necessarily implies that the status quo may come under the criticism of those who think it can be improved. The American idea is that the state exists for its citizens and that change in society must occur to meet their developing needs. The whole theory of our form of government is a theory of peaceful change. Many of the changes that Marx and Engels demand in the Communist Manifesto have taken place in this country, and they have taken place without communism, without dictatorship, and without revolution, thus disproving, incidentally, one of the central theses of Marx and Engels, that such things cannot be accomplished without communism, dictatorship, and revolution.

These reflections on the Communist Manifesto lead me to say that labeling some thing or some man Communist because Communists happen to favor it or agree with him, that easy process by which one disposes of different views by applying a dirty name to them, involves the negation of thought of any kind. If it had been applied consistently in American history it would have deprived us of some ideas and some men that we are proud to think characteristically American. For example, the Communist Manifesto demands free education for all. Are we therefore to recant, and renounce the American doctrine of free education for all?

And what would the FBI say of Thomas Jefferson, who calmly remarked in his first inaugural, "If there be any among us who wish to dissolve this Union, or change its republican form, let them stand undisturbed, as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it."

Jefferson was not in favor of revolution; he was serene in the face of talk of it because he had confidence in our people, in our institutions, in democracy, and in the value, power, and results of independent thought.

We are now in the midst of a cold war. We must protect ourselves against external enemies, their representatives in this country, and any citizens who may be conspiring to overthrow or betray the Government. But the statute books are already filled with laws directed to these ends. It has never been shown that there are so many spies or traitors in this country, or that the external danger is so great and imminent that we have to divert the entire attention of our people into one great repressive preoccupation, into one great counter-revolution in which the freedoms of our citizens must be thrown overboard as too burdensome for the floundering ship of state to carry.

It is useful to remember that Jefferson spoke in 1801, when our Constitution was 12 years old, and when the infant republic was in dreadful danger from deep divisions within and from the wars that were raging between the great powers. If he were right in speaking in such a way at such a time, we cannot be far wrong if now, when America is the most powerful nation on earth, we seek to recapture some of his sanity and courage.

How is the educated man to show the fruits of his education in times like these? He must do it by showing that he can and will think for himself. He must keep his head, and use it. He must never push other people around, or acquiesce when he sees it done. He must struggle to retain the perspective and the sense of proportion that his studies have given him and decline to be carried away by waves of hysteria. He must be prepared to pay the penalty of unpopularity. He must hold fast to his faith in freedom. He must insist that freedom is the chief glory of mankind and that to repress it is in effect to repress the human spirit.

Decline of West Leading to Slav Domination

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following article by Dorothy Thompson which appeared in the Washington Star January 3, 1949, just a year ago. In the year that passed since it was first published there have been few, if any, signs of a reversal of the trend she described, which, unless checked, can lead only to destruction of our civilization. If the decline is not checked the Soviets will not need to make war on the west. All they will need to do is wait with oriental patience and take us over as we go down, country by country, during the next few decades. Where is the leadership to call people to higher and nobler thinking and living, instead of appealing just to men's acquisitiveness and desire for selfish gain?

DECLINE OF WEST LEADING TO SLAV DOMINATION?

(By Dorothy Thompson)

When the history of this epoch is seen in historical perspective and treated by objective historians (if such survive or are revived), it will record that western civilization perished (or came close to perishing) by its own hand.

The tremendous Soviet political victories—which bid fair to fulfill Russian nineteenth-century dreams of an age of the Slavs dominating the globe—have been achieved, in every case, by default of the west. It seems as though western civilization had become too tired to think and too skeptical to hold to the values which hitherto have assured its survival.

A great and brilliant culture—whose supremacy a generation ago was recognized throughout the globe; which gave the world the first concepts of liberty under law; which recognized the menace of unchecked power; which created the most humanistic societies; whose policies were submitted to reason and inhibited by Christian ethics; from which came nine-tenths of modern science; which in the last two centuries produced the most fantastic wealth and so distributed it as to make the poverty of its least fortunate citizens richness, compared to the condition of their predecessors—has fallen into a condition of such self-distrust, mental confusion, false alliances, and indecision as to prepare the way for a receiver who has but to wait to take over the wreckage.

CHARACTERISTICS EVIDENT

The characteristics of a decaying society always show themselves long in advance of its collapse. Such characteristics are the contempt into which traditional values sink; the growth and impudence of criminality and public indifference to it or justification of it; the secularizing of ethical conceptions; the decline in decorum among all classes; an ever-increasing demand for rights and an ever-decreasing sense of obligation and responsibility; the flattery of masses by leadership and the struggle of leaders to keep their power by satisfying every public whim, in default of personality, reason, and principle; the passage of authority from the hands of those who create values, economic or cultural, into the hands of those who control them—the bosses of workers, makers of formulas, filers of papers, catalogers, critics, bureaucrats; the mechanization of politics; the disorder of sexual life; the commercialization of art; the timidity of intellect; the substitution of slogans for ideas.

All these are the way breakers for internal anarchy, leading to foreign rule—opening a great state for barbarians to despoil, and always with the aid of the barbarous forces present within every society.

MUST OVERCOME FLAWS

No great civilization ever has fallen without all these phenomena manifesting themselves long in advance. To attempt to fight those barbarians, the Communists, without overcoming these phenomena is futile. Communism never wins on its own strength; like bacteria it flourishes in the corruption created for it. Every person mocking at sanctities, spreading demagogic slogans, breaking down decorums, defending criminals, laughing at patriotism, agitating mobs, clamoring for spoils, debasing language, scoring principles—all these prepare the ground.

In this country today vigorous and precise intellect wins admiring recognition only in the sciences. But know-how will not save us unless it is combined with know-why. Rome, when the barbarians took it over—

and ushered in the 400 years of the dark ages—had reached a point in scientific and engineering civilization with attendant creature comforts which was not again achieved in Europe for a thousand years.

Louis XIV did not have the bathing facilities of the Emperor Hadrian. But running hot water did not save Rome, whose history perennially is worth rereading.

Philip O'Donnell

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert a copy of my address at the banquet in behalf of Councilor Philip O'Donnell, ward 4, Peabody, Mass., on Saturday, January 14, 1950:

During the 1930's, when so many people looked to Government to provide employment for them, the honor of being a town or city official was not an easy one.

It was not uncommon in those days for the representatives of the people to discontinue their phone service and to have a secret exit from their offices. These were purely defensive measures. By avoiding his constituents, the official would be saved the anguish of saying: "No, no, a thousand times no" to the hundreds seeking jobs for whom there were no jobs.

We have learned much from that grim experience.

By establishing an unemployment compensation system, by setting up old-age pensions, insuring bank deposits, regulating investments, controlling credit, and extending loans to business in times of stress, by means of these and many other devices, we can move swiftly to prevent our economy from going into a tailspin.

It is not the prime purpose of Government to provide jobs for the people. In other countries where the private enterprise system failed to distribute the profits of production on a reasonable basis, the government has taken over completely. Jobs of a kind are provided in return for complete enslavement to the will of the State.

We in this country have a different system. In spite of the need for occasional adjustments, it is a successful system that has and is providing the highest standard of living in the world.

It is by no mere coincidence that this is so.

A man not only receives pay for his work, but has the right through voluntary association with his fellow-workers, to have some say concerning the conditions under which he works.

He is a member of the first team, which is composed of labor and management.

Government is the all-American substitute, rushed in to hold the line if and when employment is pushed back too far.

But Government is only the substitute, the stand-by strength upon whom we call when an emergency threatens.

Ours is a competitive system which inspires every man to give his best. The greatest amount of freedom for business and the workers consistent with the public interest pays off. In a totalitarian country a worker does only what he is forced to do. He does not give that extra something to the job, springing from his own belief in it and from his own ambition to improve himself. In the United States, on the other hand, he is encouraged to employ his full talents, and will be paid for the extra contributions he gives to his work. This is not a mere Horatio Alger story. In the arts and sciences, in professional life, in government, and in every business there are cases too numerous to mention where a man started at the very bottom without wealth or influence and made his own way to the top. This is because the doors of opportunity will open to any average man who makes a real and continuing effort.

The danger in our mass-production system is that the worker never gets to meet and know his employer. The worker feels that he is an insignificant cog in the machine and that he is up against something which is too big for him to buck. To compensate for this he joins with his fellow workers in a labor union to build up a collective, balancing strength.

But if he should lose his job through a falling off in orders at the factory where he works, it is hard for him to get a job in another industry because he has no seniority there. He cannot support himself off the vegetable plot in his back yard or by doing handiwork for the neighbors. Unless he has saved and acquired a little capital, it becomes increasingly difficult for him to start up in a private enterprise of his own.

You and I look forward to the day when economic emergencies and wars will be a thing of the past, when taxes can be lowered and Government restrictions eased, to provide a greater opportunity for small business.

In the meantime, it is hard for many people to do it alone. Those graduates of our business and technical schools must now seek their opportunities, and there are many such, within the framework of a big organization already established.

But the individual drive and sturdy independence that built up our country do not always find complete fulfillment in this manner. Every man wants a little elbow room in which he can produce something of value from his own ideas and on his personal initiative.

We cannot afford to lose these precious possibilities in our present concentration on group security.

True there are people who are handicapped by disability, age, or other circumstances beyond their control. By collective action, through which the strong are assessed to help the weak, we are striving to eliminate these economic hazards, and I believe that we will succeed in this objective.

But once that we have established this base, we should then provide encouragement for extra initiative.

How to reconcile the claims of the individual and society is the stand-out problem of our age.

We find this adjustment taking place even in the area of Government.

In the beginning, the community was the Government.

It had a peace officer, a rudimentary school system, and a volunteer fire department. Its fiscal problems were simple, and a small levy on farms and buildings was enough to make both ends meet.

But, in place of yesterday's villages, we now have towns and cities. The art of government is no longer a part-time job. The business of public administration is now big league, requiring a high degree of ability and character.

With an ever-expanding educational system, with the paved highways and traffic problems of the automobile age, and with a host of other civic problems, the modern community has been forced to tax real estate to the point of confiscation in order to raise the necessary revenues. This has not been enough. The States now turn back a certain percentage of their revenues to help the communities.

When the depression paralyzed the American economy and millions of able-bodied people could find no jobs, the Federal Government tried to make up for the slack by borrowing far in excess of its revenues and authorizing make-work projects in each community with the emergency funds at its disposal.

Towns and cities were the beneficiaries of new schools, roads, bridges, and other improvements which they could not have financed otherwise.

The war diverted our energies in other directions. Materials were needed for military purposes. All other construction was postponed, and the ability of cities to provide a gradual replacement of worn-out facilities was deferred indefinitely. Furthermore, with the growing complexity of life in the cities, more extensive public services were needed.

After the war, there was such a tremendous backlog of demand, that the price of construction materials went sky high. Cities and towns had to cut back their programs, waiting for a more favorable opportunity, but this could not continue indefinitely without impairing the functions of local government.

Either the communities would have to seek new sources of revenue through some such medium as a sales tax which is always unpopular and often unfair, or seek grants-in-aid from the Federal Government.

They are doing the latter in meeting the critical housing shortage which faces the veteran and the new family he is establishing. Plainly, this is a large-scale need in most cities, and it deservedly merits top priority.

Other than this, the Federal Government does not contemplate a broad program of grants-in-aid to States and cities at this time for public works. Heavy appropriations for national defense and to implement our foreign policy, will have to be cut before we can make room for other projects.

However, under Public Law 352, the Congress is providing loans or advances to the States and their political subdivisions, such as cities, to aid in financing the blueprints for non-Federal public works to be constructed when the economic situation may make such action desirable.

And under Public Law 380, Federal aid is provided for the construction of hospitals by public or nonprofit organizations. Under this program operated by the United States Public Health Service, the Federal Government assumes one-third of the cost, the State one-third, and the applicant one-third.

My point in citing these laws is to assure you that the communities can get help if they will first help themselves, under the developing program of local, State, and Federal participation. Although it is limited at the present time, I believe that it will expand as the international sky brightens and we can devote more of the resources of the United States Government to the solution of our State and municipal problems.

The comparison I drew between the individual human being and the group of which he is a member may be applied to the individual community in relation to the United States of which it is a part.

Only the people of a city and the members of its local government know its needs and its capacity. There are certain things which only they can do for themselves. In other matters, they require some help from outside.

This banquet is being held in honor of Phil O'Donnell who you have elected to the city council of Peabody. Your judgment in selecting him is proof of his popularity and of the faith and confidence you have in him.

But do not expect Phil or any other member of the city government to do the impossible.

Just try to imagine yourself as a public official and honestly answer these questions:

Would you be able to find jobs for all the people you would like to help?

Would you be able to provide your city with every public improvement it might need immediately and without cost?

The realistic answer to both questions is the same and it is "No."

Phil O'Donnell is a warm-hearted and generous human being who hates to say "No." So why not make it easier for him by not asking? Give him and every man in public life the chance to do their job without having to cut the telephone wires to their offices or to duck out the back alleys as some officials did in the days when government was expected to provide employment for all.

Remember that as your city councilor he needs your help to make Peabody function as a busy, happy city whose public administration is a source of pride for all of its citizens.

Growing Cotton With a Fox Hole History

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. PHILLIPS of California. Mr. Speaker, in view of the present discussions among the Members, as well as in the House Committee on Agriculture on the subject of limiting cotton acreages, I would like to present the following letter which came to me this week. It expresses in a few words the difficulties one ex-GI will have if the present limitation is continued on his cotton acreage. It also gives a concise example of the inequalities and inconsistencies of Government controls.

THERMAL, CALIF., *January 5, 1950.*

The Honorable JOHN PHILLIPS,
The House of Representatives,
Washington, D. C.

DEAR MR. PHILLIPS: The following is presented as evidence of the inequities of the cotton program:

As a returning GI I invested my life's savings in 160 acres of raw land under the Coachella Valley (Bureau of Reclamation) project. With War Assets Administration credit, I equipped the farm with machinery; with a Federal farm loan, I leveled and piped the land for irrigation; with a Production Credit loan I raised 100 acres of cotton in 1948 and 120 acres in 1949.

Now, after the Government has loaned me the money to equip for raising cotton, I am told I can plant only 21 acres this season (21 percent of 1948's 100 acres). This means I am out of business. The Government can take my equipment and farm but that does not solve the inequities of a law which says to an ex-soldier "The boys who stayed home and built up a cotton history are the only ones allowed to raise cotton." By enlisting and putting in 4 years in the service (serial No. O132040) was I making the wrong kind of history or making history in the wrong place?

Why don't I plant something else? The answer is the same. You can't raise a price-supported crop without a crop history and financing is not available for other than parity crops.

Please do not think of this as concerning an individual. Just multiply it by all the ex-GI's who are being told they cannot farm with a "fox hole history."

Respectfully yours,

HOMER D. FETTY.

The Future of Foreign Aid

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, Henry Hazlitt who writes Business Tides for Newsweek, in the January 16 issue of that magazine, calls attention to a very important matter which this House will soon be called upon to consider again, namely, more money for our foreign-aid programs. Under leave to extend my remarks, I am including the article in question:

The Marshall plan was based on a wrong diagnosis of the sickness of Europe and a wrong conception of its cure. Its sponsors now hail it as a great success. They attribute to it every economic and political improvement in Europe since it was put into effect. Every set-back or deterioration, they explain, has been in spite of the Marshall plan.

This one-way post hoc, ergo propter hoc logic does not seem to be shared by the beneficiaries. In a recent poll conducted for the ECA in Europe, for example, only 4 Frenchmen in every 100 questioned thought the Marshall plan had been a factor in French recovery.

On purely economic grounds, it would do no harm to terminate ERP when the present appropriation expires on June 30. Unfortunately, though there was not the slightest good reason for our doing so, we made an implied promise to the European governments that we would continue our Marshall aid for at least 4 years. We would only bring on recriminations and charges of bad faith if we were to terminate it now.

On the other hand, even the ECA now talks of terminating aid in 1952 and of cutting next year's appropriations by 25 percent below that for the current year. But if ERP is to run for only 2 years more, the logical way to taper off would be to cut the appropriation by one-third now and by a second third for the following year. The appropriation for the current fiscal year was $3,778,000,000. This should be cut to, say, $2,520,000,000 for the 1951 fiscal year and to $1,260,000,000 for 1952.

To cut the appropriation by only 25 percent now would either imply at least a 3 years' continuance or require European governments to make a disproportionate adjustment at the end of the second year. It seems more reasonable to reduce Marshall aid by $1,260,000,000 in each of the next 3 years than to cut it by only $944,000,000 in the first (and second?) year and by the remaining $1,890,000,000 in the third.

In tapering off Marshall aid in this simple, proportionate way, Congress should act as soon as possible—long before the end of the current fiscal year. And it should authorize now the appropriation both for 1951 and 1952. This would give European governments plenty of advance notice concerning how much they could expect to receive from us. It would enable them to make their plans accordingly. It would also forestall what would otherwise be constant propaganda for larger and continuing aid.

The truth is that the amount set for ERP aid has always been an entirely arbitrary figure. To recognize this frankly would lead to enormous administrative simplification. Congress could simply direct that the reduced total sums it appropriated should be divided among the individual governments in the same ratio as in the current year. This would take from ECA officials a burden of decision that should never have been placed upon them.

In fact, the whole ECA bureaucracy was unnecessary from the first. The elaborate ritual of counterpart funds and other such special earmarked accounts is meaningless as a real control. It merely befuddles both Europeans and ourselves. All Congress need do is to authorize the Secretary of the Treasury to pay checks at regular intervals to the ambassadors of the recipient European governments. The ineffective but much-resented interferences of the ECA in the economic policies of these governments would halt. These governments would still have as strong an incentive to reform as any ECA pressure provides. It would be the definite knowledge that the aid was coming to an end.

Such a plan would be far superior to the proposed new clearing union for Europe. This union would be merely one more futile effort to do what the existing International Monetary Fund is already supposed to do. It would actually apply incentives in reverse by giving the most to the countries that succeeded in getting themselves the biggest trade deficits.

If we cannot have sound foreign-aid plans we can at least have simple ones.

President Truman Wants Only Fair Deal Congressmen

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend by remarks, I include a newspaper article released by INS from which I quote:

WANTS ONLY FAIR DEAL CONGRESSMEN

President Truman made it clear today that he wants only Fair Deal Democrats in Congress.

The Chief Executive indicated in strong terms at a Democratic Party gathering that a new purge is on to get rid of those who oppose his program.

This article makes it clear the President is going to purge anyone who opposes his program.

I have always opposed any program which, in my opinion, would lead us down the road to socialism and communism, and I definitely oppose the President's program of taking power from the people back home and placing it in the hands of Federal bureaus here in Washington. I am not in accord with the President's socialized-medicine program and I will continue to strenuously oppose unnecessary Federal expenditures and the philosophy of spend and spend—tax and tax. I am not in accord with his demand for increased taxes nor do I believe in deficit spending. The time has arrived to cut down expenditures, reduce taxes, and apply a reasonable amount to our national debt.

Because I believe as above stated, I will be one who will be on the "get rid of" list of the President. The Fair Deal candidate who will receive the support of the

President will be one who agrees with the philosophy of statism and is in accord with the views of President Truman and his Fair Deal. This philosophy, in my opinion, is not in accord with the views and beliefs of the people, Democrats as well as Republicans, of the Seventeenth Ohio District.

Mr. Speaker, the President is to be congratulated for his outright statement which makes the issues of the coming election clearly defined, freedom and security against bureaucratic control and socialism, a challenge I shall gladly accept.

Partition of Ireland

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert the attached article which appeared in the Boston Traveler of Wednesday, December 14, 1949:

DEMANDS ENGLAND BE COMPELLED TO TURN BACK SIX COUNTIES

(By Charles J. O'Malley)

One of the most troublesome problems involved in international affairs is that of the partition of Ireland. It is getting worse instead of better, and the only means of stopping this outrageous injustice against Ireland is to compel England to turn back the six counties which she now holds in Ireland.

The situation would be comparable to that of England if when she lost the Thirteen Colonies in America she claims that the New England States belonged to her and that she was entitled to retain them. How would that stupidity appeal to the Americans of the present day?

It is 29 years since this infamous assault on justice by partition was passed by England. She didn't attempt to do this in India, the Malay Peninsula, or other sections which she was compelled to turn back.

APPLIED SEVERITY

But England has always been an efficient spoils master and she has applied her methods severely in her treatment of Ireland, going back many centuries. Her reservation of the six counties is not a new achievement. It occurred several hundred years ago. Before the introduction of the feudal English system of tenure, the lands of Ireland belonged to the people of Ireland, but through the efforts of Queen Elizabeth, all of this was destroyed and the property of Ireland was seized for the benefit of English adventurers.

A proclamation was issued then confiscating and vesting the Crown six counties in Ulster—Tyrone, Derry, Donegal, Armagh, Fermanagh, and Cavan, comprising in all three and three-quarter millions of acres.

The scheme of settlement was carefully designed to avoid the errors of former plantations. Those in previous reigns had been acknowledged failures, by reason of the enormous size of the grants made to the "undertakers."

The "undertakers," as Sir Walter Raleigh and his countrymen were called, found their grants too large to settle and farm personally. They returned for the most part to England, took no trouble to plant English farmers in the land, suffered the Irish to remain on the land, and drew their rents in peace.

GROUPED FOR PROTECTION

In Ulster, however, the tracts were to be of manageable extent; the natives were to have locations of their own to which they were to be removed; the new settlers, drawn from England and Scotland, were to be massed and grouped together for mutual protection.

The lands were to be divided into lots of from 1,000 to 2,000 acres, at rents of 3 cents to 5 cents per acre, and distributed partly among the new settlers from Scotland, partly among English servitors, and partly among the well-affected natives.

Every "undertaker" bound himself to plant on the soil a certain number of fee-farmers, leaseholders, artisans, and laborers, down to the lowest grade; all grantees and their tenants were to take the oath of supremacy, and none was permitted to employ natives or Catholics in any capacity whatsoever.

Of the 3,750,000 acres which were confiscated, about one-fifth was valuable or fat land, and this was mainly apportioned in this manner: Fifty Englishmen and 59 Scots (the needy countrymen of the King) got among them 162,500 acres.

TYPICAL NAMES

The most noticeable names among the English planters were Powell, Heron, Ridgway, Willoughbie, Parsons, Audley, Davis, Blennerhasset, Wilson, Cornwall, Mansfield, and Archdale, and among the Scots Douglas, Abercorn, Boyd, Stewart, Cunningham, Ralston, and the prolific breed of the Hamiltons, who obtained estates by the 1,000 acres in every one of the six counties, and whose descendants are to be found today in every office of profit and emolument in the country.

To emphasize the attitude of America on the Irish question, it will be well to quote here the opinion of Congressman LANE, who demands that the United States take action and compel England to stop her aggressive attitude against the Irish people.

"This is a moral issue on which we will never compromise. In every dealing with the British Government we shall press for the one, decent, and fair solution to the Irish question because it is inseparable from the truly democratic aspirations of the American people who learned from their own bitter experience that no nation can exist half slave and half free."

If England expects America to back her to prevent her becoming a bankrupt nation, which she is close to being at the present moment, she will have to give justice to Ireland.

Gen. H. H. Arnold

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, it was my great privilege to know Gen. "Hap" Arnold way back in the early days of American aviation, when it was extremely difficult to secure the help and support so necessary in the proper development of a new weapon of war. No one who knew him then could resist his enthusiasm, his zealous devotion to aviation and all of its ramifications.

His was not an easy role, for he served through those trying years of the "Billy" Mitchell controversy. He was a strong and active supporter of General Mitchell's theory of the importance of air power in national defense. He served through those equally difficult days when the Air Corps was called upon to fly the air mail, when so many fine young pilots lost their lives because they were called upon to perform a service for which their equipment was most inadequate.

Through all these years General Arnold grew in stature, and the United States was most fortunate in having a soldier of his ability and experience when the need for such leadership was vital. As Chief of the United States Air Force he justly and deservedly earned the acclaim and praise of civilians and military men alike. To him goes the credit for organizing and operating the Air Force that knocked the German Luftwaffe out of the skies, that brought Japan to its knees through the operations of the Twentieth Air Force and its use of the atomic bomb.

General Arnold was not only a great soldier; he was a great man, a kindly, sympathetic individual who hated war and loved peace. Even in his last days he called upon his reserve strength and fading vitality to prepare newspaper articles calling upon our country to maintain a strong defense, with the Air Force as its keystone.

"Hap" Arnold will be mourned by the enlisted man as well as by the commissioned officer. He was that kind of a soldier. Our country will miss him greatly. His friends were numbered in the thousands; his admirers were legion.

A Weather Vane of Policy

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an excellent editorial discussion of our foreign policy by Mr. Robert Letts Jones, of the Salem (Oreg.) Capital Journal:

A WEATHER VANE OF POLICY

Chaos is the word to describe the situation in the Orient.

Chiang Kai-shek takes last-stand position on Formosa off the Chinese mainland. Chinese Communist attempts to land on two islands off the mainland have been smashed. General strike threatens Hong Kong. India recognizes the Chinese Communist regime.

Into this turmoil, the United States sends an aircraft carrier and two destroyers to bolster Asiatic naval forces. And at the same time, Washington announces that a new vigorous policy to block the spread of communism in the Far East is coming up.

The carrier and destroyers are mere indicators of what is happening and what is likely to be American policy in the Far East. For years the people of the Pacific coast have called for a definite policy on the Orient. A do-nothing policy during the thirties

which led to war is still too fresh in the minds of the people of the far West. And it looked as if that onlooker attitude was to continue despite the obvious lesson of the recent war in the Pacific that what happened in Asia affected this country.

This outward indication of a far eastern policy has all the suggestion of filling one of the gaps in a global policy for the United States. Several weeks ago one of the gaps in the Balkans policy was filled by the rather casual announcement that this country was opposed to aggression against any nation—with that announcement being offered for the sake of Yugoslavia, threatened by Moscow.

Following along this same line of reasoning, how can the United States avoid direct complications in China? How can the United States offer to help Tito repulse aggression and not do the same for Chiang? Aggression against Tito could be made to look as much like a revolution, an inside job, as did General Mao's revolt in China.

The time is far past when President Truman should make a formal statement on what this Nation's commitments are and what he intends they should be for a global policy. Letting casual remarks at a press conference tend to reveal points of foreign policy is not fair to the people themselves.

As for the naval vessels going to the Far East, that is the most ironic part of the whole affair. The administration, which has belittled the position of the Navy, finds that it must call on that Navy to act as weather vane of policy.

Water Power To Revitalize New England

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert a copy of my address in connection with my radio remarks as participant in the Public Power Panel over Station WNAC, Boston, Mass., on Thursday, December 1, 1949:

In a few weeks we will be in the year 1950, which is the half-century mark.

It is time to stop, look, and take stock.

The world has made such progress in the past 50 years that the year 1900 seems to be 500 years back in time.

Some people and some areas have failed to keep up with the remarkable advance.

New England is one of these.

We have been busy, it is true, but on a treadmill.

We are not making progress proportionate with the rest of the country.

Why?

Because in this power age we have failed to develop that abundance of low-cost energy which is the lifeblood of industry.

In 1900 we were leaders.

Today we are also-rans.

As proof of this, take a look at any New England industrial community.

With a few exceptions, of course, the buildings are the same ones that were in use in the period from 1900 to 1910.

They are obsolete, for one reason.

For another, they house the same industries, only there are less of them.

The cotton mills which once dominated the scene have moved south.

Many smaller units have moved in.

New England has receded to a second-place position, content to serve as an auxiliary to big business.

The reason is not hard to find.

New England power rates are the highest in the Nation.

Even in this, the fifth year of the atomic age, we are clinging to old-fashioned and expensive methods of producing energy, dependent on sources of fuel supply that are many hundreds of miles away.

Stubbornly we have refused to develop the God-given water-wealth in our own six States.

Once upon a time we prided ourselves on New England enterprise.

That was in 1900.

Where is it now?

Go down the list of the great industries which have come into being since 1900.

Motorcars, airplanes, radio and television, plastics, we have lost out on all of these.

Or consider the coming industries such as atomic energy, light metal alloys, glass fibers, new packaging specialties, electromatic controls, and new textile fibers.

Will we get our share of these?

Not under our present, rigid, and extravagant power set-up.

Stand-pat New England must wake up and get going or be bypassed by progress.

Once upon a time we prided ourselves upon our independence, but more and more we are becoming dependent on other sections of the country that have the vision and the energy to go forward.

The Tennessee Valley area is one of these.

For many years it was a hopelessly backward region.

But the late Senator George Norris was a man of progressive ideas who saw that if you give the people a chance they will make the most of it.

And as he looked at the depression-ridden Tennessee Valley he wondered why the vast resources of nature could not be harnessed to improve the opportunities of the people.

For years he fought for the establishment of a Tennessee Valley Authority, a huge project which only the Federal Government could set in motion.

At last, in President Franklin D. Roosevelt, he found a man of similar vision.

They foresaw the huge dams, the tremendous network of transmission lines, the millions of acres of reclaimed and rejuvenated farm soil, vast new industries, and a prosperous and happy people.

In 1933, the TVA was created.

One year later, Secretary of State Cordell Hull said, and I quote: "In magnitude and importance this vast undertaking stands alone.

"Its beneficial results will, in my judgment, extend far beyond present calculations."

And they have.

The valley has bloomed.

Private enterprise has been stimulated.

Incomes of the people have increased, enabling them to pay $2,000,000,000 in additional taxes to Uncle Sam, more than twice the cost of all TVA's dams and physical plant.

Average residential use of electricity per consumer in the 1948 fiscal year was 2,520 kilowatt-hours, four times greater than in 1933.

Five months ago the millionth TVA power consumer was added to the rolls, which is three and one-half times the number served by the power companies in the same area in 1933.

Due to the 630-mile navigation channel, river traffic has increased, with freight savings of $3,000,000 annually.

Superphosphate fertilizers introduced by TVA on a mass-production basis have revolutionized the entire fertilizer industry.

Test demonstrations of these fertilizers on 13,000 Valley-State farms have increased farm production three and four times.

Hundreds of industries have moved to this miracle valley.

Many new ones are being born there.

David E. Lilienthal, former TVA board chairman, predicts that the Tennessee Valley and the South will become the Nation's No. 1 region in 20 years with TVA's continued technical aid.

And why not, especially if other regions like New England fail to modernize.

It was at Oak Ridge, Tenn., that the atom bomb was manufactured, shortening the war by many months and saving hundreds of thousands of lives.

Oak Ridge was chosen because only this region could supply power in sufficient quantity—abundant, low-cost hydroelectric power.

And atomic power is the key to the future, with untold possibilities for industrial progress and in the advancement of medical science.

But to benefit from peacetime uses of nuclear energy, you must have the resources of a TVA to put the atom to work.

TVA has conferred benefits too numerous to mention.

At the same time it is also paying its way.

And during the fiscal year which ended on June 30, 1949, it poured $4,600,000 into State and county treasuries as payments in lieu of taxes.

This is approximately $1,460,000 more than former property taxes on all reservoir lands and on all privately owned power properties acquired by the TVA and distributing agencies.

Ask me how TVA is operated.

TVA was established on a nonpartisan, nonpolitical basis and the merit system it employs in selecting personnel has been used as a model for many other organizations, both private and governmental.

There is hardly a nation in the world that has not sent experts to study in the hope of duplicating this marvelous creation of a people's government.

Well, what are we in New England waiting for?

We have the idle waterpower.

We have the skilled labor.

And we have the highest private power rates in the Nation which handcuff our industries, and withhold from thousands of homes the many convenient and labor-saving appliances which would be used if power were plentiful and cheap.

We have the Connecticut, the Merrimack, the Penobscott, the Kennebec, the Androscoggin.

We use these rivers as sewers, sometimes using the water over again, after it has been filtered, for drinking purposes.

These same rivers drain off the topsoil of our farmlands.

Occasionally they visit us with floods.

However, they are of little use for navigation or recreation.

They just flow past our antiquated factories down to the sea after providing us with a minimum of power.

There are a few of our people who, for personal reasons, will not give up this 1900 viewpoint concerning the function of our rivers.

But there are millions of other New Englanders who, when informed of the facts, will demand a public program for the development of our river basins.

The past has no right to hold down the present or to prevent the birth of the future.

The TVA is an accomplished fact which mocks the words of the faltering opposition who stand in the way of progress.

It is a challenge to us to meet this competition by insisting on multiple-purpose water-control systems for our region.

Whenever you meet anyone who might try to becloud the issue, remember what I say.

There is no form of private enterprise which can handle flood control, develop the transportation and recreational facilities of our rivers, conserve the soil, engage in reforestation and provide enough low-cost power for our homes and factories, all in one program.

Neither can the individual States or separate and conflicting agencies of the Federal Government.

An integrated plan to cover a whole river basin is the only answer.

The TVA is proof positive that our flexible form of government can be adapted to meet new situations through new instrumentalities created by the people.

In a historic decision, the Supreme Court of the United States has solemnly decreed that the people own the right to the produce of their rivers.

The Democratic Party will hold a regional conference in Boston early next year and it will go on record as favoring TVA's for New England.

I know of Republican leaders who will also support this enterprising program.

The rest is up to you, the people of New England.

We will not get these projects unless you speak up for them until you organize your citizens committees in every city, town, and village and let every Member of Congress know from Maine to Florida and from New York to California that this region is not asleep.

The right of petition is your opportunity to ask for river-basin developments that will revitalize New England and open up a greater future for our children.

The President's Message

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an outstanding editorial written by Mr. C. E. Ingalls in the Corvallis (Oreg.) Gazette Times:

THE PRESIDENT'S MESSAGE

There was so little logic and so little regard for fundamentals and so great an appeal to prejudice in the President's message that it would be inclined to make an honest thinker sick at the stomach. It was a plain plea all the way through for Government interference in business and Government general supervision of everything under the sun from house building to socialized medicine. It was enough of demagogery to make a man ashamed that such a creature could be elected to be President of the United States. This country has reached the highest civilization in history and it has done so without the aid of the Federal Government supervising of man's affairs. True, other men have appealed for Government control of nearly everything, but it remained for Mr. Truman to be specific and urge Congress to perform miracles and demand that taxpayers come to the aid of every socialistic experiment that the radicals of this country have suggested. It is hard to believe that they themselves believe in the things they advocate, but that they advocate them purely because they are popular with the great mass of our people who pay no taxes.

Labor Injunction Law Here May Lead to the Conditions They Have in England

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. WHITE of Idaho. Mr. Speaker, the account of present political and labor conditions in England is taken from the book, The Road Ahead, by the economist, John T. Flynn, submitted for the consideration of my colleagues:

By the fall of 1947 the British planners discovered their plans were going awry. Cripps must have felt a sense of desperation.

Adequate supplies of labor and full effort by workmen were not forthcoming in the industries the Government wished to stimulate. Cripps made an appeal to the workers. He begged them to consider if what they were producing were the things the country most needed. He told them they had no right to complain about shortages of coal and underclothing and housing when they refused to work in sufficient numbers in these industries. The appeal fell on deaf ears—not wicked ears, but the ears of ordinary working people who, by the very limitations of nature, cannot escape making the decisions affecting their habits and conduct in time of peace upon highly practical premises based on their personal and family interests. Great numbers of miners refused to work more than 4 days a week. Even high pay failed to tempt workers away from their accustomed crafts or their home towns.

And so in the end Sir Stafford and his colleagues had to yield to the inevitable and enact a law which says that no man between the ages of 18 and 50, or woman between the ages of 18 and 40, could change occupations at will. The Minister of Labor had the power to direct such workers to the employment he considered best for the national interest. This is the notorious Control of Engagements Act. Professor Jewkes observes that the "Government had the choice between freedom of occupation and planning, and they chose planning." And he notes that the Prime Minister in February 1947 had said that 17 ministries had power to enter private homes for inspections without a search warrant and that over 10,000 officials had the power to make such entries.

No end of devicus apology has been offered for this dark stain on Britain's shield. Mr. Walter Scott-Elliot, MP, wrote the London Times on June 16, 1949, minimizing the character of this compulsive order. Oddly, he ruled out compulsion as fit only for the totalitarian state, and he insisted the Control of Engagements Order was not compulsion. He points out that the order provides that a worker can obtain work in only one way—by applying to the local office of the Ministry of Labor. This puts him, as to a job, wholly at the mercy of the Minister. The choice would be, in the first instance, between the job offered by the Ministry and starvation. But refusal may be treated as a public offense. The Minister may seek to guide the applicant to work in an industry where he can best serve the national interest. But he admits that in the end, the Minister of Labor has power to issue directions. And he adds that this power is seldom exercised—which means, of course, it is exercised upon occasion. It has been exercised and men have been put in jail for resisting it. Exercising it often is obviously not necessary.

The rudimentary muscle of ruthlessness does not stop at the factory. It has made its way to the farm. Over the head of the farmer hangs a threat perhaps more serious than that applied to the worker. The farmers are paid heavy subsidies to produce more food. But there is a regular inspection of every farm and a record kept of its produce. If the farmer falls short of the kind of job expected of him in following the instructions from London he gets a warning and if he does not mend his ways the Government will walk in, put a price upon his property, pay him for it and put him off the farm, which then passes into the hands of a government manager.

Now the British Socialist, faced with the problem of compelling the Englishman to comply with his plans, has turned his hand to compulsions. The Government has plenty of machinery for this, since it now possesses electric power, transportation, credit, and fuel—without which no man can operate a business. The Government can grant or withhold these. But it has gone much further. It asserts the right to tell a man where he shall work or not work and even to force him to change his habitation from one part of England to another. It still permits him to own or to buy land, though where he will get the money to buy in the future I do not know. And, of course, part of the Socialist program is ultimately to take all the land and transform every Briton into a state tenant. His right to spend his income as he chooses is almost permanently abolished, since the Government takes so much of it in taxes that the vast mass of the people have no more left than will cover the bare necessities of life.

More on Spain

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. KEOGH. Mr. Speaker, much has recently been written and said with reference to the matter of the relationship between the United States and Spain. In order that the record may be complete it is desirable that there should be included the following editorials which appeared in the Washington Evening Star of January 2 and 12 and the Washington Post of January 13, in which the editors of these papers present some factual objective views that will be of help in arriving at a proper and immediate solution. The editorials are as follows:

[From the Washington (D. C.) Evening Star of January 2, 1950]

THE SPANISH FRAUD

Senator CONNALLY'S statement that he believes this country could properly exchange ambassadors with Spain if it wanted to do so is interesting as a subject for speculation.

In 1946 the UN General Assembly adopted a resolution requesting member nations to withdraw their ambassadors from Madrid. This was a phony show of morality that was rooted in deceit and tainted with fraud. The pretense was that the Spanish Government had aided the Axis, that it was a dictatorship, and that it suppressed civil rights and religious freedom. And, of all things, the leader of this crusade for decency was that inverted model of democracy—the Communist-dominated Government of Poland.

Evidently Senator CONNALLY is not in sympathy with this shabby performance by the General Assembly. And since he says that he does not regard the 1946 resolution as legally binding on this country, the inference is that he may use his influence as chairman of the Senate Foreign Relations Committee in an effort to persuade this Government to resume full diplomatic relations with Spain.

If so, he will be working in a good cause. And this is true, not because of any especially compelling reason of self-interest, but because this country, if it aspires to a position of moral leadership in the world, ought to purge itself of the intellectual dishonesty inherent in its position on the Spanish issue.

There is reason to believe that the State Department, or many of the top men in the State Department, would like to see an American Ambassador at Madrid. But they wring their hands and say that this cannot be done while the UN resolution remains in force. Perhaps there is some merit to that contention. Even if one believes that we were mouse-trapped by the iron-curtain delegations when the resolution was passed, there is still some force to the argument that the United States ought not to act in defiance of the Assembly.

But when these arguments are appraised in the light of the position taken last spring, they are found wanting in simple honesty. There was an effort last May to rescind the 1946 resolution. The vote was 26 to 15 in favor of repeal, but since a two-thirds majority was needed, the effort failed by a margin of 4 voter.

And what was our delegate doing in this attempt to cure the injustice of snubbing Spain while maintaining relations with the iron-curtain dictators? He was doing nothing. Under instructions from the State Department, he sat on his hands and abstained from voting.

It is this aspect of the matter which is most offensive to any concept of integrity. The United States should support the UN. But there is no valid reason why it should refuse to go on record as between right and wrong. If our Government believes the original action was a fraud, it should have voted to rescind it. If it does not believe this, its vote should have been cast against the repealer. In one breath we proclaim our greatness and our moral principles. And then we stultify ourselves by refusing to stand up and be counted on a clear-cut issue which bears not only on our own integrity, but on the integrity of the UN as well.

[From the Washington (D. C.) Evening Star of January 12, 1950]

SOME TRUTH ABOUT SPAIN

Chairman JOHN KEE of the House Foreign Affairs Committee has delivered a carefully prepared address on our relations with Spain, and it deserves attention. It is deserving because it is a sensible and, for these times at least, a singularly candid discussion of a blunder which reflects discreditably on this country.

There have been reports that Mr. KEE's speech was delivered with the blessing of the State Department. This is not confirmed, but if true that is a fact to be welcomed.

In 1946 the General Assembly of the United Nations adopted a resolution recommending that the member nations withdraw their Ambassadors from Spain. This move was spearheaded by the Communists. Its intent presumably was to weaken the position of General Franco and pave the way for his downfall.

Of course, it has had the opposite result, as might have been expected. The Spaniards, resenting this attempt at coercion and the atmosphere of intellectual dishonesty in which it was conceived, probably stand more firmly behind Franco today than they did in 1946. That the policy has been a failure, in addition to being a kind of international fraud, has been evident for some time. There have been attempts in the General Assembly to rescind it, the latest effort mustering more than a majority but less than the required two-thirds vote. The Government of the United States, however, with all of its talk of world leadership, with all of its pleas for international morality, has been unable to make up its mind on this issue. It has been unwilling to say whether it believes that the Assembly's recommendation is right or wrong. And when the decisive vote was taken last year, when the nations were asked to stand up and be counted, our representative—the representative of the greatest power in the world—sat on his hands, closed his lips, and looked the other way. Rather than take a stand as between right and wrong, we sought refuge in the timid device of abstaining from the vote.

Now Mr. KEE comes forward and urges a different course of action. He says that the policy of withdrawing our Ambassador has failed as a "moral demonstration." The Star does not agree that there was ever anything moral about the policy, but at least there can be no doubt that it has failed. And this being so, Mr. KEE says he believes that the action of the General Assembly should be rescinded, that we should support such rescission, and that when the recommendation has been repealed we should send the best man who can be found as our Ambassador to Madrid.

It is to be hoped that this reflects the present thinking at the State Department and in the White House. If so, we can look forward to the day when our Spanish blunder will be rectified, and when, with respect to Spain, we will begin to serve our own interests rather than the interests of other nations, including all of those who have lined up against us in the cold war.

[From the Washington (D. C.) Post of January 13, 1950]

RECOGNIZING FRANCO

Representative KEE in the House on Monday clarified a good many matters relating to the question of full recognition of Franco's Spain. The first and most important is the fact that the United States already recognizes the Franco government and has done so continuously since shortly after the final collapse of the Loyalist government in the early part of 1939. The question, therefore, is whether we should resume now an exchange of embassies with the Spanish Government. For some years the United States has been represented at Madrid only by a charge d'affaires, who is accredited to the foreign minister rather than to the generalissimo himself. Mr. KEE suggested that one obstacle is the difficulty of finding a man suitably qualified for so delicate and important a mission. An Ambassador to Spain, as Mr. KEE observed, "must be able to deal with Spanish problems * * * as part of our western European policy. * * * A solution of issues with Spain is devoutly to be desired—but not at the price of impairing our objectives among Spain's neighbors. Our next envoy must be broad in his comprehension of those objectives and resolute in his devotion to them. The American public must have complete faith in his disposition to represent them 100 percent of the way. With an envoy of such caliber in Madrid, we should find the restoration of an ambassador there much to our advantage."

Another obstacle to the restoration of an embassy to Spain is the resolution adopted 4 years ago by the General Assembly of the United Nations, specifically debarring Spain from membership in that body "until a new and acceptable government is formed there," and recommending that the member nations "immediately recall from Madrid their Ambassadors and Ministers Plenipotentiary." Thus unless the United States is prepared for unilateral action, contrary to the expressed will of the United Nations, the resolution must first be rescinded. We should not, Mr. KEE believes, act in such a way as to weaken in the slightest degree our unity with the nations with which we have entered into great commitments.

It is plain, however, that the resolution was badly advised. The mistake that led to its adoption lay in assuming the perpetuation of the political conditions existing at the time. It is probably true, as Representative KEE says, that the fundamental character of the Spanish Government has not changed since the resolution, but the character of international politics has altered radically.

The whole difficulty, it seems to us, arises from a confusion about what is implied in recognition. In earlier times this difficulty did not exist, for recognition implied nothing more than the power of the government to govern. Thus, the policy was to recognize all de facto governments as soon as they had demonstrated themselves to be such. Indeed, Mr. KEE admitted that whenever the United States has departed from this tradition, whenever it has awarded its recognition as a moral endorsement of a government or its leaders, "we have usually involved ourselves in more problems than we solved."

This being so, the question of full recognition to Spain should not, in our opinion, be weighed according to the theoretic merits or defects of its form of government, or according to the personal qualities of the ruler, but solely according to its advantages or disadvantages in the present state of international affairs. Now, whether we like Franco or not, the fact remains that Spain is part of western Europe. Thus the sending of an embassy to Madrid must be undertaken sooner or later; and, in our opinion, it would be better sooner than later—for the longer it is delayed the more the full recognition of Spain, when it comes, will seem like a moral endorsement of its leader.

Congress of Industrial Organizations

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert a copy of my address at the third anniversary banquet, Greater Lawrence joint board, Textile Workers Union of America, CIO, in St. Mary's auditorium, Lawrence, Mass., on Sunday, December 4, 1949:

Ten years ago the CIO in Lawrence was just learning to walk.

Today it is big and still growing.

And it is the new partner in the textile industry, a partnership that will never be dissolved as long as labor and management work together for the improvement of our free-enterprise system.

You have done a remarkable job in organizing the mills and in making collective bargaining work.

Whenever I see the letters TWUA I also thing of TWA, which happens to represent the name of an air line, the most modern means of transportation. I think that the two have much in common. Both are devel-

opments of the twentieth century. Both have made swift progress, and they have an even greater future before them.

The CIO has transported the textile workers from the feudalism of yesterday to the higher wages and improved working conditions of today without a hitch. In doing this you have not only helped the workers but have brought great credit to Lawrence by the example you have set in harmonious labor-management relations.

Before the workers were organized we used to have a little trouble now and again, which made Nation-wide headlines and gave the mistaken impression that the people of Lawrence were tough guys and gangsters' molls.

Happily, those days are gone.

Proof of this is in the experience we have gone through during the year 1949. Last spring and early summer there were 24,000 people on the unemployment compensation rolls. Lawrence was harder hit than any other city in this Nation. Reporters from New York papers and national magazines came here to get the story. And what did they find? That the people, with an understanding of the situation, were taking their hardships in stride, knowing that textile management and workers were in the same boat.

We are not out of the woods yet but employment in the mills has and is continuing to pick up.

Recalling a little bit of recent history if I may, even though it happens to be history made by the Democratic Party, I would like to remind you of the great social legislation, including unemployment compensation, that was engineered under President Roosevelt. The people of Lawrence have reason to be grateful to his vision and his memory. The value of such legislation was never more clearly demonstrated than in the experience of this city during the first half of this year. Men out of work were able to make some provision for their families, and merchants were able to pay their bills because of the income which replaced in part the loss of wages.

Labor leaders had much to do with the passage of such foresighted legislation. And the unions, even now, are leading the way in promoting new social and economic gains that will mean greater security for all our people.

I was interested in a suggestion made not so long ago by Walter Reuther, head of the huge automobile workers union which is affiliated with the CIO. The industry whose workers he represents has been building cars at the rate of 5,000,000 a year, which will break all previous records. But Walter Reuther knows that this pace cannot be kept up forever. Supply will pass demand and there is bound to be some unemployment. Reuther is not waiting for this to happen. Ahead of time, he is making plans to take up the slack. He suggests that airplane plants, presently not in production, be made available to displaced auto workers for other types of production.

Only industrial experts from the fields of labor and management can make an evaluation of this idea. The point is that Reuther is ahead in his thinking.

This, in turn, is evidence of the vital and intelligent leadership that has come up from the ranks of labor in a truly democratic fashion, producing men who are qualified to deal with the difficult economic problems of our times.

They say that there is no substitute for experience, and the labor movement bears out this contention. Only a man who has himself worked in a steel factory or at a textile loom can know the real meaning of wages and working conditions and the uncertainties that attend such employment. As he goes up the ladder to union leadership and faces management across the conference table, he speaks from life and not from words.

I do not think it an exaggeration to say that the future of American civilization depends upon a responsible and forward-looking labor movement. The quest for economic justice is finding fulfillment through our unions, in the progressive American tradition, that delivers the goods. Communism will never make any inroads in our country as long as we have a free labor crusade to work for security, social and human.

Today, the initiative is in the hands of labor.

A prime example of this concerns pensions.

When conservative elements in the Congress blocked the increase of benefits and extension of coverage under the social security law, they thought they had progress tied down.

But they had not figured on the dynamic leadership of the CIO, which is also an instrument of the people's will, having won for itself the right to make its own arrangements with management in the workers' interests.

Promptly, the CIO brought the matter of pensions to the foreground and made this the principal issue in collective bargaining negotiations. Strangely enough, management agreed with the big unions on private pensions without too much opposition, leaving the Dixiecrats and some others high and dry.

This accomplished fact puts the reactionaries in Congress on the spot.

They now find themselves definitely behind the thinking of the American people and have been served notice that progress will continue with or without them.

The only recourse they have is to try and catch up.

Therefore I predict that the expanded social security law which we in the House of Representatives passed this year will break through the Senate blockade in 1950. If any of the old guard should try to filibuster against it, the people will laugh them down. The unions are proving that the cause of economic justice cannot be pigeonholed. It is now leading the way.

Most of the road blocks which stood in the way of the worker's right to enjoy a better share of his productive efforts, have been cleared away. As we face the future, we can take heart from the fact that a small group of people by their excesses cannot stall the American economy as they did in 1929.

It is no mere coincidence that the CIO was organized after that collapse. It was a movement that developed from the workers along new lines to meet their present-day problems. It was an extension of democracy from the political to the economic field. It is your insurance against a return of the old days.

We in Lawrence, the whole community, have benefited from the work of your union.

On this your tenth anniversary we offer our thanks and our best wishes for continued success to the Greater Lawrence Joint Board of the Textile Workers Union of America, CIO.

Our Hidden Taxes

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. REED of New York. Mr. Speaker, the Truman administration is trying to find some way to win votes by eliminating a few excise taxes to appease the rising wrath of the people against taxes, and then win favor with the radicals by soaking corporations. Instead of being forthright with the taxpayers of the country, and tell them that corporation taxes are passed on to the overburdened taxpayers, they seek to accomplish their deception by making it appear that they are giving relief to the small taxpayers.

There are many proposals for tax reduction, and under consent to extend my remarks in the Appendix, heretofore granted, I am inserting an article by Robert S. Bird which appeared in the New York Herald Tribune of January 17, 1950. The purpose of extending this is to show the interest which different groups are taking in this all-important question, not only of taxation but of retrenchment in Government expenditures.

The article follows:

OUR HIDDEN TAXES—EVERYONE AGREES ON OBJECTIVES OF TAX REFORM; PHILOSOPHIES COLLIDE ON HOW TO ATTAIN THEM

(By Robert S. Bird)

Tax reform starts with the question: How can the Nation keep and strengthen its system of American democracy, preserve its national security, and, at the same time, finance the social programs its people are demanding?

Everyone agrees that these are the desired objectives; but political philosophies collide on how they shall be attained.

An answer by the Truman administration is given in the new proposals for an enlarged program of deficit spending which would add this year another $5,500,000,000 to the more than one-quarter of a trillion-dollar debt.

These funds would extend social-welfare benefits and would provide for the national security in both military defense and foreign assistance. The administration says that deficit spending in this prosperous period can be continued a little longer without danger, and the American system can be preserved and strengthened, too.

CRITICS FEAR BANKRUPTCY

Leading critics of the administration assert that Federal policies already have weakened that traditional economic system which has won for the American people a living standard higher than any the world has ever known. They say that some of the President's proposals would impair it further, and that his continued deficit spending would take the Nation down the road to bankruptcy. They would drastically curtail Federal functions and expenditures; and, arguing that social security presupposes national security, they would use the ax first on some of the more costly domestic programs.

On specific tax policy there is just as wide disagreement. Labor, laying down the ability-to-pay principle as its guide, insists that the present tax burden is too heavy for the American working people. It views the administration's welfare proposals as necessities, even at the expense of an unbalanced budget. It would diminish or remove those taxes which seem to bear heaviest on the lower brackets and would "soak the rich"—both individuals and corporations—by increasing the tax cut on large personal and corporate incomes.

BYRD SEES DILEMMA

Business says this would be killing the goose that lays the golden eggs. It points out that the bulk of the national income lies at the bottom of the pyramid. Personal income-tax rates on incomes above $25,000 a year already are so high as to discourage initiative, it argues, and even total confiscation

of all personal salaries over $50,000 would add scarcely $500,000,000 to revenues. The tax burden on corporations is so heavy now, it asserts; that the risk capital needed for new plants and tools to provide jobs and products for the expanding population is drying up.

Senator HARRY S. BYRD, Democrat, of Virginia, depicts the Nation on the horns of a dilemma where to increase taxes would be to invoke the law of diminishing returns, and to lower them would not compensate in stimulated business activity for the loss in revenues. He sees no way today of assuring sound prosperity for the Nation; not until the spending trend is reversed.

A Republican answer to President Truman on his spending and taxing proposals was offered in the present session of Congress in a bill which would give tax relief all along the line. Introduced by Representative DANIEL A. REED, of New York, ranking member of the tax-writing House Ways and Means Committee, it would raise personal income-tax exemptions from $600 to $700, at a 50-percent tax-rate ceiling on all incomes, reduce most excise taxes by 10 to 20 percent, permit deduction from gross income of dividends received up to a maximum of $500 and lower the capital-gains provision from 50 to 40 percent.

In pressing for an extension of the administration's social measures, labor represents 18,000,000 union members and their families, comprising the biggest single entity in the Nation having common social and economic aims. Its view of the spending policy of the Federal Government, as set forth in a tax study last year by the CIO, is that a balanced budget at times is secondary to considerations of full employment, high national income, and general social welfare.

VIEWPOINT OF THE CIO

"As in all things, choices must be made, and the immediate choice involves balancing the budget in a way that will not prevent tax cuts for low-income individuals, but will, instead, seek additional sources of revenue whose burden does not fall on low-income groups," it said.

"So long as the public debt is an internal debt held by residents of the United States, as ours is," the CIO study continued, "it cannot be said to impoverish us as a nation, since all that is involved is an internal transfer of assets, as compared to an external transfer if the debt were foreign-held."

Getting down to cases, the CIO at its last national convention called for increased income-tax exemptions in the lower brackets, repeal of all wartime excise taxes and nonregulatory excises, enactment of an undistributed-profits and excess-profits tax, repeal of provisions for splitting income so as to prevent its use for reducing income-tax payments, a tightening of estate and gift-tax structure, elimination of exemption for tax-exempt bonds, increasing the capital-gains tax, closing "the many existing loopholes in our present tax structure," and prevention of business organizations' evasion of taxation by the devices of nonprofit and charitable set-ups.

SALES TAXES OPPOSED

Then it declared itself "to be unequivocally opposed to all forms of sales taxes, manufacturing taxes, transaction taxes, and wage pay-roll taxes" in States, cities, and localities, asking instead new State income and corporation taxes.

Business asks, above all, for tax relief to permit it to expand and operate with a safe degree of flexibility. Especially it seeks to have eased the provisions of law which impose penalties on corporations deemed to have accumulated reserves in excess of "reasonable" needs, more liberal depreciation allowances, and removal of double taxation of dividends. These are serving to hamper the flow of capital and business expansion, forcing business to depend on "plow-backs" out of earnings to make what growth it can, it says.

At the present high rate of population growth, business estimates that 700,000 new jobs must be made available each year for new recruits to the labor force, and that $5,000,000,000 in new capital is required annually for the plant expansion and equipment necessary to furnish these jobs. The venture capital for this expansion is lacking; excessive taxation has driven it into other channels.

It complains that personal consumption is increasing faster than private investment in new business enterprise, and while corporation sales are up over predepression boom years, taxes are far higher.

VARIED SOLUTIONS PROPOSED

Whereas labor views all the excises with distaste, and industry finds many of them discriminatory against it, varied solutions are proposed. The National Association of Manufacturers would eliminate all the existing excises and supplant them with a single uniform excise tax on all manufactured goods, which would amount to a Federal sales tax. This association would cut the budget by $13,000,000,000.

Most middle-of-the-road advocates of tax revision see a need for continued high revenue, and their budget shaving would not go much further than the $5,500,000,000 needed to eliminate the deficit. They would accomplish this by strictest economies of the kind outlined by the Hoover Commission and by a paring down largely of those outlays which lie between the rigidly fixed items and those providing for national security—including foreign aid.

They are worried about the debt, which, after all, is owned in large part by the people through insurance company, public bodies, and bank investment. And they are concerned about inflation which, if unchecked, would make repayment in a fraction of the dollars originally paid in good faith.

There is little disagreement on the importance of eliminating the overlapping of taxation as between Federal, State, and local governments. This adds to the tax burden for all groups of taxpayers and is a main factor in the present unbalance of the tax load. Roswell Magill, professor of law at Columbia University and former Under Secretary of the Treasury, who served as chairman of the committee on postwar tax policy, has urged a drastic separation of tax sources.

A PLAN FOR DIVIDING TAXES

He would assign to the Federal Government the income tax, which now accounts for 72 percent of its tax receipts, and customs, liquor, and tobacco taxes; to the States, inheritance, gasoline, retail sales, admissions, and unemployment taxes. In the case of corporation taxes levied by both Federal and State governments, he would permit the States to make their own tax laws for enterprises doing business within the State, but would have a uniform corporation-tax law by all States for those whose transactions extend beyond one State's boundaries. This would conform more closely to the traditional areas of responsibility between the governments.

The present tax structure is a patchwork which everybody agrees needs revision. Everybody also wants tax reduction. Tax reduction hinges in the end on Government expenditures, and Treasury Department figures are as plain as they are conclusive; everybody pays for Government expenditures. What Congress does about taxes in this session, and in future sessions, will depend on how the taxpayers speak up concerning which programs they consider to be vital and which can be dispensed with in this time of unprecedented demands. Tax awareness today is just common sense for everybody who wants a strong and prosperous American democracy.

Money, Inflation, and Socialism

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my remarks today, I wish to include an editorial from the Seattle Post-Intelligencer for January 10, 1950, which contains one of the most brief and simple statements of the folly of our present state of fiscal insanity I have yet read. I recommend it to all Members as they pore over the tremendous budget and variety of new governmental experiments which have been presented to us this year.

The editorial follows:

MONEY, INFLATION, AND SOCIALISM

Gold, in the long experience of the ages, is the best kind of money that can be contrived.

Every other kind of money has genuine value and validity only to the extent that it is related to gold.

In the modern era the usefulness of gold as money was augmented by the auxiliary device of paper money which was redeemable in gold and was therefore the equivalent of gold.

Under this arrangement, a government issuing and guaranteeing the paper money for which the gold was security served as the custodian but not the actual owner of the gold.

The real owners were the holders of the gold-redeemable paper against which the gold had been pledged.

And the gold could lie in safekeeping while the paper passed around in circulation as currency.

Thus, redeemable printed currency was like warehouse certificates denoting title to merchandise.

It was not necessary to move the goods—or the gold—in order to change the ownership.

At the same time the issuance of certificates—or currency—was necessarily limited by the amount of gold available for redemptive purposes.

This prevented demoralizing monetary inflation.

Likewise, public expenditures and public debt were similarly restricted, which served as a brake on credit inflation in all banking operations.

And since all transactions had to be liquidated eventually with money, and the money had to be either gold itself or else redeemable in gold, the system was accurately known as the gold standard.

Gold, with not very many variations, was the fixed common denominator of all values and of all currencies.

Now, among its other excellences, the gold standard tended to prevent frauds, and frauds can be perpetrated by governments as well as by individuals.

Frauds committed by individuals are punishable by statute.

Government, however, is not only the source of legal currency: it is also the fountain of statutory power.

Consequently, by illicit use of power, government could subvert the gold standard.

Government could substitute deficit financing for balanced budgets.

Government could replace fiat money for redeemable currency—even in the payment of its own obligations.

And the Government of the United States did these immoral things in 1933.

It confiscated all the monetary gold in the country, and devalued the dollar, thereby reducing the worth of pensions and insurance policies by nearly 50 percent.

It took over the Federal Reserve System—that is, the national banks—as a tool and agent of the Treasury.

Thereafter, the Government could borrow in multi-billion-dollar installments on the security of its own debt and monetize the debts—part of which emerges from the banks in the form of fiat currency but the bulk of which comprises the basis of credit inflation, making itself evident in low interest rates or cheap money, in excessive checkbook money and in swollen bank reserves.

These manipulations liberated the Government from dependence on taxes.

They made inflation the Federal fiscal policy.

As a result, the supply of currency in circulation has increased from $8,000,000,000 to $20,000,000,000, the volume of bank credit—about $30,000,000,000 in 1933—now exceeds $100,000,000,000, and the national debt—less than $20,000,000,000 in 1933—had mounted to $40,000,000,000 before the war and is now more than a quarter of a trillion dollars.

Of course, much of the pyramidal debt and pervading inflation have been due to the war.

And the effect of this has been to obscure the truth.

For the truth is that inflation became the New Deal's policy before the war and has remained the New Deal's policy since the war.

The methods pursued originated in Europeans socialism and in the new economics sponsored by the late Lord Keynes, and were imported here to socialize America.

The theory is to be found in the Marxist gospel of Lenin, who taught that the surest way to socialize an industrial society is to debauch its currency.

Without inflation, the New Deal could not undertake the fantastic schemes of its Socialist welfare state—and without inflation it could find no excuse for undertaking them.

But inflation—either by means of managed currency or deficit financing—is an illusion for which the people must pay.

They must pay in labor and production without corresponding progress and prosperity, if not in industrial stagnation and degraded standards of living.

And with $24,000,000,000 worth of idle gold in the United States, available for a return to the honest gold standard, there is a remedy at hand.

Socialism Penalizes the Useful Citizen

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an editorial that appeared in the Chicago Tribune and which points out the penalties of state socialism as applied to the ordinary citizen:

PENALIZING THE USEFUL CITIZEN

A British market gardener named George Thomas Fidler was prosecuted by the Socialist government and compelled to pay a fine of $2,000 for spending money in excess of what the Socialists thought ought to be spent to rebuild some wrecked greenhouses. He used the greenhouses to grow 22 tons of tomatoes when food was rationed because of short supply and the government was urging increased food production.

In a somewhat analogous case a builder named Ronald A. Stokes, who built himself a bungalow, was jailed for 6 months and fined the equivalent of $2,700 because he did not obtain a government license to provide himself housing.

The treatment of these men by the Socialist Government, though different in particular, is the same in effect as the New Deal gives American landlords. They provide shelter and a needed service for their fellows, and, as a reward, are penalized for their pains by the form of property confiscation known as rent control.

American landlords who are denied fair rents are forced constantly to pay heavier local, State and Federal taxes out of dwindling income. The tax they pay the Federal Government helps to subsidize the construction of competing Federal housing with artificially low rents which will further debase the return from their properties when and if control is lifted.

In England the local governments must meet deficits on government housing through higher taxes on the owners of nongovernment housing. Each new government house adds to the burden on the private home owner or his tenant. There is a prospect that the load on private houses will eventually become so heavy that the houses will be seized for unpaid taxes and the government will have the monopoly in home ownership that socialists seek.

Under the socialism of England and the developing socialism of the New Deal, the stage has been reached where a citizen who does something useful is regarded as a criminal who deserves punishment.

Men's Class of Riverside Church Endorses World Federation Resolution

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. JAVITS. Mr. Speaker, rumors of a dread hydrogen bomb which could obliterate our civilization again underline the necessity for passage of House Concurrent Resolution 64. This resolution, introduced by 102 Representatives and 22 Senators, calls for strengthening of the United Nations and its development into a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation and enforcement of world law. Hearings on this measure have today been made available by the House Committee on Foreign Affairs—these hearings emphasize the importance of this legislation in the establishment of a permanent world peace.

Appended hereto is the unanimously passed resolution of the men's class of the Riverside Church of New York City which endorses House Concurrent Resolution 64:

Whereas we the members of the forum of the men's class of the Riverside Church, in a resolution adopted in June 1943, have expressed ourselves in favor of the formation of a world government with powers sufficient to insure the preservation of peace and of the participation of the United States therein; and

Whereas House Concurrent Resolution 64, sponsored by United World Federalists, and advocating the development of the UN into a world federation is now before Congress; and

Whereas this resolution seems to provide the initial step toward the attainment of world peace: Now, therefore, be it

Resolved, That we, the members of the forum of the men's class of the Riverside Church, do hereby endorse the principles inherent in House Concurrent Resolution 64, and that we urge our elected Representatives to lend their support to this measure.

Isthmian Canals: The Panama Canal and Diplomatic Relationships

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. MARTIN of Iowa. Mr. Speaker, along with many other Members, I have closely followed the Isthmian Canal subject now before the Congress, especially with reference to the national defense. From time to time I have included in extensions of my remarks informative articles. The special attention of the Congress, particularly those Members on committees having legislative cognizance of Isthmian canals, is invited to a comprehensive bibliographical list on the Isthmian Canal policy of the United States which was placed in the CONGRESSIONAL RECORD of August 25, 1949, by Representative CLARK W. THOMPSON, chairman of the special subcommittee investigating the financial operation of the Panama Canal under House Resolution 44, Eighty-first Congress. This bibliographical list is a most useful reference when seeking independent information relating to the canal question and is a contribution of national importance.

A new and most instructive article on the Panama Canal by the distinguished author, Arthur Stanley Riggs, was published in the November 1949 issue of Forum, volume CXII, No. 5, page 267. In this article Commander Riggs summarizes four centuries of Isthmian history, clarifies some of the major issues of the present canal question, and emphasizes the diplomatic angles of the all-important treaty subject which was ignored by those who conducted the investigations and made the report under Public Law 280, Seventy-ninth Congress. The failure to consider this intricate question and allow for the huge indemnity and increased annuity—both of which would undoubtedly be required by the Republic of Panama for the granting of a new treaty—is a serious omission that cannot be overlooked by the Congress.

Furthermore, it emphasizes the gross inadequacy of the cost estimates of the Panama sea-level project as presented in the indicated report and tends to discredit the entire document.

The text of Commander Riggs' article follows:

THE BRIDGE OF FEAR

(By Arthur Stanley Riggs)

(Commander Riggs is a retired officer of the United States Naval Reserve and a special student of the Panama Canal. The views expressed in this article are exclusively his own and do not represent those of the Navy Department.)

Now that the capacity of the Panama Canal is being taxed by ocean traffic, which continues to grow steadily with the world's postwar recovery, we, as its operators, are faced with two interrelated problems. How can we best secure the needed extra facilities which by 1960 will be imperative if the Canal is not to cause confusion and serious, costly delay? The second is equally vital. How can we do this without resorting to means similar to those President Theodore Roosevelt used when the United States first undertook to see that the Canal was built? We do not, instinctively, distrust our own motives, but the world may. We should remember the long history of Panama and the tremendous part continuous fear has played in it.

To most of us, fortunately, fear is merely a word. We have nothing actually to fear, and knowing that, we carry ourselves perhaps with a slightly self-righteous attitude toward fear's victims.

It is not altogether an academic question to ask ourselves what we should be and what we should do if for 450 years we had lived constantly in an atmosphere charged heavily not with one fear but with many fears. We might also gage the true greatness of the Spain of the past by remembering De Tocqueville's remark that the "physiognomy of a government can best be judged in its colonies, for there its characteristic traits usually appear larger and more distinct." The false vision, the deep religious fanaticism, the individual cruelty of reckless adventurers, despite clear government orders to the contrary, the wild lust for both gold and power in Tierra Firme, paint for us a picture of the Spanish homeland that goes far to explain the steady retrogression of the realm of Don Quixote.

For centuries a whole people lived in daily fear of being robbed of everything they possessed; of having their homes burned to the ground; of being obliged to flee into swamp or jungle or inhospitable hills with their children, their aged, and their sick; of being hideously tortured or of being killed without provocation. The women and children feared being actually eaten by demons in human form. With four centuries of this horror behind them, came a brief respite and then another set of fears: national collapse under the pressures of a powerful neighbor, the loss of independence and of most of the rights that accompany political and religious freedom.

That unhappy people lives between the Americas. It is the mixed population of the bridge of fear that connects North and South America, the Isthmus of Panama. Secure in our own borders and confident in our natural and intellectual wealth, we have not understood our Panamanian neighbors. The benefits we have thought we conferred upon them are of dubious quality in many instances. We have completely overlooked the fact that our mere shadow weighs more in Panama than all the rest of the Americas and Europe combined. The Panama Canal and Railroad have profoundly affected Panama's economy and brought the little Republic many good things. But they have also vastly increased her domestic problems by indirectly affecting social and educational imbalance, health, crime, and so on. To understand all this it is necessary to glance back over the history of the Isthmus, and to evaluate the evidence largely disregarded hitherto in our imperialistic plans and our slightly noxious do-good talking points.

When on his fourth voyage in 1504 Columbus touched the Atlantic side of the Isthmus, he took the lid from a veritable Pandora's box. The Spanish conquerors promptly turned a country into a road. They had no interest in Panama beyond exploiting such wealth as might easily be appropriated. The Camino Real, or Royal Highway, in reality little more than a villainously bad trail between Panama on the south and Nombre de Dios at the north, the Spaniards made the artery through which flowed a flood of gold, pearls, emeralds, silver, and other precious goods. The results for Spain were tragic enough, and we have a fairly accurate estimate of them. What we have never bothered about is the effect those four black centuries had upon the people of the Isthmus.

The centuries saw Francis Drake and Henry Morgan plundering Spain at will. Pizarro started his conquest of Peru and the pillaging of the wealth of the Incas from the bridge of Panama. Admiral-of-the-Blue Vernon in 1739–40 smashed up the fortifications of the Atlantic side of the bridge with a formidable British fleet and so impressed his young lieutenant, Lawrence Washington, that Mount Vernon was named in his honor. Balboa first saw the great South Sea in 1513 from the summit of the Continental Divide that spines the Isthmus, and Drake, years later, was the first Englishman to sail across it. In every direction and in every way this in-between country is not only of surpassing interest, but as the crossroads of the world, present and future as well as past, its preservation is a matter of concern to civilization.

The Republic of Panama is larger than we usually believe. Its area in square miles is only a trifle less than that of the four States of Vermont, New Hampshire, Massachusetts, and Delaware—29,065 miles compared with 29,541. But the compact industrialization of the New England group comfortably supports a population now running to well beyond 5,000,000. Undeveloped Panama, with its hundreds of miles of infertile and untillable land disposed in mountains, swamps, pestilential jungles, and eroded areas, has a white population of a mere 26,906, and a black, yellow, and half-breed population of 145,073, according to the last Panamanian census. The Government, under whatever name it functions, is necessarily an oligarchy and behaves accordingly. This is something distinctly foreign to our North American way of thinking. As we do not send either military men or Government representatives to the Isthmus who themselves seem to understand this, certainly frictions have developed which could have been avoided.[1]

Two years ago, because I have been the most outspoken figure in the fight over improvements to the Panama Canal, a Panamanian engineer attacked me in the daily papers of the capital city. His arguments and mathematics were open to serious question, but his psychology was sound. He said that whatever the United States does the verdict of the world will be rendered on the basis "that it is precisely by what they do in Panama that the United States must be judged." In other words, if we treat Panama fairly and without pressure, the Americas and, in turn, Europe, Asia, and Africa, will find their suspicions of us slightly less tinctured with apprehension.

If we apply pressures to get everything we think we want and Panama feels affronted or robbed, the whole flimsy fabric of our good-neighbor boast vanishes overnight. Every Central and South American state, with the possible exception of Brazil, will feel insecure, aggressively distrustful of our pronouncements, acutely aware that we are the mightiest Nation in the world in a commercial and financial sense—and morally bankrupt. All these countries know how easily power is abused and to what distress such abuse inevitably leads. We face a danger on the Isthmus quite as real as Panama faces from us. Its effects, if we boggle our opportunities, will have tremendous impact upon the world.

Though our detailed knowledge of the Isthmus begins only with the bold railway project and the finale of the gold rush in 1851, the stormy story goes back centuries. Panamá had its first major shock on April 20, 1550, when the two bandit grandsons of its founder captured the city, looted it thoroughly, abused many of the citizens, and tied the new Bishop, Fray Pablo Torres, to a stake in the main plaza. There they insulted him, mocked him, spat upon him, and threatened even worse. After they had left, the outraged townsfolk released him, organized a pursuit, and drove the bandits into contact with a government armed force. Between the two groups the despoilers had a merry time. Not one escaped.

Fires played a terrifying role in the grim story. A few of the conflagrations that swept the largely wood-and-straw constructions occurred in 1539, 1563, 1644, 1671, 1737, 1756, and 1781. The constant raids of English, French, and Dutch pirates began on a large scale with Drake's foray of 1572. They forced Spain to spend millions to fortify and garrison her American ports, and at intervals became so vicious and alarming that men more than once slept for weeks on their arms. Henry Morgan took and looted Panamá in 1671, and in the bloody argument outside the city—the Spaniards lost 600 men and Morgan 200—no quarter was asked or given. When the Spanish governor saw the city was lost, he blew up the magazines, and in the fire that resulted the city was so thoroughly destroyed that it was abandoned and built anew a year or so later on its present site.

As many of the African slaves as could revolted, joined the native Indians in the bush, and bred a new and savage enemy for the colonists, the Cimarrones. Cimarron in Spanish means wild or unruly, and as used in the colonial records it indicates the savage runaway slaves and their descendants. The English called them "Maroons." Their abiding hatred of everything Spanish frequently led them to make friends with the English adventurers, and to inflict hideous reprisals upon every Spaniard unfortunate enough to come into their power. Mere gold had no meaning for them, but they understood thoroughly the Spaniards' lust for it. They partly evened the score on one occasion by giving the Christians all the gold they could take—melted and poured bubbling into their opened bowels.

Besides these purely material terrors, whites and Indians alike were made to feel the horrible, chill fear inspired and assiduously cultivated by the Inquisition. As Englishmen by this time were all nominally heretics, any awkward or particularly annoying cases the civil authorities could not or did not believe it wise to handle, were turned over to the grim bigots of the holy office. This was a convenient arrangement while it lasted, and no foreign pirate or adventurer questioned survived to tell tales. Civil, religious, and military authorities were also frequently at open enmity, and both the distant king and the local colonists suffered. As we gaze back over the dark record of in-

[1] This criticism does not apply in any way to our present Ambassador Monett Davis. He has repeatedly displayed his understanding, tact, and initiative, and is giving us excellent representation, besides winning the respect and friendship of the Panamanians.

competence, flagrant dishonesty, meanness, intrigue, jealousies, and inertia, the parallel of Spanish colonial administration with Democratic administrations today, both Federal and local, is startlingly clear.

TREASURE

The answer to our doubts regarding Spain is embodied in the name given the Isthmus early in its tragic story: Castilla del Oro, Golden Castile. Spain echoed from Barcelona to Lisbon with tales of the unimaginable wealth to be picked up there without effort. Some of the stories were partly true. Spaniards had stumbled upon nuggets of pure gold in certain rivers. Placer deposits yielded fabulous sums. The proof lay in the whole shiploads of treasure—silver by untold tons, gold by the hundredweight, pearls, emeralds beyond price—pouring into Spain with the regularity of a ferry service. But the treasure tales that drew men as sugar draws ants failed to enlarge upon the Indians with poisoned arrows, the deadly jungle snakes, the fevers that more than decimated whole companies and towns, and the murderous pirates who raided not only shipping and seaports but penetrated far into the interior. Some of the marauders were so terrible that a great Frenchman called them tigers with reasoning powers.

Sixteenth-century Spaniards were tough, hard to kill. Those who went to the Ultramar were especially lusty and ferocious. They had to be to survive, and their own historians have recorded so black a chronicle of their behavior that the depredations of the pirates seem hardly more than a balancing of the scale. The whole story is one of such complete misconception of opportunity, such mismanagement in administration through fear, treachery, bigotry, cruelty, self-seeking, and outright hate that the Panama of the twentieth century is little short of a miracle in survival. With such a background, it is easy to understand Isthmian suspicion of our slightest move, jealousy of our power and wealth, and bitter resentment at much of the treatment we have accorded a republic we facetiously style "an equal sovereign state."

The worst of it is that an oligarchy of 27,000 whites surrounded by five or six times as many hybrids of color is clearly not the equal of a state of more than a hundred million whites, a democracy with extraordinarily firm foundations. Nobody knows this better than the educated Panamanians, and the knowledge is not pleasant. That is the real reason for the delicate political situation that faces us upon the Isthmus and makes what we do so important in the eyes of all the rest of Latin America, whose backgrounds and experience parallel those of Panama, and whose feeling is identical.

* * * * *

Since 1851 the Panama Railroad has been functioning admirably, and besides performing its planned duties has accomplished much incidental good for Panama. The Canal, which operates the railroad as an adjunct, has served the entire world's commerce and shipping for 35 years. Now it is regarded as likely to prove inadequate by 1960. Various powerful interests have demanded improvement to insure its adequacy, the construction of a sea-level canal partly following the present waterway, or the adoption of an alternate route in another location, with the building of one of any number of fantastic systems for transit from ocean to ocean. These schemes include a railway to drag ships overland, bombproof tunnels through the Continental Divide, sea-level, high-lake-level, and mixed-type canals, all regardless of cost.

Those individuals and groups who have declared for the sea-level plan at Panama have gone far out on a very dubious limb. They are sawing it off behind themselves by approving specifications and plans based upon largely theoretical conclusions that every engineer who had actual experience in building the present Canal regards as fallacious and misleading to the point of disaster. The record is clear and conclusive in innumerable documents published by the Government and in technical papers and discussions in naval, marine, and engineering periodicals, some of them republished as documents of national significance in the CONGRESSIONAL RECORD.

There is also in the background the sane and conservative plan for the Pacific terminal lake, balancing and making adequate to foreseeable demands the present Canal without interfering for a moment with its operation. It was slowly worked out by Capt. Miles P. Du Val, United States Navy, retired, as a result of his more than 3 years' experience as port captain at Balboa during the war. This is, moreover, the first and only plan for improving the Canal based upon the experience acquired in putting ships through in all conditions, including stress. Casting all theory aside, the terminal-lake plan is based soundly upon actual operating experience, published official data, common sense, and a cost well within the bounds of reason. Its appeal to an economy-minded Congress is indisputable.

What does not appear on the surface of any of these plans, aside from the terminal lake, is their complete disregard of several major factors. We are blithely informed that costs mounting into the billions are negligible. Comment is superfluous, but the annual interest at 3 percent on $2,480,000,000 comes to $73,000,000 a year. We are emphatically not told that before we could dig one spadeful of earth for a sea-level canal we should have to negotiate an entirely new and distinctly different treaty with Panama at high costs to ourselves. We are assailed by raucous nonsense about atomic bombing, national security and the like, though all canals, regardless of type, are vulnerable to the atom bomb or to any bombing. Last, and perhaps most significant of all from the purely economic standpoint, nothing is said about the profits of the manufacturers of special and heavy machinery, new fangled and unproven dredges; the never-too-modest emoluments of the purveyors of the innumerable goods and supplies required by such an undertaking, from dynamite to diapers. Then there are the appalling pay rolls of labor for years to come; the costs of new construction and, in the case of a canal at an alternate location, the astronomical figures to cover the establishment of complete terminal port facilities, which involve the building of whole cities.

Panama naturally regards most of these schemes with dismay. Our more sober-minded legislators also recognize the seriousness of the problem. Many of them have made personal investigations on the spot so that when the matter comes to public hearings and debate before a congressional committee, they will be able to understand and even perhaps to evaluate the different arguments advanced. If Congress blunders when it decides the question, and foists a large increment upon the already huge national debt, the taxpaying public will suffer. Our already perniciously anemic merchant marine may come perilously close to disappearing. With the experience of what the need for ships drove us to in World War II, with its floating coffins, we know that, should another world struggle involve us, we might easily lose control of the sea.

Of all the points at issue in the canal controversy, the matter of a new treaty with Panama is the most complicated and brings us directly back to the fear with which we began. We, as well as Panama, have reason to be afraid of the consequences of blundering. The results of such stupidity and venality could easily spread over incalculable time, and lead to such a frittering away of our resources as to prove almost fatal in the national sense. The incredibly muddy thinking that led us straight from the hot war of shooting into the cold war that still rages, could easily manifest itself in another shocking folly.

THE TREATY

To return to the treaty, the plans for the sea-level canal show the divergence of its route from that of the present ditch at several points. That alone invalidates the present treaty by encroaching upon Panamanian territory. The width of the Canal Zone is figured as a distance of 5 miles on each side of the axial line of the canal, except for the sprawling out of Lake Gatun. The sea-level plan not only changes that axis in part but, if the scheme could be carried out as planned, it would drain and expose thousands of acres of pestilential muck now deep under water, thereby creating a new hazard to health which might easily entail very serious consequences. In addition to this, the present outlet of the Chagres River would be shifted some 10 miles. Villages and individual farms now occupied would be drowned out.

Anyone who imagines that Panama or any other State would acquiesce to all this and more without demanding adequate reparation is unusually naive, even for a North American. Moreover, the definition of adequacy is barbed and poisoned for both countries. Our idea of it may be the opposite of what Panama and the rest of Latin America feel it is. * * *

There is vastly more to understanding the Panama question than is even suggested here. It is high time, too, that we justify our pretense of the good friend to mankind by seeking a modicum of wisdom. The Bridge of Fear is again a region where angels fear to tread, and the ghosts of half a millenium gibber at us to beware as we venture upon it.

Truman Inflation Is Here

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks heretofore granted, I am inserting the following article by Mark Sullivan which appeared in the New York Herald Tribune of January 18, 1950:

TRUMAN PROGRAM CALLED THREAT TO THOSE HAVING FIXED INCOMES—MARK SULLIVAN SAYS ECONOMIC PLAN FAILS TO CARE FOR SAVERS WHOSE REVENUE CANNOT INCREASE

(By Mark Sullivan)

President Truman, projecting an increase in national income, defined that it is the total of all the income received by all the people in the United States. "All the people" is an appealing phrase. It is repeated by Mr. Truman in effect in his projected economic plan for the next 5 years, in which increase of national income is the cornerstone. "The benefits," Mr. Truman says, must extend to all groups."

But there is one kind of income that cannot increase—it is the kind called "fixed income." Wages of workers can be increased.

Prices received by farmers for crops can be increased. Prices received by manufacturers of goods can be increased. But the group who depend on fixed incomes can have no increase.

This group is very large. It includes beneficiaries of pensions, both government and industrial, which are usually fixed in amount. It includes beneficiaries of social security, the amounts of which are fixed by law. It includes persons receiving life-insurance annuities. In the same situation are persons who put savings into Government bonds, the interest and principal of which are fixed. The group as a whole includes nearly all who save from their earnings and who depend on their savings for income after they have ceased to be earners, 10 or 20 or 30 years from now.

FIXED INCOMES IN DANGER

Hardly any of these can benefit from Mr. Truman's projected increase in national income; on the contrary they are set back by it. For out of their fixed incomes they must pay higher prices for what they buy.

If wages of large numbers of workers are increased from $2,000 a year to $4,000, as Mr. Truman projects for a future period, then the services of these workers will cost more, and the goods they make will cost more. Similarly, when farmers are paid more for their crops, food costs more. What is increase of income for these groups is for the receivers of fixed incomes merely increased cost of what they must buy.

Those who depend on fixed income or on fixed amounts of savings—in effect nearly all savers—these are the aggregate "forgotten man" in the country's economy, so far as the economy is shaped by the Administration. They are more than merely neglected, they are discriminated against.

The administration urges people to save, conducts campaigns urging them to buy Government bonds. By the social-security law, an immense number of workers are compelled to save by paying taxes based on their earnings. The administration exerts pressure for pension systems in industry, whereby employers add to workers' wages an amount set aside for pensions when the workers come to retirement age, some years in the future.

Simultaneously with urging or compulsion of savings for income at a future time, the administration has practiced policies which cause savings to have a smaller purchasing power when they come back to the saver than when the saving was made.

The administration encourages raises in wages—in some cases the raises are decreed by the Government. This causes higher costs of goods, and of services which savers and others must pay for. In some cases the higher costs are decreed by Government bodies, the Interstate Commerce Commission has decreed several increases in railroad passenger and freight rates. And the Government supports prices of farm crops, causing prices of food to be higher than they would otherwise be. The consequence of all this to savers has been reduction in their purchasing power. The saver gets the number of dollars stipulated in his pension or Government bond or social security, but each dollar buys him less goods.

A FAMILIAR EXPERIENCE

This has become a familiar experience. When a person 10 years ago put a thousand dollars into Government bonds or other form of savings, that was the price of a new automobile. When 10 years later he gets his savings back, it is only half the price of the same automobile. A saved dollar 10 years ago was in effect a saved bushel of wheat; it is now only half a bushel. This reduction in purchasing power has gone on as respects practically all lines of goods and services.

It is the savers who actually are, in Mr. Truman's phrase, "all the people," though he does not seem to comprehend this. The aggregate of holders of Government bonds, pensioners, and beneficiaries of social security and life insurance is, with overlapping, more than the total population. The Government policies which work detriment to these is an injustice to the people and a dangerous distortion of the country's economy.

Old Age and Survivors Insurance

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to place the following article by Eugene Bertram Willard, which appeared in the Chelsea Record, Chelsea, Mass., on January 12, 1950:

EDITOR, CHELSEA RECORD:

The number of Chelsea folks who have reached 65 years of age and who will be eligible for and accept social-security benefits when they are upped by the second session of the Eighty-first Congress cannot be stated definitely. But we do know that many of our elderly citizens are still at work even though many of these would like to take things a lot easier in their last years, but certainly cannot make both ends meet on the paltry present benefit payments.

Less than 10 percent of the folks now on the old-age-assistance rolls, a set-up bearing all the stigma of welfare, are eligible for old-age and survivors insurance. Many now on OAA do not want to be there at all but because of their inability to find work or because of physical disabilities to retain employment are compelled to accept the State's hand-out and along with this have to suffer the visitations of the snoopers known as case workers. The Federal old-age and survivors insurance system employs no visitors and after an application is filed that is the end of the matter. No embarrassing questions are asked and the beneficiaries accept the payments as a matter of right. As long as a person has been in covered employment long enough to be eligible for the old-age and survivors insurance benefits that is all that is necessary. In certain hardship cases beneficiaries have had to ask for supplementary help from OAA. However, under the proposed increased benefits by the Congress much of this supplementary aid will not be necessary and beneficiaries will not have to suffer the humiliation of bowing and scraping to the welfare department which will have nothing to do with helping the old folks. This certainly will not hurt the feelings of worthy aged persons many of whom now resent the prying into their affairs by welfare workers chiefly interested in their own pay checks.

If we are to preserve the American way of life in Chelsea and elsewhere in the Nation, old-age assistance as we now know it, must be tossed out the window. Its place must be taken by the Federal old-age and survivors insurance system by providing adequate benefits for eligible folks. The older group of American citizens have earned retirement. Many of these are not covered by the Social Security Act. Something will have to be done for these other than making them members of the OAA group which is distasteful to every red-blooded American. The Congress must act to make possible the payment of a pension to every American who has reached 65 so that he or she can hold up one's head and not have to bear the stigma of welfare.

Between the retirement payments and a modest national old-age pension the whole process of our business activity will be stabilized. Retirement payments will provide continuous buying power, will provide the needed balance in market demand, and will help to provide mass consumption, without which our mass-production economy cannot function successfully. It will lead the way to greater prosperity in America.

In discussing this subject we must not overlook that the Chelsea Bureau of Old-Age Assistance does not make its own laws, and any deficiencies in it are the result of mandates from Beacon Hill. It is a safe conclusion that Director George R. Morse has little sympathy with many of the rules and regulations governing OAA clients, but he and his assistants have to do as they are mandated by the law, or else. We know that many will agree with us that the present system of OAA is all wrong because it is beset with so many humiliating musts; we also know that the present system of sending snoopers into the home of aged is all wrong and not the American way of doing things. Maybe somebody borrowed the idea from Moscow. The rank and file of Chelsea citizens, like the rank and file of good Americans everywhere, want to see the aged get a decent break at long last, and they will never get a break under the old-age assistance set-up where closely scrutinized budgets are the rule. Americans must look for something better than the present hand-out by OAA. The hand-out is bad enough of itself, but the conditions imposed upon the recipient a thousand times worse. It is encouraging to know that the progress of the social-security movement in the Congress may be traced by those who have eyes to see; the works of those interested in the welfare of America's aged speak persuasively to those who have ears to hear; the pulsations of the heart humanitarian may be felt by those who have hearts to feel. In their needs, in their tendencies, and in their weaknesses the Eighty-first Congress, just opened for its second session, will be mindful of Chelsea's aged, of the Commonwealth's aged, of America's aged.

EUGENE BERTRAM WILLARD.

Miners' Welfare Fund

EXTENSION OF REMARKS
OF
HON. ROBERT L. RAMSAY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. RAMSAY. Mr. Speaker, pursuant to a unanimous-consent request, I insert herewith the following copy of an article appearing in the United Mine Workers Journal for January 15, 1950:

WEST VIRGINIA MEDICAL JOURNAL PRAISES WELFARE FUND, DEBUNKS STATE MEDICINE CHARGE

Unfounded charges intended to discredit the medical services offered by the welfare and retirement fund were thoroughly "debunked" in the January issue of the West Virginia Medical Journal, an official publication of the medical profession. Its editorial comment was directed especially at the loose talk that the UMWA program was in some way related to state medicine or that it destroyed the traditional doctor-patient relationship.

Text of the editorial follows:

"We have heard whisperings to the effect that the United Mine Workers welfare fund

has been wrecked by the inroads of the medical profession; that it will lead to state medicine, etc.

"While exact figures as to medical costs are not yet available, we have information to the effect that, by and large, the fees charged by individual physicians have been reasonable and satisfactory to the fund management; so satisfactory, indeed, that there is no contemplated fee schedule in the offing.

"The questionable fees submitted have been very occasional and far between, although a few have been exorbitant. These have been so few, however, as to be practically negligible.

"As to the charge that the operation of the welfare fund will lead to state medicine, it will in our judgment have exactly the opposite tendency. As set up, the working of the fund certainly is at least a corollary of free enterprise, so to speak. The plan has been worked out in the various States in conjunction with the organized medical profession, and, in those States which have liaison committees of the State medical associations, controversies have been even fewer than elsewhere.

"The plan actually gives the patient reasonably free choice of physician and hospital, certainly along the lines of normal patient flow from his home community, and there is in actual practice no disturbance of the time-honored doctor-patient relationship. The doctor is not hampered as to examination and treatment; he gives the patient what, in his own judgment, is necessary, and submits his bill for service rendered.

"There is no compulsory legal element or tax in the procedure. Certainly this is the very antithesis of compulsory governmental health insurance.

"As far as our observation of the fund has gone, the profession is satisfied and the patients are likewise satisfied. Certainly it has ameliorated the lot of the miner medically and has pioneered in the field of labor-medical relationships. Experiences have been gathered and guideposts have been erected which might well be considered by other welfare funds now being set up when they come to furnishing actual medical service to their beneficiaries."

Be It Known

EXTENSION OF REMARKS

OF

HON. DWIGHT L. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1950

Mr. ROGERS of Florida. Mr. Speaker, I am proud and honored to have in my district the Palm Beach Post-Times, whose editor and publisher, Charles Francis Coe, has received national recognition and an award from Freedoms Foundation, Inc., for the most constructive and outstanding editorial of the year. The award is for recognition for his contribution to the American way of life by speaking up for freedom. The presentation to Editor Coe was made at Valley Forge, Pa., by Gen. Dwight Eisenhower and consisted of a gold medal and $2,000.

The greatest of metropolitan dailies had entries before the jury which made the award. This jury consisted of justices of the supreme courts of various States. The award comes to Charles Francis Coe in competition with the great editorial writers of the Nation.

These are times when liberty and freedom should be fortified by fearless expressions. I hope every Member of the Congress, as well as the readers of the CONGRESSIONAL RECORD, will read this editorial.

The editorial is as follows:

BE IT KNOWN

Be it known by the peoples of the world that there is in the earth a government conceived in simple principles, established by and for the average man, strong through nearly two centuries of consecrated growth.

Be it known that this is the Government of the United States.

Be it known that the name of this Government derives from its nature. It is a federation of separate States, each of which of its own sovereignty. These States originally united in a wise and common effort, each to support and serve the other, in a public policy of common defense, and common freedom for the governed.

Be it known that in these States united, the individual dignity and right of a citizen is the first governmental proviso. One hundred and forty-odd million John Does and Mary Does reside in this Utopia of man's creation, under God's guidance.

Schools abound. Libraries are free. Institutions for the betterment of the individual are as common as the very trees. A network of roads binds these States united in a common ground of play and work for all. There is no barrier of customs at any State line. There is no passport or visa needed by the traveler between States.

There is free and unrestricted intercommunication between States, and between men within those States. If a man wishes to move from one State to another, no governmental restrictions retard him. His is the right of citizenship in the State of his own election; and of common sovereignty in the federation of all the States.

Be it known that in this federation, the God of a man's uncontrolled selection, is the God of his worship. The home of John Doe is his inviolable sanctuary, free from unlawful search and seizure. The right of John Doe and Mary Doe to assemble in public meeting is a guaranteed right. The right of each to seek redress for governmental wrong, is of like nature.

Be it known that this Government has so prospered as to become the mightiest among nations. This Government has vested its final and ultimate authority in John Doe and Mary Doe, its constituent citizens.

It knows no monarchs. It repudiates the "divine right to rule." It asserts and maintains the supreme dignity of the average man. It has done so for nearly two centuries of constant growth. It is the manifest expression on earth of man's capacity to be man.

Be it known that lesser governments, though older and more selfish civilizations, in envy and gross ambition of leadership, have sought, and are now seeking, the overthrow of this Federation.

They would replace it with oppression, and the spurious "divine right of kings."

Be it known that such forces have developed, and are developing, a new technique of subversion by using freedom, to annihilate freedom. They are "boring from within." They are polluting the instrumentalities of this Federation. They would destroy the tools which manufacture common liberty. They mock the idea that a government should be accountable to its people. They insist that a people must be accountable to its government.

Be it known that such forces abhor the philosophy of a written contract between government and governed. Such forces are frustrated by such an equitable and specific contract. They insist that the government must tell the people what to do. They deny that the people must tell the government what to do.

So these destructionists are faced with the first task of invalidating the contract between these States and the federation they joined. The contract is the Constitution of the United States. The States refused to ratify it, until 10 amendments were made to guarantee the rights of the States, and of Mary and John Doe.

This contract does not say what the Federal Government can do. It says what the Federal Government cannot do. That keeps Mary and John in control. That defeats the monarchs and the dictators. It will do these things so long as it remains undestroyed.

That is why it is great. That is why Mary and John Doe, and their children, and children's children, live and laugh and learn and labor and love, in a liberty of God's recognition.

Be it known that the forces opposed to such liberty have fomented endless wars, and are still so fomenting wars. Such wars are costly in worldly goods. These destructive forces have come to realize that there may be cheaper ways to destroy freedom and reestablish the "divine right to rule" than by war.

Be it known, therefore, that these forces are providing vast sums of money to finance subversive efforts among Mary and John Doe, in the hope that weariness, and a desire for international peace, will deceive Mary and John into relinquishment of their contract for freedom.

Be it known that traitors are financed and finagled into positions of high trust and power within the federation. Some are now open candidates. These dress lechery in the habiliments of freedom; garb license in the gowns of liberty; bribe treasonists into terror campaigns, and subvert supine politicians with the blandishments of diplomacy along with the gangrenous gold of dictatorship.

Be it known that Mary and John Doe, cherishing their liberty, treasuring their individual dignity, faithful to their trust as custodians of the world of the average man, conscious of the presence of God in the earth, stalwart in the valor and fortitude of their sacred dead, have roused themselves, at lingering last.

Be it known that Moscow money must not buy American liberty. That communism must not overthrow world freedom. That these States in unison will not surrender the prerogatives ordained of God and sanctified by the generations of human devotion and sacrifice.

Be it known, aye, be it known.

Let Mary and John Doe make it known, for the hour is late and, through the ballot, the means are at hand.

CHARLES FRANCIS COE.

Formosa

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I place the following article by Charles J. O'Malley which

appeared in the Boston Traveler, Boston, Mass., on Tuesday, January 10, 1950:

BOSTON INVESTORS CALLED PART OWNERS OF FORMOSA

(By Charles J. O'Malley)

Considering the news emanating from China and coming through the newspaper channels and the airways, the situation there seems to be deplorable, but the facts bearing on Formosa, which is a crucial point in the Chinese survey, are so different from what has been expressed that it has induced me to present the facts as they are and not what they might be.

The people of Boston and New England have greater ownership interest in Formosa than the Chinese or Japanese.

The facts are these:

When Japan defeated China, she sold the island of Formosa to the Taiwan Electric Light & Power Co. for a sum equal to about five million American dollars. The Taiwan Electric Light & Power Co. was the most important industrial development in Japan. It owned and controlled the electric light and power all over the Empire and the taking over of Formosa was one of its activities. When this was accomplished it was decided that America would pay for it, and bonds, equivalent to $22,800,000 were issued. These bonds were sold in Boston, New England, New York, and other parts of the United States. In order to accomplish this, the company secured the services of J. P. Morgan & Co., Kuhn Loeb & Co., the National City Co., the First National Bank of the City of New York, and the Yokohama Specie Bank, Ltd. When this was accomplished, through the Yokohama Specie Bank, which was the interest involved in Japan, practically all the leading brokerage houses in this country were engaged in the sale of these bonds. Hayden Stone & Co. sold a great many of these bonds in Boston.

Before the agreement was completed the Imperial Japanese Government guaranteed as follows:

"The Imperial Japanese Government hereby unconditionally guarantees the due and punctual payment of the principal, interest, and sinking fund of the within bond in accordance with its terms; in faith of which it has expressly authorized Juichi Tsushima to sign these presents in person or by his nominee.

"Dated, July 1, 1931.

"For the Imperial Japanese Government.
"JUICHI TSUSHIMA."

I have visited the island of Taiwan, or Formosa, on two occasions. The island is about the size of Ireland and has a population of 6,000,000. These people consider themselves as a part of the United States possessions. The island had, when I was there, about 34 forts protecting it. This island is very rocky and has very steep cliffs.

I was personally interested in this enterprise and knew that the bonds were of some value, for the interest on the bond was paid regularly from July 1931 untily July 1, 1941. Then trouble began.

The island of Formosa in 1938 was called the island of Taiwan after the ownership was conveyed to that company. I have been in Japan several times, and a few months ago I contacted the foreign department of the Industrial Bank of Japan, the representative of the Japanese Government in Tokyo. I saw Mr. Togama Araki, the promanager of the bank. He informed me that the people of the United States owned the island of Formosa and that the bonds which were sold for that purpose were the actual ownership of Formosa. This gentleman stated that our bonds are the first obligation of the Government of Japan. The Japanese agreed to pay for these bonds in full with interest when the peace treaty is signed, and every cent was to be returned to the owners in Boston, New England, New York and other parts of the country. In reference to this matter, the United States administration has taken bold action to stop communism in Europe and is now fighting it in Formosa, or the island of Taiwan which the people of Japan call Formosa.

I was talking with Gen. Douglas MacArthur, the Supreme Commander of the Allied Powers in the Pacific, and he informed me that we should hang on to Formosa, it belongs to us and should be our property.

I was told by Mr. Togama Araki that the bonds are worth every cent that was invested in them. They were purchased at 93½ per bond instead of the $100 which was the reputed value. The island of Formosa was the guarantee of the payment of the bonds, and when I was in Japan, a few months ago, I was fully informed that the Americans owned the island and they should keep it. It is now up to us to decide what to do about it.

England has recognized the Communists in China so it is said and the reason is quite obvious. Hong Kong was taken by England from the Chinese in 1841 with the understanding that Hong Kong would protect China from the advent of opium from India, and it was to be returned to China in 1941. When that time came, the Nationalist Chinese did not insist on the return of Hong Kong to China, but the Communists did. In order to placate the Communists, England is now recognizing them, thus protecting Hong Kong from their assault.

United States Naval Officers in Diplomacy

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. MARTIN of Iowa. Mr. Speaker, the diplomatic history of the United States has many great chapters, some of them formed by the actions of our naval officers when on cruises to distant foreign lands.

Among these, none is more brilliant than the opening of Japan in the middle of the nineteeth century by a naval expedition commanded by Commodore Matthew Calbraith Perry. This eminent naval officer, like many others before and since, by personally viewing an historic movement and evaluating its significance, was able to foresee events with remarkable precision and to state his conclusions in words of power.

During his famous Asiatic cruise Commodore Perry not only visited the Japanese Empire and other islands of that region but also the mainland of eastern Asia. He was thus able to interpret realistically the movements he discerned. His conclusions have been recently quoted in a letter of Mr. John Frank Stevens to the editor of the New York Herald Tribune, published in the December 8, 1949, edition of that paper.

Mr. Stevens, by the way, is the son of the world-famed engineer, John F. Stevens, who, as Chief Engineer of the Isthmian Canal Commission and, later its Chairman, was primarily responsible for the decision in favor of the high-level lake canal at Panama and laid out the great engineering organization under which the Panama Canal was constructed— a work essential to the realization of Commodore Perry's prophecy.

To make Commodore Perry's farvisioned pronouncement available to the Government of the United States and the Nation at large, under leave accorded, I am extending my remarks to include the full text of Mr. Stevens' letter, which follows:

PROPHECY BY PERRY—READER QUOTES WORDS OF THE FAMOUS COMMODORE

To the NEW YORK HERALD TRIBUNE:

As I lived in the Orient for 17 years, I am very much interested in the political and economic conditions and developments in that part of the world, and now that Communist China has taken over practically all of the continent of that country my thoughts go back to the contents of a paper written by Commodore M. C. Perry, United States Navy, read before the American Geographical and Statistical Society at a meeting held March 6, 1856, in New York City, and published by D. Appleton & Co., 1856, page 28:

"It requires no sage to predict events as strongly foreshadowed to us all; still westward will the course of empire take its way. But the last act in the drama is yet to be unfolded, and notwithstanding the reasoning of political empires—westward, northward, and southward—to me it seems that the people of America will, in some form or other, extend their dominion and their power until they shall have brought within their mighty embrace multitudes of the islands of the great Pacific, and placed the Saxon race upon the eastern shores of Asia; and I think, too, that eastward and southward will her great rival of future aggrandizement (Russia) stretch forth her power to the coast of China and Siam, and thus the Saxon and the Cossack will meet once more, in strife or in friendship, on another field. Will it be in friendship? I fear not. The antagonistic exponents of freedom and absolutism must thus meet at last, and then will be fought that mighty battle on which the world will look with breathless interest, for on its issue will depend the freedom or the slavery of the world—despotism or rational liberty must be the fate of civilized man. I think I see in the distance the giants that are growing up for that fierce and final encounter; in the progress of events that battle must sooner or later inevitably be fought."

For some time it has been the opinion of some of us who are seasoned students of far eastern affairs that the last struggle between the two largest countries would be probably in north China—perhaps in Shantung or Manchuria—and certainly Commodore Perry's paper points to something of this kind. However, let us hope that it can be settled amicably between these two physically very powerful nations.

JOHN FRANK STEVENS.

NEW YORK, *December 4, 1949.*

Abject Failure in China

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. BOGGS of Delaware. Mr. Speaker, during the past few weeks an increasing number of thoughtful citizens have spoken or written to me expressing their concern about the manner in which our Department of State has handled, or mishandled, our relations with China.

They realize that China has been one of our finest allies and staunchest friends. They further realize that the eyes of the peoples of the entire world are focused on Americans and that the future security of our Nation, as well as many others, may very well depend on what action our Government takes with respect to China and other far eastern nations.

To all of those who have written and spoken to me about China and to all the others who are puzzled about this matter, I say that their interest and deep concern cannot be any greater than mine. The confusion with respect to the State Department's policy, or lack of it, concerning China is tremendous. So far as I am concerned, no explanation yet given by our State Department, including its 1,054-page white paper report, has eliminated this confusion or justified the Department's inconsistencies and wait-until-the-dust-settles attitude. The dust has settled, and what we now see is the entire mainland of China in the hands of Communists—and Burma, southern Korea, Indochina, Siam, and other far eastern nations, including India, squarely faced with this same Communist threat.

Let us compare this actual situation with what the President said in his state of the Union message on January 4, 1950. Said the Chief Executive:

> In foreign policy * * * we can never be tolerant of oppression or tyranny. * * * We must throw our weight on the side of greater freedom and a better life for all peoples.

The very next day the President announced that we were forsaking Formosa.

Because I have been fortunate in having many American friends who spent long years in China and because I have been able to discuss this matter with several Chinese leaders and plain citizens, I long ago became deeply interested in China's problems as they relate to the United States and to the future peace and security of the world.

Partially with that interest and knowledge in mind, I said in May 1947—almost 3 years ago—in connection with the proposal for assistance to Greece and Turkey:

> What we need as a realistic Nation, before we attempt to rebuilt the political and economic structures of other countries, is a clearly defined, forthright, widely accepted policy which will provide us with a fully charted, integrated course of action.

In October 1947—more than 2 years ago—I wrote to the Secretary of State, saying:

> It is a matter of concern to me that almost our entire attention—with respect to foreign assistance and foreign economic recovery—is directed toward the European nations when it appears that China, a former loyal ally, is much more certainly in need of urgent assistance than such western nations as Switzerland, Sweden, and Turkey. This becomes a matter of even greater concern when on the basis of apparently reliable information in the public press, economic stability and recovery in China are not only urgent but could be effected at a very much lower cost to this country.

In reply I received this statement from the Under Secretary of State:

> I can assure you that this Government is thoroughly aware of the critical conditions which exist in China and is giving earnest attention to the question of how the United States can most effectively aid China in overcoming the present difficulties.

At the time of that exchange of correspondence Nationalist China had successfully contained the Chinese Communists in Manchuria, which, incidentally, had been made available to the Communists through the secret agreements made at Yalta. In the slightly more than 2 years which have intervened, the entire vast mainland of China has been lost to the Communists.

In spite of what has taken place in China in the past 2 years our State Department said loftily and without a noticeable twinge of conscience that—

> Nothing this country did or could have done * * * could have changed the result; nothing that was left undone by this country could have contributed to it.

This is a self-satisfying, self-serving statement of the Department of State, with which I emphatically do not agree.

During the past 2 years, in the face of State Department opposition, the Congress has appropriated funds for assistance to China. Even now the President has funds made available by the Congress for use at his discretion for assistance to China which have not been and are not being used. Adding to the general confusion were pictures and stories in last week's newspapers showing tanks and other war matériel destined for China being loaded aboard ship at an eastern port. This equipment was purchased by the Chinese Nationalist Government with American funds authorized in 1948. The matériel itself is surplus and, therefore, presumably was available when these funds were appropriated in 1948. It is no wonder, therefore, that questions are being asked as to why it has taken more than a year for this sorely needed matériel to be made available for shipping.

At this point I would like to direct attention to some of the conditions established by our State Department in 1948, as reported in the white paper, with which the Chinese Nationalist Government was expected to comply in order to receive American aid.

We find that China was asked to establish budgetary control in the hands of a central fiscal authority, with sufficient political strength to resist demands for unnecessary expenditures. Now, compare this for a moment with the operation of our own Government. Concerning Federal budgeting and accounting systems, the Hoover Commission reported that they found such systems in this country to be an antiquated, accretion of practices dating back to Alexander Hamilton. Although it would be possible to understand the existence of deficit financing in war-wracked China, it is difficult, if at all possible, to understand or condone peacetime deficit financing in our own country, which is the most prosperous in the world. Nevertheless, the fact remains that this Nation is today spending in excess of its revenues even though we already have an accumulated debt in excess of one-quarter of a trillion dollars.

In 1948 the Chinese Government was asked to eliminate nonproductive expenditures not essential to civic administration and prosecution of the war. In peacetime United States, however, as Senator BYRD's committee repeatedly pointed out, we have had one civilian employee for every two persons in uniform.

The Chinese were told to make administrative improvements in taxation. In our own country the Joint Committee on Internal Revenue Taxation reported in January 1948:

> Unnecessary, cumbersome, outmoded, and wasteful practices have continued unchanged in the Bureau [of Internal Revenue] for decades.

In 1948 our State Department asked the Chinese Government to make a conscientious reduction of civil and military rolls to eliminate unnecessary employees. This and the other State Department recommendations to China are highly commendable. But let us compare again what we recommended for China and what we continue to do at home. We find that in December 1932, Federal civilian employment in the executive branch totaled less than 600,000. Seven years later, in 1939, this number had increased by 50 percent and was slightly more than 900,000. As of June 30, last year, the total number of Federal civilian employees in the executive branch exceeded 2,000,000 and was reported by Senator BYRD to be increasing at the rate of 300 a day.

Let us consider another worthy recommendation made to the Chinese in 1948. They were told at that time that coordination and elimination of duplication in civil and military agencies was essential. What is the situation in our own country, according to the Hoover Commission and the Byrd committee? Those groups reported that there was almost fantastic duplication and overlapping among the 1,816 component parts of the executive branch of our Government. Here are but a few examples. We have 37 Federal agencies engaged in public health activities; 1. in electric and water power; 34 in the acquisition of land; 12 in home and community planning; no less than 16 in wildlife preservation; a total of 65 agencies engaged in gathering statistics; and 21 agencies in the field of transportation. This whole situation was very ably described by Comptroller Gen. Lindsay Warren as "a hodgepodge and crazy-quilt of duplications, overlappings, inefficiencies, and inconsistencies with their attendant extravagance."

In 1948 we made many other excellent recommendations to the Chinese Government, but I shall mention only one more. The Chinese Government was told to "clarify, by action as well as by statement, the fields open to private enterprise without government intrusion." On the other hand, in the opinion of many of us, our own Government's continued intrusion into many fields of private enterprise in direct competition with taxpaying private businesses has

become a matter of serious national concern. We find that our Government now owns, or is actively interested in, approximately 100 important business enterprises. Some of these fields of private endeavor into which our Government has entered extensively include banking, electric power production, life insurance, transportation, housing, and purchase and sale of farm products. In the electric power field alone our Government has already invested over $3,000,000,000 of the taxpayers' money in multipurpose power projects. But this is only the beginning. Our Government has, in addition, a planned program for further public power development entailing an ultimate aggregate cost of over $40,000,000,000.

Again, let me emphasize the fact that the recommendations we made to China in 1948 are extremely commendable. However, I am unable to understand why these same conditions or requirements were not established with respect to other nations to which we have made available billions of dollars, and why our own Government should not in effect "practice what it preaches."

I mentioned in the preceding sentence that such preaid conditions as were established for China were not applicable with respect to other nations which we are supporting with loans and gifts in tremendous sums. When it was suggested by many Members of Congress that requirements of this nature be made applicable, for example, to the European nations receiving Marshall-plan aid, the reply was given by our Department of State that this could not be considered because we would be interfering with the internal operations of these other governments. I fail to see any consistency in the policies established on the one hand for China and on the other hand for European nations, and yet I believe that the reconstruction and postwar development of nations in Europe and in Asia were of similar significance and importance to Americans and people throughout the world.

Let me repeat—the future peace and security of the world depend in a great measure upon American policy in the Far East. Bipartisan support for our foreign policy is much to be desired. But bipartisan support cannot be expected and should not be given unless both parties are fully and completely informed and unless both parties formulate, in fact and not in theory, that foreign policy.

In view of the foregoing, I earnestly urge that there be an immediate, intensive, and nonpartisan investigation of the forces within and without the Department of State which have caused our weak and wavering China policy to result in abject failure, the loss of China and its friendly people, and the very real threat to peace and security which the continued spread of communism in the Far East represents.

I hope that the pressure of public opinion will force the administration to take fearless and positive action of this nature. If this is done honestly and at once, I am confident that unity of purpose will thereafter produce "a clearly defined, forthright, widely accepted policy which will provide us with a fully charted, integrated course of action"—and support for a truly bipartisan policy which will be recognized by all the world as eminently just and worthy of freedom-, peace-loving Americans.

Lucien J. Bourgoin

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I place the following address which I delivered at the dedication of the West Street playground to a Franco-American veteran of World War II, Lucien J. Bourgoin, on December 4, 1949, at Lawrence, Mass.:

This is just a field now set apart as a playground, but it is rich in memories of youth that has gone.

Of Lucien Bourgoin and of so many others, some of whom have come back to West Street this day as mothers, fathers, or grandparents. Others have moved to far off places. There are some who sleep forever on the western hills just beyond the railroad tracks, close to the scene of this, their childhood land.

As far back as most of us can remember this was an open space which the young claimed for the sports and games of their happy, carefree years.

If by some magic we could have all the boys and girls who found their freedom here come back today, as they were then, this field would be filled to overflowing and it would ring with their gay little voices.

But youth does not last forever. Sometimes it is taken by the early frost of death and it is so difficult to believe that journey's end has come so soon.

So it was with Lucien Bourgoin, who gave up the brightest years of his life that we might live.

Those of us who have not been called upon to make his sacrifice move on to middle age and to the quiet, thoughtful, later years when the reaper claims us in due season.

We look back on the young who follow us, identifying ourselves with them, trying to recapture the joy and the wonder that once was ours.

Perhaps Lucien's father told him of the ward 5 football and baseball games that were played here long ago, of the championship boxing bouts that drew people from near and far, of the carnivals that strung pearls of light against the night sky, of all the excitement and mystery when the circus came to West Street.

And maybe the boy's eyes went wide with the adventure of life even more so when his dad told him of the Archibald Wheel Co., which once stood just north of here.

It made wheels for the wagons which delivered food and coal and ice and furniture to the homes and wagon wheels which transported goods from the freight depot to the stores. It was a useful industry that served the needs of peace.

But in 1917 and 1918 it made wheels for a different purpose, and it was a busy place in those days. Every few weeks one saw a freight train pull away south along those very same tracks over there [pointing], its open cars loaded with wheels, each one daubed with different colors of paint, as if done by a child.

They called them camouflaged wheels because, at a distance they blended into the background and they were hard to see.

Those wheels were on their way to France as parts of the mobile guns that were helping the American and French Armies to save those freedoms in which our two countries believed.

Sometime later, after the war had ended, I remember those same wheels were carrying the body of a soldier who died of his wounds after his return home, carrying him along the street which flanks the northern end of this one, up to the Legion lot beyond the bridge.

In the meantime, automobiles were crowding out horse-drawn vehicles and the Archibald Wheel Co., having outlived its usefulness, went out of business.

The war to end all wars was over, and life in Lawrence resumed its normal ways.

The field was still here.

A new generation of children played on it. And the games they played were much the same as those played by children of 1900 to 1910, who had since grown up and gone to war and had come home if they were lucky, older, wiser, and disillusioned.

The new ones paid little attention to them, except on Memorial and Armistice Days, and then only in the passing parade.

The young of 1920 to 1930 had other things to do, such as "playing soldier," for instance, little dreaming that they would be called to follow in their fathers' footsteps, and that the game would become cruel, bloody, and in deadly earnest.

Even we, the older ones, did not think that it would happen.

It did, in a war more frightful than the one of 1917.

And we who were older and thought we were wiser failed to stop it. By our carelessness and our failure to concern ourselves with the problems of the Nation and the world we did this to our children.

We sent them off to fight and suffer and die to pay for our mistakes.

And now we receive back their still and broken bodies. Belatedly we grieve and raise monuments in their honor.

Too late for remorse? It is never too late for us to mend our ways and do something for another generation which is growing up in their likeness, and by something I mean that we exert ourselves to the fullest in building an international organization that will curb aggression and banish war forevermore from the face of this earth.

It will not be easy. It cannot be done in a year or 10. But it must be done, for the sake of the children here at this dedication who look up to us in such trust and confidence as their protectors.

Lucien Bourgoin would wish it so.

And as an everlasting reminder to us of our obligations, he would like his name associated with this playground of his boyhood.

To his gallant memory, symbolic of all the Franco-American young men and women who went from this neighborhood to fight our battles for us, we dedicate this playground.

That the children of today—and all children who follow them—may grow up to be happy, healthy citizens in a peaceful world which Lucien Bourgoin inspired us to win for them.

The Rules Committee

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Pittsburgh Press for Monday, January 16, 1950:

DON'T GO BACK

A battle impends in Congress over whether the House Rules Committee's former power to bottle up legislation shall be restored.

Last year the House voted, 275 to 142, to deprive the committee of that power.

The system then adopted provides that, if the Rules Committee fails to clear a bill in 21 calendar days, the chairman of the legislative committee which originally approved the measure can demand a vote by the House membership on whether it shall be brought out for debate.

Nine of the Rules Committee's 12 members have now asked the House to abandon the new system. Their request should be denied.

The system they would bring back was undemocratic. Under it the Rules Committee too often functioned, not as a traffic signal to keep the flow of proposed legislation orderly, but as a blockade.

Unless a bill could get approval by a Rules Committee majority it was held up indefinitely. Six committee members could prevent 429 other representatives of the people from debating and voting on measures which a majority of them might favor.

It is argued, on behalf of returning to that system, that danger of crackpot and spendthrift legislation would be lessened.

The Rules Committee, that is, could spare the House the necessity of voting on proposed laws and expenditures which most representatives recognize as unwise but shrink from opposing openly for fear of angering potent pressure groups.

Republicans and southern Democrats on the Rules Committee, for example, could prevent enactment of much of President Truman's program.

We question the wisdom of many things in the Truman program. But in the past the power which the Rules Committee now seeks to regain often was abused for the purpose of blocking legislation we favored.

We said, then, that it was wrong for the committee to have such power. We believe, now, that it would be wrong for the committee to recapture such power. What House Members need is enough backbone to stand up for their own convictions, not a device to shield political cowards.

Wind Power as a Possible Source of Power Is Not in Missouri River Basin Power Plan

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by O. L. Huntsman:

WIND POWER AS A POSSIBLE SOURCE OF POWER IS NOT IN MISSOURI RIVER BASIN POWER PLAN

(By O. L. Huntsman, Washington, D. C.)

In connection with the power plan for the Missouri Basin development B. H. Greene, regional engineer at Chicago of the FPC gave the Inter-Agency Committee a report upon various aspects of the situation confronting it. Among the phases treated by him is the estimated required capacity for the next 20 years in that region and as to it the conclusion was that the required capacity of generating facilities would be far short. "To complete the 1970 generating capacity, and additional 8,922,000 kilowatts or 41 percent of the total, will have to come from new sources," the FPC engineer declared.

The new sources of supply of the required power, as suggested in Mr. Green's report, do not mention wind-generated power, but steam power and atomic energy are the contemplated sources or means to be developed.

The significance of the fact that the use of the aerogenerator, in this Great Plains area where wind movement is the most constant of any comparable part of this country, has not been mentioned by this Federal Power Commission engineer shows that within the Commission where the aerogenerator research work was done that the Bureau of Power there is either unfriendly, unfamiliar, or not interested with the new invention as an auxiliary supplier of power.

Wherever a condition exists in a Government agency such as is illustrated above, it becomes a poor policy to delegate administrative power to it—aimed at the development of a proposition—to a group of men who have undertaken the development of a competitive matter. That is to say, that if electricity can be generated by the wind cheaper than it can by water or steam power, those engaged in the construction of hydroelectric projects could not be expected to promote the development of facilities which may render obsolete the water-power or steam-power projects. For these reasons the cause of progress in the field of producing electrical power by the use of the wind should not be entrusted to the Federal Power Commission and its staff.

There are in existence other reports and studies made by the staff of the Federal Power Commission concerning the power development in other river basins, including one of particular interest to Arkansas. These reports are made by different segments of the staff at different times and plans but they show, with an exception, that no thought has been given to augmentation of electric needs of the area covered by use of the wind. In all of the reports on hydroelectric development plans, the demands are greater than the possible potential capacity of water-power resources.

It may be well to obtain copies of these various engineering reports from the Federal Power Commission and have them spread upon the record for information to the people who may be able to see the trends and thereby be able to understand them.

Labor Unions in Nazi Germany and Soviet Russia

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert an article from the International Teamster on labor unions in Nazi Germany and Soviet Russia by Rev. Edmund A. Walsh, S. J.:

LABOR UNIONS IN NAZI GERMANY AND SOVIET RUSSIA

(By the Reverend Edmund A. Walsh, S. J.)

In the early stages of nazism and as preparation for seizing total power, Hitler leveled one of his first attacks against the labor unions of Germany. No organized group of that type could be tolerated, since such associations of freemen are always a thorn in the side of dictators. Hence, labor, the church, education, youth organizations, cultural associations, agricultural societies, industry, finance, the press, literature, art, science, and every other agency which had a voice and a will of its own were systematically surrounded, absorbed, and reduced to silence.

When Germany had lost its freedom by this planned conspiracy, Hitler launched his legions on the series of conquests which nearly wrecked the continent of Europe and plunged mankind into the misery from which we are still suffering.

A similar enslavement of labor is the policy of Soviet Russia. No such thing as an independent labor union is tolerated. What are called unions are merely state-controlled armies of workmen regimented to obedience and subject to the iron discipline of the Communist government. Those who attempt opposition or even speculate out loud quickly disappear into concentration camps or are quietly liquidated by the all-powerful NKVD, which can arrest, try men in secret, and even execute them without recourse to legal forms. It is estimated that the number of victims from all levels of society at present in Soviet labor camps reaches the appalling total of from twelve to fifteen million persons. They are slowly being worked to death behind a second iron curtain.

It is an error to imagine that Hitler invented labor battalions or concentration camps. Both existed in Soviet Russia from the earliest years of the Communist regime. Hitler imitated the iniquity but improved the technique and surpassed the barbarity.

These two historic examples demonstrate how brutal and inhuman men can become when they lose respect for the dignity of human personality and degrade immortal souls to the level of mere machines and handy tools to be used until they are worn out and then cast on the scrap pile. It must never be forgotten that the loud claims of Communists to be the protector and champion of workingmen is only a smooth lie to cover up the new slavery and gain recruits for the Kremlin's world-wide campaign against Christianity and democracy. One has only to examine the condition of workers in Russia and compare the known facts in that police state to appreciate the liberty, the strength, and the progress of free labor in the United States of America.

Floods in the Twenty-sixth District of Illinois

EXTENSION OF REMARKS
OF
HON. C. W. (RUNT) BISHOP
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. BISHOP. Mr. Speaker, so that the Members of the House may have the opportunity to get accurate information about the dangers of the floodwaters in the Mississippi and Ohio Rivers, I am inserting the statement made by Mr. Peyton Berbling before the Appropriations Committee today.

I trust that when this comes before the House, we will receive the unanimous support of the Members in the effort to reduce the loss of life and property in the Twenty-sixth Congressional District.

The statement follows:

My name is Peyton Berbling and I am the corporation counsel of the city of Cairo, Ill., and attorney for the Cairo drainage district. The Cairo drainage district is the industrial district of the city of Cairo, and in this statement the area is treated as one unit, and considered as the Cairo area.

Cairo, which is at the head of year-round deep-water navigation on the Mississippi River, is situated at the extreme southern tip of Illinois. We are literally and actually surrounded by rivers. At our front doorstep is the Ohio River. At our back door is the mighty Mississippi River, and the north boundary of the Cairo drainage district is the south bank of Cache River. Our levee system, for protection against floods in these rivers, is approximately 22 miles in length, and while these levees are in the process of being brought to standard grade and section, they are not completed. Being thus surrounded by rivers, we of the Cairo area are probably more flood conscious than any people in the United States. We have more flood problems than any other river dwellers, and any failure to adequately protect the people against floods in the Mississippi Valley threatens the security of Cairo. Because of that fact, I am here, as a representative of the Cairo area, to urge this committee to give serious consideration to the flood protection in the Mississippi Valley, not on a basis of economy, not on the basis of expediency, but on the basis of common sense and necessity.

Flood protection is a never-ending job. It cannot be done in 1 year or 2. It requires constant attention and improvement, from the little creek to the mighty river. Possibly stabilization of flood control will eventually come, but certainly the goal is not yet in sight. It is a project that will require for some years an annual expenditure by the Federal Government of at least $100,000,000 on the lower Mississippi River alone. The river is a shifting, changing, unpredictable foe. To spend less is to invite disaster. To spend less is to waste a great part of what is actually spent. And in these days of $40,000,000,000 budgets, $100,000,000 is a very small amount to spend for the protection of our own American citizens and our own possessions. Adequate flood protection is not money wasted. It is a very good type of insurance, for the benefit of the Nation as a whole, because with adequate flood protection the people behind those levees can farm their fertile fields and raise the foodstuffs this Nation requires. If a flood comes, that breaks or overtops the levee, the cost cannot be easily measured, but certainly it will exceed many, many times the cost of adequate protection. A flood protection that doesn't protect is like a broken chain.

Possibly this is an old story to this committee. But if the members of this commitee will read the newspaper headlines of the last few days, they can easily grasp the widespread devastation floodwaters are at this very minute doing to the hundreds and thousands of people in the Mississippi Valley. Today, the Ohio River floodwaters stand some 14 feet higher than the streets of Cairo—held back only by the levees. We have had over 10 inches of rain in 15 days. The Wabash, the Tennessee, the Cumberland, the St. Francis, the Ouchita, and many other rivers are rampaging out of their banks, forcing hundreds of families out of their homes, drowning livestock, destroying property, and the end is not yet in sight. If the rains continue we may well have another flood like the terrible 1937 flood.

I am sure that if I could take this committee with me, to see the thousands upon thousands of acres of fine farmland covered with swirling, yellow, river waters, if they could see the hundreds of families living in boxcars, and other makeshift shelters, if they could visualize the great loss in livestock and property already suffered, this committee would need no urging on my part to allocate sufficient funds for the protection of the people of the valley against floods. The scenes of desolation and destruction by the angry floodwaters of the rivers would be a far more potent advocate than I.

Therefore I am glad to appear before this committee at this time. I think the time most opportune because the facts are here for all of us to see. We are a generous Nation. Please be just as generous with the people of the Mississippi Valley as we are with others. If economy is necessary, then let us economize some other place, and not at the expense of flood protection, which is so vital and necessary.

As the representative of the Cairo area, but also as a vital part of the Mississippi Valley, I respectfully urge this committee to consider this matter in the light of its urgency, and give to the United States engineers sufficient money to go ahead with this great work.

The Close of a Chapter

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Close of a Chapter," written by Felix Morley, and published in the weekly publication Human Events of January 11, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CLOSE OF A CHAPTER

(By Felix Morley)

The British recognition of Communist China, coming on the heels of President Truman's final abandonment of the Nationalist cause, has brought to a close the most miserable chapter in the whole history of American diplomacy. Even the New York Times, stanch follower of the Roosevelt-Truman line, is forced to admit editorially that: "We have taken a terrible beating in the Far East."

As yet, however, there is little realization of what the results of that beating are likely to be. The Communist conquest of China is in itself an event of historical importance second only to the Bolshevik revolution of 1917. But the loss of China is, to paraphrase Winston Churchill, only "the end of the beginning." With Mr. Truman's unconditional surrender of Formosa, initiative in the cold war everywhere passes to the clever men in the Kremlin. We can be sure they will exploit their advantages to the full.

Among the results to be anticipated is the further deterioration of the United Nations. In spite of Soviet sabotage this Organization has heretofore been able to function in a fumbling manner. Russia has stultified the Council by use of the veto power, but with the Soviet bloc a small minority of the Assembly there has been some prospect that the veto difficulty could be bypassed.

This likelihood is now diminished. It is not merely that before long Vishinsky will have an oriental colleague to give Moscow control of two out of the five permanent Council seats. The Soviet influence in the Assembly will also be strengthened. From now on, as in the recent test on the internationalization of Jerusalem, the Government of the United States can expect to be outvoted in the more democratic organ of UN. Continuing enthusiasm for an international organization in which we are continuously outsmarted by Russia is not to be expected.

The growing reaction toward isolationism was obvious in President Truman's noninterventionist statement on Formosa. This reaction is certain to be stimulated by the British recognition of the Mao Tze-tung regime, not less so because we shall ultimately follow the British lead in this matter.

If our foreign policy since 1945 could point to a single tangible accomplishment, it was the solidification of Anglo-American relations. The substance of even this one achievement has now been largely whittled away. In domestic affairs our British ally has moved a long distance toward a national socialism which is anathema to traditional American thinking. In western Europe the British are openly skeptical about the economic "integration" that Mr. Hoffman has been vainly preaching. Now, in the Far East, Great Britain moves to make friends with a Chinese regime that has humiliation of the United States as its clear objective.

II

There is, of course, a body of American opinion that would gladly follow Britain into national socialism as domestic policy, and into military alliances in the foreign field. But the task of those who would push the American people down these devious paths is becoming increasingly difficult. The inconsistencies are too clear, and, what is more influential, they are too costly to be passively endured.

Senator TAFT has been prompt to point out the contradiction between the early Truman doctrine of intervention in Greece and the present Truman doctrine of nonintervention in China. If it makes sense to pour money and supplies into the Greek civil war, it should make at least equal sense to do the same in the Chinese civil war. Mr. Truman's assertion that we have no predatory designs on Formosa is close to admission that we have predatory designs on Greece.

The appalling tangle into which opportunism has brought us is the more deplorable, because the Department of State could easily have advanced a reasonable explanation for its flounderings. Secretary Acheson could have said frankly that while the principle of containing communism is sound, this country simply cannot afford to apply it on a global basis. Mr. Acheson could have said that our Greek adventure has been too expensive, and tbo dubious in its accomplishment, to risk repetition on a far larger scale in China. Such an explanation would have been frank and honorable, and the more impressive when backed by the explicit and implicit revelations in the President's budget message.

But this admission would be out of character for the present administration. Taking the cue from his predecessor, Mr. Truman refuses to admit that anything is beyond his power. Then, when the inevitable frustrations arise, they are glossed over with hypocritical and sanctimonious phrases which can only serve to play into Communist hands.

Actually, we should be grateful to the British for their forthright, if painful, decision to recognize Red China. It knocks the props from under the whole jerry-built structure of our postwar diplomacy. With increasing insistence Americans will now ask why we should pour billions into the containment of communism in Europe if our allies there are willing to make terms with Communist regimes in Asia.

This is a reasonable question which the Department of State will find increasingly difficult either to evade or answer. Perhaps the only satisfactory answer now would be the cry of confession: "Oh, what a tangled web we weave when first we practice to deceive."

III

The tragedy of China is the more poignant, and the more dangerous, because our

recent policy toward that tragic country has been lacking in elementary honesty. Secretary Acheson asserted at his press conference on January 5 that "when the United States takes a position it sticks to that position and does not change it by reason of transitory expediency or advantage." Unfortunately the record says otherwise.

On November 26, 1941, in the virtual ultimatum to which Japan replied by attacking Pearl Harbor, the State Department demanded that Japan should not support "militarily, politically, economically, any government or regime in China other than the National Government" headed by Chiang Kai-shek. If it were true that when we take a position we stick to it, we should be sending a similar ultimatum to Great Britain today.

The record further shows that at Yalta, on February 11, 1945, Roosevelt, Churchill, and Stalin agreed that Soviet Russia should receive important territorial and economic concessions in the Far East. These concessions, providing the springboard from which the Communists proceeded to conquer all of China, included the complete surrender of Outer Mongolia to Russia and recognition of "the preeminent interests of the Soviet Union" in Manchuria.

Stalin was not merely given these priceless advantages at Chinese expense, he was given them without any consultation with our Chinese ally. As Secretary Acheson himself has written in the letter transmitting the China white paper to President Truman: "It was not until June 15, 1945, that General Hurley was authorized to inform Chiang Kai-shek of the [Yalta] agreement," concluded behind Chiang's back 4 months earlier. The white paper itself says (p. 115): "It was unfortunate that China was not previously consulted."

Diplomatic chicanery of this sort is bad enough in itself. But when followed by rhetorical asservations of "the fundamental integrity" of our policy toward China, the hypocrisy becomes intolerable.

IV

Since the sell-out at Yalta it has been impossible for those who have studied the record objectively to regard our Chinese policy with anything but contempt.

In his letter transmitting the Chinese white paper to President Truman, an attempt to gloss the ugly facts was made by Secretary Acheson. So that the war might be quickly ended, he said: "We * * * were prepared to and did pay the requisite price." But Mr. Acheson failed to emphasize that the price paid to Stalin, for 1 week of Russian participation in the war against Japan, was paid at Chinese expense, and without informing the Chinese of the secret transaction. Against this black background Mr. Acheson now says that we stand for principle, that we are honorable and that we do not put forward words, as propagandists do in other countries, to win a temporary advantage.

All that we can accomplish, by this sanctimony, is to consolidate the Chinese behind the Mao Tze-tung regime. The Chinese Nationalists realize, if we do not, that the United States has sold them down the river. It will be wholly understandable if all in a position to do so rally behind the Communist government, the more so since the latter shows every disposition to pay us off in our own coin.

The background also explains why the British, reluctantly but firmly, are dissociating their far-eastern policy from our unpredictable and indefensible gyrations. As the friendly Manchester Guardian observed, in its weekly issue of January 5: "It is rare for a government to repeat its mistakes so exactly and so quickly as Mr. Truman's administration has now done." Perhaps we can afford a blundering diplomacy. The British cannot. So they have split with us to recognize the Red China that we have done so much to consolidate.

Of course, this split between Britain and the United States weakens the whole basis of our European policy, simultaneously with the complete collapse of our policy in Asia. It is not surprising that Moscow should choose this moment to open a propaganda offensive in Finland, in Italy, and in Germany. The time to cash in on our mistakes is at hand.

It is a dismal picture; one that presages a swift and sweeping revulsion in popular thinking. Indeed, an outstanding question now is which of the two parties will more quickly see the domestic implications of growing disillusion. In November 1940 both Democratic and Republican leadership were for intervention. In November 1950, as the tide is running, a bipartisan policy of isolationism would not be surprising.

B. H. Greene's Report on Missouri River Basin Plan Omits Mention of Possibilities of Wind Power

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by O. L. Huntsman:

B. H. GREENE'S REPORT ON MISSOURI RIVER BASIN PLAN OMITS MENTION OF POSSIBILITIES OF WIND POWER

(By O. L. Huntsman, Washington, D. C.)

It may be of interest to note some facts which indicate the nature of varied interests that some people have, who are engaged in various phases of power development work. One of these manifestations came to light recently in an official report submitted by an engineer employed by the Government. B. H. Greene, regional engineer of the Federal Power Commission at Chicago, gave the Inter-Agency Committee a technical report upon various aspects of the situation confronting it and among the phases treated is one in the form of an estimate of required generating capacity for the Missouri River Basin power plant in the next 20 years. The conclusion reached by this engineer was that the required capacity of generating facilities in that region would be far short. Using his words, it was said, "to complete the 1970 generating capacity an additional 3,922,000 kilowatts, or 41 percent of the total will have to come from new sources."

The sources or possible sources of this added needed supply suggested by Mr. Greene are atomic energy and steam power. There is no mention of wind power as a possible source, which omission is of significance from another viewpoint.

This is not to criticize Mr. Greene, but to point out the fact that because the constituency of the Federal Power Commission is composed of engineers whose interests and training gravitate around the two conventional types of electric generation—water power and steam power—it may not be sound policy to entrust to it the task of developing wind-power instrumentalities to meet present needs. The steam locomotive is passing into the limbo, but there are thousands of earnest men who still believe that steam power is best notwithstanding the demonstrated fact regarding Diesel engines which are supplanting them, because of efficiencies and economies.

Since the Eighty-first Congress, second session, has before it through the President's messages the public power program, it may be that now is the proper time to inject into it the subject of the aerogenerators as sources of cheap auxiliary power to complement the vast hydroelectric developments which are being designed.

Mr. Truman did not mention the scientific development of wind power for generating electricity among those things enumerated in his message and I doubt whether it has ever been brought to his attention. He did specify the need for power development in the Southwest region embracing parts of Oklahoma and Arkansas.

Here, as I have stated in my memo on wind velocities, may be found the best locations in the country for the use of an aerogenerator, because of the constancy of the wind.

If aerogenerators can be built and installed in that region in connection with the dams on those small rivers, how well the windmill and the water turbine can work together. When the wind blows the water wheel can be shut down, thus conserving that source of power for days when there is no wind, and thus a constant supply of power can be maintained at a minimum cost.

This feature should be considered in the matter of the Southwest power development. I am calling it to your attention for whatever importance you may see fit to attribute to it.

A Reporter Looks at Government

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, there follow the final two articles in the series on bigness in Government authored by Mr. Paul Martin, of the Gannett News Service. The first three in this series appeared in yesterday's CONGRESSIONAL RECORD.

[From the Rochester (N. Y.) Times-Union of December 15, 1949]

SPEND-FOR-PROSPERITY POLICY FEARED

(What is there to fear in Government planning? Can the managed economy succeed? Are we on the way to a one-party system of government? This is the fourth in a series of articles on the magnitude and power of the Federal Government, supported by taxes of the people.)

(By Paul Martin)

There are many citizens today who fear the growing concentration of power in the hands of the Federal Government.

This is evidenced by the variety of American leaders who have spoken out against present trends, including former President Herbert Hoover, Gen. Dwight D. Eisenhower, and former Secretary of State James F. Byrnes.

Congressmen who have returned to Washington during the recess say the one thing uppermost in the minds of the folks back home is the high rate of Federal spending without being able to make ends meet.

What is there to be apprehensive about today? Sometimes it is the hidden trend in government, rather than the accomplished fact.

Here are some trends which have not become fully apparent:

First, there is the theory of the boom economy.

President Truman's economic advisers have what might be termed a 10-year plan. The object is to channel Federal spending into such avenues that we may be able to pump up the national economy from an output of goods and services of around $260,000,000,000 a year as at present, to three hundred or three hundred and fifty billion dollars annually.

This inflationary program contemplates such goals as a $4,000-a-year minimum income for every family—35 percent higher earnings for farmers, pensions of at least $100 a month for the aged, business profits of $40,000,000,000 a year, instead of fifteen or twenty billion dollars.

Fiscal planners are veering away from the old-fashioned notion of a balanced budget, in favor of a what-can-the-economy-stand formula.

Federal spending will be kept high, even inflationary, to pump more money into production and employment, and keep the stream of currency moving. This in turn should create a broader base for collection of more Federal taxes.

In this managed economy, the national debt itself becomes an instrument for expanding credit, and booming business.

There is a rule of thumb that the national debt could go safely to twice the amount of the national income.

Thus with output of goods and services running around $260,000,000,000, the debt could hit a peak of $520,000,000,000 without endangering the national economy. If the economy could be pumped up to the Truman goal of over $300,000,000,000, the debt could go even higher.

Then there, is the roll-it-over theory.

So long as the Treasury can meet interest payments on the debt, why worry about the principal? When one set of securities comes due, buy it in, then issue another series.

After all, the full faith and credit of the United States is behind these notes, and if the Government's credit isn't good, whose is?

Another trend affects the future role of State and local governments.

An unpublished report of the Hoover commission recommended that the Federal Government reduce State-aid grants, and leave to the various States all control and responsibility for such activities as:

(1) Education, (2) public health, (3) welfare and public assistance, (4) employment security, (5) housing and slum clearance.

The report also urged the Federal Government to retire from the following tax fields, and leave them to State or municipal governments:

(1) Estate tax fields. (2) Levies on gasoline and oil. (3) Excises and retail sales taxes.

The Treasury collects around $4,000,000,000 a year from these sources, excluding the old-line, prewar excises on alcohol, tobacco, etc.

This report, prepared for publication, was not released because of objections from at least 2 out of the 12 members of the Hoover Commission.

One dissenter was Secretary of State Dean Acheson, the Commission's Vice Chairman. Acheson is said to hold the view that in this new era of internationalism, State governments are archaic and old-fashioned.

The trend of Government planning in Washington today is that there should be no expansion in the direction of more State government, but rather a gathering in and consolidation of power in a strong Federal Government.

Finally, some believe there is under way an irresistible movement of voters into one single majority party, welded out of many minorities.

A whole new generation of voters has grown up during the last 20 years, with no concept of the old ebb and flow of political power between the two great parties.

And the Government is getting credit for redistributing the tax money of the people, often in reverse ratio to what they paid in, or how it was collected from the various States.

Businessmen, who formerly resented Government invasion into the field of private enterprise, are being more and more tempted by the easy credit of Reconstruction Finance Corporation.

Grants, loans, guaranties, price supports, State-aid programs, and benefits to veterans, the aged, the needy, the unemployed, hold a magnetic political attraction.

Some political observers today feel that the United States is in danger of losing its traditional two-party system of government.

[From the Rochester Times-Union of December 16, 1949]

A "Spending Spree" Into Socialism

(By Paul Martin)

Who is responsible for runaway Federal spending and dangerous trends in government?

There are some hopeful signs. But in the last analysis, it's the individual wage earner-taxpayer citizen who counts.

Your direct link to better government is through your home-town Congressman.

What is being done today to protect the United States from economic or political danger?

There are several hopeful signs. But none, in itself, amounts to a firm guarantee that this country is not following bankrupt Great Britain on a spending spree into socialism.

Here are the encouraging signals:

HOOVER COMMISSION

Work of the Hoover Commission probably holds the most immediate promise for future economy and efficiency in government.

This bipartisan group, headed by former President Herbert Hoover, avoiding any semblance of politics, made 288 separate recommendations for Government reorganization.

Mr. Hoover estimated these could save American taxpayers $3,000,000,000 to $5,000,000,000 a year.

In its concluding report the Commission said:

"Federal Government has become the largest enterprise on earth. In less than 20 years its civil employment has increased from 570,000 to over 2,000,000. Its bureaus, sections, and units have increased fourfold to over 1,800.

"Annual expenditures have soared from $3,000,000,000 to over $42,000,000,000. It now costs more each year to pay the interest on the national debt than it did to pay the total cost of the Federal Government 16 years ago."

Around 20 percent of the Commission's recommendations have been enacted to date. Many additional reforms remain for the next session of Congress.

ADMINISTRATION

The White House expects to send a performance-type budget to Congress in January, for the first time in history.

This is designed to show more clearly where the money goes, make it easier to determine where to cut Federal spending.

Mr. Truman also has shown some gestures in the direction of economy.

He vetoed a number of private bills of the Eighty-first Congress which would have upped the cash outlay of the Treasury. He also impounded $615,000,000 in Air Force funds which Congress voted over and above the President's recommendations.

CONGRESS

The practical opposition to more costly social-welfare programs in recent years has come from Congress.

This has been due to a loose coalition of conservative, midwest Republicans and southern Democrats, who have held in check runaway spending plans of the administrative agencies.

Congress next year will attempt for the first time an omnibus appropriations bill, in which all funds for the 1951 fiscal year will be shown under a single cover, instead of 15 to 20 separate bills.

This may or may not add to economy, but it should give a clearer picture of the Federal spending.

Yet Congress, itself, is at fault in failing to keep spending within confines of the Federal revenues, and failing to establish a debt-reduction program.

Members who in theory are for economy give in to practical politics when an appropriations bill affects some pet project in their own districts.

And they swap votes for subsidies to farmers, veterans, business, home-building, miners, ranchers, aviation, merchant marine, and the like.

Proposals to direct the President to make a flat 5 or 10 percent cut in appropriations, already voted by Congress, are a tacit admission that the legislators don't want to do an item-by-item job of pruning their own money bills.

Former Secretary of State James F. Byrnes summed it up this way:

"Our real trouble is debt and taxes. We cannot cure it by more debt and taxes. We should devote to cutting expenditures some of the thought we are devoting to taxing and borrowing.

"But cutting expenditures is not seriously considered in the executive departments. And new taxes will not be considered in Congress. So deficit spending will continue."

A seasoned politician once gave this advice to a new Member of Congress:

"To stay in politics, you must vote for every appropriation bill—against every tax bill."

POLITICS

The trend to one-party politics may arise in large part from the fact that present political symbols have become almost meaningless.

Study the composition of Congress, and what do you find?

So-called liberals are distributed more or less on a regional basis, not according to party lines.

There are the well-defined areas—New England, the Middle Atlantic States including New York and New Jersey, the agrarian radicals around Minnesota and North Dakota, the far West, and the Pacific coast.

No one knows exactly what a liberal stands for, but it sounds more attractive to many than conservative.

Gen. Dwight D. Eisenhower recently defined a liberal as a "man in Washington who wants to play the Almighty with our money."

So-called conservatives reflect largely the sentiment of the Midwest in the GOP, that of the South for Democrats.

If there were a new alinement according to basic economic and social beliefs, many Members would shed their traditional Democrat and Republican labels, and a new two-party system would emerge.

THE PUBLIC

In the past, it has been difficult to interest the average wage earner in such things as taxes and deficits and socialism.

That era may be on the way out. For taxes now hit just about everybody. Federal, State, and local taxes take around 33 percent of the pay check of the average worker.

Major complaints in the congressional mail this year were against excessive Government spending and high taxes.

It is still difficult to put across the concept of socialism or statism in contrast to individual freedom, competition, and private property.

But former Gov. HERBERT H. LEHMAN, of New York, while campaigning for the Senate on President Truman's Fair Deal program, shied away from socialized medicine.

SOLUTION

Then what is the solution to run-away Federal spending and dangerous trends in the body politic?

Obviously, no one has the final answer, or there would be no problems today.

But in the last analysis, the direct link between the individual and his representative form of government is Congress.

That means the home district Congressman, and on a larger scale, the two United States Senators.

Congressmen are remarkably allergic to mail from home. They tend to ignore form letters, telegrams, and mimeographed postcards from lobby blocs and pressure groups.

But they consider carefully all well-reasoned, personal letters from constituents.

Material Aid to Europe

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1950

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks, I include a radio speech I recently made:

My fellow citizens, already most of the first day of this new year, 1950, has passed into history. It is quite possible that many of my listeners have made resolutions for the new year. Personally, I prefer to use the word "determination."

The time has come in the world and certainly in our own country when we must take a very positive position on all fundamental questions if we are to meet the world-wide responsibilities which are ours whether we want those responsibilities or not. There is no doubt but what the rest of the world is looking to us for many things. I wonder sometimes if we have not encouraged peoples everywhere to look our way for too much material help. It may be that as we seek to divide that which is stored in our plenteous warehouses, we forget that real advice, counsel, precept, and example should accompany the liberal sharing of our physical resources. Would it not be wise for us as a country to ponder a more realistic return to the fundamentals which have brought this country to the height of prosperity, mass production, good health, good schools, good recreation, sanitation, good roads, automobile ownership, and opportunities of all character which we enjoy under the democratic way of life?

It must be remembered that our Southland has prospered greatly since the Civil War. We had no Marshall plan to aid us. In fact we had few of the labor-saving devices which we enjoy today. Houses were built by hand; the gasoline plow was unknown. The mechanical cotton picker was but a dream. Children came into the world in private homes instead of maternity hospitals. Sensitiveness to certain foods held no place in the medical fraternity. Miracle drugs remained in undeveloped scientific fields. The automobile was not about us, not even to suggest the absence of the airplane, the radio, and now television. The development of the atom was suggested but not even the most erudite scholar knew where to start and certainly no one dreamed that it would cost more than $2,000,000,000 to build a plant in the State of Tennessee, wherein science in cooperation with business management, architects, engineers, contractors, and skilled workmen would finally produce an instrument so powerful as to not only shorten the most horrible war in the world's history but to bring it to a conclusion. All of this suggests to me that we could have never done any of these remarkable things without the fundamentals of hard work, thrift, honesty, the development of good character as individuals and as subdivisions of a great Federal Government.

All of these accomplishments resulted from an ambitious people ever looking toward the future and ever recognizing the need for bringing real happiness to the world in the development of the sciences and the professions, labor, and business. With all of these remarkable physical advantages about us, without the dedication of sound education to useful gains, with this general prosperity and physical happiness so common to most of the citizens of this great country and with so many luxuries in other parts of the world, accepted as simple necessities here, I am afraid that we have lost some of the substantial foundation in the training of some of our teachers and leaders who would have a utopia reached in a day without the hard and difficult and rugged steps which brought us to this place now and which must be continued if the fondest dreams of the idealists are to be further realized in the future.

The President of the United States has announced that he will again press for the passage of his civil-rights program in the second session of the Eighty-first Congress which convenes day after tomorrow. I list the 10 points in that program for you in order that you may be refreshed as to its details:

1. Set up a permanent Civil Rights Commission, a Joint Congressional Committee on Civil Rights, and a Civil Rights Division in the Justice Department.
2. Strengthen existing civil rights laws.
3. Provide Federal protection against lynching.
4. Give more adequate protection to the right to vote.
5. Set up an FEPC.
6. Prohibit discrimination in interstate transportation facilities.
7. Provide home rule and Presidential election suffrage for the District of Columbia.
8. Authorize statehood for Hawaii and Alaska.
9. Equalize the naturalization opportunities for residents of this country.
10. Settle the evacuation claims of Japanese-Americans.

Immediately you will recognize the highly controversial nature of several of these proposals. Just as quickly, I am sure, you will appreciate that some of these suggestions, though very noble in character, are not such as will become a part of the very nature of the individual citizen by simply enacting a law and writing language, which, if violated, will carry a penalty of imprisonment in a Federal penitentiary or the payment of a fine in dollars and cents, or both.

Years ago when I sat as judge of the city court of Memphis, I found out that a great many people believe in the rigid and strict enforcement of the law just so long as those laws are not being enforced against "me or a member of my household." A great many people believe that laws prohibiting the excessive use of speed in the operation of automobiles should be promptly and severely enforced, but many of the same people are just as quick to believe that an exception should be made in a particular case if a member of his household is found exceeding the speed limit. Should that arise many find it very convenient to suggest mitigating circumstances, sometimes claiming that the youth or age of the person committing the violation was the reason behind the excessive speed so as to minimize the charge or completely excuse the offender.

All of us know that you cannot legislate morals. Education is most important. But if a man have an evil heart and you educate that heart you but make it better possible for him to execute his evil design. On the contrary, if a man have a good heart and you give him that broad and understanding education, you make it possible for that individual to render a genuine, a true, and an unselfish service to his fellowman.

I recognize that I have been making a general statement thus far. God willing, I shall be talking to you each Sunday night all this year. I shall discuss specific legislation which is being considered by the Congress. To the very best of my ability I shall report to you the reasons behind some of the proposed laws. I could not let this night go by, however, without stating the premise that this country was not made great and secure, prosperous, and the leading Nation of the world on any basis of socialism. We are truly a capitalistic Nation and our people are essentially capitalists. Our people are both superior and supreme in this land of opportunity. The individual citizen in this country is superior because he has unlimited opportunities. We own more telephones than all of the other nations of the world put together. The same may be said of automobiles. The great majority of people in the United States accept a bathtub as a simple necessity, while millions and millions of people have never heard of one. The people in this country are supreme as capitalists because they buy on a free market everything they want with money earned at the highest wage scale and salary scale enjoyed in the world. The more diligently a man applies himself, the more money he naturally makes and the more material blessings he enjoys. That is all fundamental. From time to time I expect to have much more to say about this thought which any thinking person must accept as axiomatic.

Thomas Jefferson many years ago said this and I ask you to pay close attention to the quotation:

"I place economy among the first and most important virtues and public debt as the greatest of dangers. To preserve our independence, we must not let our rulers load us with perpetual debt. We must make our choice between economy and liberty, or profusion and servitude. If we can prevent the Government from wasting the labor of the people under the pretense of caring for them, they will be happy. The same prudence which in private life would forbid our paying our money for unexplained projects, forbids it in the disposition of public money."

What Jefferson said then is just as true as can be today. This is no time to add further Federal taxes to the citizens of this country. We must raise the efficiency of public service and that can only be raised by the interest of each individual who is employed by the Government.

We must have a complete reorganization and administration of the civil service, and do not let anyone say that I propose the abolition of the Department recognized to administer those laws which cover the regulation of employment and employees and which gives assurance of job security. What I do mean most positively is that red tape must be abolished and foolish regulations, which in themselves add to the pattern of administration and call for literally thousands of unnecessary employees, must go and should go at once. The head of a department should be graded and recognized for efficiency on the basis of the least number of competent people who can do a public service courteously and well, rather than be judged and many times promoted because he is in charge of an extraordinary number of incompetent, discourteous, and unsatisfactory employees. I have had too many Government

employees to agree with me on this to feel for one moment that I am taking an improper or unfair attitude. If there should be a tightening up of inefficiency within the civil service itself, and if that same degree of competence be required in all Federal departments and agencies, much money would be saved and the employees as well as the country would be much safer, much more secure, and certainly happier.

The time has come to follow the expenditure of American dollars into the countries under the Marshall plan. Too many of my colleagues have come back in recent weeks and have reported that many thinking people in other countries of the world have come to the conclusion that the Marshall plan means far more to us than it does to them. Many have said that in our whole complex problem, they have but increased the burden by spending the dollars we allow them in this country which but adds to inflation, when if they had the will to build and to produce the same food, machinery, and other items in their own countries—they would be far better off.

The women of this country are absolutely correct in asking the question as to why there is a 20-percent excise tax on cosmetics, when the same does not apply to men's shaving cream. These items are just as necessary under our way of living for one as to the other. We must have taxes to run good public services, but far more important at the moment is the problem of reducing unnecessary expenses so that our tax burden shall most certainly not be increased, and we hope decreased, so that all businesses, large and small, may extend themselves, grow and profit.

I have already in recent broadcasts made the statement that it was never intended for the post office to go into the express business. I expect to introduce a bill at the earliest possible time in this session, which, if passed, will return the weight and size limits to the original law and will result in the restoration of thousands of employees to private enterprise, reducing not a single person in the Post Office Department, and make unnecessary the tremendous building program which will otherwise be incumbent upon the Post Office Department if post-office express is continued under the present regulations.

As soon as possible I shall state why I am against social medicine. Our professional medical standards are the highest in the world, and we must keep them there.

I expect to take up the so-called civil-rights program item by item and will develop as studiously and sincerely as I know how problems affecting housing, taxes, the development of our rivers and harbors, the Hoover reorganization plan, and all other public questions which I may be called upon to vote as your accredited Representative in the Congress of the United States. I will continue my efforts to stabilize the employment of the civil employees of the engineer depot in Memphis.

I shall leave for Washington early in the morning. The past 2½ months have made possible the longest stay at home since you sent me to Congress February 15, 1940. My secretary, Carl Lemser, and I opened the Memphis office promptly upon adjournment and have sought to answer every call and to meet every demand which came to us. Many organizations and clubs were kind enough to invite me to talk to them personally. To some it may have appeared a strenuous task, but I received a very great reward in the privilege of seeing many friends and meeting newcomers during that period of time. Our office in Washington has remained opened all the while with a most adequate staff. This has made possible more prompt service on many matters because we were in touch daily with that office.

I express the deep appreciation of all of my family and of all of my staff for the many notes of encouragement received during this holiday period. While we go back to Washington without any respite from our assigned task, we do approach this next session of Congress with enthusiasm and determination, and with the hope that we may give a good accounting of our stewardship.

Since reading the prayer of St. Francis of Assisi on a recent broadcast, a great number of requests have come in—that I repeat it—with the hope that it brings you as much inspiration and challenge as it has me. I shall wish all of you the happiest New Year of your lives with this beautiful prayer in my heart.

"Lord make me an instrument of Thy peace; where there is hatred, let me sow love; where there is injury, pardon; where there is doubt, faith; where there is despair, hope; where there is darkness, light; and where there is sadness, joy.

"O Divine Master, grant that I may not so much seek to be consoled as to console; to be understood, as to understand; to be loved, as to love; for it is in giving that we receive, it is in pardoning that we are pardoned, and it is in dying that we are born to eternal life."—St. Francis of Assisi.

Happenings in Washington

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD four broadcasts by me on October 24, November 7, November 21, and December 5, 1949, under the headline "Happenings in Washington." These embrace programs Nos. 10, 11, 12, and 13.

There being no objection, the broadcasts were ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 10)

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

Well, the first session of the Eighty-first Congress has finally ended. Unless called back into special session, we will not meet again until next January.

Under the Reorganization Act, Congress is required to complete its business on or before July 31 of each year.

When that date arrived Congress was so far behind in its work that a technical ruling was made by the Democratic leadership holding that World War II had not yet ended.

Under that ruling Congress continued in session for 3½ months longer.

In this broadcast I want to give you a brief report on the accomplishments and the failures of this long session of Congress. Usually such reports are routine. This year, however, the situation is different.

Recently, in a most unusual step, the President issued a summary of the legislation considered and praised the accomplishments of this session of the Eighty-first Congress. The White House sought to show that this Congress was much superior to the Republican Eightieth Congress which preceded it.

As I said, that was a most unusual step by a President of the United States. It was especially odd, because, as I shall prove to you, the facts do not justify the claim.

First, let us keep some simple figures in mind. In the Eighty-first Congress there were 54 Democratic Senators and 42 Republicans. That was a solid Democratic majority of 12 votes. In the House of Representatives the Democrats had 263 Members, the Republicans 171, and there was 1 Member of the American Labor Party, who nearly always voted with the Democrats. That gave the Democrats an overwhelming majority of 92 votes.

In view of Mr. Truman's summary, I ask you to keep these figures in mind, because they prove conclusively that in the session just closed the Democrats could pass any bill they wanted to pass, and, by the same token, they could defeat any bill they wanted defeated. They had the votes in both Houses.

Now let us turn to the accomplishments and failures of the recent session of the Eighty-first Congress.

Do you remember the Democratic national convention in Philadelphia in July of 1948? At that time President Truman announced that he was calling the Eightieth Congress back into special session. He read a 29-point program, all of which he described as of a highly emergency nature which could not wait. If it were not passed, he said, the country would go to rack and ruin.

What were these emergency measures which Mr. Truman asserted were needed to prevent national disaster? I have listed some of the 29:

The President wanted stand-by authority for price control, wage control, and rationing of scarce commodities.

He wanted to reestablish an excess-profits tax.

He wanted Federal aid to education; socialized medicine; a 50-percent increase in old-age pensions.

He demanded the repeal of the Taft-Hartley bill.

He wanted to establish universal military training.

He wanted civil-rights legislation, including an anti-poll-tax bill, an antilynching bill, and a FEPC bill.

He wanted approval of the St. Lawrence Waterway Treaty and the establishment of a national science foundation.

Do you remember these recommendations? And do you remember that the President said in July 1948 that if Congress wanted to buckle down to work it could roll through his entire program in 15 days. I am sure you remember that statement.

None of these recommendations were enacted into law in that special session of 1948. Then the President went up and down the country asking the people to give him a Democratic Congress. He promised that such a Congress would enact his entire program into law and that it would do it promptly.

Well, the people gave him the kind of a Congress he asked for—a strong Democratic Senate and an overwhelming Democratic House.

Now let's see what happened during the first 15 days of the Eighty-first Congress.

It didn't pass the President's 29 points—not a single one of them. In those 15 days it passed just two bills. One of these gave the President, the Vice President, and the Speaker of the House substantial pay increases.

In addition, the President was given an allowance of $50,000 a year, free of income taxes. This raised his total salary to the equivalent of approximately $300,000 a year if all of it were subject to tax.

The other bill gave Government employees a 4-day holiday for the inauguration.

That is the first thing I want to report to my fellow Pennsylvanians about the Eighty-first Congress and its accomplishments in the first 15 days of the session.

But you may say they couldn't put through that program in 15 days. Of course the Democratic Congress could not do it in 15 days, any more than a Republican Congress could. I agree with you there.

Now, let us survey the record of the entire first session of this Congress—a session lasting 9½ months. This session must be recorded as the slowest in American history.

The fiscal year in the Federal Government begins on July 1 of each year. Appropriation bills should all be passed before that date. During the Eightieth Congress the last appropriation bill was approved on June 19, 1948, but in this session we did not complete action on many important appropriation measures, involving billions of dollars, until a few days ago.

Since July 1, the Government has been operating on a stop-gap legislation which provided funds for the various departments, boards, and agencies. Nothing like this ever happened before.

Now let us consider some phases of the program which the President promised would be enacted if he got a Democratic Congress. He promised civil rights. He promised a FEPC law. He promised anti-lynching and anti-poll-tax laws. Now, let me tell you about that.

It was nearly 4 months after the Eighty-first Congress commenced before the administration bills were even introduced in the Senate. Not one of them has been reported out by the Senate committee handling it.

Remember that at the beginning of the session the Democratic majority was increased in every one of these committees so that they would have absolute control. Each committee has a Democratic chairman and a substantial Democratic majority, so that if every Republican member of those committees were to oppose the bills, the Democrats were still strong enough to send them to the floor and pass them, if they were so minded.

The only bill on civil rights which reached the floor of the Senate was a bill introduced by a Republican, Senator FERGUSON, of Michigan. It was an anti-lynching bill. It has been on the calendar since June 6, and at no time did the majority leader of the Senate make any effort or attempt to have this bill taken up for consideration.

It so happens that the large majority of Republican Members of Congress favor civil-rights legislation. You know, as well as I do, that the opposition is centered in the Democratic Party.

When we tried to push some of this civil-rights program through the Eightieth Congress, it was the Democrats who filibustered and prevented its passage. Mr. Truman failed to explain that to you in his report on Congress the other day.

Another promise was to liberalize the existing law with reference to the admission into this country of displaced persons. That bill was bottled up in committee until a few days before the end of the session when it was finally reported to the Senate without any recommendation. Mr. Truman failed to explain that in his report on the Eighty-first Congress.

Among Mr. Truman's recommendations was a 10-percent increase in taxes. Both parties joined in killing that proposal. I know you are not sorry for that.

Important groups of domestic measures which became law were those reorganizing and merging certain executive departments and agencies. Those were based on the recommendations of the Hoover Commission. That Commission was created by the Republican Eightieth Congress and the legislation which was passed, putting its recommendations into effect, had bipartisan support.

The administration admits it was weakest in the fulfillment of its domestic program. It has been concealing these failures by attempting to emphasize the accomplishments in the field of foreign relations.

Let me remind you, my fellow Pennsylvanians, that the accomplishments in the field of foreign relations was a bipartisan affair. Prominent Republicans like Senators ARTHUR VANDENBERG, of Michigan, and John Foster Dulles, of New York, actually led and managed the debate on the floor.

Under their patriotic guidance, partisan politics was put aside to strengthen American leadership for peace and security in the world.

They must be given full measure of credit for any claim of accomplishment in this field by the present administration.

I voted for nearly all of these measures. My principal disagreement was over the administration's extension of the reciprocal trade agreements. I voted to amend this law and to write into the bill the peril-point provision which would have given some degree of protection to the American worker and farmer.

The recently disclosed list of products on which tariffs were further reduced, at Annecy, France, is convincing evidence that Congress blundered in rejecting the peril-point amendment.

The recent devaluation of the currency of foreign countries will have the same effect as a further reduction in the tariff rates. Workers in the glass and pottery plants of western Pennsylvania, and many other industries which I have mentioned in previous broadcasts, are learning this the hard way. They are among them any whose jobs are being taken away by the influx of low priced foreign goods.

Mark my words—those conditions will become worse—and more Pennsylvanians will be out of jobs because of the blundering mistake of this session of Congress.

In the summer of 1948, Mr. Truman issued a "box score" of legislation which he claimed was vital to the public welfare.

In denouncing the Eightieth Congress, he wrote after many of these points, "Failed to Act."

Among the points on which Congress had failed to act were such Presidential demands as anti-poll-tax legislation antilynching; FEPC; compulsory health insurance; Federalized medicine; repeal of the Taft-Hartley Act; universal military training; St. Lawrence waterway treaty; stand-by rationing authority; wage and price controls; Federal aid to education; a national science foundation, and many others.

Well, the Eightieth Congress did not act on them in 15 days. The Eighty-first Congress did not act on them in nine and a half months.

Now, I want to make a flat charge about the majority leadership in this Congress. I charge that the administration leaders of the Eighty-first Congress never made an honest effort to push some of these bills through, although they had the votes and could have done so.

It is common talk here in Washington that the administration leaders have put many of these bills in the deep freeze in order to keep them and bring them out as major political issues for 1950. They seem to like it better that way.

This Eighty-first Congress might well be termed a "5-percenter Congress." It has given President Truman about 5 percent of what he recommended.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

HAPPENINGS IN WASHINGTON

(Program No. 11)

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

With the close of the first session of the Eighty-first Congress, I have almost reached the half-way mark in my 6-year term as your representative in the United States Senate.

This is an appropriate time, therefore, to look back over the 3 years of my service at Washington and to report to you on some basic principles of government which are the foundation of American freedom, opportunity, and progress.

Throughout my public career I have supported the idea of a proper division of powers, functions, and duties among the three levels of government—Federal, State, and local.

I have opposed the increasing trend toward concentration of authority in an all-powerful supergovernment at Washington.

I have fought against the encroachment of Federal control upon functions that rightfully belong to the State.

I have supported the principle of local control of local affairs, because the closer government is brought to the people the more efficiently and the more economically it is administered.

Most of all, I have fought to protect the American plan of individual freedom, individual initiative, and self-reliance from the false and corrupting promise by government that it can provide everything needed by the people for their happiness, prosperity, and security.

Those were the fundamental principles that I brought to Washington when I took my seat in the Senate 3 years ago. My experience in the Senate has confirmed my belief, more strongly than ever, that local government is government by the people and must be preserved.

For 3 years I have been watching at first hand the process by which our local and State levels of government are being stripped of power and authority while the Federal Government assumes absolute control over one function after another.

At every opportunity I have spoken in protest against this unwarranted and dangerous course. My votes in the Senate have been in opposition to its further extension.

But the process goes on. Supported by so-called grants in aid, it has spread year by year until today Federal funds are being used to impose bureaucratic control upon practically every important local and State government service.

Who is to blame?

First, I blame the power-hungry men, who want more and more control over the political and economic life of our Republic and who seek to achieve their objectives by unlimited and reckless spending.

But all the blame does not rest there. A portion of the blame must be placed upon those State and local governments that have been careless of their responsibilities and have failed to do the job which had to be done.

They made no protest when Washington moved in. In fact, they welcomed Federal funds as something for nothing.

Finally, some of the blame must attach to the individual citizens—the taxpayers and the voters—not only in Pennsylvania but in all of the States.

Let me tell you why.

I know from long experience that the average citizen is watchful over local expenditures. He will fight vigorously against an increase in local taxation.

He will oppose proposed new projects, no matter how desirable, if the cost is beyond

what his community can afford. He will frequently upset his local government when he believes it is spending his tax money in waste or extravagance.

But here is the great difference. The same citizen does not object with equal vigor when the more distant Government in Washington wastes his money or spends too freely.

He does not become aroused over high Federal taxes. He does not become indignant when deficit financing adds billions to the national debt. He does not rise up in his wrath against Washington.

At home he demands prudence, efficiency, and economy, because he knows he pays the bills. But when Federal funds are being spent—that's Government money; he feels it doesn't cost him anything.

That is one reason why local and State governments have not done their full job. They have become dependent upon Washington.

Local responsibility has been undermined by a constant flow of power into big Government control at Washington.

There is another thing we must not forget. When the National Government takes over a project that should be done at the local level the price invariably goes up. Overhead costs are greater. Administrative expenses are higher. More people go on the pay roll.

Experts have estimated that it costs the taxpayers $1 for every 60 cents worth of actual construction when they use Federal funds to build roads or improve their schools or airports.

Now what about that citizen who thinks what he gets from the Government doesn't cost him anything?

Let me remind you again—there is no such thing as government money. There are no free gifts from Washington.

The Federal Government has nothing to give that it does not first take from the earnings of the worker and the farmer.

The only way Washington can get funds to turn back to the States and local communities is by taxing all the people in Pennsylvania and all the people in the other 47 States.

The next time someone tells you that Government money is something for nothing, just remember this:

Of every dollar you pay in taxes, 25 cents goes to the State and its local subdivisions. That includes county, township, school district, borough and city taxes.

The other 75 cents is taken by Uncle Sam's tax collectors.

When someone tells you of the benefits which flow from Washington, just remember that you are paying—and paying a high price—for all of them.

Just keep in mind that out of every month you work, it takes one week to pay the various taxes, direct and hidden, which all levels of government collect from you.

And three-fourths of that week is put in to earn the money you pay in Federal taxes.

But that's not all.

In this fiscal year the Federal Government is operating at a deficit which will surely exceed $5,000,000,000 and may go as high as $8,000,000,000—I said billions, not millions.

Let me put it this way. As late as 1934, Federal expenses for all purposes—operating all the departments, boards, commissions and agencies, Congress, national defense, interest on the public debt, pensions—cost the taxpayers less than the deficit alone will be in this fiscal year.

That is how much Washington is going into the red during this 1 year alone.

What did Mr. Truman say about this the other day?

Well, he said it was impossible to cut expenses. He said the only way to close the gap was to raise taxes. In other words, you would have to work more days a month to support the National Government in Washington.

This is why I have been fighting the spread of Federal spending. When your city or town proposes something like that, you crack down hard. You demand economy. Local government costs are lower because people take more interest in their local government than they do at any other level.

But what I have just been telling you is not the whole story of how your money is spent in Washington.

The Federal Government is proposing even greater spending. It wants to get into new projects—Federal aid to education, socialized medicine, low-rent housing at the public expense, higher subsidies for farmers, for the shipping industry, and many other things.

Powerful organizations are lobbying for all these proposals. Many people, misled into thinking that it will be something for nothing, are urging their Representatives in Congress to vote for these things.

They refuse to believe there is no such thing as free "Government money".

But, you and I know better.

You and I know that Washington, despite the present high national income, cannot make ends meet. It is running billions of dollars in the red.

Therefore, if new so-called benefits are to come as handouts from Washington, the price must be paid in higher taxation, or a much greater debt, or both. That debt must be paid by the people.

It cannot be paid within the lifetime of anyone listening to me today. We will hand it down as a mortgage on the future of our children, our grandchildren and generations yet unborn.

I believe that essential new projects, should be taxed and managed at the local and State levels. There they will cost less and they can be designed specifically to meet the needs of Pennsylvania.

I shall keep on fighting and voting in Washington for less expensive Federal Government—for less frills and less waste. Not for higher taxes to support bigger and more expensive Federal Government.

And I should like to see all the people of our State join in this fight.

There is only one way to get results in Washington. That is for the people to demand as much efficiency and as little waste there as they do on local community levels.

One way to help is this: When Washington offers to take over new functions from the States and local subdivisions, you folks must say, "No" in a loud, clear voice.

You must insist that if the job is to be done, it should be down at the State and local levels. You must be willing to provide the tax money to have it performed at those levels.

The State and local governments must be willing to bear the responsibility and to do the job.

Not until then will we get more home rule and better government at lower cost.

Remember always that good government begins at the local level.

We cannot have good government at the higher levels unless it begins in our home communities.

Local elections are most important because upon them we build the foundation for good government in the State and in the Nation.

Next Tuesday the people of Pennsylvania will go to the polls to name public officials who will serve in our city halls, borough, and township buildings, and in many of our courts.

American citizenship has no more important duty than the election of men of upright character and honest principles—men who will accept responsibility and have the courage to carry out those responsibilities with fidelity to the public interest.

Regardless of party affiliation I urge every man and woman voter in Pennsylvania to exercise the right of franchise on election day.

Vote for candidates in whom you have trust and confidence. But do not fail to vote.

It is a patriotic duty that must not be neglected or ignored.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention

---

HAPPENINGS IN WASHINGTON

(Program No. 12)

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

In my last talk, a few days before the recent election, I appealed to the people of Pennsylvania to turn out and vote. At that time I said, and I quote: "Regardless of party affiliation I urge every man and woman voter in Pennsylvania to exercise the right of franchise on election day. Vote for candidates in whom you have trust and confidence. But do not fail to vote. It is a patriotic duty that must not be neglected or ignored."

Now that the election is over and the smoke of the political battle has cleared away, it is most gratifying to know that so many of the citizens of Pennsylvania fulfilled their obligation as free Americans by casting their ballot on November 8.

It was a record-breaking vote in a year in which Pennsylvanians were not voting for President, or Senator, Congressmen, or Governor.

The only State-wide office voted upon in the last election was for a judge of the superior court. Yet, of the approximately 4,900,000 eligible to vote in Pennsylvania, more than 3,500,000 ballots were cast.

This was a splendid demonstration of self-government at work. There is no more patriotic service that can be rendered in peacetime than the intelligent exercise of the right of franchise. I hope we shall have even larger turn-outs in future elections.

In some counties more than 75 percent of the registered voters went to the polls. In my home county of Washington, with approximately 100,000 registered, more than 78,000 ballots were cast. That was true in many other places.

Since the election I have been asked by many of my constituents whether the results in our State and elsewhere had national significance.

It is only natural that each political party should attempt to place the most favorable interpretation upon the returns.

Earlier this year, a special election was held in the Twenty-sixth Congressional District, comprising Cambria, Armstrong, and Indiana Counties. It resulted in a smashing Republican victory. Naturally, Republicans regarded this as a rejection of the policies of the Truman administration.

Now, with the election of the Democratic candidate, HERBERT LEHMAN, as the United States Senator from New York State, it is natural for the Democrats to claim this was approval of the administration's program.

On the other hand, the Republicans, with equal right, claim that the reelection of Governor Driscoll in New Jersey was a repudiation of those same Truman policies.

Certainly there was nothing in the Pennsylvania returns to indicate a national trend.

In the only State-wide contest, Judge William E. Hirt, the Republican candidate for the Superior Court, was reelected in spite of overwhelming Democratic victories in Philadelphia and Allegheny counties.

Pennsylvania's election was a crazy quilt of strictly local campaigns and local issues from which no general interpretation can be drawn.

For example, while Philadelphia elected four Democrats to county offices, the voters in Erie, at the other end of the State, ousted

a Democratic mayor and city administration, and elected every Republican on the ticket.

Meadville and Shamokin replaced Republican mayors with Democrats.

In three heavily Democratic counties—Berks, Fayette and my own county of Washington—Republican judges were elected. There were numerous similar situations. It is apparent, therefore, that in Pennsylvania the elections were determined by the local issues. There was no over-all pattern.

Unquestionably the heavy vote was, in a large measure, due to the efforts of the veterans who organized in support of the soldier's bonus.

I hope that these veterans will take the same active interest in future elections. They can do so much to help solve the great problems which confront the Nation.

Since the adjournment of Congress last month, I have talked with many Pennsylvanians—not only my own neighbors in Washington county, but with men and women from all sections of our State. This has given me an opportunity to find out what is foremost in the minds of our people.

What seems to be most disturbing to the average man is the fiscal policy of the Truman administration. People consistently ask me how long the Government can continue to spend more money than it takes in and still escape disaster.

The President's recent announcement that we would end this fiscal year with a deficit of five and one-half billion dollars—which, by the way, is a very conservative estimate—shocked many people. I have been pointing out for several months that the deficit would probably reach eight billions, and perhaps more.

The people I have been talking with remind me that they cannot keep out of trouble if they continually spend more than they earn. They ask me if there is any way that a government can spend itself in the red year after year and still avoid national bankruptcy.

The answer is obvious. The Government has no mysterious source of revenue. It receives no money except what it takes from the earnings of the people.

Abraham Lincoln, perhaps the greatest of all our Presidents, answered the question of Government overspending most emphatically when he said, and I quote:

"As an individual who undertakes to live by borrowing soon finds his original means devoured by interest, and, next, no one left to borrow from, so must it be with a government."

This statement by President Lincoln is a simple truth. It cannot be challenged successfully by name calling directed against those who question the wisdom of going deeper and deeper into debt.

Today we are spending each year in interest on the Federal debt alone more money than we spent to run the entire National Government as recently as the early 1930's.

Franklin D. Roosevelt was another who answered the question of whether a recklessly spending government can avoid disaster. In 1932, when he was a candidate, Mr. Roosevelt declared:

"Any government, like any family, can for a year spend a little more than it earns. But you and I know that a continuance of that habit means the poorhouse."

Well, that is what our Federal Government has been doing year after year since that statement was made—living far beyond its means and going deeper into debt.

I find that the people of Pennsylvania are alarmed about this situation. They want the budget balanced. But they make it clear that they do not favor the recent suggestion of Mr. Truman that the only way it can be done is by raising taxes.

They point out that in July of this year the President said a tax increase would be detrimental to our national economy—that it would dry up business and result in unemployment.

Then, in October, only 3 months later, Mr. Truman stated that he knew of only one way to balance the budget—and that was to increase taxes. He said he would recommend such increases when Congress comes back to Washington in January.

Some of the people I have talked with have suffered as the result of the great strikes—coal miners, steelworkers, storekeepers, and housewives. They have had to adjust their budgets and to cut down on their spending. Things haven't been good with them and they can't afford to have their taxes raised.

They suggest that the Government, like themselves, should take a hitch in its belt and reduce spending to fit its income.

But Mr. Truman says it can't be done. He claimed the other day that he just could not see how he could reduce the Federal spending, now running at the rate of more than $43,000,000,000 a year—the highest rate of peacetime Government spending in the history of our Nation.

Each week since July 1, when the Government's fiscal year began, Washington has spent an average of $160,000,000 more than it has taken in.

I know it is hard for people to grasp these sums. Their vast size makes them something beyond our comprehension. But let me try. Let me put it this way.

Pennsylvania is the Nation's greatest factory State, so I'm going to give you some figures about factory wages.

The Federal Department of Commerce recently announced that the average weekly wage of the factory workers in America in September was $55.64—the second highest level on record for factory workers.

There are 12,000,000 factory workers in our Nation and their weekly wages add up to more than $667,500,000 a week.

That is a lot of money, you will agree. Yet, if they were to take every cent of their earnings and give it to the Federal Government, it still would not be enough to pay the bills at the rate Washington is pouring out the cash.

In fact, the $830,000,000 the Government spends each week is nearly $163,000,000 more than all our factory workers earn.

Now, President Truman says that the only way to make up his estimated deficit of $5,500,000,000 is to raise taxes. Well, let's see what that would do.

To close the gap would require an average increase of 18 percent in the income tax paid by every individual and 18 percent in the corporate tax paid by every business.

Are you ready to shoulder an increase of 18 percent in your income tax?

I think such a burden should not be added to the heavy tax load our people are already carrying.

I remember, even if Mr. Truman seems to have forgotten, that Federal taxes are not the only ones we pay in this country. I remember that our people also pay taxes to their States and their counties and their school districts and cities. This is no time to add to the load.

If there is to be any change in Federal tax levels, I favor reducing them. If we are in the red today—and of course we are deeply in the red in Washington—the solution lies not in taxing more, but in spending less.

The solution lies in Government at lower cost. It lies in cutting expenses to the level of what we can afford.

No more serious problem confronts the American people today than preserving their national solvency and preventing this march down the road toward national bankruptcy.

You, and you alone, have the power to stop it. You must demand less spending and make this demand heard in the Halls of Congress.

In a speech out in Minneapolis the other day, President Truman cited Thomas Jefferson in support of the administration's spending policy. Mr. Truman set up the great patron saint of the Democratic Party as a good authority. I accept the authority.

But let me tell you what Thomas Jefferson had to say about spending policies like those being followed in Washington today. He said, and I quote:

"I place economy among the first and most important virtues, and public debt as the greatest of dangers. To preserve our independence, we must not let our rulers load us with perpetual debt. We must make our choice between economy and liberty, or profusion and servitude. If we can prevent the Government from wasting the labors of the people under the pretense of caring for them, they will be happy."

My fellow Pennsylvanians, those are the words of Thomas Jefferson, the great authority referred to by President Truman.

Those are living words still. Today they apply more forcefully than ever, because we are more deeply in debt than ever.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

HAPPENINGS IN WASHINGTON

(Program No. 13)

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of Happenings in Washington.

In previous talks I have discussed the high cost of Government and the dangerous increase in Government spending.

In this broadcast I want to discuss Government lending, which is just as dangerous as Government spending because it adds to the tax burden of every American citizen, every worker, and every farmer.

Recently I have had many letters from Pennsylvanians asking:

"What about those millions of dollars in Government loans to Henry Kaiser?"

"What about the loans to the Lustron Corp. and others?"

"How can the Government make all these loans to private business and agriculture?"

"Who hands out that money down there in Washington?"

"Why don't they get private loans from banks the way most people have to?"

These are very interesting questions.

Many of us, both in and out of Congress, have been trying to get the answers.

There have been several investigations by congressional committees. The Hoover Commission made an exhaustive study of the Government lending and business enterprises financed by Government funds.

Another investigation is going on right now and I am confident that next year we will get to the bottom of the Federal Government's confused and tangled ventures in competition with private business.

Remember it is your money that is being poured out in loans and business investments. You have a right to know where it is going, how it is being handled, and what protection you are being given.

Since the Federal Government went into the business of lending money, its operations have become involved in a trackless jungle.

Uncle Sam is today the biggest banker in the world. In direct loans to businessmen, farmers, housing projects, and foreign governments we have handed out over $10,000,000,000.

In addition, your Government has guaranteed over $100,000,000,000 in bank deposits, mortgages, loans on farm commodities, and loans to veterans. Your Government has issued life-insurance policies totaling $40,000,000,000.

On top of that, your Government has an investment of more than $20,000,000,000 in a wide variety of business enterprises which compete with private business.

Your Government is producing and selling electric power. It is producing and selling fertilizers. It is buying and selling farm products. It is smelting and selling metals. It is operating railways and ships.

In all, there are about 100 important business ventures which the Federal Government owns outright, or has a substantial financial interest.

As I said before, this is all your money. All of it is money which was taken from you in taxes or borrowed from you when you bought Government bonds.

I regret to report to you that there is so much confusion that no one seems to know where we stand.

The figures I have just given you are only a partial picture of our Government in the small- and large-loan business and our Government in private business. It is an appalling situation, bordering on chaos.

Let me try to explain it this way. Among the more than 2,000,000 Government employees there are thousands of economists and fiscal experts. I doubt if you could find one of them who could even name the various Federal Government lending agencies or could describe the functions of each.

Let me give you an example. A year or two ago the Senate Judiciary Committee looked into this situation. The committee found that there were 20 Government agencies making loans in the field of agriculture alone. There were many cases of overlapping and duplication.

Some of these agencies were in competition with each other in lending out the taxpayers' money. They worked at cross purposes. Naturally your money was frittered away in waste and duplication.

But agriculture is only one field of operation. There are loan agencies in housing, veterans' affairs, general business, and international relations, all with the same confusion, duplication, and waste.

In addition to the confusion which occurs within each category, there is similar confusion, similar overlapping, and similar waste in the constant tug of war among agencies in different departments.

These lending agencies are forever at war with each other, striving always to become bigger and more powerful. All too often it is utterly impossible to tell where the authority of one agency stops and the next begins.

This may sound very confusing to you. But it is not surprising because of the story of these lending agencies is one of utter confusion.

One of the principal lending agencies of the Government is the Reconstruction Finance Corporation. It was set up as a temporary organization to make direct loans for the purpose of saving banks and business from bankruptcy during the depression years. It was to operate for 1 year but today, 17 years later, we find it is still operating on a tremendous scale.

Let us now take a look at the Henry Kaiser loans which have been the subject of so much discussion and concerning which some of you have written to me. With the latest loan of $34,400,000 recently authorized, he has received from the Federal Government a total of $226,795,000 in loans and mortgages. Of that sum he now owes $194,442,000.

The announced purpose of the latest loan was to finance the production of a new car in the low-price field. That new car would be in competition with the Ford, Chevrolet, and Plymouth.

Now, Ford, Chevrolet, and Plymouth financed themselves without Government loans. They are also big taxpayers. Yet, part of the money they pay in taxes is being used to build up competition against them.

The RFC is authorized to make direct loans to private business where bank loans are not available. But it has been brought out that Henry Kaiser is using part of this latest Government loan to pay off his bank debts.

Here is a situation worth considering. If Henry Kaiser may do this then any other businessman should have the same right to borrow Government money to pay off his bank loans.

Believing as I do in free enterprise and in keeping the Government out of business as much as possible, I am strongly opposed to that kind of transaction.

The trouble with some of these Government loans—such as this one—is that the Government soon finds itself committed to protecting its investment by advancing more money.

One example is the Lustron Corp., which was organized to build prefabricated steel and enamel homes on a mass-production basis to relieve the housing shortage.

In 2 years the Government has invested $37,500,000 of the taxpayers' money in this experiment without making a dent in the housing shortage.

Most of the millions advanced by the Government have been spent on pay rolls, material, machinery, and other equipment. The company has been losing money ever since it started in business and is reported to be going in the red at the rate of $1,000,000 a month.

If the company is to continue in business, it must have more working capital and now the Government is asked to put up another $15,000,000.

Now that looks like throwing good money after bad. Nevertheless the RFC must either keep the business going or write off its $37,500,000 investment as a total loss.

Now, whose money figured in this fanciful and unprofitable scheme? Your money of course. The Government borrowed it from you and then loaned it to the RFC at a lower rate of interest than it pays to you.

If it all should be lost, how would you be repaid?

That's easy. The Government would increase your taxes in order to raise enough money to pay off the Government bonds you bought.

Let me give you just a few typical examples of what has been going on.

Not long ago it was decided for the Federal Reserve Board to tighten credit in order to check the rising threat of inflation. In line with that ruling, banks put the brakes on their lending and rejected some loan applications that might otherwise have been granted.

But the Reconstruction Finance Corporation paid no attention to that. Under its regulations it may grant direct loans to businesses which cannot be obtained through normal banking channels.

So we had the RFC operating in direct conflict with the Government's anti-inflation policy.

In other cases Federal business agencies, operating on money advanced by the United States Treasury, invest their surplus funds in Government securities and collect the interest. This means that the Government pays interest on its own investment. Of course, that means you pay the interest.

The Hoover Commission, in its survey of Government administration, figured that elimination of this practice by six agencies would reduce the interest-bearing debt of the Government by $350,000,000.

We all recognize that many of these agencies were created in the depression period. They were temporary, emergency organizations to provide employment and to lift the Nation's economy over the hump.

We've long been over the hump but we still have the agencies, bigger and more powerful than ever.

They are no longer emergency propositions. They are permanent. We shall continue to have them until the people rise up and demand that they be done away with.

You will recall that one of the principal objectives of Government lending was to help small business. How that has worked out is shown by testimony given a few weeks ago before the Congressional Economy Inquiry, headed by Senator DOUGLAS, of Illinois.

It was brought out that the RFC has 127,000 loans of all types now outstanding with a total of $1,682,000,000. Of this total nearly one-half, or $733,000,000, have been advanced in loans of more than a half-million dollars each to 207 concerns.

That looks like big business, not small business.

There are many reasons why the Government should get out of the business of making direct loans to individuals or business organizations.

The Hoover Commission, in its report had this to say, and I quote:

"Direct lending by the Government opens up dangerous possibilities of waste and favoritism to individuals or enterprises. It invites political and private pressure, or even corruption.

"Emergencies may arise in depression, war, national defense, or disaster which should be met in this way. But direct lending should be absolutely avoided except for emergencies."

That is bad enough but, in my opinion, the greatest danger lies in the increasing trend toward Government regulation and control of the Nation's economy.

That, my fellow Pennsylvanians, is the road to socialism.

Free enterprise built the great industrial strength of America, not a socialistic system, controlled and directed by an all-powerful government.

Government in business is notoriously inefficient and costly to the taxpayer.

That is why you should call upon your Government and your Congress to get out of this business of private loans and to get out of all enterprises which compete with private initiative.

Aside from the cost, a great principle is involved. We must decide whether we are to continue under a system of free enterprise or whether we are to permit the Government to dominate the economic life and progress of our people.

I hope all Pennsylvanians will make their wishes known on this most important question.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

Statement by Former Supreme Court Justice Owen J. Roberts on Atlantic Union

---

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by former Supreme Court Justice Owen J. Roberts on the subject of Atlantic Union.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Former Supreme Court Justice Owen J. Roberts said today that passage of the Atlantic Union resolution by Congress in 1950 would be the first step toward unifying the foreign policies of the democracies, thus strengthening the United Nations and helping to avert the threat of a hydrogen bomb war.

Roberts cited division of opinion between Great Britain and the United States on recognition of the Chinese Communist Government as the most recent example of divided sentiment among the democracies.

"The old American motto—United We Stand, Divided We Fall—is still good," he said. "Division between the remaining democracies encourages the Kremlin which hopes through its current boycott of UN sessions, to force the democracies to give way one after the other in recognition of its puppet government in China.

"On the other hand, a Federal convention of sponsors of the Atlantic Pact, called to consider turning our present defensive military association into a positive political union of free peoples, would present a united front against the advance of dictatorship and would lend hope to advocates of freedom in countries now dominated by Communist minorities. The Atlantic Union resolution authorizes President Truman to call such a convention. Our delegation of Atlantic Union members from 15 states will discuss with the President the world-wide significance of this step when we call on him Friday."

Practical Internationalism

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Practical Internationalism," delivered by Walter Cenerazzo, national president, American Watchworkers Union, before the International Students' Center, Cambridge, Mass., on January 8, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PRACTICAL INTERNATIONALISM

To address a group of students who come from many foreign lands to obtain an education in American colleges and universities, is indeed a rare privilege for a labor leader whose avocation has been to study the economic conditions existing in foreign lands.

Today in this world there exists a sharp cleavage as to the systems of government. One trend of thought is predicated upon the outgrowth of the idea established in the Magna Carta of King John in the thirteenth century which is that human dignity shall prevail, that men are not the chattel property of anyone, be it feudal lords, kings, or the politburo; that men shall have the right to choose their own religion, their own field of endeavor in employment, and live within their own family unit as dignified human beings.

The other trend of thought is that produced by totalitarian government, which claims as the first obligation from its citizens obedience to the government. Their theory is that men should work, eat, live where they are told, take their recreation as the government plans it and that men have never the right to criticize their rulers. There is no difference between this modern day totalitarianism and the slaves of Egypt. Both represent tyranny and lack of respect for human dignity.

The free nations of this earth have come a long way since the signing of the English Magna Carta by King John, and as each century has gone by, men have gained more and more freedom in an economic way which has given to them freedom in other ways.

To me, one of the unsung heroes in his battle for the freedom of men was a great American—Benjamin Franklin. This man Franklin had an opportunity to observe conditions in England as a workman and later as a statesman. He visited France and lived there during the French Revolution. He was a student of governments, and it is my opinion that the citizens of the United States owe to this man a deep debt of gratitude for our today—that inalienable Bill of Rights—the first ten amendments to the Constitution of the United States. The thinking that went into that Constitution which separated the executive, legislative, and judicial branches of government was long-range thinking to forever bar any man or men from treating human beings as serfs within the boundaries of the United States of America.

In the century and a half that followed the adoption of the Constitution of the United States, men and women have lived with human dignity and in the industrial revolution have been the peoples of the only nation in the world who are a great middle class. Nowhere else in this world will you find a lack of class struggle, nowhere else in this world will you find complete a way of life by which men and women can set their goals within the family unit and achieve them for that family.

In the past several years, I have visited the South American continent and the European continent. In South America I had the opportunity to visit Peru, Chili, Uruguay, Argentina, and Brazil. In Europe this summer, I visited England, Scotland, Belgium, Holland, France, Italy, Switzerland, and western Germany.

In each of these countries I visited industrial plants to witness the engineering and research skills and to see how productive labor was. I asked many questions concerning living conditions, wages, government controls, and where the ideas in existence in the government of the country came from.

One basic element was missing from every single one of these countries—and that was a virile labor movement dedicated to collective labor bargaining with employers to obtain a fair share of the fruits of productivity for the employees of industry.

Oh, yes; there was a labor movement in each and every one of these countries, but those that led it were either Socialists, Communists, Christian Union Democrats, Falangists, Apristas, or some other type of ism which was dedicated to curing economic ills by government fiat. In each case the labor leader of these countries was wrapped up in a political movement to take over the administration of the government. To me this is not the way that a great middle class of people is created within a nation. In these countries there are only the very rich and the very poor, and the purchasing power of the very poor is, indeed, very small. You cannot have prosperity for a nation unless the rank and file of the people have purchasing power in their hands and can purchase what they produce.

We in the United States, unfortunately in my opinion, have at the helm of our State Department a group of men who have no understanding of business economics, and who have been in a daydream for many years on the problems of foreign trade. These men believe that you can purchase goods from a foreign country and give to that foreign country prosperity when the persons that made the goods obtained wages that would not enable them to feed themselves properly, let alone clothe themselves properly. There can be no prosperity for any country unless the workers of that country obtain a fair share of the fruits of productivity that will enable them to purchase the goods of other workers to consume themselves.

That's the key of the prosperity of the citizens of the United States. Purchasing power—consumer income—with which to purchase consumer goods.

The United States program for reciprocal trade does not and will not help either the American worker or foreign worker. All it does is make the importer richer at the expense of both the American worker and the foreign worker.

For this reason I have advocated for some time a twofold program in the field of foreign trade which, in my opinion, if carried out, would create a middle class of people with purchasing power in every country in this world.

I believe the United States should lead the way by creating a Board of Foreign Trade composed of 15 persons, the 15 to be appointed, 5 by the President of the United States, 5 by the United States Senate, and 5 by the United States House of Representatives. Three of each group should be appointed from the majority party in control and two from the minority party.

This Board of Foreign Trade should have complete control and jurisdiction over all economics that have to do with foreign trade, and every other department of Government should be stripped of authority in this field.

This Board of Trade, with its 15 members, would negotiate agreements with a foreign country on a bilateral basis only, and every agreement with each country would have to stand on its own merit, and what considerations that were granted to one country would not necessarily have to be given to another country.

The type of men I would like to see appointed to this board would be the best talent available in the field of business, finance, economics, agriculture, and labor. They should receive at least $25,000 per year for serving on the Board.

This board of trade should have established within it a statistical department with competent men to establish the production costs on every article produced in the United States, and these records should be kept up-to-date so that every time unit costs go up or down it is reflected in the records.

In negotiating an agreement with a foreign country this board of trade would ascertain the unit cost of production in the foreign country they are negotiating with, and they would establish tariffs equal only to the difference in the unit costs between the costs of production in the United States and the costs of production in the foreign country with consideration given for transportation and insurance costs to bring the article to the United States.

As wages were increased, or unit costs increased in the foreign country, the tariff would be reduced accordingly. Thus, as more wages were paid to foreign workers, more purchasing power would be in their hands to buy consumer goods and more prosperity would be available for that nation.

This board of foreign trade would have authority to put a limitation on amount of

goods to come into the United States of any type; they would have the authority to impose quotas, raise tariffs, lower tariffs, and to negotiate in any manner they deemed essential.

All tariffs which they collected would be put in a fund which I would call the point 4 fund to be spent for the development of underdeveloped areas throughout the world. The board would be given authority to refund all of the tariffs to a nation for its development if it deemed it wise.

Thus a two-fold purpose would be accomplished. No goods would compete in the United States except at equality at the border and importers' excess profits would be eliminated. The foreign worker would find his employer paying him more wages for there would be no point in paying him low wages, and then paying the difference in tariff to the United States.

In the distribution of point-four money the second part of my program would come into play for I would allow no nation to participate in obtaining any of this money unless they first adopt in the constitution of their country a bill of rights comparable to ours and establish a separation of the powers between the executive, legislative, and judicial branches, so that dictators could no longer function or gain a foothold in the future.

With the adoption of this bill of rights would come a new day for the working men and women of foreign countries, for they would be guaranteed the right of free association and forming unions of their own choosing. And thus a virile labor movement would gather momentum and bring about a standard of living that creates a great middle class.

The reciprocal trade program of the United States establishes the same tariff regardless of the wage conditions between nations. Goods produced in a country paying 10 cents an hour wages come into the United States at the same tariff as goods produced in a country paying 50 cents an hour wages. Where do you think investment capital is going to open factories under such a tariff program?

This board of foreign trade that I suggest should have industrial engineers in its employ to visit factories in the United States to make sure they are efficient and productive, and have adopted modern technological improvements, and if they have not a leveling factor should be placed on their unit cost of production in the records to penalize them for their inefficiency.

There is no room in this world for inefficiency, obsolete methods and failure to introduce modern production methods. Only in a world where there is efficiency and modern efficient production can the rank and file of people participate in the enjoyment of the goods they produce.

If every country established such a board of foreign trade, it would not be long before all the low wages in this world would gradually disappear and we would have fair living standards for all the workers in the freedom loving nations in this world. And when misery, terrible housing, improper diet and squalid living conditions disappear from a nation and an honest democratic labor movement does its job well in obtaining more and more each year in collective bargaining within the framework of prosperous corporate enterprise, those that represent totalitarianism will find the seeds of communism which they spread falling upon sterile ground, which refuses to accept their ideology.

To me there is no substitute for cooperative capitalism to achieve human dignity. Cooperative capitalism to me means adequate dividends to the investor for the risk that he takes in furnishing capital to purchase the tools and equipment, adequate payment to manage for furnishing the brains of direction to the enterprise; fair wages to labor for fair work with the accompanying security that prosperous enterprise can give to its employees. And last, but not least, the lowest possible consumer prices for all that effective cooperation between investor, management and labor can produce.

That is what has made America what it is. It is what has given more people opportunity for a better lot in life than any other economic system yet devised in this world. There is only one way we can preserve it—and that is for every nation in this world that respects human dignity to achieve the same program and for our Nation to establish a flexible tariff system to protect American working men while point 4 does its work in building the production facilities of other nations.

The Taft-Hartley Act to the Aid of Farmers

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. BUTLER. Mr. President, the situation in my State with reference to fertilizer is very serious. In this morning's issue of the Washington Times-Herald, an editorial entitled "The Taft-Hartley Act to the Aid of Farmers" was published. The editorial speaks very well of a former Member of this body, and I ask that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TAFT-HARTLEY ACT TO THE AID OF FARMERS

Two strikes now threaten to tie the national economy in knots. One is John L. Lewis' 40-percent strike in the coal fields—the 3-day week. The other is a strike of workers in the potash plants at Carlsbad, N. Mex.

Mr. Truman is about the only person in the country who refuses to admit that the coal slowdown constitutes a national emergency. He has taken his stand against the Taft-Hartley Act, and he refuses to use its powers even if the whole country freezes.

The National Labor Relations Board, however, has invoked the Labor Act in an effort to protect several million American farmers from crop failures caused by lack of fertilizers.

Potash is one of the three essential ingredients in all standard fertilizers. The three companies at Carlsbad produce 65 percent of the American supply. This is their busiest season. Before the strike they had been working around the clock and had had no opportunity to accumulate stock piles.

Three-fifths of American crops now depend upon commercial fertilizers and 70 percent of the demand is during the first 4 months of the year, as farmers customarily spread the fertilizer when they seed their crops. Furthermore, it takes 6 weeks to dig potash from the mines, process it, and ship the refined product to fertilizer makers.

The Carlsbad strike thus has cut off virtually the whole of American agriculture's 1950 fertilizer supply at one stroke. This was not accidental.

Investigators for the National Labor Board discovered that the Washington representative of the CIO Mine, Mill, and Smelter Workers had made extensive inquiries of the Department of Agriculture about fertilizer sources and peak demand periods shortly before the union called the strike in mid-November.

VIOLATION CHARGED

The Mine, Mill, and Smelter Workers, although at the moment in good standing in the CIO, face an investigation of Communist control of their union. At Carlsbad the union conducted mass picketing to keep employees who wanted to work out of the plants and conducted a campaign of threats against nonstrikers.

These practices violate the Taft-Hartley Act. The employers filed charges of unfair labor practices against the union. Counsel for the National Labor Relations Board then went before Federal Judge Carl A. Hatch, who enjoined the goons from interfering with the operation of the plants.

On Monday several hundred employees, most of them members of nonstriking AFL unions, were able to enter the plants from which they had been barred previously by picket mobs. The struck companies say that they expect to resume production with this force.

This strike puts to the acid test the CIO's professions of friendship to the farmers. Philip Murray and his followers are urging farmers to unite with them behind the Truman program for a poorhouse state, particularly on the nonsensical Brannan plan to pay for groceries out of our tax bills.

The claim of a community of interest between labor and farmers is shown up by the CIO strike to inflict crop failures on the Nation.

Get the Real Facts Before Judging Eighty-first Congress

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the transcription of my biweekly broadcast for the week end October 14 to 16, inclusive, in which I discussed the achievements of the first session of the Eighty-first Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

What has the Eighty-first Congress done in its first session, and how do these things affect you?

Politically speaking, of course, these are the $64 questions of the year. And, just as naturally, the answers you get often depend upon the politics of the expert who gives you his opinion.

Now, I don't intend to answer the $64 questions on this broadcast, although I will comment on some of the achievements and failures of this session, from a factual standpoint, and then let you decide, if you will, whether the Congress has done a good job or a bad job, and whether the actions it took affect you for good or for ill.

In connection with these broadcasts, I'd like to thank this station for providing me with this opportunity every 2 weeks to report to the people of Pennsylvania on the doings of your National Government, par-

ticularly as they affect you as a citizen of Pennsylvania; I feel that the station thus makes a real contribution to its public trust. As a United States Senator, my actions take on great importance to you, whether you agree with all of them or not, and it is equally important for you to know why I take these actions. By providing time every 2 weeks for me to report to you, this station and others participating in this series have made possible the full and complete report I feel you should have.

Those of you who are already familiar with what I have covered in my past broadcasts in this biweekly series are aware that most of the matters I have discussed have been right in the midst of some great battle in the Congress over the particular form that the various pieces of vital legislation should take. So in large part, the measures I've discussed haven't been in the final form of a public law.

And, as you know, until both Houses do agree in identical detail on every detail of a bill—and sometimes that takes weeks or even months, as in the case of the flood-control appropriations bill which we finally sent on to the White House for signature last week—all we have is a combination of separate bills, one bill passed by the House, and a separate and different bill, usually, passed by the Senate. So until both Houses iron out their differences, the bills can't become law.

So what I've discussed in most of my previous broadcasts in this series was forced by events, by the inconclusiveness of legislative action, to remain restricted to the possibilities or the probabilities of proposed legislation, rather than the finished public law.

Your newspapers over the months have given you the step-by-step and play-by-play and day-by-day developments in legislation. But I gather from the conversations I've had with numerous Pennsylvanians that what most of you would really like to know is how these laws will actually be administered, how the working of these vital pieces of legislation will actually operate in their effect on you, and on Pennsylvania, and on the Nation.

I haven't had an opportunity yet to make firm plans as to the details of any future broadcasts, but what I have in mind is to bring before the microphone with me some of the top men—and also some of the operating officials who are experts on particular phases of the work—from such departments and agencies as agriculture, labor, public health, social security, public housing, and others, and have them tell you in their own words, in plain and understandable terms—not in "Government-ese" or gobbledegook—just how these new laws will be administered, and, much more important, how the laws will affect you.

As I say, the details aren't worked out, but I feel you'd find such broadcasts informative and interesting. The big question in the minds of all of us when we hear or read about gigantic Government operations is why—and the why of them is what I want to help to bring to you with the assistance of these experts in the departments and agencies who do the actual administering of the laws we pass—laws we often pass in broadgaged terms, leaving the detail determinations to the so-called bureaucrats.

I have often found it necessary to defend these officials against what I considered extremely unfair criticism voiced in general terms about all Government officials without discrimination and without identification, but on these future broadcasts I will let them speak for themselves. And in order to obtain a full and complete picture, I intend to ask all of them the hot-potato questions, including, in the case of agriculture, the one about the potato itself.

And now, let's take a look at the Eighty-first Congress. In speaking to you on this question, I am acutely conscious of my own position in that Congress as majority whip, as assistant majority leader, in the Senate, a position which carries with it the obligation to lead in pushing through to enactment the administration program. And since that program, in most details conforms to the 1948 Democratic platform, and since I was chairman of the committee at Philadelphia which battled over every detail of that platform before we finally drafted it, I am in close identification with the administration point of view.

Nevertheless, I have always tried in these broadcasts to you to keep them as nonpolitical as possible, as factual and as much above partisanship as possible, on the theory that you are interested primarily in the facts, and not in the politics, and I approach this review of the Eighty-first Congress activities with that idea uppermost.

Now don't get me wrong: I personally am quite proud of the achievements of this Congress thus far. I don't hear very often any more the term "Eighty-worst" Congress used about this Eighty-first, for the achievements in many fields, particularly in the international affairs, but also in some domestic fields, have been solid achievements, and I am proud of them. But, at the same time, recognizing this as a nonpartisan program, I would rather let the facts speak for themselves, and let you decide on our accomplishments.

On the international front, this Congress gave the President and the State Department virtually everything they asked for—not out of loyalty to the administration, or blind acceptance, but out of thoroughgoing, intensive, critical and extended study of the merits.

It is still a source of amazement to me that despite a tremendous outcry in the Congress and in some sections of the public, the Congress has sent onto the President—with simply overwhelming majorities in the votes—measures which renewed the Marshall plan, ratified the Atlantic Pact, together with provision of adequate funds for the arming of the nations participating with us in that Atlantic Pact. The votes were obviously of bipartisan origin, and had almost universal public support. The credit here is not so much to the administration or to the majority leadership in the Congress—but to the people, to the public, who got behind these programs and stayed behind them and refused to be panicked into opposing them by hysteria or by misleading and unsupportable attacks.

One other piece of significant foreign policy legislation passed by this Congress differed from the others in that strong bipartisan support for it was conspicuously lacking. The extremely successful and highly important reciprocal-trade program inaugurated by our great former Secretary of State, Cordell Hull in 1934, almost had the rug pulled out from under it by the amendments put through the Eightieth Congress last year. I am pleased, and very proud, that the reciprocal-trade program has been restored to its full vitality by the Eighty-first Congress, and is now effectively at work. And the bill we put back on the books this year provides ample safeguards to American industries against undercutting by vicious and unfair slave labor competition from foreign producers. The law as it now stands will go forward to produce greater wealth for all free nations through its encouragement of international trade.

But it's on the domestic front, on the legislation that begins and ends at home, that we can really take the measure of the Eighty-first Congress. Here's just a partial list and because my time is short on the remaining part of this broadcast, it is only a list, and it is only partial:

This present Congress, the Eighty-first, has passed a new low-cost public housing bill which, during the next 6 years will permit 810,000 families all over the country to move from slums into decent and adequate American housing. This same legislation had failed to get through in two previous sessions, but this time we got it through. Even though the act is just a few months old, it has already been announced that at least 12 Pennsylvania communities have agreed to go forward with construction during the next 2 years—Philadelphia, Pittsburgh, Johnstown, Allentown, Bethlehem, Pottstown, Farrell, Beaver Falls, Aliquippa, Ambridge, Harrisburg, and Williamsport having already been approved for Federal assistance in their separate programs.

We got rent control extended, after dire prophecies that it would die in this Congress. But after a really major fight, we were able to pass, finally, a good bill which I believe is a pretty fair bill for both sides—landlords and tenants.

After years of talking about Government reorganization, the Eighty-first Congress approved six major reorganization plans submitted by President Truman on the recommendations of the Hoover Commission. And in addition to the big improvements made possible under those six specific bills, there have been several other reorganization plans approved by the Congress that were passed in connection with other legislation affecting the particular agencies.

On the farm front, the Eighty-first Congress has made it possible for the Commodity Credit Corporation to assist in providing adequate storage facilities for grain, after this problem had haunted farmers in recent years when they saw bumper crops rot away because there were no storage facilities. Efforts had been made to pass this legislation in the Eightieth Congress, but they failed. The Eighty-first Congress, too, has provided for a gradual expansion of crop insurance, a measure of vital importance to farmers which will enable them to help themselves over rough spots when acts of nature unexpectedly wipe out whole crops in a particular neighborhood.

The Eighty-first Congress has renewed for the next 6 years the splendid program which will assist local communities in the construction of needed hospital facilities. Under the new bill, the Government will put up $150,000,000 annually to pay for two-thirds of the cost of building new hospitals, leaving to the communities the job of planning for their needs and raising the balance of the funds.

And I might mention, too, that since I last discussed it on this series of broadcasts, that the House has now approved the bill previously passed by the Senate to provide $100,000,000 in loans to local communities for use in planning schools, sewer and water facilities, and other public needs. These loans will permit cities and towns and counties all over Pennsylvania and the Nation to make plans for local improvements which they expect to put under construction with their own funds.

As I said earlier, this list of accomplishments of the Eighty-first Congress—and I might mention the minimum wage bill passed by the Congress—is only a partial one, only a part of what I proudly regard as an impressive total accomplishment. There are many, many more things, and if I am any judge of the present political scene, I believe all of you are due to hear a great deal during the next few weeks over the question of what the Eighty-first Congress has done. You will hear those who will deny with a good bit of fervor that we have accomplished much in our long months here in Washington—and you'll hear others say that we've done a great deal.

I notice that my time on this broadcast is running out, but I'd like to leave this thought with you:

When you hear a debate over the record of the Eighty-first Congress, make every effort you can to sift out the political arguments,

and do your best to glean the real facts. Listen carefully to what we've done—and what we haven't done, on such failures as civil-rights legislation and the promise of this administration to repeal the Taft-Hartley Act. Look at the record. Weigh the good against the bad. Weigh the facts, all of them you can get. Ask yourself what the accomplishments mean to you. Then decide for yourself where this Congress stands.

I'm proud of what we've done in the first session of the Eighty-first Congress, and I believe, when you look squarely at the record, most of you will be proud, too.

I invite you to be with me in 2 weeks when I hope to get under way my rather ambitious proposal to bring before you the men who will administer the laws we in the Congress have passed.

Low-Rent Housing Program of the Eighty-first Congress

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, on my biweekly broadcast of the week end of October 28–30, inclusive, I chose as my discussion topic the new low-rent housing program authorized by the Eighty-first Congress. I invited Mr. Walter Alessandroni, executive director of the Philadelphia housing authority, and Mr. Charles Levy, director of the Philadelphia field office of the Public Housing Administration, to join me in discussing just how the new housing program would work in a State such as Pennsylvania; how it would help to alleviate the tremendous lack of housing in all of our cities, not only in Pennsylvania but in the other 47 States as well. I ask unanimous consent to have the text of my broadcast printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Officially, at least, the Congress is out of business for the rest of 1949, and we aren't due to go back into session until January of next year. This doesn't mean, of course, that our duties and responsibilities to constituents are over and done with for the next 2 months or so. Between now and January, all of us in Congress will want to take stock of what we accomplished in the last session by looking into the way the new laws are working out in practice, and then, too, we'll have to look over unfinished business and new business in order to make plans for next session.

Now I can't think of a better way for us to evaluate the achievements of the Eighty-first Congress than to follow up with the people who administer these laws, and have them fill out the details left to their discretion, supervising and administering the broad legislative instructions that we in the Congress have established.

Because housing is a subject of such vital importance to Americans, I intend to devote this broadcast to the new low-rent public housing program authorized by the Eighty-first Congress, and I hope in this way to reduce this vast program down into terms familiar to us as Pennsylvanians. I was a cosponsor of the housing bill in the Senate, and I am very gratified at the vigorous and enthusiastic fashion in which communities all over Pennsylvania have participated in the program. The public housing law authorizes Federal assistance to communities for the next 6 years, during which period it is expected that 810,000 low-rent nonfarm public housing units will be constructed. The new law, in addition, will provide for direct grants to communities for the purpose of slum clearance, and it also establishes a research program which will be used to develop better and less expensive methods of housing construction.

Now what does all this mean to Pennsylvania? Well, I have invited as my guests on this broadcast two Pennsylvanians who are prominently identified with public housing. I intend to ask each of them a few questions, and I believe their answers will do a great deal to explain just what this does mean to Pennsylvania and Pennsylvanians.

My first guest is Mr. Walter Alessandroni, executive director of the Philadelphia Housing Authority. Mr. Alessandroni, as the State commander of the American Legion, as former chairman of the national housing committee of the American Legion, and as a past national vice commander of the American Legion, you are exceptionally well qualified to discuss public housing on two counts—first, how the local public-housing program is working out in Philadelphia and, secondly, the importance of this program to veterans. I don't think there is any doubt at all but that your efforts have been largely responsible for the Legion's present position in support of public housing. And so why, Walter, have you led the all-out fight, year after year, to get the Legion to adopt its present, enthusiastic support of public housing?

Mr. ALESSANDRONI. Well, first of all, Senator MYERS, this act provides for a priority to veterans, and the American Legion feels that the Congress very wisely gave the veterans a priority because certainly, as a group, they are most sorely in need of housing accommodations. Secondly, the housing legislation which was adopted in the Eighty-first Congress—which was known variously as the W-E-T bill, or "wet bill," and then the T-E-W bill, and now as the National Housing Act of 1949—offered the most comprehensive and forthright solution for providing decent, safe, and sanitary housing for a large segment of our population who never would have been able to provide themselves with adequate shelter otherwise. This legislation also received the full public discussion and debate in the Congress for some 4 years, and no better alternative was ever offered. The act which provided assistance for the present public-housing units has been in operation for over 10 years, and we believe has been found satisfactory.

Senator MYERS. Well, Commander Alessandroni, when the first public housing act of the Federal Government was passed, back in the late thirties, you and I both remember that the municipal government in Philadelphia was dead set against participating in that program at first. Now, of course, the entire municipal government in Philadelphia has swung around completely on public housing, as have most communities and most community officials all over Pennsylvania in the past few years. And when we passed the new housing law this summer, Philadelphia and Pittsburgh were the first two cities in Pennsylvania to be approved for participation in this new program, the Philadelphia Housing Authority having been allocated 10,000 units to be constructed during the next 2 years. Will these 10,000 new low-cost units answer all of Philadelphia's problems, Walter?

Mr. ALESSANDRONI. No, Senator MYERS, they will not answer all Philadelphia's problems, but they certainly will go a long way toward alleviating a situation which has been with Philadelphia and all great cities for many years. I might say that Philadelphia was slow in accepting public housing some 10 years ago, but then in all pioneering efforts, cities as well as people are slow to lead the way. Philadelphia I think at that time was concerned about its local autonomy. I believe, however, that the experience of the past 10 years with public housing has led Philadelphians and public officials to the inescapable conclusion that Philadelphia will retain its autonomy, and that this bill is merely one of Federal money assistance.

Senator MYERS. Well, I think what you have said, Commander Alessandroni, makes it clear why low-rent public housing should be a completely nonpartisan issue, and it makes it equally clear that the national policy which this program reflects is simply one that's above politics, and is squarely a question of getting done with a vital and a necessary job, if we're going to see to it that all Americans are giving a real opportunity to become full-fledged Americans, self-sustaining, and productive.

Thank you very much for joining me, Commander Alessandroni, My next guest is Mr. Charles Levy, who has recently become Director of the Philadelphia Field Office of the Public Housing Administration, which office has jurisdiction over Pennsylvania, Maryland, Delaware, and the District of Columbia. Mr. Levy, because you have had years of professional experience in the Public Housing Administration, having grown up as it were under this Federal program that was in existence before the war, I think you are exceptionally well qualified to answer several questions I have about the new housing law we passed a few months back. In the Housing Act of 1949, the Congress provided that a total of 810,000 low-rent, nonfarm units could be constructed all over the country with Federal help during the next 6 years. Now I understand that the Public Housing Administration is allocating these housing units on the basis of a program to be undertaken only for the next year, or next 2 years. And since a 2-year program is a third of the total we provided for in the law this year, this means, I believe, that you will parcel out 270,000 units to communities all over the country for the next 2 years. This doesn't mean that all these units will be allocated to the first communities that send in requests for allocations, does it, Mr. Levy?

Mr. LEVY. No, indeed, Senator MYERS, the Public Housing Administration can't allocate 270,000 units in the next 2 years on a first-come, first-served basis. That wouldn't be fair at all. We've taken a lot of things into consideration. There is a far greater need for public housing than can be filled with the 270,000 units, or 810,000, for that matter. To allocate these units fairly, we have to consider the relative needs for slum clearance for new housing in all our communities. We have to consider the amount of bad housing, the number of low-income families living alone, or doubled up, in the various communities and the states. So what it is, is a question of fitting all these things together, not inflexibly, but as best we can, to give every community with housing problems a chance to be helped by the new law.

Senator MYERS. There is another limitation in the law, as I recall it, Mr. Levy, which provides and sets up and limits the allocations to any particular ones of the larger States more than 10 percent of the total of all units. Now Pennsylvania is one of our largest States, and as I understand it that means that we in Pennsylvania couldn't get more than 27,000 units—or 10 percent of the 270,000 units that are allocated for the entire country for the next 2 years. The last figures, as I saw them, indicated that nearly 20,500 units have already been allocated to a total of 18 communities in Pennsylvania. And I think my listeners might be interested in the names and the alloca-

tions to those communities. There was an allocation of 10,000 units to Philadelphia, 5,000 to Pittsburgh, 750 to Johnstown, 600 to Allentown, 400 to Bethlehem, 200 to Pottstown, 100 units to Farrell, 100 units to Beaver Falls, 175 to Aliquippa, 150 to Ambridge, 750 to Harrisburg, 300 to Williamsport, 150 units to Uniontown, 100 to Brownsville, 50 to Masontown, 400 to Chester, 628 to Reading, and I believe, 600 units to McKeesport. Now what kind of an opportunity, Mr. Levy, will other communities in Pennsylvania have where allocations have not yet been made?

Mr. LEVY. A very good opportunity, Senator MYERS. You see, the list of cities you mentioned already contains almost all the large communities in Pennsylvania. The largest communities naturally tend to have the greatest need, and as would be expected, they take up a substantial part of the total. The 18 communities have been allocated as you have indicated approximately 20,500 units for the programs in the next 2 years. We have also received applications from the city of York, Darby Township, and Upper Dublin Township. There have been inquiries from a number of other communities, large and small. I feel confident that not only will these communities receive programs, but that communities which do not have active local authorities will have time to examine their needs, organize an authority where required, and make requests to participate in the first 2-year portion of the program. New authorities have recently been formed in Connellsville, Lancaster, York, Lycoming and elsewhere, and any interested community can do the same thing.

Senator MYERS. Well, what if some of the people listening to this broadcast, either municipal officials, or just plain private citizens, are interested in seeing local housing authorities established in their communities if they haven't already got a local authority? What would you suggest to such communities, Mr. Levy, and what would you advise them to do?

Mr. LEVY. Well, Senator, you are familiar with the 30-page pamphlet on the Housing Act of 1949, what it is, and how it works. That was put out by the Senate Banking and Currency Committee. I think it is an excellent job, and the Public Housing Administration, Washington, D. C., or the Public Housing Administration, 3701 North Broad St., Philadelphia, will be happy to send it to anyone who writes. It's got the facts, and it's good.

Senator MYERS. That's a fine suggestion, Mr. Levy, and I might also say that if they write to my office, 307 Senate Office Building, Washington, D. C., we might also be able to provide them with a copy of this pamphlet. And incidentally, I have a number of these pamphlets already on hand, and as I say, these folks to whom you have just made the suggestion that they procure such a pamphlet can obtain it from my office, or they can obtain it from your office, as you have said, Mr. Levy, or from the Public Housing Administration in Washington.

Now all our discussion on this program has been devoted to the low-rent public housing problems in our cities. The Housing Act initiates a brand new program which we haven't discussed; it will undertake the building of low-rent farm housing, the getting rid of rural slum conditions.

The two gentlemen who have been with me on this program have been best acquainted with the city problem, and so we have stuck to that. The Farm Housing Program is under the Department of Agriculture, and later when I hope to have with me on one of these broadcasts some high officials from the Department of Agriculture, I intend to discuss this program of rural housing. And then I haven't discussed the slum clearance provisions of the new housing law. Most of the communities with local housing authorities are familiar with this important phase of the law, and perhaps in a later broadcast we can go into this in detail.

Well, my time on this broadcast is running out, and so I'd like to close by saying I will be back with you again in 2 weeks.

Farm Bill of the Eighty-first Congress

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, on my regular biweekly broadcast of November 11–13, inclusive, I was indeed fortunate to have our Secretary of Agriculture, Mr. Charles F. Brannan, join me in discussing the services rendered by the Department of Agriculture, the problems faced by the whole agricultural industry of our great country, and the meaning of the farm bill passed by the Eighty-first Congress to both the farmer and the consumer. I request unanimous consent to have the text of that broadcast printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

When most Americans think of Pennsylvania, they think of us as having one of the greatest of the industrial States. But I don't think they are aware that Pennsylvania is also one of the great agricultural States.

We in Pennsylvania know this, of course. We know that there is scarcely a spot in the State which is more than a few minutes distant by car from really fine farming country.

Our agriculture is diversified. We aren't a one-crop State—and we haven't got the huge factory farms that you find on the Great Plains of the West. But we do produce a great deal of the food we eat—and in some instances, such as buckwheat, we are among the largest producers in the country.

So that means that I, as a United States Senator from Pennsylvania, must keep up with farm legislation just as carefully as I must with matters like minimum wage, housing, social security, reciprocal trade, and many other important issues.

But farm legislation is important to Pennsylvania not only because we have a great agricultural State. Whether you're a farmer, or a businessman, or a housewife, you are very much interested in what your food costs you. You are interested in seeing that we continue to find markets for the countless products of our industries and our mines—and because the farmer is an important consumer of the products we make, we're interested in the farmer's ability to buy them.

I'm fortunate in having at the microphone with me on this broadcast the Secretary of Agriculture, Charles F. Brannan.

Most of you are, I imagine, aware that Mr. Brannan moved up through the ranks of the Department of Agriculture to become its top boss, bringing with him to that job about 15 years of distinguished accomplishment and a widely varied experience in some of the most important phases of the Department's many activities.

Well, Secretary Brannan, since the Department of Agriculture is one that annually receives hundreds of millions of dollars in appropriations—I think it is only fair to ask you what the American people get for their money. You employ more than 60,000 people to get your job done, and I can't think of a single aspect of our economy that isn't affected in some way or another by what the Department of Agriculture does. So I do think it's fair to ask what the Department's goals are—and what the American people actually got for their money.

Secretary BRANNAN. Well, Senator MYERS, as you know, the Department of Agriculture has various kinds of responsibilities. They have, and maintain, one of the greatest research and educational institutions in the field of agriculture in the world.

Then they do a great deal of regulatory work, keeping the foods that move in the channels of commerce in the best possible condition for the consuming public. They regulate the grain market so that the speculating that is essential to some phases of trading in grain and some of the other commodities is not carried on to the penalty or disadvantage of farmers.

Then there are a wide variety of services to farmers, in addition to research—the crop reporting which gives farmers some indication of what the volumes of crops this year are so they can plan for next year—and an economic analysis of what farmers might expect in the way of prices, etc., for their various crops.

The Department of Agriculture also has a great lending institution, the Farm Credit Administration of the Farmers Home Administration—and collateral to that, lending institutions which make it possible for farmers to build their own cooperative enterprises in the field of rural electrification and now, perhaps, in telephone. There is also going to be an agency now concentrating on improved housing.

Then, basically, they are trying to assure the American farmer, through the price-support mechanism, the opportunity to earn a fair return on the marketplace. And then, when we get too much of one commodity, or another, we take some of those commodities and put them into the school-lunch program.

Senator MYERS. I'd like to interrupt you right there, Charlie, to ask you to explain a bit more about the school-lunch program. Every child in Pennsylvania is eligible for that program—and while it doesn't represent the largest item in the Department of Agriculture's budget, I think it is exceedingly important.

How's the school-lunch program working out, Mr. Secretary?

Secretary BRANNAN. Well, Senator, it's doing a tremendously important job in my opinion. Of course, even now it isn't big enough to serve all our school children, but it represents a big advance over where we were a few years back.

In the Nation last year, it provided over a billion meals—42,500,000 of them in Pennsylvania. That was a 13-percent increase for Pennsylvania over previous years, and shows an appreciation of the program. The amount of good any State gets out of the program depends, of course, on how the people take hold of it. At the peak of the program last year, the Nation had 7,000,000 children in about 48,000 schools participating in the program—and Pennsylvania had 259,000 in about 2,036 schools.

The program will give us an opportunity to help farmers who are producing abundantly, as we want them to, and also in some cases where we have surpluses, to handle the surpluses in a way which is not wasteful and destructive of good food.

Senator MYERS. Of course, Secretary Brannan, putting some of our surplus food to work in the school-lunch program is just one minor phase of our food-surplus problem. But food surpluses do suggest the price-support issue, and I'd like to talk about

that new farm bill we just passed in Congress.

The problem of surpluses is a national question, and both parties agree on that completely. Republicans and Democrats agree, too, that we must strive to produce some reasonable surplus of food every year to avoid shortages, high prices, and the privation that would result from serious droughts or other natural calamities. Both agree we must produce this food at reasonable prices people can afford to pay. And both agree we must at the same time see to it that our farmers incomes stay at a decent level—and avoid the wild ups and downs that have plagued farmers in the past. And that's just about as far as general agreement goes.

We don't agree on how we're going to accomplish all this. Our national agricultural policy at the moment is in a period of transition. Partly this is because we increased our food production so tremendously during the war—and even though we're eating better today, we don't know what to do with surpluses. Some say we should use fixed price supports—and others say they should be flexible. Some say we should use rigid crop controls—and others say crop controls are the worst kind of regimentation. And there are innumerable variations.

So with all these different ideas, it's pretty obvious we in the Congress this year didn't solve all the basic issues that make up our so-called "farm problem." You might say the new bill just postpones these issues until we find a more satisfactory solution. The bill we passed was a compromise of these conflicts—and like any compromise, I doubt that anyone was completely satisfied with it.

But it was an honest compromise, fought out in the traditional American manner of give-and-take, and now we've got to wait and see if the issues we compromised in this bill actually lend themselves to compromise. The ultimate solution may, in a few more years, turn out to lie in the Brannan plan, or some variation of it, or in some other plan that hasn't even been suggested yet. But I know that the Congress is sincere in wanting to find a practical, long-range, enduring solution, and I honestly believe our compromise bill was a pretty good bill. In view of all the conflicts, I know it was the best bill we could get at this time.

What's your reaction, Mr. Secretary, to the bill we in Congress gave you? Could you compare it briefly with your own suggestions?

Secretary BRANNAN. Well, Frank, I look upon this new act of 1949 very much in the same way as you just analyzed it. Certainly, it is a much better law than the one which it replaces—the one passed by the Eightieth Congress. It does provide better protection against declining farm prices, and helps us maintain farm income at a level which the American people, both farmers and others, are entitled to see it retained.

However, it does leave important problems unanswered. It does not encourage shifts in production so as to balance supply with realistic demand. It does not meet the dual objective of assuring farmers the opportunity to earn fair returns from abundant production, and at the same time assuring consumers the opportunity to use the products the farmers have produced.

Those are objectives that I'm sure we all agree upon. The question is just how you do it. The administration has recommended certain ways of meeting these outstanding problems. But if anybody can find better methods of doing the same thing, and if the Congress will agree that they are better methods, the administration will wholeheartedly undertake to make those new methods work. We aren't fighting over a narrow difference of detail. We're interested in seeing the farmers have a decent return, and we're interested in seeing that the consumers of this country have access to the food we can produce abundantly at reasonable prices. In my opinion, the job is partly done, but there is much yet to do, and I am glad to hear you say, and I agree with you, that the Congress has done a fine job so far, and is in a mood to continue to work on it.

Senator MYERS. Well, Secretary Brannan, I think everyone will agree that the consumer has a very real interest in the prices he has to pay for food. In fact, I recall that on an earlier broadcast in this series, I promised I'd ask you the question about the potato—which for the consumer has really been a question of the $64 variety in the last couple of years. I know we had to increase our potato production during the war, then wound up with too many—and the Government had to buy the surplus. But the housewife had to continue paying high prices for potatoes she used at home. How do you answer that one, Charlie?

Secretary BRANNAN. Well, there's no really brief answer, FRANK. The problem is very complicated. Farmers have learned to produce potatoes in ever increasing quantities. I think the yields per acre have jumped perhaps as much as a hundred bushels to the acre in the last few years. And at the same time, the capacity of the American people to consume potatoes has not increased proportionately.

And then, you must remember, you just can't export potatoes. So we've got to consume them domestically—or they become a very serious surplus.

We at the same time tried to assure the potato growers of the country a fair return because they have been in business a long time, and we got them in business during the war. Trying to assure them a fair return, and then at the same time, making the potato acceptable at reasonable prices to American consumers is the job that we have not gotten done legislatively these past 5 or 6 years. And frankly, it's not done yet.

Senator MYERS. Well, Secretary Brannan, your answer certainly tosses the hot potato back into the laps of Congress. But I will say I'm glad our farms were able to produce so much more food than before when we really needed it to feed ourselves and so many other people.

Thank you, Secretary Brannan, for joining me.

I notice now that my time has just about run out, and I'll close by saying that I hope you'll join in listening again in 2 weeks.

Wage-Hour Bill of the Eighty-first Congress

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have the text of my broadcast to the people of Pennsylvania of the week end of November 25–27 printed in the Appendix of the RECORD. At that time I was privileged to have join me Mr. William R. McComb, the Federal Wage and Hour Administrator, and we discussed the background of minimum-wage legislation and the effects of the new minimum-wage law on the American worker.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

In earlier broadcasts while the Congress was still in session, I made periodic progress reports on the status of the new wage-hour bill as it made its way through the House and Senate to final enactment along in October.

When President Truman put his signature on the wage-hour—or minimum-wage—bill as it's sometimes called, a fight which had gone on for years ended in victory, a victory for a higher American standard of living.

Because this will mean added purchasing power for a great many Americans, we in Pennsylvania will benefit from the law in a number of ways. For one thing, we know that purchasing power measures the health of our whole productive economy. For us in Pennsylvania, it is exceedingly important that we find markets for the things we produce in our factories and our mines and on our farms—and thus any change which increases the ability of more people to buy the things we make has a very real effect upon our prosperity.

This is one of the many reasons why I want you to know something of the details of the wage-hour law and I hope in the course of this broadcast to develop for you some of the things which will be accomplished by the new act recently passed by the Eighty-first Congress.

Now the wage-hour law isn't a new idea. Congress passed the Fair Labor Standards Act in 1938, so we've had the basic law on the books for more than 11 years. The Eighty-first Congress this year changed many of the details of the 1938 act, but we left the fundamental features of the old law pretty much as they were, so I think I should begin by telling briefly about the essential purposes of the Fair Labor Standards Act.

For one thing, the terms of the original act provide a floor under the wages of more than 22,000,000 Americans whose work flows through the channel of interstate commerce. But because we usually think of it as the minimum-wage law, we frequently overlook the fact that the 1938 law also established, for millions of Americans, the 40-hour workweek as the usual standard, and provided that overtime payments should be made for any work above that amount. And lastly, among the really important features, the 1938 act contained certain provisions which marked a real beginning toward a decent child-labor law.

I have invited Mr. William R. McComb, the Federal Wage and Hour Administrator, to join me in this broadcast because he has been the top administrator of the old law, and will, after January 25, 1950, when the new amendments go into effect, be responsible for carrying out the administrative provisions of the new duties we have provided for him as well.

Mr. McComb, you've heard my brief description of the provisions contained in the wage-hour law, and as my first question I'd like to ask you what you consider to be the most important change we made in the Fair Labor Standards Act by the amendments we passed this year.

Mr. McCOMB. Well, Senator MYERS, I don't think there's much doubt as to the most important feature; that is, the increase in the minimum hourly rate from 40 cents to 75 cents an hour. That is the change which has received most of the attention, and it certainly deserved to.

Senator MYERS. I agree with you, Mr. McComb, that the new 75-cent hourly minimum is the really important new feature, but I'd like to say something more about the 40-cent-an-hour minimum in the old law.

As I recall, while the 1938 act did provide for a 40-cent hourly minimum, we didn't plan that it would immediately bring every worker covered by the law up to 40 cents an hour. If we'd pushed the minimum up to 40 cents at once, it would have wiped out many businesses, and so the law visualized a gradual, step-by-step increase up to 40 cents.

In fact, as I remember it, the minimum wage that was established for 1938 was only 25 cents an hour, or $10 for a 40-hour week. That still makes me shudder when I think that we could ever have considered $10 a week as a satisfactory minimum wage, even in 1938—but that's where we had to start.

Mr. McCOMB. Ten dollars a week wasn't much money at all, Senator, but it gave us a start, low as it was, and we were able to get some valuable experience in administering the law at a time when many of its features were more or less untried.

Then, as you've said, the law made it possible for the minimum to move up year after year when, after careful study, it appeared that could be done without serious hardship to employers, and it wasn't until 1944 that we finally reached the over-all 40 cents an hour for everyone covered by the law.

Senator MYERS. Well, Mr. McComb, 1944 was right at the peak of our wartime production, and virtually everybody who wanted a job could get one. You shouldn't have had much trouble enforcing a 40-cent minimum wage rate at that point because almost everyone could find a job that paid at least that much money.

Mr. McCOMB. You're perfectly correct, Senator. The 40-cent-an-hour minimum wage under the law became rather meaningless at that time.

Senator MYERS. Yes; but if it was rather meaningless in 1944, it became completely meaningless in the postwar years. Remember that though a lot of us in the Congress fought hard to stave off inflation, the major wartime price controls died in 1946, and, of course, inflation followed.

So in the postwar years, it's obvious that 40 cents an hour—$16 for a full working week—certainly wasn't a realistic minimum wage when the cost of living rose the way it did. You'll recall that the Senate actually did pass a bill in 1946 to increase the hourly rate above 40 cents, but the House refused to go along, and the question was held over for the Eightieth Congress when it convened in 1947. And, as all of us know, the Eightieth Congress didn't budge on minimum wage.

Mr. McCOMB. That's right, Senator MYERS, and I recall that you tried to amend the act from the floor of the Senate in 1947. Didn't you offer an amendment to the Portal to Portal Act of that year which would have increased the hourly minimum under the wage-and-hour law to 60 cents?

Senator MYERS. Yes; I submitted such an amendment, Mr. McComb, but unfortunately the Senate voted it down without debate, because we were then operating under a strict application of Senate rules during a unanimous-consent agreement to vote on various aspects of the portal bill.

But immediately after my amendment was voted down, Senator TAFT, as chairman of what was then the majority policy committee, and also as chairman of the Senate Labor Committee, promised that the Labor Committee would report out a wage and hour bill promptly. I regret to say that didn't happen, although the Eightieth Congress didn't end for almost another year and a half. In fact, there never was a wage-and-hour-bill reported out of a Senate or a House committee during the Eightieth Congress.

That's history now, and the Eighty-first Congress has amended the wage-hour law, adopting, among other changes, a 75-cent minimum wage.

How many wage earners are due for an increase to that figure under the new provision?

Mr. McCOMB. The best estimates, Senator, indicate that about a million and a half people covered by the law are making less than 75 cents an hour, and thus that number will receive direct increases to the 75-cent level.

Senator MYERS. Where do these million and and half work, Mr. McComb?

Mr. McCOMB. The best available information we have, Senator MYERS, shows that these lowest-paid workers who will get direct increases under the new 75-cent provision are employed principally in segments of these manufacturing industries: Lumber, leather, apparel, furniture, and food products. Then there are some others in nonmanufacturing industries such as trade and communications. And they're scattered throughout practically every State in the country where these industries are to be found.

Senator MYERS. We have every one of these industries in Pennsylvania, so I imagine there will be a number of Pennsylvanians who'll get direct increases to the new 75-cent minimum.

But Pennsylvania working people, by and large, earn wages that are well above the 75-cent level. I know, though, that some of the very employers who pay these higher wages in Pennsylvania are threatened by competition from other manufacturers who now pay less than 75 cents an hour. So this will be a big protection to employers who pay more than 75 cents, because low-paying competitors will now be required to raise their wages at least to the 75-cent minimum—in other words, the new amendment will do a lot to end unfair, sweat-shop competition against fairer-minded employers.

Now, Mr. McComb, before our time runs out, I believe we should go over some of the other important changes we made this year. For one, I'm proud that we strengthened the child-labor provisions of the wage-hour law, and eliminated, as I hope we did, one of the worst loopholes in it. How is this going to work out?

Mr. McCOMB. It's a big improvement, Senator. A child under 16 can't work at any industrial job covered by this act—and if it's a hazardous job, the minimum age is 18. Before this new amendment, the act did not directly forbid child labor in these jobs. About the best we could do was to restrict and discourage child labor, but the law could be evaded, and we were powerless to stop it.

Senator MYERS. Another change we made this year was along the lines you suggested to the Congress, Mr. McComb. The 1938 wage-hour law didn't provide a satisfactory means of computing overtime pay—and a lot of trouble resulted. The famous "overtime on overtime" case went to the Supreme Court, and there were a number of others. You pointed out we could get around much of that difficulty by defining the term "regular rate of pay"—and so we incorporated a new definition in the law. Just how will that definition help out?

Mr. McCOMB. What we did this year, Senator MYERS, was to give employers and employees something concrete to work with, whereas before, the law hadn't been clear as to what was intended. By enumerating some of the types of payments which do not have to be considered in determining an employee's regular rate of pay for purposes of overtime computation, much of the confusion and uncertainty we experienced will be eliminated.

Senator MYERS. Thank you very much for joining me, Mr. McComb. I appreciate your visit, and I know our listening audience does, too.

Incidentally, Mr. McComb told me before the broadcast that anyone—whether an employer or an employee—can get more details on the new wage-hour law by writing the Wage and Hour Division at the Widener Building in Philadelphia or the Wage and Hour Division at the Victory Building in Pittsburgh—or I'll be glad to send you the material if you'll write to me, United States Senator FRANCIS J. MYERS, Senate Office Building, Washington, D. C.

Thank you for listening. I hope you've enjoyed this broadcast.

Achievements of ECA

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, on the week end of December 9 to 11, inclusive, I had the honor of having Mr. Paul Hoffman, ECA Administrator, join me on my regular biweekly broadcast. Mr. Hoffman's work has been invaluable to the achievements of the Marshall plan, and I felt it a great privilege to have such a public servant with me to discuss just how our programs in Europe have helped the nations of Europe fight communism and rebuild their own economies. I ask unanimous consent that the text of that broadcast be printed in the Appendix to the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Senator MYERS. At this time of year, when the words "peace upon earth and good will among men" are frequently heard, I think we may be grateful that the spirit of peace has more substance this year than it's had for some time.

Too often, recent years have been marked by the tragedy, destruction, and pestilence of war, or threat of war. At the end of 1947, two years and a half after the European war ended, many Americans feared we were losing the peace. World War II veterans cast anxious eyes at their discarded uniforms, and there were rumors of a third world war in a matter of weeks.

Communism, a new threat to Europe's liberty, rolled out of the east Europe's democracies, their economies close to collapse, their people on the verge of starvation, seemed ready for Communist masters to take over. There were rumblings in France, and dire prophecies that the Communists would win at the Italian polls in the spring of 1948.

Today, 2 years later, we face a vastly different picture. The Communist march has been halted. The western democracies have a new strength and vitality. There is real confidence now that we are winning the peace.

We can't explain this change or this new confidence by any one reason, but we do know without doubt that Marshall plan assistance has played a huge role in shaping our success to date.

I've asked Mr. Paul Hoffman, the ECA Administrator, to join me on this broadcast in bringing you a report on the progress the Marshall plan has made during the 19 months it's been in operation.

I recall in the spring of 1948, Mr. Hoffman, when we first debated the ECA bill in Congress, that those of us who were all out in support of the Marshall plan got behind General Marshall's proposal because it was

the only solution we could see for giving the free European democracies a chance to prove that liberty could be retained while a worn-out, hungry and broken Europe got back on its feet, rebuilt its factories, restored its agriculture, and reestablished its trade.

But the ECA blueprint of 1948 was merely a hope—really our only immediate chance—to save the day for democracy. You've been close to this right from the beginning, Mr. Hoffman. How do you feel we've progressed in translating this hope into reality?

Mr. HOFFMAN. Senator MYERS, I believe it can be said in all honesty that the Marshall plan is ahead of schedule. That doesn't mean for a moment, of course, that our task is near completion. It isn't. More—much more—remains to be done. But we do feel that the first phase of the recovery job has largely been done.

Senator MYERS. And that means?

Mr. HOFFMAN. First, and most importantly, that the Communists in Europe have been stopped cold. They have been turned down in election after election. Norway in its recent election, practically obliterated the Communist Party. As a result, there is a new political vitality flowing through the veins of the European democracies. I think it is accurate to say that Europe is well on the way to becoming freer and more democratic than ever. On the economic front, I can report with some gratification that in all the Marshall plan countries the people now have a sustaining diet. It isn't a luxury diet, but is enough to grow on and work. That is a warm and human accomplishment that should make all of us very happy. I can also report that the people in Europe are working, and working hard. They have jobs.

That is the human meaning behind the statistics that European production is now 50 percent above what it was when the Marshall plan was conceived, and 20 percent above what it was before the war.

Defeatism has been replaced by hope. The people now have confidence in themselves and in their future. That, as General Marshall saw so clearly, is all important to the success of the program.

Senator MYERS. Of course, Mr. Hoffman, the success of this first phase of recovery—that is, the rebuilding of production to levels that in most instances are well above prewar—has depended a lot on the equipment and food we've furnished Europe during the past year and a half.

But Europe's productive efficiency was low—and that was true long before World War II. Now we in America are very proud of our industrial know-how because, with this know-how we've been able to turn out tremendous volumes of goods at low cost, while at the same time paying much higher wages than were received in Europe.

It seems obvious that Europe must step up her efficiency—and the purchasing power of her people—if she is to play an important part in a flourishing world economy in the future. Have European nations shown much interest in our know-how, Mr. Hoffman?

Mr. HOFFMAN. You are familiar, of course, Senator MYERS, with the technical assistance program through which we are translating our know-how into European terms. The Europeans are cooperating enthusiastically. The British have, in fact, set up an Anglo-American Council on Productivity which envisages a permanent exchange of information on techniques and procedures.

All of the Marshall plan countries have sent, or are sending, teams representing both management and labor to visit our factories, farms, and mines. These teams return home to spread the information collected. I am convinced that this program will have both short- and long-range results. It has proven to be, furthermore, a most inspiring adventure in human relations. The foreigners who have visited here have learned to know America and like Americans. Our people who have entertained them have learned to know and like them.

Senator MYERS. I am delighted to hear that, Paul.

Now I suppose we might regard as the second phase of European recovery the economic integration of western Europe. We've heard a lot about that word "integration"—and I think everyone understands it to mean the western European nations will act as an economic unit, more or less in the same sense our 48 United States do.

I can't imagine what America would be like if people in New York and every other State had to pay a tariff on something manufactured in Pennsylvania—yet that is the way tariff walls between the European countries work. Worse still, most European countries also have trade restrictions—restrictions that actually limit the amount of a particular goods that can be brought in from another country.

You made a big point of this in your recent visit to Europe, Mr. Hoffman, and I'd like to know whether you expect many European tariffs and trade restrictions will be lifted in the next year or so.

Mr. HOFFMAN. The long-range goal I put before representatives of the participating countries was the effective integration of the economy of western Europe, the building of a single market of 270,000,000 consumers, in which quantitative restrictions on the movement of goods, monetary barriers to the flow of payments, and eventually all tariffs should be permanently swept away. We in ECA are, of course, fully aware of the difficulties in the way of such a program.We realize it cannot be done overnight. Therefore, I pointed out that as a practical approach to their long-range goal, smaller regional groups might make faster progress within their own areas. I suggested that the small groups push ahead with such a plan, keeping, of course, their ultimate objective constantly in view.

The suggestions I offered were accepted, and have been embodied in resolutions which are now before the governments of the member countries. There is no magic, of course, in resolutions. I am confident, however, that we will see quick action on these short-term objectives. I, also, have high hopes for rapid and early progress toward the longer-range goal of European integration. The Europeans themselves, I think, see this as the only answer to their problems.

Senator MYERS. I hope we do see that kind of progress, Mr. Hoffman, but it will be a difficult job.

We've had a hard time lowering American tariffs; yet we know that tariffs cut down on world trade; and we know that our own economy is most prosperous when world trade is greatest. The reciprocal-trade program, initiated by our former great Secretary of State, Mr. Cordell Hull, back in 1934, has always faced a tough fight in Congress simply because it aimed at reducing American tariffs. I'm happy, though, that the Eighty-first Congress restored reciprocal trade to its original vitality this year, by repairing the damage done to the program last year by the Eightieth Congress. Now the reciprocal-trade program is back at work, and is assisting the Marshall plan in restoring and encouraging world trade.

In our discussion thus far, Mr. Hoffman, we've confined ourselves to talking about the way Europe is getting back on its economic feet. I think it's extremely important to consider what probably would have happened if there'd never been a Marshall plan, there had never been an ECA. I'm convinced Europe, without the Marshall plan, would have fallen to the Communists, perhaps we'd be at war with Russia today, or if not, we'd be watching the Communists consolidate their hold on the continent of Europe.

We've helped Europe rid itself of the conditions that breed communism. Without the help of the interim-aid program, and especially ECA, Europe simply couldn't have come back fast enough to avoid trouble. But Europe's getting along toward recovery—and when free men can find a way to feed themselves and their families, and can see hope in the future, then the rash promises that communism can provide security through dictatorship are promises that fall on deaf ears.

Of course, we're spending about $15,000,000,000 this year on national defense alone, but even without going to war our national defense would probably cost us two or three times that much if the Communists controlled western Europe and its industries.

We estimate the Marshall plan will cost about $15,000,000,000 to carry it through to its end in 1952, and we'll have spent close to $10,000,000,000 of this when the present law expires in July of 1950.

Do you think, Mr. Hoffman, that we can end ECA in 1950, instead of 1952, as originally planned, and still have any assurance that democracy could survive in western Europe?

Mr. HOFFMAN. If our aid to Europe were halted now, it would not take 6 months to undo all the accomplishments of the past 20 months. We have not yet passed the halfway point in getting our job done. Europe is still highly vulnerable. The Marshall plan will not have accomplished its purpose until Europe has ceased to be vulnerable. Let us not fool ourselves. The frank truth is that while the flames of economic and political catastrophe have been dampened down and are no longer easily visible, the fire has not yet been put out. The free world, and that includes the United States, will not be safe until it is.

You, Senator MYERS, I think, have shown an appreciation of this fact. I have not forgotten how ably, as acting majority leader, you supported our program for European recovery.

Senator MYERS. There will be a fight about this in the next session of Congress, Paul, but I'm confident the American people want to stay with the job until it's done. They know we can't afford the alternative of allowing Europe to fall to the Communists because of economic collapse in the democracies. If a total of $15,000,000,000 will put Europe back on its feet, this is a far better bargain than spending twenty or thirty or forty billion dollars every year for national defense, as we'd have to do if the Communists controlled western Europe and her industries.

Thank you for joining me, Mr. Paul Hoffman, and I congratulate you upon the splendid progress which has been made in the recovery of western Europe. Your magnificent and inspiring leadership has had a great deal to do with the success of the program.

I hope our listeners have enjoyed this broadcast and will join me again in 2 weeks.

Christmas 1949

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, Christmas week end of 1949 was the occasion of one of my regular biweekly broadcasts to the people of Pennsylvania. In that broadcast I reviewed the achievements of the year of the American people—and in the year 1949 they were, in many re-

spects, greater than any preceding year in our history. I pointed out, however, that we cannot be self-satisfied with our progress—we still have a long, hard road to pull to world peace and security. I ask unanimous consent that my remarks on this broadcast be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

This is a very special time of year for all of us; a time when the Christ Child and the Three Wise Men, when thoughts of home, of our families, and of our closest friends are uppermost in our minds, a time when the words "Peace on earth and good will unto men" have a special significance.

On Christmas Day of 1949, we can pretty much settle down, relax, enjoy the holidays and reminisce. We can talk and laugh about the difficulties we had with our Christmas shopping; about the troubles getting train, or bus, or plane reservations to get us home as soon as possible; and about what a particularly fine Christmas this one really is.

And I honestly believe this is a good Christmas. I believe most of us will look back upon this season in 1949 as a truly memorable one. America is in pretty good shape—very good shape, in fact. We're at peace, and our prospects for the future look good.

The world has quieted down a good bit this year. It's true, of course, that lasting world peace isn't a sure thing yet, but the outlook is better than it's been in a long, long time.

Christmas, the time of peace, has scarcely meant that to the world for many years. But this year, for a change, we can go back to the old Yuletide vocabulary without having it marred by earth-shaking terms like "Blitz," "Pearl Harbor," "Stalingrad," "The Battle of the Bulge," and the "cold war," all of these, and many others that have been the important words in our hearts at Christmas time for a decade or so.

So, this Christmas we can settle back and relax—relax and be pretty well satisfied that 1949 represents, by and large, a job pretty well done. And in its own way, 1949 has been something of a record breaker.

True, in other years we've produced more tanks, more machine guns, more war planes, and all the other things that played their part in making America the arsenal of democracy. I recall in that connection the time some years back when we talked of shifting our production from guns to butter.

Well, this year we turned that phrase around, and to use the same terms, we really went to town on our butter production. We're back in production for peace again, and I'd like to point out several significant instances where we broke some records this year.

Perhaps our most spectacular domestic accomplishment for 1949 was in the field of housing. As all of you know, we have lived with a serious shortage of adequate housing for years, and it may surprise you to know that until this year our record year for new home construction occurred 'way back in 1925, and it's taken us 24 years to break that record. The final figures for 1949 aren't in yet, but we're already sure that the 1925 record has been shattered.

It is almost certain now that very close to one million new, non-farm dwellings will have been put under construction between the first day of January and the last day of December 1949. The most hopeful note of all, however, is the fact that the trend in home construction is steadily upward, and if the trend continues, as we have every reason to believe it will in view of the great need for housing, I'm confident we will see well over a million new units begun during 1950.

We aren't going to lick our housing problems over night, but we're moving in the right direction. Another factor which will increase construction next year is, of course, the new public housing program authorized by the Congress last summer. That new program came along too late to have any noticeable effect on our building program in 1949, but by 1950, I think we're safe in saying that it will add another hundred thousand or so dwellings over and above the private construction—which is almost certain to increase as well.

All of this adds up to the fact that this time next year, another million or so American families will be living in brand-new, decent homes.

Another important old record has already been broken this year. Just 20 years ago, 1929, America produced the record number of almost 5,500,000 automobiles and trucks. We've come close to breaking that record twice before this year—first in 1941, and again last year, in 1948—but in neither case did we quite make the grade.

But this year, the automotive industry will smash that 20-year-old record to smithereens by turning out almost 6,250,000 cars and trucks—or about three-fourths of a million above the 1929 production level.

There is another factor of real significance behind this tremendous automobile output in that the largest increases in production were made in the less expensive models, the cars that give us a lot for our dollars in the form of sturdy, dependable, and economical transportation.

Too, we've seen the disappearance this year of the endless waiting to get anything with wheels, and what is more, we don't have to buy every gadget under the sun in order to get delivery. For a change, the prospective automobile buyer doesn't have to take the first thing that comes along, he can shop around until he gets just what he's looking for. That kind of condition is healthy, and I think everyone benefits by it.

The radio industry's big achievement this year was in the field of television. After turning out about a million TV sets in 1948, the industry set its sights on the figure of 2,000,000 sets for 1949 * * * then surprised itself and everyone else by stepping up its production goals all year long with the result that some 2,750,000 TV sets will have been manufactured this year. And the plans for next year are even bigger.

Now these big strides in some of our primary producer industries are among the outstanding ones, but they certainly don't represent all the examples we find in looking over the production records for 1949. And, of course on the other hand, there are plenty of instances where production this year is below the high points of other years.

But for the most part our producer industries are rolling along pretty close to peak levels, if not actually exceeding them.

So, as I've already said, we can settle back and be pretty well satisfied at the way 1949 has turned out. Our economy is humming along in good shape for the most part, with plenty of signs that the future looks good.

Perhaps we can be most encouraged by the fact that this free-enterprise system of ours is not only meeting the heavy burden of our domestic needs but is shouldering the load of our staggering and absolutely essential international obligations as well. Not only have we turned out nearly a million new homes, more than 6,000,000 cars and trucks, and all the other domestic requirements, but in addition, our economy is footing the bill on about $6,000,000,000 worth of Marshall plan assistance and arms for the military assistance program.

Six billion dollars a year for foreign commitments is a tremendous investment, but where the stake involved is world peace we simply can't afford to gamble. In less than 2 years we've pretty well dampened down the fears that a cold war might, at a moment's notice, become a shooting war. The concerted efforts during the last 2 years of the western democracies have stopped the advance of communism in Europe, and we can be proud that our American contributions to those efforts have made us a principal architect of world peace.

We can be proud, too, that the American economy this year came sailing through what the gloomy prophets of last spring were heralding as the next depression.

Yes; we can be satisfied—quite satisfied. But there is a big difference between satisfaction and smugness.

We can't be smug. Not everything in this old world of ours has been patched up properly. There are still plenty of trouble spots, plenty of instances where the machinery of our national and international life isn't operating as smoothly as the machinery should. We can be satisfied, I think, that the steps we've taken thus far to oil the machinery or to remodel it are proving out to be steps in the right direction, and most indications show pretty clearly that our progress to date has been basically sound.

Some of our trouble spots are rough to handle, but we're going after them in a realistic fashion. Right here in America, on this very day, there are, I regret to say self-respecting, capable, dignified, and conscientious people who are not at work, and many of them haven't been able to find work for some time. Still worse, there are a great many who haven't been able to provide for themselves and their families the kind of livelihood we like to regard as the American standard of living.

Some of these Americans are Pennsylvanians—our neighbors, living in our communities. It is frequently a vexing problem to find opportunities for these people to work and earn their way in order that they, and their families, may live decently.

There are perhaps three and one-fourth million people unemployed, as compared to about 60,000,000 who are at work. This unemployment is spotty; it's concentrated in particular communities, and in some of those communities it has had an almost paralyzing effect on the life of the entire community.

The important point, of course, is that whatever may be the reason for poverty, insecurity, and unhappiness, the problem of doing away with fear and insecurity is a national problem, and it is being approached as such. As a Nation, we have no intention of sitting idly by. Unemployment is eradicated by continuing to expand our economy through the encouragement of private initiative buttressed by affirmative Government cooperation. We are determined in our efforts to keep our economy expanding, and the results show that we're getting places.

Elsewhere in the world today there are other trouble spots. On this day there are hundreds of millions of people who, fettered by vicious dictatorships, are unable to think freely, act freely, and worship freely. The precious freedoms which we in America regard as so essential in our way of life are denied the victims of totalitarian regimes.

These trouble spots mean not only the oppression of human beings in far away places, but they exist as stark threats to the democracy under which we in the United States live, and in which we believe.

So long as we keep our Nation healthy, so long as we are capable and willing to undertake our responsibilities of world leadership in the cause of liberty and peace, I have no fear of the future.

America is setting for the world the lesson of the good example. With a scant 7 percent of the world's population, we are responsible for about half of the total industrial production, and our margin of productivity is increasing steadily. Without being smug about it at all, we do represent an example which other nations wish to follow. The truth about America is a persuasive truth that is permeating all corners of the world. No iron curtain can keep it out, and the truth

is ultimately capable of corroding away the most impervious of curtains, iron or otherwise. By continuing our example, and by continuing our good works toward world peace, a lasting kind of world peace, we will surely wear away the barriers to full understanding and freedom throughout the world.

It is a slow job, but we're making steady progress. We are dedicated to that task, the task of giving peace its true meaning, the meaning intended by the Prince of Peace in that holy era so long ago, and we will succeed.

And so we Americans do have cause for rejoicing during this blessed season of 1949.

A merry Christmas and the happiest of New Years to you all.

Liquor and Free Speech

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Liquor and Free Speech," published in the Christian Science Monitor of January 14, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LIQUOR AND FREE SPEECH

A determined audience packed the big Senate caucus room to overflowing the other day, in support of a bill to ban interstate transmission of alcoholic beverage advertising. A duplicate of the Capper bill, for which that Senator worked so earnestly while in Congress has just been introduced by Senator WILLIAM LANGER.

Here, perhaps, is the most promising single weapon for attacking the liquor evil through legislation. For it strikes at the multimillion-dollar efforts of the liquor industry to expand the market for the very product which lies at the root of that evil.

Spokesmen in behalf of that industry have contended before, and doubtless will contend again, that since the manufacture and sale of alcoholic beverages is lawful, there is an accompanying right to use any means to merchandise it that are open to other businesses. That contention is not valid.

Liquor is a tolerated product, as the universal practice of licensing attests. It is already controlled because it is dangerous. And society has a clear right to control it further in the public interest—as it forbids indiscriminate merchandising of firearms and narcotics.

Friends of the industry have claimed before, and doubtless will claim again, that banning liquor advertising would violate the right of free speech. It would not.

Anyone and everyone, including the liquor industry itself, would continue to have the right to speak freely through any medium he chooses to influence public policy in his behalf.

And that is what free speech means. It does not mean that there is an inalienable right to persuade boys to take up pistol toting, teen agers to try marijuana—or youngsters to begin on beer, or even sober, workaday citizens to acquire "distinction" through the social drinking of branded whisky.

The Pine Tree

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. PEPPER. Mr. President, the pine tree is extremely important to the southeastern area of the United States, especially in my section of the country. On Pine Festival Day, at Macclenny, Fla., a very attractive young student in high school gave a very magnificent dissertation on the pine tree and its importance and possibilities to Baker County. I ask unanimous consent that a letter from this young lady, Miss Jackie Douberly, together with the excellent discourse which she delivered on that occasion, be inserted in the Appendix of the RECORD.

There being no objection, the letter and essay were ordered to be printed in the RECORD, as follows:

MACCLENNY, FLA., *January 3, 1950.*

Senator CLAUDE PEPPER,
Washington, D. C.

DEAR SENATOR PEPPER: Enclosed you will find my essay, which I read on Pine Festival Day, here in Macclenny. I hope I have not waited too late to send it to you.

I cannot tell you how glad I was when you told me that it would probably be put in the CONGRESSIONAL RECORD. I hope I have not waited too long for you to do so.

Please, let me know if it was put in the CONGRESSIONAL RECORD.

Thanks, for making me feel so wonderful.

Sincerely yours,

JACKIE DOUBERLY.

THE PINE TREE: ITS IMPORTANCE AND POSSIBILITIES TO BAKER COUNTY

Pine, the name of a family of cone-bearing evergreen trees, distinguished as the oldest living trees that have descended from the forests of geological time. Within this great family, which includes larches, spruces, hemlocks, firs, and others, is the genus Pinus, made up of 80 different species. It is the trees of this genus that we usually have in mind when we speak of the pines.

The pines may be distinguished from the rest of the cone bearing trees by the arrangement of their needles; these are borne singly or in groups of two to five, and have paper-like sheaths around their bases. The pines called soft, because of their soft wood, shed these sheaths when the needles reach full growth, but the resinous pitch pines keep them until the leaves fall. While the trunks are straight and tall, sometimes reaching 250 feet, the shapes of the trees vary from round to pyramidal; the lengths of the cones range from 1 to 18 inches or more. Although the pines thrive in almost any soil and place, they prefer sandy uplands, and can live but a short time in unusually smoky cities, where, it is believed, the gases choke them. To the pine genus belong some of the world's most important timber trees; many species, moreover, are valued for ornamental purposes.

Foremost among all the pines is the white pine. The wood of this pine is soft but compact, straight-grained and easily worked, and takes a fine polish. The bark yields a sap that is used in cough mixtures.

The Georgia, yellow, southern, or long-leaf pine, most important and widely spread of southern timber trees, ranking next to the white pine, may be recognized by its orange-brown branches, large cones, and needles more than a foot long. From the needles is obtained an oil much like turpentine, and a fiber used for making bagging and for stuffing pillows. The long-leaf pine is valuable, not because its wood is easily worked, but because it is hard and strong.

Naval stores, which include the gathering of turpentine and tar, is of great importance to Baker County. Naval stores are produced from slash and long-leaf pines. When these trees are wounded or chipped, they exude a resinous gum to aid in healing the scar and to prevent insect attack. Man has taken advantage of this and systematically chips the trees and collects the gum by means of cups and gutters. Every 2 or 4 weeks, except during the winter months, the gum which has flowed into the cup is collected and taken to a still. At the still, the gum is distilled into turpentine and rosin.

The long-leaf and slash pines are referred to as dual-purpose trees because after being worked out for naval stores they may be cut into sawlogs, poles, pulpwood, and other forest products.

The first naval stores sale on a national forest was made on the Chactawhatchee National Forest in 1910. Since then better practices and more efficient management of lands for naval stores production have been developed on the national forests and elsewhere, especially on the Osceola National Forest. This forest with a gross area of 161,813 acres, is located in northeastern Florida in Columbia and Baker Counties, 12 miles south of the Georgia line. The Suwanee River, made famous by song and story, flows within 2 miles of its western boundary, and the St. Marys River within the same distance of its eastern boundary. The Old Spanish Trail, US 90, and the Seaboard Air Line railroad run along the southern boundary.

The entire forest is extremely flat, and the area is dotted with numerous small ponds and swamps where the soil is covered with water varying in depth from a few inches to several feet. Long-leaf and slash pine grow on the higher areas, and with adequate protection from fire the pine reproduction has become well established. Slash pine and cypress predominate in the shallow swamps, and hardwood and cypress on the muck soil in the deep swamps. In the larger swamps are virgin stands of cypress.

The Osceola National Forest is managed primarily for naval stores and saw timber. After the trees have been worked out for turpentine, the larger trees are taken as saw timber and poles, the small trees and tops are sold as pulpwood and the turpentined butts, as fuel wood. Cypress in the large swamps is being cut as saw timber, and much of the Cypress in the ponds is being taken out as cross ties.

The forest was established primarily as a naval stores demonstration area to show that proper forest management could be practiced economically and effectively in the naval-stores belt. Because the area favors intensive management, research, and demonstration, many permanent improvements have been constructed. The most important of these are located near Olustee, 12 miles east of Lake City. Three miles east of town is Olustee guard station. Here the key fire-lookout tower and a modern equipment depot and machine shop are located, also a complete modern seed extractory which furnishes pine seed for national forest nurseries elsewhere.

At Olustee is located the naval-stores branch of the southern forest experiment station and the naval-stores laboratory of the Bureau of Chemistry and Soils. The southern forest experiment station manages 3,000 acres of the Osceola National Forest as an experimental and demonstrational

area, and conducts large-scale experiments on the management of southern pines for naval stores. The naval-stores station of the Bureau of Chemistry and Soils conducts studies to determine the most efficient methods of harvesting raw gum and distilling and refining turpentine and rosin. Many of the theories that are worked out in an experimental way by these agencies are practiced in a commercial way on the Osceola Forest. Since the establishment of the Osceola forest in 1931, it has produced revenue in excess of a quarter of a million dollars, and has increased its annual cuppage of naval stores and its sale of pulpwood, saw timber, and other forest products.

Several species of pine trees yield turpentine. Cuts are made through the bark into the wood of the tree. The crude turpentine then runs from the tree into little cavities cut for the purpose, when it can be collected as a semisolid substance. About every 10 days the bark is cut at a higher point, and so the flow is kept up right through the summer.

This process goes on for a number of years, but the product is best in the first few years after the tree is tapped. The hardened turpentine is often sold as frankincence, though this product is also the gum of several other kinds of trees.

Seedlings should be planted while in a dormant condition. Trees are usually dormant from the first of December, to the first of February. Best survivals have resulted from planting before the middle of January and effort should be made to plant not later than the end of that month. Moisture conditions at the time of planting are important and, if on a dry site, planting should be done when there is some assurance of rainy weather.

Pines weakened by rot, disease, fire, grazing animals, logging, or storms offer good homes for thousands of kinds of insects, some of which do great damage. But insects can also damage trees that seem to be perfectly healthy, with no weakness noticeable.

Leaf-eating insects are easily seen, of course. Fine sawdust and sometimes sap or gum may come out of the holes that boring or girdling insects make. Bark beetles make regular wavy passages or galleries on the inner side of the bark. Under certain kinds of insect attack the leaves of the hardwoods change to their fall colors, while the softwoods turn brown or red.

Careful forest management, which prevents injuries to trees and removes those already sick or weak, helps to prevent insect attack. Tiny parasites destroy some of the insects.

Each year fires cost Baker County thousands of dollars. Yet the cash value of the wood destroyed is only a part of the damage. Burning kills some of the larger trees and weakens and slows down the growth of others. Bark beetles and diseases enter easily through the burned places. Seedlings and young trees needed to establish another forest are killed. Fire may destroy the fertile, moisture-holding litter on the forest floor, robbing trees of nourishment and perhaps starting erosion. Woods fires sometimes take human life.

It is estimated that 25 percent of forest fires are caused by smokers—persons who go into the woods for camping, hunting, and recreation. A carelessly discarded burning match, cigar butt, or glowing pipe heel may in a few moments be converted into a disastrous forest fire which, before sufficient manpower or equipment can be brought to the scene, results in a desolate, blackened wilderness of smoking ruins. If the forests of Baker County are protected from fire, they can be made to fulfill the highest objectives of forestry.

Among many tributes to the pine, the following, by Robert Service, the Canadian poet, is especially appropriate:

"On the flanks of the storm-gorged ridges our black battalions massed,
We surge in a host to the sullen coast, and we sing in the ocean blast;
From empire of sea to empire of snow, we grip our empire fast.

"To the niggard lands were we driven, 'twist desert and foes are we penned;
To us was the Northland given, ours to stronghold and defend;
Ours till the world be riven in the crash of the utter end;
Ours from the bleak beginning, through the aeons of deathlike sleep;
Ours from the shock when the naked rock was hurled from the hissing deep;
Ours through the twilight ages of weary glacier creep.

"Wind of the East, Wind of the West, wandering to and fro,
Chant your songs in our topmost boughs, that the sons of men may know
The peerless pine was the first to come, and the pine will be last to go!"

Mr. Truman's Budget

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Mr. Truman's Budget," published in the Nevada (Mo.) Daily Mail of Tuesday, January 10, 1950. I think this editorial will be of general interest, appearing as it does in an avowedly Democratic newspaper in President Truman's home State. As a Missourian, who sent the editorial to me, remarked, "It is evident that the people are beginning to think for themselves."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. TRUMAN'S BUDGET

President Truman's annual budget message to the Congress, yesterday, set most of us back a peg. His schedule of expenditures indicates that the Nation will operate again next year more than $5,000,000,000 in the red.

This, a commentator explains, is an "antideflation budget, as economists view it. The Government would be putting more money into the public's pocket than it takes out in the year starting July 1."

Somehow we had higher hopes for Mr. Truman and the Government than this antideflation gobbledygook. His message certainly wasn't antideflating. We definitely feel deflated.

To the ordinary, run-of-the-mill citizen, who sees a fair share of his pay check go to the Government each week, the fact that Uncle Sam proposes to keep on going into debt is a source of uneasiness. Although it may be sound enough theoretically, to most of us it doesn't make common sense.

One of the hardest lessons of life, and one that every person must learn if he is to get along satisfactorily, is that he must not spend more than he earns. Anything else means overdrawn bank accounts, bill collectors at the door, mortgage foreclosures, mechanics' liens and all the other things with which the improvident are daily hounded.

When a government continues to go into debt, year after year, one can't help but wonder if it is sound policy. We are not expert in taking a budget apart to see what's wrong but, from what little of the document has been exposed thus far, it would appear that there were certain expenditures recommended which might well be put off until there is more hay in the barn.

Surely we can wait for fatter days before we begin the costly experiment with a national health plan. Nor does this seem to be the time to expend $50,000,000 to "aid middle-income groups to obtain adequate housing they can afford." Nor can we justify financing out of a deficit a million-dollar program to assist capable youth to get a college education, a $30,000,000 subsidy to medical schools, nor a $290,000,000 grant to grammar and high schools.

The Government needs to share some of the facts of life with which its citizens are faced, and in the doing both will be infinitely better off.

Atomic Energy Commission Report Makes Mandatory Plans for Removal of the Seat of Government—Shocking Implications of Report Should Blast Complacency—Even in Peacetime Washington Not Geared Up To Service Million Citizens and Government Functions

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. PATMAN. Mr. Speaker, on September 16 of last year I introduced House Resolution 358 which would authorize the Rules Committee to investigate the possibility of removing the seat of Government west of the Mississippi River, preferably in the Colorado area. Public reaction to this proposal, as reflected in letters, telegrams, and newspaper editorials, indicates that it has strong national support. It is obvious that forward-looking citizens concur in the belief that while Washington may be an archeologist's dream spot it is unsuited to the demands of modern government. It is generally agreed that the time has arrived when the removal of the Capitol should at least be brought up to the blueprint stages.

A major undertaking such as the removal of the seat of Government to a more centrally-located area necessarily will require much study and planning before it can be executed. It was primarily to stimulate thought on this project, in the hope that discussion would ultimately lead to action, that I introduced my resolution.

Since I introduced this resolution certain official information has come to light which bears out the urgency of my

proposal and the irresistible logic behind it. The Atomic Energy Commission recently issued a report of its study of the effects of an atom bomb on the city of Washington. The report is enough to cause a national nightmare.

This report, which I am discussing in detail, reveals some of the shocking possibilities in the event of war. The report alone, with its terrifying implications, should be sufficient to shatter our complacency and to force plans now for any future contingency. The report makes such planning mandatory. In times of prosperity and relative security such as we now enjoy in this country, it is difficult almost repugnant, to consider the frightful possibilities contained in this report. While it is difficult for a peace-loving people such as we are to even contemplate the horrors of war, we must overcome this national inertia if we are to survive.

In cold, detached and simple prose, the Atomic Energy Commission raises disaster warnings for all of us to see. One atom bomb dropped on Washington would blow the city sky high, wreck its communications and, since it is the nerve center of the Nation, would cripple the country. That is the gist of the scientific study made by the Atomic Energy Commission. The inescapable conclusion is that the seat of Government should be removed inland or at least should be greatly decentralized.

David E. Lilienthal himself expresses grave concern for immediate action on the subject of decentralizing Government agencies in preparation for an enemy attack. Mr. Lilienthal recognizes the urgency for planning for such an event. No thinking person can brush off this warning contained in Mr. Lilienthal's letter to the National Security Resources Board, which ordered the study:

> The recent atomic explosion in Russia brings closer the time when decisions must be made on major issues of civilian defense, including the matter of dispersal out from congested urban areas of facilities such as those of Government in Washington.

Unfortunately, the Atomic Energy Commission's report has not gained the currency to which it is entitled. The implications of the report are a matter of vital national concern to all of us. Since it was given only piece-meal treatment by newspapers, I am including its full text at this point in my remarks:

THE CITY OF WASHINGTON AND AN ATOMIC-BOMB ATTACK

(Report by the staff, Division of Biology and Medicine, to the Atomic Energy Commission)

The effects of the explosion of an atomic bomb in a metropolitan area and the problems of civil defense that ensue differ in both quality and quantity from those of high-explosive bombing.

The experience of the bombed cities of England and Germany may be utilized for lessons in fighting fires, rescue of trapped personnel, and large-scale care for the wounded and homeless. Knowledge of the problems which are peculiar to an atomic-bomb attack, on the contrary, must come from a study of what occurred at Hiroshima and Nagasaki where the bombs were fused to detonate high in the air. The Japanese estimated that the heights of burst were 550 to 600 meters, that is, approximately 1,800 to 1,970 feet. While there is no assurance that an enemy might not detonate his bomb in water adjacent to a city, on the surface of the ground, or underground—each of which would bring its own unique problems—it is more likely that he would resort to an air burst because the latter would devastate a larger area on the surface of the ground. That is, a bomb equal in power to the Nagasaki bomb, if detonated in air over an American or European city, would crush or otherwise render useless the residences, as an example, over an area of 6 to 8 square miles. It presents not only a radiation hazard, but an explosive hazard beyond any blockbusters, and a fire hazard beyond any incendiaries.

From such a burst there would be four effects near the surface of the ground: (1) Blast, that is, a wave traveling with approximately the velocity of sound would engulf objects in a high pressure; (2) wind of considerable velocity would follow the blast as the highly heated air near the point of detonation expanded; (3) heat traveling with the velocity of light would strike exposed objects and kindle fires; and (4) radiation would penetrate the bodies of exposed personnel. Two additional effects should be mentioned. First, from the detonation of the bomb there would result highly radioactive fission products which would rise with the cloud from the bomb to be scattered harmlessly at great distances by the air. Second, near ground zero—the point on the ground directly beneath the point of burst—the radiation would cause objects to become radioactive but at a level which, to judge by Japanese experience, would be harmless to those who entered the area on rescue missions immediately after the incident.

If an atomic bomb is exploded quite close to the ground, as at Alamagordo, there will be a small area of residual radioactivity. If a bomb is exploded in water, such as Test Baker at Bikini, there will be considerable amounts of residual radioactivity, depending upon wind, currents, tides, and the size of the body of water.

The blast and wind, which may be considered together, would crush or render unusable the ordinary load-bearing brick wall dwellings for a distance of 7,000 or 8,000 feet from ground zero, would severely damage steel mill-type buildings for a distance of 4,000 to 5,000 feet, and would cause substantial structure damage in multistory steel or reinforced concrete buildings up to distances of 2,500 feet.

Accordingly, in an instant the usually dependable telephone, telegraph, electric service, and transportation (both public and private) would cease to exist in the damaged area. Also, because of the numerous broken pipes in houses, water pressure would fall to near nothing.

In addition to the direct fires which would follow the flash heat, there would be many more which would start from broken gas and electric lines and in particular, from combustible material coming into contact with cooking and process fires. Fire-fighting equipment inside the damaged area would probably be crushed by the collapse of the firehouses and with water pressure gone the many fires would speedily merge to destroy the greater part of the crushed area.

While this is happening, what would be the fate of the people? In Japan, the number of casualties was enormous because the attacking planes were not heeded and people were caught in the open or with inadequate cover. Consequently great numbers were badly burned by the flash, many so severely that they died within a short time, or were exposed to such a level of radiation that they died. As radiation passes through the body in any considerable amount a number of tissues which are necessary for normal health are damaged. At Hiroshima and Nagasaki everyone within one-half mile not protected by earth, steel or concrete died and the incidence of radiation injury was very high up to approximately one and a quarter miles from ground zero.

With adequate warning which was heeded and adequate shelters which were occupied the casualties could be greatly reduced. Furthermore, doctors with ample medical supplies, hospital facilities, and blood banks would save many of those who were injured by blast or burns.

No one can do the enemy's thinking for him and decide what he would select as his aiming point in Washington. In addition to some purely military establishments like the Naval Gun Factory, there are three obvious targets: (1) The Pentagon, (2) the area near the Capitol which includes the Senate and House Office Buildings and the Union Station, and (3) assuming 5,000 feet as the diameter of the circle in which there would be severe damage, the area in which is located the White House, Treasury Department, Executive Office, State Department, Interior Department, Navy Department, Pan American Union, Federal Power Commission, Court of Claims, Brookings Institution, National Advisory Committee for Aeronautics, Inter-American Defense Board, American Council on Education, Carnegie Endowment for International Peace, Red Cross, Federal Works Agency, Veterans' Administration, Federal Reserve, Reconstruction Finance Corporation, and Atomic Energy Commission. Aiming accuracy being something less than perfect, it is clear that other sites on the rim of the area would also be endangered.

The 5,000-foot-diameter circle has been assumed somewhat arbitrarily. It is known from the experience in Japan that at distances of 2,500 feet from ground zero substantial modern tall buildings would suffer such damage that 10 to 15 percent of their main columns and beams would require replacement, much of their outer-wall shell would be stripped off, and they would lose their partitions and their windows. As the distances to ground zero became less the damage would become progressively greater.

Because it represents modern construction and because the data are available, the Atomic Energy Commission Building is selected as an object for study. Would it protect its population in an attack? From its plans it is found that the building has the following above its floors:

Cover above:	*Inches of concrete*
Attic floor	2½
Third floor	9½
Second floor	17½
First floor	25½
Basement	33½

The maximum thickness mentioned, that is, 32 to 34 inches, may protect against the radiation hazard from a bomb detonating overhead at a height of 1,800 feet. No one can predict the strength of an enemy's bomb. Furthermore, windows, partitions, and possibly walls would become missiles. There would be approximately 80 percent casualties and added to this an unknown number of radiation deaths. Naturally, less substantial buildings and their inhabitants would suffer much greater damage. The inevitable conclusion is that the building should be abandoned in the event of an impending attack, or well before. The predictions for AEC building are generally applicable to Government buildings in Washington.

Metropolitan business districts, in which there are great concentrations of population during working hours, are additional vulnerable areas. Shelters for these populations may be provided in basements and in the interior of lower stories of large buildings if the work is undertaken in time. However, adequate warnings must be assumed for any

shelter to be effective. Hence, dispersal is far preferable.

It must be regarded as probable that fire will spread from the outside to buildings which have been opened by blast and that, in the absence of firefighting, their contents will be destroyed. In consequence, valuable records or microfilm copies should be removed to storage vaults.

The hard fact is that a shelter system, while saving the lives of the persons who take shelter, does not guarantee the resumption of vital functions. For example, in the event of an attack upon the Atomic Energy Commission building the building would be completely destroyed and following the attack those who emerged from the shelter would be quite helpless to carry on the far-flung operations of the atomic energy program.

The alternative to the shelter system and an alternative which not only saves the lives of key personnel but also permits at the same time a continuance of the vital governmental operating functions is—dispersal. The problems which it presents, physical, financial and psychological, are obviously tremendous and beyond the scope of this paper and the authority of this agency.

Long-range community planning to place projected hospital, fire stations and other essential emergency services in properly dispersed fashion should be encouraged. Routes available for emergency evacuation should be planned. These may well provide effective fire lanes through areas now highly vulnerable.

The attractiveness of the target vanishes with dispersal of some or all of the abovementioned agencies. Scattered in the outskirts of the Washington area with distances of perhaps 2 miles between targets, the agencies would have a fair measure of security because no single one of them would be likely to warrant the expenditure of a bomb. Also, and equally important, persons who live adjacent to the original area would be less in jeopardy because the enemy would seek his target elsewhere.

From the experience at Hiroshima and Nagasaki it is clear that if an attack comes to an unwarned population the most that can be expected of them will be that the uninjured will rescue those who are trapped or injured before they are reached by fire. Because of the confusion and destruction which will follow a bomb burst, general relief must come from the outside. Washington, if attacked, would look for help—that is, for workers, supplies, and equipment—from its outlying undamaged ring and its suburban areas and from cities as distant as Baltimore, Philadelphia, and Richmond. Relief must be organized with this in view. Supplies, supplementary fire-fighting equipment and new hospitals must be kept outside vulnerable areas.

Safety will in large measure depend upon adequate warning of an attack, warning which it must be assumed will come from the radar system of the National Military Establishment. Such warning when combined with shelters for those who must stay in threatened areas, will minimize, or even eliminate, casualties. Less effective measures may result in panic, suffering, and 80,000 deaths as at Hiroshima.

Mr. Speaker, the conviction of those who have studied this problem that the seat of government should be removed west of the Mississippi River is further confirmed by the recent public statement of Secretary of Defense Johnson. His statement reveals that already plans are under way for the removal or decentralization of the three branches of the armed forces in anticipation of an enemy attack. His statement said:

Recognizing the fact that it is not beyond the bounds of possibility for Washington to be the target of a devastating or damaging attack, and that the seat of government might have to be moved as a result, it follows that plans should be prepared to cover this contingency. Such plans are in the course of preparation.

Specifically, these plans include the movement of the three service elements of the Department of Defense to other locations and the designation of successors to military command.

DISTRICT OF COLUMBIA OVERGROWN WHISTLE STOP CRUSHED IN JAM OF TWENTIETH-CENTURY PROGRESS—ITS HORSE-AND-BUGGY STRUCTURE NOT SUITED FOR SPEED AND EFFICIENCY OF FORWARD MARCH OF ATOMIC ERA

Even in peacetime the seat of government should be removed from Washington. The District of Columbia is an overgrown whistle stop. It is not geared up to serve the ordinary needs of its million residents. It has passed its absorptive capacity for people, homes, office buildings, and apartments.

In 25 years the town has built only one hotel of major importance. The city, supposed to reflect the glory and power and culture of a free people selected by the Creator to receive the richest blessings in all history, does not even have a legitimate theater. The town is a national disgrace to the dignity of a great nation.

In establishing the village in 1800 as the seat of government, officials never dreamed of the march of events that would turn the muggy marshland into a swollen metropolis teeming with automobiles that drag along at a snail's pace during rush hours. Because of this hardening of traffic arteries, which borders on paralysis, it often requires 40 minutes to traverse 7 miles in a straight line.

Washington, the horse-and-buggy town, cannot keep step with the swift pace of the atomic era. It has outlived its usefulness in peacetime and constitutes a threat to our national security in wartime.

The time has arrived for a serious study of the proposal to remove the seat of government to a more centrally located area. I trust that the Rules Committee will see fit to adopt my resolution without further delay.

At this point in my remarks I wish to insert an editorial on the subject from the Nevada (Mo.) Herald:

A NEW CAPITAL

Recently Congressman WRIGHT PATMAN, of Texas, suggested that the Nation's Capital should be moved from Washington to some point West of the Mississippi. Either that or have a second capital established, a sort of substitute capital, as it were. In this atomic age, Washington's location on the eastern seaboard is too exposed and definitely hazardous.

Mr. PATMAN'S suggestion isn't original. Roger Babson not only made a similar suggestion several years back but actually did move some of his establishments to Eureka, Kans., within what he calls the "magic circle"—an arc which takes in much of Kansas, western Missouri, Arkansas, and Oklahoma.

Of course everyone out in this part of the country will embrace the Congressman's suggestion with a view toward converting their home town into the new Nation's Capital—or substitute capital. After all, possession of the Congress, several hundred lobbyists, the Supreme Court, and a dozen or so bureaus would be a far better prize for any chamber of commerce than an egg-breaking plant that employed only a few thousand people.

We strongly suspect that Congressman PATMAN in making the suggestion had some spot in Texas already picked out for the new capital. If he didn't support such a move Texas would surely be the first State in the Nation to launch lynching proceedings.

Our neighbor city to the south, Joplin, has put in its bid for the new capital.

Says the Joplin Globe:

"Let them erect a new capital between Joplin and Webb City. While it is true that almost any point in the United States is equidistant from Russia, via the North Pole, our important official records should not be housed in a large city. Then in this district, if cold war developed so much hidden fire it threatened to burst into flame and an atomic attack was feared, the records and official operating personnel could retire to the safe and commodious underground caverns of our worked-out sheet ground mines.

"Maybe you think this is a bizarre suggestion, offered only with facetious intent, and maybe it is, but don't be too sure it won't seem 100-percent practical and desirable some day in the future."

Although we know of no Kansas towns that have made a bid for the new capital, some are sure to do so on the specious grounds that both the geographical and geodetic centers of the United States lie within the borders of Kansas. As we see it, those are about the only bases on which any Kansas town can lay much of a claim. Kansas just don't do. Although it has recently voted itself wet, liquor is still something of a novelty in the State and the cosmopolitan crowd that hovers around our Nation's Capital would find itself uncomfortable in such a new-wet environment.

Oklahoma would have to be ruled out of the picture because it is legally a dry State. Arkansas might qualify but it is too hard to get to. The only place left is Missouri.

Big cities, with their factories and war plants, can't qualify. So the choice narrows down to a smaller Missouri city and, of course, there is only one that can meet every sort of test. Needless to say, that's Nevada.

Nevada already is a cosmopolitan city. The High Lama from Tibet or the Minister of the Exchequer from Britain could walk through Nevada streets now and feel perfectly at home. The town's ability to absorb strangers, and make them feel not strange, is practically unlimited.

Nevada has railroads (at least part of the time), highways, and a big air field that could handle any number of traveling dignitaries.

The Government already owns considerable real estate in this vicinity—Camp Clark—with its own water and sewage disposal system which could be converted into the Capitol grounds on short order and a minimum of expense.

True, Nevada has no caves. We presume some could be dug if it seemed expedient. But it appears to us that the virtue of keeping Government aboveboard and on the up-and-up outweigh whatever perils are threatened by the atomic bomb.

And if the Government is really interested in this move, we presume the Nevada Country Club would let Mr. Truman bid on one of the lots out at their auction Sunday afternoon, even though the President isn't a member of the club. After all, they could afford to be generous if it meant having the White House on top of their hill.

What Is Right in the "Left"

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. HUGH D. SCOTT, JR. Mr. Speaker, an article by David Lawrence entitled "What is Right in the 'Left'" covers a subject of general interest and merits wide circulation. Under permission of the HOUSE, I submit it herewith for printing in the RECORD:

WHAT IS RIGHT IN THE "LEFT"
(By David Lawrence)

"Left wingism" was defeated in Australia and New Zealand, but not by a negative attitude on the part of the conservatives toward those good things which the "left" had brought through social welfare legislation.

To allow emotional prejudice to shape the course of a political party anywhere is to invite defeat. The Republican leaders in our own country are discussing what kind of a program or platform they should write for the coming elections. The Democratic conservatives in their primary campaigns also are discussing how to fight "left wingism." No political group in either party can make progress by assuming that the Nation does not want some of the basic principles retained which have enabled America to deal with social welfare problems during the last several decades.

When Governor Dewey, as a presidential nominee in the autumn of 1944, announced, in a speech at Portland, Oreg., that he favored the principle of Government intervention in the economic life of the country, he was promptly criticized by many conservatives in his party. They began then—and have echoed ever since—an attack on what they call me-tooism. The argument runs that the Republican candidate, who favors any activity a Democratic administration has sponsored through legislation and merely claims he can do a better job, either by amending the existing law or by better execution of the task, is simply crying "Me, too."

Yet the principle of Federal intervention in the conomic life of the country is older than the Republican Party itself. It was first pronounced by Alexander Hamilton when he and the founding fathers declared that infant industries must be protected by a tariff. The Federal Government started social security in the form of pensions and granted land to the soldiers of the Revolution. It made land grants to pioneers who headed west. It later built good roads. It helped the railroads to get land grants. It not only assisted the growth of land and water transportation through the building of bridges and the dredging of rivers and harbors but, in the Republican administration of William Howard Taft 40 years ago, it entered the express business by carrying parcel post.

The Federal Government has helped to do countless things for the farmers, from free seeds to better crop information. It even began, under a Republican Congress in the 1920's, to regulate labor-management relations on the railroads.

Federal intervention in the economic life of business and the individual is no longer vulnerable as a principle. It is rather the scope and degree and quality thereof which is debatable.

Political strategists always court defeat if they attempt to fight a battle on a battlefield favorable to their opponents. Good strategy requires a different battlefield. If the conservatives in the United States would only grant in a few words—as did the conservatives in Australia and New Zealand—that they plan to retain the good things the "left" has brought and to do them even better, it would enable the conservative strategy to be devoted 90 percent or more to the subjects on which "left wingism" is injuring social welfare.

Principal among these is the interference by "left wingism" in the individual liberty of the citizen and his family—his right to liberty and the pursuit of happiness. To dissipate the workers' dues paid to certain unions, to intimidate a worker, to threaten his family, to overturn his car at the factory gates, and inflict violence upon him when he asserts his right to work is not social welfare. It is despotism.

To permit a union boss to regulate the production of coal or any other commodity is to sanction monopoly. This is not social welfare.

To impose on the citizen such tax burdens that in the price of food and clothing and the necessities of life there are hidden imposts which cut down the net purchasing power of the worker's dollar is to bring social ill and not social good.

To allow the Federal budget to remain unbalanced and to add to the national debt at the rate of $5,000,000,000 a year is to threaten the solvency and hence the social welfare of the Nation.

The primary meaning of the word "conservative" is one who wishes to conserve. The problem of conserving America's national and individual resources presents the biggest conservation issue the Nation has ever faced.

Conservation of natural resources as against the exploiters was a big political issue of 1912 and a mark of progressivism.

Conservation of individual resources and of the precious freedoms of the indiyidual as against the exploiters is even more important today.

Failure of Peace on Earth

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter from Emil Fredrich, of Garrison, N. Dak., addressed to the editor of the Garrison (N. Dak.) Independent.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LETTERBOX

DEAR EDITOR: Christmas will come and Christmas will go and bells will toll throughout the world, peace on earth, good will toward men. Children are singing in cathedrals in all lands: Glory to God in the highest. Peace on earth, good will toward men, is one of the greatest philosophies put into a few words, which is meant for the benefit of humanity, not for 1 day, but for 365 days a year. These few words and their meaning have failed utterly. Their teaching can be put into reality by parents and educators, educating children from childhood, when the brain is fertile, love toward your neighbor and fellow man, which will bring out the beauties of life, and to abhor the wickedness and the cruelties of war.

The teaching of the great Master has failed up to the present day. Universal is the cry of peace, and in silent meditation, they come from everywhere, to meet in holy assemblage, people of all nations, whether in peace or war. What is the highest order that will bring peace to man? Surely not weapons, to destroy what the Creator of the universe has created alive.

We create pretention calling to our people, saying that we must arm and be a strong Nation, and tell them to take up arms for patriotism's sake. We make it greater than God's commandment, "Thou shalt not kill." We multiplied widows and orphans by the thousands; we have caused poverty to reign in a land of abundance, we have rained death upon helpless old men and women, small children that have harmed no one, little infants in their cradles, the most precious being in the eyes of the Creator. When the helpless looked toward the heavens, and pray to their Heavenly Father for protection, its death out of the blue skies. To the man who says there shall come a time of peace, we mock and say, "Thou fool, we have become more terrible than the beast in the forest."

Why be selfish, greedy, corrupt, and self-centered? It would be more beautiful to be pleasant, amiable, tolerant, honest, and serviceable to each other than to be mean, nasty, and dishonest in our dealings with our fellowman. That holds true to nations; we are now standing at the very threshold of a new day, for recent technological advances have wiped out all cause for selfishness which heretofore has barred the way. A little united effort and the victory is ours.

We must stop prattling the Lords Prayer like a bunch of parrots and work for it, praying fervently in our hearts, "Thy Kingdom come, Thy will be done on earth," etc. We have been deceived and been told that Mammon must reign his thousand years, as if he not already reigned far overtime, but his power is waning. It is the Creator's aim that all mankind shall be one loving family here on earth, living in peace, harmony, and comfort. Although he has found few loyal helpers, he has gone steadily forward, building to that end by teaching us the great principles upon which all human happiness must rest, altruism.

You were put here to bring this about. Man has clung to individualism and selfishness, but the Creator has continually taught him the opposite. "Love thy neighbor as thy self" fits into an individualist society just like Thou shall not kill, fits any army. Are you helping bring the Creator's kingdom on earth? What has been accomplished the last 2,000 years. Love one another has failed. Are men more tolerant today than yesterday? Do they not hate each other more than ever before? Men against men, nationality against nationality, their efforts wasted. They have spend hundreds of years, and millions of dollars in preaching, converting the heathens, teaching brotherly love. The sad part of it is, they have failed and utterly failed, not only in other countries, but right here in this great country of ours. One of the greatest inscriptions I have seen on the bulkhead of a coal bunker, inscribed by a humble coal passer, in the year of 1918. "You cannot have peace on earth, not until civilization becomes civilized, humanity humanized, christianity christianized, not until then will you have peace on earth, good will towards men." I say "Amen" to that. I do not intend to lecture on this subject, nor do I care to listen to everlasting preachings, but it sure would be a world of beauty and a paradise on earth, if there would be more action and less empty verbiage.

EMIL FREDRICH.

GARRISON, N. DAK.

I Adjure You To Watch Please Where the Illegitimate Propaganda Babies Are Being Laid and by Whom

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. O'SULLIVAN. Mr. Speaker, I want to advise, and thus I hope alert, my fellow Congressmen to a realization of the fact that the superlatively selfish reactionary political and financial alliance in our Republic has been quite busy for some time, like a rogue in the night, laying illegitimate propaganda babies upon the doorsteps of some of the unsuspecting, sleeping Americans, among said babies being the following:

First. By blaming John L. Lewis and his United Mine Workers and not the coal barons, mine owners, and operators of the Nation for causing or threatening to cause the banking or putting out of the fires in the factories and homes of America by failing, neglecting, and refusing to bargain collectively, honestly, and in good faith with Mr. Lewis and his miners, and jamming the listening posts of America with calamity howlings that the wheels of industry will stop for want of coal and the home fires of America will sputter out, until today the conjured-up cold causes the substitute teeth of some people to chatter and their aging knees to knock in sequence until you cannot distinguish any more the old clippity clop in the mule-train song from the noises these calamity howlers are making, all to the great detriment of hill-, mountain-, and plain-billy music.

Second. Seeking by deeds to retain and by words to polish and gloss over the vicious and idiotic Taft-Hartley slave-labor law, and without cause, force President Truman to invoke its foul provisions so as to make for them campaign talk for the 1950 elections.

Third. By causing certain precocious, child-minded doctors of the medical profession to wax wroth in the contention that national health insurance is socialized medicine, and that it would lead us into England's present plight, sans bombs, sans bombings, sans total war's devastating everything.

Fourth. By stirring up and fomenting religious strife in the Republic and driving a cruel wedge of discrimination into the heretofore tolerant and peaceful educational systems of the Nation by denying to poor nonoffending, impressionable children attending private and all parochial schools the duly-paid-for benefits they are entitled to, such as bus rides, free nonsectarian books, health programs, and so forth.

Fifth. By demanding restrictive alcoholic advertising legislation in an attempt to prop up the ugly, deadhead of the Republican Party's so-called noble experiment and breathe life into the putrid prohibition carcass.

Sixth. By encouraging and promoting legislative road-blocking in sundry ways including a return to the old bottle-'em-up rule of the House of Representatives Rules Committee.

Seventh. By encouraging the use of unpatriotic, gutter language in referring to the high office of the Presidency of the United States and its present incumbent, who is a real friend of the people and not an enemy of any man, woman, child, or institution, big or little, in the Republic.

Eighth. By giving encouragement, aid, and comfort to Joe Stalin and other enemies of the Republic in libeling and slandering the state of the Nation as far as the honor and integrity of its executives is concerned, and its much-desired, worth-while currency, and its financial solvency, stability, and over-all honesty of purpose and efficiency of operation.

Ninth. By encouraging the enemies of the Republic into believing that the Republic is disorganized and wastefully weak and impotent, is practically bankrupt, and thus hastening world war III with vulture No. 1.

Tenth. By attempting to divide the households of America and thus, in Hitler, Mussolini, and Stalin fashion, disunite the Nation and thus divide it in order to conquer it for themselves.

Eleventh. By carrying on a campaign of lies and attempting to convince the people that their friends are their enemies.

Twelfth. By wickedly infiltrating, for politically shameful purposes, otherwise good intentioned and respectable organizations.

Thirteenth. By claiming that the present administration, and not the greatest war in the history of the world, is responsible for the present huge public debt and unbalanced budget.

Fourteenth. By pretending that an unbalanced budget and deficit spending is new, novel, and original for the Republic and was authored by the present Democratic administration, when the truth of the matter is that the budget of the Nation has never been balanced, beginning with the administration of Calvin Coolidge, the Republican mummer, who after all had sense enough to keep his tongue from wagging potential treason.

Fifteenth. By working to build up huge monopolies and trusts and causing the free enterprise system of America to become an exclusive enterprise system for them.

Sixteenth. By attempting to pervert with money the great free press of the Nation into an unfair press and a sordid hireling of glorified gangsterism.

Seventeenth. By attempting to ruthlessly scare and frustrate people into a depression.

Eighteenth. By ignobly attempting through the circulation of falsehoods to destroy the high purpose and prestige of our country at the council tables of the other nations of the world.

Nineteenth. By spending propaganda money like drunken sailors in expectation of a return to political power so as to again enslave and debauch the people of the Nation.

Twentieth. By resisting civil-rights legislation and approving of second-class citizenships.

Twenty-first. By the coalition of evil forces to fuse the thoughts, words, and deeds of reaction into one octopus whole.

Twenty-second. By pretending to ride again with Paul Revere in the interests of freedom and the Constitution when in truth and in fact they are striving to attain economic slavery over others in violation of natural and moral law and of the United States Constitution and proper human law.

Twenty-third. By pseudo-endowment of self-created pressure-group organizations to fight public hydroelectric and other power projects of the people behind the masked face of inordinate greed and selfishness.

Twenty-fourth. By funneling money into various and sundry lobbying activities.

Twenty-fifth. By hiring persons and other entities to endeavor to lure people into following the crooked and winding ways of the financial serpent and go basely upon their ignoble bellies and not upon their stalwart feet.

Basing-Point Law Condemned by Farmers Union Herald—Cites Clash of Big Business With Farm, Labor, Co-op, and Small-Business Groups—Many Groups Aroused in Opposition to False Issue of Clarification

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. PATMAN. Mr. Speaker, the Farmers Union Herald of January 9, 1950, in a short but direct leading article on its front page, signals the danger to many groups embodied in the basing-point bill, S. 1008. The Herald says:

A head-on clash of big business versus the major farm, labor, co-op, and small-business groups has shaped up. Big business wants a basing-point clarification bill passed which, in effect, overrules the Supreme Court.

This refers to the Supreme Court decision in the Cement case on April 26, 1948, outlawing the basing-point system.

FARMERS OPPOSED TO IDENTICAL PRICES

The Farmers Union Herald article describes the basing-point system as a gentlemanly form of business monopoly. Farmers are opposed to monopoly because in the past they have been victims of monopoly in the purchase of supplies and equipment for use on the farm and in the sale of farm products. Any system of fixed prices by an industry levies its toll from every walk of life, either by direct consumer purchases or by taxes used for materials to build our great public works.

FARMERS UNION POSITION IS SOUND

The position of the Farmers Union on S. 1008, the basing-point bill up for consideration on January 20 by the Senate, is the correct one. The Farmers Union

has consistently opposed S. 1008 and predecessor bills of like nature since the beginning of this fight shortly after the Cement decision. I commend this short article to my colleagues as it concisely describes the situation. The article follows:

BASING-POINT LAW FIRST ORDER OF SENATE BUSINESS

The basing-point system—a gentlemanly form of business monopoly—may again be legalized when Congress takes up S. 1008 on January 20. Under a Supreme Court order, the basing-point system is now outlawed.

A head-on clash of big business versus the major farm, labor, co-op, and small business groups has shaped up. Big business wants a basing point clarification bill passed which, in effect, overrules the Supreme Court.

The system is used to make sure all manufacturers give uniform prices and bids on material—such as steel and cement—throughout an area. Any producer who wanted to offer bids could be sure no one else would offer less.

If it turned out that someone put in a lower bid and took the business, he was regarded as a chiseler who ought to be punished. The other companies would teach him a lesson by offering low prices in his territory, even at a loss, until he was faced with bankruptcy and decided to be good.

Thus a basing-point system is a much more civilized and gentlemanly way to set up a monopoly than the old-fashioned system. But it is just as effective.

The great cry on Capitol Hill now is going to be a demand that Congress clarify the law so everyone will know just how far he can go on the basing-point system. "This is like demanding that Congress clarify the law against murder, saying just what weapons you must not kill a man with," said spokesmen of the National Farmers Union last week.

Reception in Honor of William Warrick, of Scranton, Pa.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an excellent address delivered by Oscar J. Toye, Massachusetts department commander of the Jewish War Veterans of the United States, before a group of veteran representatives and city officials in Lynn, Mass., on the occasion of the reception which was given William Warrick, of Scranton, Pa., when he visited the widow and children of his late buddy, Maurice Goldstein, who was killed in the Battle of the Bulge in 1945:

It is a rare privilege for me to be here tonight and to bring to you the official greetings of the Department of Massachusetts Jewish War Veterans of the United States of America and to join with you in welcoming our guest and his charming wife into this great city, in a great State, of the greatest of all lands, on the eve of a great day, Mr. Warrick has come here on a great and noble mission—to pay, as he himself has described it—a long-delayed visit to the widow and children of his former buddy, and to bring to them a measure of solace. To a large degree, Mr. Warrick's visit with us tonight, as also this entire assemblage by this group, represents combined effort on our part to answer the question to the young lad of a war hero, "Why did my daddy have to die?" and to help in the solution of the Nation's No. 1 problem, internal friction. I hope that you will forgive me if I digress for a moment and inject what may seem a personal note.

To me personally, standing before you tonight breaking bread with my comrades and fellow Americans is of special significance. Tonight marks the twenty-eighth anniversary of my stepping onto American soil for the first time. My first meal in this blessed land of ours was a traditional Thanksgiving dinner, such as the one we are having tonight.

I left Europe 28 years a week ago, and came to this land 28 years ago tonight. I left behind me a country, a continent, which was a malignant sea of hate. I came to a land where love and brotherhood was the order of the day. It was then, as it is now, a haven and refuge for many people. And as I look back and trace the happenings in the world during these past 28 years, and as I draw in my mind a quick comparison between the many countries of Europe, each of them set against one another and the peoples within the borders of each of them divided among themselves, and the unity that exists among our people, I cannot help but see where that sea of hate in Europe has engulfed and drowned millions of its people, and the countries have gone from bad to worse; while our country has been going forward all the time and has since become the hope of the world. If you will accept the benefit of thinking by one who has spent the first part of his life in the Old World, and the major part of his mature years in the New World, then I am sure you will agree with me that the reason for the big gap that exists between the conditions in the two worlds is to be found in the two words "hate" and "love."

Where hate creeps in, no matter in what small doses, division follows. Internal harmony suffers, the structure weakens, and collapse is the inevitable result. We must be alert to learn from the bitter lessons of the Old World, and make the elimination of group hatred and the substitution for it of love and respect as the first order of business on the agenda of every American. We must reject and combat the false teachings of the Old World which have been making inroads into our way of life during the past decade. This gathering represents a milestone in the history of our people. We have reached a point in the life of our Nation where we find that we have all too long delayed our program of house cleaning. We should embark on it now, not only to secure ourselves by preserving harmony in our land, not only to perpetuate and preserve a way of life for which men like Maurice Goldstein gave their lives, and men like William Warrick gave so much, but also to abide by the teachings of Christianity and Judaism which command us to "scorch the bad from our midst."

This program of house cleaning could begin in nearly any city or town in our land. That it began in Lynn, Mass., is no reason for any aspersions on this cosmopolitan city.

On the contrary, I do not share the opinion of some of the people of this city that the Goldstein incident puts our city here in bad light in the eyes of the Nation. Which of the cities and towns here in this State or in any State in the Union can claim immunity from the disease of hatred and bigotry, so that it might lie in the mouths of its people to take issue with us here. I submit to you, my friends, that the people of the city of Lynn are at this moment writing a golden page in the history of our Nation. They will be recorded to the credit side of the history of our people as having had the courage to ask the question which was on the lips and in the hearts of millions of people in our land, but which was not asked, much less was the answer given. The question in our language would probably be, "How long will we continue to tolerate the bigot in our midst; how long will we permit the daily desecration of the principles for which the flower of our people gave their lives; how much longer will we delay housecleaning?" The Goldstein lad, having received an unmerited beating for no other reason than he was the son of an American who chose to abide by the faith of his fathers, a Jew, asked the question in much simpler but deeply rooted question, "Why did my daddy have to die?"

The press of this country has quoted our guest as saying that the incident has impelled him to pay a long-delayed visit to the widow of his buddy. I am very much intrigued by the phrase "long delayed." Is that not characteristic of our people, and of our country. Here is a fine man, who for several years harbored in him a longing, a desire to do something nice, something noble. We are a busy people, we are a hard-working people; a good portion of the time we are busy carrying on our backs the people of Europe, feeding them and pulling their chestnuts out of the fires, and we have not the time to do the things that are most dear to us. Then something comes along and shocks us into action. That is what happened to Mr. Warrick. When he heard of the beating administered to the son of his buddy, whom he saw dying for the American way of life, he could not tolerate his postponement any longer. He is here tonight joining with us in some housecleaning. The same, my friends, is true of our entire country. This incident has shocked the Nation, the American people are doing a bit of extra thinking and self-searching, and that means, we are going to do some long-delayed housecleaning, and that means we are moving forward along the lines of the principles for which our men and women gave their lives.

HOW MUCH OF HATRED AND BIGOTRY?

You are going to tell me perhaps that we are making too much of an issue of an isolated incident that has happened so many times, and perhaps happened to some of you in your young days, and you are going to ask me, "How much of bigotry and hatred between groups in this country is there? How serious is it?" I am afraid that I cannot answer you the first part of your question. But I can attempt to tell you how serious the existence of any of it is to our security, to our reputation, and to the daily well-being of ourselves and our children.

PULLORUM CLEAN

I come from a family where there are a number of individuals engaged in farming. Two of my brothers run one of the largest turkey farms in Middlesex County. My uncle operates one of the big farms in Norfolk County. Now I am not trying to canvass any of your business; it would be late in the day to do it, especially after you have already had your dinner. But I want you to bear with me while I attempt to answer your question, "How serious any measure of bigotry is."

For a number of years I have watched State inspectors coming to the farm of my uncle and my brothers, at their invitation, and take blood tests from each and every one of some 6,000 birds. Finally I heard them rejoice in the fact that their stocks were declared by the State to be "Pullorum clean." I heard so much of that word "pullorum," that I decided to betray my ignorance and to inquire.

I said to my brother, "What is this business 'pullorum,' that you talk so much about it." "Why, that is a disease of the blood stream," came the answer. "It gives you a bad repu-

tation, people refuse to deal with you, and any morning, you might get up and find your entire flock succumbed to the disease. You are never certain." Having become interested, I proceeded to ask him, "Well, do you want to tell me that all these years until now, all of your 6,000 birds were pullorum-affected?" In answer, I received one of those amazed and inquiring looks, and after a moment of silence the answer came, "No, only perhaps about 15 or 20 birds in the entire flock were diseased." "And is that so serious?" I inquired. "Very serious," was the answer. "Permitted to remain, the entire flock would become infected, the blood stream of every bird might become diseased, and I would lose my entire business, my whole life savings." Buyers would shy away from him, he would lose his credit and standing. Because of that, he is going through annually a process of testing and checking at great expense, and painstaking effort. "But," he says, "it pays big dividends." He is in a healthy state; he has a sense of security. He enjoys a good reputation; he is making money, and he is happy. His stock is pullorum clean.

My friends, bigotry, the practice and the teaching of hate on account of race, creed, color, or national origin, is a disease of the blood stream. It is the pullorum of the human race, and if permitted to go unabated, if not checked at its source, we are endangering the well-being of our entire people, our national security, and the future of our children. We shall leave them an inheritance of hate, which they may not survive.

I hope that the mother of this young lad will forgive me for what I am about to say. I know she is an understanding person. At this time, I am not concerned with the beating that her son received at the hands of youngsters, by whatever description we want to call them. Young Larry will soon forget this, if he has not already. I will go a step further; though here I may be going on thin ice, and I will say to you that for the time being, I am not too much concerned by the fact that he was beaten by the youngsters for no apparent reason except that he was called a Jew while being beaten, though that is very serious. I submit to you that he was assaulted and insulted by youngsters. We can retrain these youngsters to our way of thinking and understanding, which is the American way.

But I am gravely concerned, and so should you and so should every American be concerned, about another phase of this matter. I want to know where did these boys learn that you must beat Jews because they are Jews. I want to trace that to its source and give it a thorough cleaning there. I want to find those individuals who are undermining our youth, who are disseminating imported un-American, un-Christian doctrines in our midst, and deal with them as befits a free, democratic people. I want to get at that disease-spreading human pullorum, at its source, and check it before it is too late. We have made a good start.

Last week, following the incident, I called at the home of Mrs. Goldstein and presented young Larry with a volume entitled "Jews in American Wars." I told him that there he would find many stories which will parallel the heroic story of his dad, and there he would "find part of the answer" to his question. I turned over to his mother a letter which I addressed to her son, requesting Mrs. Goldstein to let him read it when she thought her son was mature enough to understand it. But I want to tell one or two of the things that I told Larry, and then I will conclude.

First, I cautioned Larry against the fixation that his father alone died for his country. I informed him that more than 300,000 American men and women died during World War II for the American way of life; that 18,000,000 more Americans were in uniform ready to die; and if 18,000,000 more Americans had been asked to die, they would have gone. It is our America. All of us will defend it and its institutions in every generation, even as his father and Mr. Warrick did.

Secondly, I cautioned him against the belief that he was assaulted by Christian kids. I told him that Christian kids do not beat Jews. That Christianity like Judaism teaches love, respect, and dignity, and I told him that even though these kids may be of Christian parentage, the moment they beat him because of the fact that he is a Jew they took themselves out of the Christian faith, or any religion practiced in our land.

My friends, I would like to go one step further tonight. The word "America" has long since ceased to mean just a land, just another country. To us and to the whole world it has come to mean more than that. It is a philosophy of life synonymous with Christianity and Judaism, and any person who practices the false teachings of hate, bigotry, and the monolithic doctrines of a people browbeaten into unity through uniformity is also un-American. He or she belongs to that small poisonous group of people in our midst who live in America, but are not Americans, because they don't practice America. They are our real enemies.

Let us also remember that the whole world is presently engaged in an ideological war. We must prove to the world that our way of life is the best. Our enemies will not fail to even magnify and exploit the situation to their unholy designs. Let us be ready to tell them that this is a "family situation" of which we are able to acquit ourselves honorably. But as for ourselves, and between ourselves, let us remember that the elimination of hatred and group tensions in our land is a major and serious problem, and the solution of that problem cannot be delayed with impunity. Tonight, and from now on.

Treaty of Friendship With Uruguay

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. CARNAHAN. Mr. Speaker, I have been informed that the President has sent to the Senate for its consideration and for ratification, a treaty of friendship, commerce, and economic development with the Republic of Uruguay.

As the Speaker and my colleagues know, I was the chairman of the South American Study Mission of the Committee on Foreign Affairs which toured Latin America last fall. On November 23 we were fortunate to be present when the Uruguayan Foreign Minister, Dr. Charlone, and our Ambassador, Mr. Ravndal, signed the treaty in Montevideo. Accordingly, I wish to express a few thoughts with regard to Uruguay and to the treaty.

I was most favorably impressed with Uruguay and its people. They have a progressive country with one of the highest standards of living in Latin America. As a democratic nation Uruguay unquestionably ranks among the world's first. The Uruguayans are friendly and their make-up and viewpoint, while predominantly Latin, are very much like our own.

The Uruguayan economy is similar to that of our Great Plains area, for the most part. Cattle and sheep raising and the production of wheat and corn predominate. The country does, however, produce considerable fruits, wines, rice, and fresh vegetables. Since the beginning of the last war the United States has been Uruguay's best customer for wool of a high quality. Also since that time, Uruguay has obtained most of its manufactured goods and many of its raw materials from the United States.

A long period of stability, democracy, and social consciousness has allowed a progress which is very commendable. Uruguay has large meat packing plants in which United States capital has a heavy share. Virtually all the country's cement is produced by a United States owned plant. Most of the other industries are owned by Uruguayan capital which has been of sufficient amount to sustain a moderately wealthy economy and one which allows universal and free education of a high standard as well as an enviable public health system including health security benefits to the whole population.

All this has been possible in South America's smallest country. For Uruguay has only about 71,000 square miles inhabited by approximately two and a half million people. But this small country has many firsts to its credit. The friendship, commerce, and economic development treaty to which I refer is the first modern treaty of this type which the United States has signed with a Latin-American nation. It is similar to the treaty with Italy which went into effect in 1949 but is more comprehensive. Additional features are intended for the most part to encourage technical collaboration for the economic development which is heralded in the title of the treaty itself. These features are further evidence, if any is required, that the days of dollar diplomacy are forever gone and that the United States intends diligently to pursue a constructive course in its dealings with other nations, always with careful provision for the maintenance of mutual guaranties to safeguard legitimate private and national interests.

Mr. Speaker, I consider this treaty a highly important foundation stone in the structure we are trying to build of international interchange and reciprocal help. It is for this reason that I wish to invite your attention and that of my colleagues to the President's message to the Senate requesting its approval.

Alaska in the Budget

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the St. Louis Post-Dispatch of January 12, 1950:

ALASKA IN THE BUDGET

Alaskan appropriations of $185,000,000 which President Truman is asking for in his budget are certainly none too much. These relatively few millions will go to make the United States' most vulnerable outpost more defensible, and to create something better than poverty and privation out of its potentially rich resources.

One of the major items in the budget figure is for construction of roads and reconstruction of the Alaska Railroad. If the country should ever be called on to defend Alaska, and to defend itself through the defense of Alaska, roads will be indispensable—roads between the United States and Alaska, roads from one part of Alaska to another. Yet the highway connecting the United States and Alaska is primitive, and there are fewer highways within Alaska than in the tiny State of Delaware.

The railroad is also of critical strategic value, and the heavier rails, the new shops being built at Fairbanks and the terminal improvements there would be worth many times their cost in event of an emergency.

Other major items are for health, education and welfare, including the construction of hospitals, schools, electric and telephone systems, water and sewage systems. Alaska has little more than an elementary school system, and a scattered one at that. Its health problems are acute, its tuberculosis death rate shameful. In peace times these conditions are a national disgrace. In war times they could be a national debacle, for the defense of the territory can be no stronger than the people who live there, on whom defenders would have to rely for many forms of assistance and cooperation.

When the economizers get down to Alaska on the budget, they would do well to realize that the best way to use money economically at this stage of the game in Alaska is to use quite a fair amount of it. There is quite a good deal to be done.

The Coal Crisis

EXTENSION OF REMARKS
OF
HON. LOUIS E. GRAHAM
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams:

BEAVER FALLS, PA., *January 17, 1950.*
Hon. LOUIS E. GRAHAM,
House Office Building:

DEAR MR. GRAHAM: All industry in Beaver County notified today by Duquesne Light Co. that all industrial power will be shut off completely unless coal is received before Friday, January 20. Over 200 industries affected. Means complete shut-down in 90 percent of plants. Have wired an appeal to President Truman. Hope you will lend your efforts in our behalf. Imperative that we have coal.

Sincerely,
MANUFACTURERS ASSOCIATION OF BEAVER COUNTY,
C. E. MARTIN, *Secretary.*

BEAVER FALLS, PA., *January 17, 1950.*
Hon. LOUIS E. GRAHAM,
Member of Congress, Washington, D. C.:

Beaver County industries face a shut-down of electrical power effective Friday, January 20, midnight, by Duquesne Light Co., unless coal supplies are made available. The economy of Beaver County will be drastically affected by the coal situation, which has progressed beyond the emergency stage. We hereby appeal to you for assistance.

BEAVER FALLS BOARD OF TRADE,
S. E. STEWART, *Secretary.*

NEW CASTLE, PA., *January 17, 1950.*
LOUIS E. GRAHAM,
House of Representatives,
Washington, D. C.:

Coal situation in New Castle critical. Government action requested.

NEW CASTLE COAL MERCHANTS ASSOCIATION,
EARL L. MILLER, *Secretary.*

MONACA, PA., *January 17, 1950.*
Hon. LOUIS E. GRAHAM,
New House Office Building:

Have been notified by Duquesne Light, our supplier of power, that all production operations must cease Friday, twentieth, account of coal crisis. Major effect upon rubber and other enterprises using our product, zinc oxide, which is now in critically short supply, as well as those consumers of zinc metal. How much longer must the business lifeblood and millions of workers and consumers of this country be pushed around by a few big goons and several thousand small goons who practice absolute tyranny and monopoly while our legislators and the Department of Justice debate, sue, and otherwise harass so-called big business, which has an important part in maintaining our great Nation?

ST. JOSEPH LEAD CO. OF PENNSYLVANIA.
GEORGE F. WEATON.

BEAVER FALLS, PA., *January 17, 1950.*
Hon. LOUIS E. GRAHAM,
Congressional Representative From Pennsylvania, House Building, Washington, D. C.:

Is coal situation critical? Local power company advised us today they were obliged to suspend service to us midnight Friday, the twentieth, for productive use in our plant until further notice. Understand same restriction issued to other manufacturers served by Duquesne Light Co. This means shutting down our plant and laying off 300 people. We urge your immediate attention to assist in demanding a proper legal approach to stop coal-strike difficulties.

INGRAM RICHARDSON MANUFACTURING CO.,
J. F. INGRAM, *President.*

Economic Deadlock in Coal Industry

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Business Week for January 7, 1950:

STILL OVER LEWIS' BARREL

WASHINGTON DOUBTS THAT AN INJUNCTION WILL BE MUCH HELP TO COAL OPERATORS—REASON: A COURT PROBABLY WOULDN'T ACT ON THE 3-DAY WEEK, WOULD ONLY TELL LEWIS TO RESUME BARGAINING

Can the coal operators' attempt to enjoin John L. Lewis break the economic headlock he has on the industry? That has Washington wondering.

Pinned down

The consensus seems to be that the operators' charge of unfair labor practices brought before the National Labor Relations Board can't get them off the floor.

Here are the reasons:

The charges—that Lewis is refusing to bargain, that he is insisting on forcing the operators to accept an illegal contract—aren't enough. Any NLRB order or court injunction based on these charges can only tell Lewis and the union to go back to the bargaining table—and Lewis can do that without letting up on his headlock. Such an order, even if obeyed by both sides, will not result in anything but an eventual Lewis-dictated contract. Few people believe the courts can enjoin the 3-day week on the basis of unfair labor practices in bargaining proceedings.

Taft-Hartley health-welfare injunctive powers cannot be used against Lewis because the public health and welfare aren't endangered. Coal stocks above ground, coupled with the 9-million-plus tons of coal coming out of the ground each week (Business Week, December 24, 1949, p. 36) are enough to keep industrial and home-heating customers going until April. There may be a few "spot" shortages in home-heating coal, but nothing on a national scale, barring very bad weather which would slow down or stop transportation of coal. And then it would be too late to do anything.

Lewis prevailing

Few people in Washington believe that a court injunction would be issued against the 3-day week. They say that:

1. You can't make a man work—particularly when he has no contract.

2. The charges by the operators that the 3-day week is coercive are not stated in a way that makes the sin a separate issue. It's tied to bargaining.

Thus, Washington opinion (made up of pro-Lewis, pro-operator, and neutral government statisticians) points to a continuation of the deadlock in coal. Most debators won't bet on the outcome, because they can't outguess a court. But they believe that Lewis will win in the long run.

Apportionment

The economic strategy that Lewis is using was planned more than a year ago. As far back as October 1948, Lewis was thinking of spreading the work (Business Week, December 25, 1948, p. 21). Even then the bloom was coming off the coal market, both here and more particularly, abroad. With the UMW's 400,000 members spread between low-cost good-coal mines and marginal low-grade pits, a depression in coal would put the marginal operators out of business. And Lewis didn't want part of his union unemployed.

The answer had to be an apportionment scheme along the lines of the prewar Guffey coal act, which "divvied" up production of coal among the entire industry.

Here was where Lewis was in a dilemma. He couldn't think up an angle to write into a contract—and Congress was cold to another Guffey act.

Backfire

The get tough attitude of the operators—they let it be known that they wanted more work, less pay, and no royalty on tonnage—finally worked to Lewis's benefit. When the 1948 contract expired in June, Lewis was faced with the alternative of striking or knuckling under to the operators. He couldn't do either.

With the "spread-the-work" idea in the back of his mind, Lewis came up with a temporary solution—the three-day week. This spread the work. And it was not a strike, but still put pressure on the operators where it really hurt—in their pocketbooks.

The beautiful thing about the 3-day week—to Lewis—is that the only charge against it, a monopoly in labor, can't be prosecuted because the law exempts labor unions from monopoly restraint.

New twist

Meanwhile, while the country waits for the outcome of this latest version of the slow-down, a new twist on the old saw about carrying coals to Newcastle, has shown up.

This week a ship from England will unload coal at Boston. A year ago we were shipping the stuff to England. Now we are getting it back.

Predatory Government

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include therein an editorial from the New York Daily Mirror of Tuesday, January 10. This editorial refers to the slogan of my good friend and colleague the gentleman from Pennsylvania, Congressman RICH, to which slogan the House and the country might well pay attention. Either we give serious consideration to the matter of reducing Federal expenditures or our whole financial house will be in a state of collapse.

PREDATORY GOVERNMENT

The most hopeful bit of news out of Washington yesterday was simply a slogan coined by Representative ROBERT F. RICH, veteran Pennsylvania Republican, who, in the past, has been fond of asking the question most embarrassing to politicians, namely, Where are we going to get the money?

Representative RICH's slogan for this session, he told the House, is "Be nifty and thrifty in '50."

Perhaps that is no great shakes for sloganizing, but the idea is there by which we can throw the spenders out if it is only hammered home again and again.

Because taxation is the hottest issue in this country today; it burns everybody's pocket; it jeopardizes everybody's job and everybody's future.

That brings us to the most vital news from Washington yesterday—President Truman's proposed budget for the next fiscal year, starting July 1, in which he plans to spend $42,439,000,000, or $5,133,000,000 more than the Federal Government will take in.

Prorated among our 150,000,000 population, that means the Federal Government's expenses would cost $283 for every man, woman, and child in the country.

The deficit alone figures out to $34 per person.

The national debt at the end of the next fiscal year—after 2 years in which deficits have totaled more than $5,000,000,000—will stand at $263,800,000,000.

That, if divided among the 150,000,000 of us, figures out to a mortgage of about $1,700 on each of us; and the annual interest costs each of us $35.

Of course, Truman budgets are hard to understand. They are so big. They are like the Einstein theories.

But Samuel B. Pettingill, former Congressman, simplifies it in an article for the Gold Standard League. He says:

"If every one who holds life insurance cashed his policies, the amount would not run the Federal Government 1 year. If every urban home owner sold his home, the total would finance the politicians on the Potomac for 8 months. If every farmer sold his farm, equipment, and livestock, the total would run the Government for only 7 months. If every industry converted its net working capital into cash, it would last the Federal politicians less than a year."

Or, think of Government spending, in the terms used by Herbert Hoover in his famous 75th birthday speech; that—

Twenty years ago, all Government (Federal, State, and local), omitting Federal debt service, cost the average family $200 annually; today the bill is $1,300. And—

Today, the average working citizen must work 61 days for government before he can take care of his own family.

The spenders hurt you also in invisible ways.

President Truman's deficits are covered with printing press money—inflation, which drives down the value of your dollars. Your insurance, savings, Government bonds, pay off in dollars worth less than the dollars you put into them.

A $10,000 insurance policy, paid up in 1940, has lost about $4,000 in terms of what it will buy today.

We have a predatory Government, warring on its people, stealing their substance. The Republicans, this year and in 1952, should fight it out on that overwhelming issue.

NLRB Schism

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial which appeared in the Washington Post of today under the heading "NLRB schism."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NLRB SCHISM

Robert N. Denham, general counsel for the National Labor Relations Board, may have legitimate grievances against the Board, but it is difficult to see why he chose to air them before the Building Trades Employers Association in New York. It was inevitable from the very nature of the separate status that Congress gave to the general counsel in the Taft-Hartley Act that differences would arise between him and the Board. But we doubt that Congress ever contemplated the general counsel attacking the Board in public in this fashion. In our opinion, Mr. Denham has raised a serious question as to whether the present system will continue to be workable with this sort of strain upon it.

Mr. Denham's chief complaint is that the Board is misinterpreting the Taft-Hartley Act—presumably twisting it toward the grooves of the old Wagner Act. Whether or not his charge has substance is an extremely complicated question that we do not presume to discuss here. But in no event could the Board be expected to agree with the general counsel all the time. Out of 20 cases in which the courts have granted temporary injunctions while waiting for the Board to hear the testimony and decide the cases on their merits, the Board has sustained the position taken by Mr. Denham 13 times and overruled his contentions 7 times. This seems to be a fair batting average for the general counsel's office. If the Board were to agree with the general counsel in all cases, the purpose of Congress in separating the prosecuting and judging functions would obviously be flouted.

It is a distortion of facts, moreover, for Mr. Denham to say that "the courts have apparently been held by the Board to be in error in issuing injunctions at the behest of the general counsel, in cases which the board has later dismissed." The courts have issued injunctions only to prevent irreparable damage from being inflicted while the case is being disposed of on its merits. Representatives of the general counsel have repeatedly requested injunctions with the understanding that the cases were not presented to the court on their merits. For Mr. Denham to assume that the court is being overruled by the NLRB when the court never considered the merits of the case is distortion of a type that a public servant should not indulge in. Of course, there is no way in which the NLRB can overrule a court after the court has heard a case on its merits.

More serious is the fact that when appeals from the Board's decision are carried to the courts, the Board must be represented by the general counsel. The general counsel has now said in public that he thinks the position taken by the Board in numerous cases about to go to the courts is wrong. In effect he has invited employers dissatisfied with the Board's rulings to appeal to the courts, knowing that he himself will represent the Board when it is challenged. How can he or his subordinates conscientiously present the Board's case before the court in these circumstances? The effect of the speech is thus to bring to light a grave weakness in the present set-up of the NLRB and to accentuate doubts as to the advisability of giving the general counsel as much power as he now has.

What Can Nazi Victims Expect?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. MULTER. Mr. Speaker, through the aid and insistence of United States authorities a law was recently adopted in western Germany to indemnify Nazi victims for their suffering and losses under the Hitler regime. While the principle is a sound one, the law unfortunately does not go far enough and the rate of compensation is far too small. Nevertheless, I think American officials in Germany who were instrumental in getting the law into effect should be congratulated:

The following is an article entitled "What Can Nazi Victims Expect?" by Murray Frank, was published in the National Jewish Monthly, in the January 1950 issue:

WHAT CAN NAZI VICTIMS EXPECT?

(By Murray Frank)

When United States High Commissioner for Germany John J. McCloy announced last

August that the American Military Government had approved the draft of an indemnification law to compensate Jewish and non-Jewish victims of Nazi Germany, the action was hailed as a just and courageous step.

Mr. McCloy unquestionably deserves the praise and gratitude which greeted his announcement. His action is evidence of the serious and fair manner in which he approached this problem, and indicates how quickly he realized the righteousness of the principle of compensating the victims of Hitlerism for their losses and for the injustices they suffered at the hands of the Nazis.

The indemnification law—its official title is "Law Concerning Redress of National Socialist Wrongs (General Claims Law)," but the designation, "General Claims Law," has been adopted in common usage—has been in the making several years. Some of its basic clauses date back to 1946, when the Restitution law was promulgated in the United States zone in Germany, but that law dealt mainly with the restitution of identifiable property, tangible or intangible.

In 1947, the combined Chiefs of Staff to the Military Government in Germany issued a directive (MGR 23-2050) which listed as one of the occupation aims the payment of compensation for bodily injuries suffered under the Nazi regime. Thus, the general claims law seeks to fill this gap.

It had been reported that important elements in AMG were opposed to the law; opposition was also reported in the State Department, as well as in the British military government, which objected to enactment of the law in the British zone. Despite this opposition, Mr. McCloy overruled the military authorities and on August 10, 1949, he approved the indemnification law.

That, in brief, is the history of the law. It now remains for the German provinces of the United States zone to formally put it into effect. Incidentally, it has since been reported that plans are under way to put the law into effect also in the British zone.

Thousands of DP's and other Nazi victims, now in the United States, Israel, and elsewhere, are presently seeking an answer to such questions as: Who is entitled to indemnity under the general claims law? How much? How does one go about collecting? How and when will it be paid? This writer has given careful study to the matter in recent weeks; he has consulted State Department officials who are working on this problem in Washington or who have been to Germany in connection with it, and he has also obtained a complete copy of the indemnification law, of which only a limited number are presently available in English translation. It is not a simple matter to go through the text of this law. It consists of 27 legal-size mimeographed pages, single spaced, of legal language.

Here it will be possible to deal only with the high lights. Despite its verbosity, the law lacks certain details pertaining to procedure and remuneration which makes it impossible to answer fully the above questions. These details are in preparation at this time and will be announced at the time the law goes into effect. It should also be emphasized that for the time being the law applies only to the United States zone; nor does it include Berlin. It is believed, however, that it will eventually be adopted by the west German federal government for the area under its jurisdiction.

The five major sections of the indemnification law are:

I. General provisions, in which are established the restitution claim, liability, assertion of the claim, and transfer.

II. Restitution cases, dealing with damage to life and limb, health and liberty, possessions and property, and damages to economic advancement.

III. Priority of restitution payments, indicating the various groups or classes of claimants and the sequence in which payments are to be made.

IV. Procedure, specifying the time limit and the prescribed form for filing claims.

V. Penalties and final provisions, enumerating causes for rejection and cancellation of claims, special decrees, and time when law becomes effective.

The most important of all is article 1, which establishes the right to indemnification. It provides that all those who were persecuted under the Nazi dictatorship, from January 30, 1933, to May 8, 1945, "because of political conviction or for racial, religious, or ideological grounds" and who suffered damage to life, health, liberty, possessions, or economic advancement, are entitled to compensation.

Claimants must show that on January 1, 1947, they had their legitimate domicile in the area now constituting the United States zone as a refugee or resident of a DP camp, or that they emigrated prior to this date, or that the victims on whose behalf they are seeking indemnification died before that date. Claims can pass on to legal heirs, such as the widow, children, or near relatives who were supported by the deceased, but such claims cannot be transferred beyond the second order, such as grandchildren.

The law recognizes as claimants not only individuals, but also institutions or unincorporated associations which previously functioned in Germany and were forced to dissolve because of political or other reasons. This means that Jewish communities are enabled to claim compensation for the destruction of their synagogues or other property. In the case of institutions or associations, however, the claimants must establish that they are the legal successors to the dissolved agency.

Where indemnification is sought in the death of a close relative, the claimant must show that the relative was killed or driven to his death at the instigation or with the approval of an agency or functionary of the Nazi regime. The law stipulates that "existence of these prerequisites is assumed in favor of the claimant, if the persecutee has died during deportation or political imprisonment or immediately thereafter," which means that relatives of those who died in the concentration camps or during deportation will have no difficulty in establishing their claims.

Compensation will be paid in the form of annuities as follows: To a widow, until her remarriage or death; to children, until the end of their sixteenth year; to relatives formerly maintained by the deceased, for the duration of their need. Claims are neither transferable nor inheritable.

Indemnification for damage to body or health will be made where the working capacity of an individual has been reduced by at least 30 percent; if the mental and physical efficiency of the claimant have not been reduced over a longer period of time, such damages will be considered as negligible.

Loss of liberty will be compensated if the claimant has been imprisoned under the Nazi regime for political, racial, or other motives, detained for investigation, kept in a concentration camp or ghetto, or assigned to a penal unit of the Nazi army. The compensation in such cases shall be at the rate of 150 deutsche marks for every month of detention. (The deutsche or west German mark was formerly worth 30 cents, but was devalued in September to 23.8 cents).

In cases of damages to possessions and property, the indemnification in each individual case cannot exceed 75,000 marks. The provincial government will determine the extent of damage and the amount of compensation.

Special taxes imposed upon those who were persecuted, either through legal or arbitrary acts by Nazi agencies or functionaries, shall be refunded in annual installments. The tax imposed on German Jews who wished to emigrate after January 30, 1933, shall be refunded up to a sum of 50,000 marks. Fines paid or exacted under pressure shall also be refunded.

Then follows a series of articles which defines damages to economic advancement as far back as 1933, provided such damage was inflicted by special laws instituted by the Nazis, such as the national citizenship law of 1935, the law excluding the Jews from the German economy in November 1938, the law on utilization of Jewish property of December 1938, etc. Damage is recognized as loss of a person's public or private service career, professional activities, trade, or business. In each case, a method for indemnification is prescribed. One or two examples will explain the point. Professionals, such as physicians, lawyers, engineers, etc., who were removed from their profession as a result of persecution measures, shall be allowed to resume practice of their profession and the necessary licenses and in some cases subsidies will be granted them. Another illustration concerns persons who have been deprived of maintenance benefits which they enjoyed prior to the rise of the Nazis and who subsequently emigrated from Germany or have even become nationals of another country. Their benefits shall be regranted them retroactively from the time of their deprivation, but the total sum is limited to 5,000 marks.

Indemnification claims will be arranged according to a system of priority, with preference given to those in the first group. Class I includes payments for medical treatment, annuities to relatives of victims who were killed, annuities to victims who lost their earning capacity, pensions to civil servants who lost their jobs due to persecution, maintenance benefits, half of the indemnification to those who lost their freedom, etc. Class II includes the balance of indemnification for loss of freedom, compensation for damages to property and possessions, fines and special taxes, payments to former civil servants and to those engaged in the professions. All other claims will come under class III.

The section dealing with procedure does not indicate sufficient details, other than to state that claims must be filed in the prescribed form not later than 1 year after enforcement of the law, except that in certain cases the time limit may be extended. A State Department official told this writer that for the time being, until further and exact procedure is announced, all applications for indemnification should be sent to United States High Commissioner McCloy at Frankfurt, with the request that it be forwarded to the appropriate agency for consideration.

So much for the law itself and its major clauses. It should be remembered that while it has been approved by the United States occupation authorities, the law has not yet become effective and that many important details remain to be worked out by the Germans themselves. The entire indemnification program will be administered by the Germans. They will determine the amount of compensation to which the Nazi victims are entitled; they will determine who is or is not entitled to indemnification, they will decide how and when to make the payments. The American authorities will have supervisory functions limited primarily to the task of seeing to it that the law remains in effect.

Payment will not be made in United States dollars, but in German marks. Although it has not yet been announced, one State Department official who had returned from Germany the day before I discussed the matter with him told me he was certain that the Germans will not permit any of the money paid out under the indemnification law to be taken out of the country, nor will it be convertible. The only possible concession may be that the German authorities may allow

the purchase of German goods for this money for shipment out of the country; otherwise the money will be deposited to the account of the claimant, who can come to Germany and spend it there.

It is difficult to say what claimants may expect to receive as compensation. Some general estimates have been mentioned, i. e., that 850,000,000 marks will be distributed, and that the average claimant will receive 70 marks per month. State Department officials were reluctant to discuss such general figures. By way of comparison, it is interesting to note that refugee authorities in Israel estimate that the damage to Jewish property destroyed or confiscated by the Nazis in Germany and the European countries which came under their domination amounted to $9,000,000,000.

The wording of many clauses is so ambiguous that interpretation of the law becomes difficult and may provide loopholes and excuses for rejecting indemnification to many claimants. In fact, it is difficult to see how any claimant can succeed in collecting his due compensation without professional advice. Furthermore, it should be remembered that execution of the law depends largely upon political developments in Germany in the years ahead. Will the law remain in effect after the occupation powers withdraw from Germany?

Weak and ineffective as the law is, its greatest weakness lies in the fact that it is limited to the area comprising the United States zone in Germany. What about the Jews and other peoples who perished in other parts of Germany? What about the millions of Jews who were exterminated by the Nazis in the crematoria and gas chambers established on Polish soil? Or in concentration camps established by the Nazis in other Europeon countries? Indemnification—if the Germans can ever really indemnify the Nazi victims for the magnitude of the crime they committed against them—should be made applicable to all victims in all countries which came under the Nazi regime. Relatively few will benefit from the law.

Another weakness is the meager compensation prescribed under the law. A concentration camp victim will be entitled to 150 marks a month or 5 marks a day, equivalent to $1.19 a day for "enjoying" the benefits of life in the hells of Nazi Germany.

The indemnification law is more of a gesture than anything else. The victims of Nazi Germany will benefit little from it. It is no atonement for the wrongs committed against the Jewish people. Yet it is important that the principle of indemnification be clearly established, and that is what the law primarily amounts to—a law in principle, in theory, but not in practice.

Reduction of Federal Spending

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter reprinted from the Oil City (Pa.) Derrick:

EDITOR, DERRICK: Remember during the war emergency the Federal Government called on certain capable individuals in private industry to head up important posts to organize and expedite the production of war matériel. As I see it, an emergency exists today which is equally as serious and just as much a threat to the well-being of our country and the continuance of what we call the American way, as war, viz, the deficit spending and waste in Washington.

The stock reply by anyone in the administration, from the President down, is "Where would you cut?" when they are urged to decrease the budget by eliminating waste, overlapping, duplication, etc., in the Federal administration. This reply is an admission of utter incompetence, in my opinion. They are spending more money than they are taking in, and they don't know how to stop.

I would respectfully suggest a plan to meet this emergency; viz, that the President appoint a special committee of, say, six or more individuals selected from the personnel of the management of the larger corporations in the United States. This committee would be given supreme authority to go to work and put the Nation's house in order. There is no doubt any of the major corporations in the country—the genius of whose management really has made America great—would be willing to allocate one of their executives as a member on such a committee, and I would also recommend that a representative be secured from the administrative department of the greatest circus on earth, whose efficiency is the wonder of the world. If it were possible to put such a scheme into action, it would be only necessary to give these men about a week to organize and then turn them loose on the Washington scene. It is reasonable to expect that results would become evident within a relatively short time and we could be sure that there would be a prompt cancellation of further research, for instance, on the Love Life of the Frog; the Government Printing Office would be reorganized on an economical basis and many of the ridiculous and uneconomical situations that the Hoover Commission report brought to light would be quickly corrected.

This idea may cause many people to smile, but it can be seriously considered and put into effect if there was a nonpolitical desire to do so. Incidentally, after this committee got down to business, the income of all transportation companies out of Washington and other places where there are Federal offices should be greatly increased. In fact, it might prove to be the greatest exodus in history.

OBSERVER.

OIL CITY, PA., *December 21, 1949.*

Prayers-for-Peace Movement

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I would like to include a proclamation issued by the mayor of the city of Newark, N. J., the Honorable Ralph A. Villani, on December 22, 1949, in connection with the Prayers-for-Peace Movement:

PROCLAMATION—PRAYERS-FOR-PEACE MOVEMENT

Whereas two frightful wars have been witnessed within our life's span, the havoc of which has remained with all its incumbent threats, circumstances, and international maladjustments and influences; and

Whereas in taking cognizance of these destructive and trying conditions, a prayers-for-peace movement came into being by way of a resolution introduced by Mr. Herve Joseph L'Heureux, Chief, Visa Division of the State Department, and adopted by the Last Man's Club, William H. Jutras Post No. 43, American Legion, at Manchester, N. H., on October 28, 1948; and

Whereas subsequently veterans' groups of all religious denominations, Americanization committee of the Army and Navy Union, units of the Gold Star Mothers and the Blue Star Mothers, Rotary Clubs, industrial and other firms, student bodies of schools and universities, religious groups of every sect, newspapers, through editorials and governmental leadership, have adopted the prayers-for-peace movement, calling for a 1-minute noonday prayer; and

Whereas we are now on the threshold of holy season, dedicated to good will and peace among all men.

Now, therefore, I, Ralph A. Villani, mayor of the city of Newark, do hereby proclaim this endeavor as prayers-for-peace movement in our city, and ask that the fullest measure of recognition by our press, radio, churches, synagogues, schools, civic, industrial, and business groups, toward the purpose of this peace movement be given. I further urge that each of us pause for 1 minute each day at noontime and offer fervent prayer for guidance toward the adjustment of ourselves to one another, to eradicate bigotry, to help us build for better understanding and pray for tranquillity to the end that we may become unified of purpose toward our chief desire—peace.

RALPH A. VILLANI,
Mayor.

Dated December 22, 1949.

Article by Congressman Vito Marcantonio, Daily Compass, January 15, 1950

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

TRUMAN CAN PASS OR KILL FEPC, SAYS MARCANTONIO

The bill to establish a Fair Employment Practices Committee can be passed by the House of Representatives next Monday.

Or it can be bottled up forever in the Rules Committee.

Whether the FEPC bill is to be passed or is to die is entirely up to President Truman.

The chips are down.

Monday is the crucial day. On that day the country will discover whether the Truman administration's devotion to civil rights is real and honest, or mere demogogy for vote-getting purposes.

The American people will discover on Monday whether the Democratic platform was a statement of the honest principles of honest men, or a hypocritical sham.

If it comes before the House, the FEPC bill will pass, probably with 50 or 60 votes to spare. I say that as one who has canvassed the situation thoroughly, as one who in 1940 introduced the first FEPC bill in history, as one whose anti-poll tax bill was passed by the House in the Seventy-eight and Seventy-ninth Congresses, as one who has lived with the problem of civil-rights legislation every day and every night for 13 years.

But the problem is to get the FEPC bill before the House.

Monday is the last day that can be done.

Whether it is done then depends upon the action of three Congressmen. They are not

Dixiecrats. They are not Republicans. They are not enemies of President Truman.

On the contrary, they are Administration stalwarts. They are the leaders of the Truman Democrats. They are the prophets of the Fair Deal.

The three men are:

SAM RAYBURN, Democrat (Texas), Speaker of the House.

ADOLPH J. SABATH, Democrat (Illinois), chairman of the Rules Committee.

JOHN LESINSKI, Democrat (Michigan), chairman of the Committee on Education and Labor.

What they do will depend on what President Truman tells them to do.

Here is the parliamentary situation:

The present Congress—the Eighty-first—passed a resolution on the first day it met, in January 1949, which took away from the Rules Committee its power to sit forever on legislation it didn't like.

The new rule provided that when a committee of the House reported out a bill, the Rules Committee had only 21 days in which to set a date for debate on that bill by the full House.

If the Rules Committee sat on a bill for more than 21 calendar days, the chairman of the committee which had originally reported out the bill had the right to bring it before the House for debate and action.

Two days of each month were set aside for this purpose, the second and fourth Mondays.

On those days—and only those days—the chairman of any committee whose bill had been bottled up in the Rules Committee for more than 21 days could rise, obtain recognition from the Speaker, and bring the bill before the House. The Speaker was required to recognize the committee chairman for such purpose.

The Committee on Education and Labor, of which Representative LESINSKI is chairman, reported out the FEPC bill during the first session of the Eighty-first Congress, last summer. The Rules Committee failed to bring it before the House in 21 days.

Chairman LESINSKI could have brought the bill out and forced a vote on it by exercising his privilege on the remaining second and fourth Mondays of the session. I urged that this be done, but the administration decision was to let it go until the second session, beginning in January 1950.

Immediately the new session convened I issued a statement to the press demanding that the FEPC bill be brought before the House at the earliest possible date, the second Monday of the month, January 9.

This was not done. Chairman LESINSKI failed to ask the Speaker for recognition.

However, he promised to seek recognition on the fourth Monday of January. That is next Monday, the twenty-third.

If the administration had permitted LESINSKI to act at the first opportunity the present dangerous situation would not exist.

After that opportunity had been allowed to pass unused a new factor entered the situation.

The Rules Committee, by a vote of 9 to 2, approved a resolution which would abolish the 21-day rule and return to the committee its power to bottle up legislation indefinitely.

That resolution, approved by the Rules Committee last Friday, was the fruit of an alliance between Republicans and reactionary southern Democrats to block civil-rights legislation.

When it comes before the House that resolution may be approved.

That will end any chance to bring the FEPC bill before the House for a vote.

The FEPC bill must therefore be brought out for action before the resolution abolishing the 21-day rule is presented to the House.

This can be done. It must be done next Monday, January 23.

It depends on the action of three men, the three administration stalwarts, the three men whom President Truman can tell what to do: Speaker RAYBURN, Representative SABATH, and Representative LESINSKI.

Here is what President Truman must do if he really wants the FEPC bill passed:

1. He must see to it that SABATH, the chairman of the Rules Committee, holds up for the full 10 days allowed by House rules the resolution abolishing the 21-day rule. After 10 legislative days from last Friday, any member of the Rules Committee can bring the resolution out for a vote. But for 10 days, until after next Monday, SABATH is perfectly within his rights in not bringing up the resolution.

2. President Truman must see to it that Lesinski, chairman of the committee which approved the FEPC bill, jumps up and seeks recognition as soon as Corgress convenes Monday.

3. President Truman must see to it that Speaker RAYBURN recognizes LESINSKI, rather than some other committee chairman seeking to bring his own committee's bill to the floor.

It is entirely discretionary with Speaker RAYBURN which committee chairman he recognizes.

As President Truman's general directing the administration's program in the House, he is responsible for carrying out the President's wishes. If the President is sincere in his protestations about civil rights, RAYBURN will recognize LESINSKI.

The President can no longer pass the buck to Congress. He can no longer blame the Republicans or the Dixiecrats for blocking civil-rights legislation. His own men now hold the key to success or failure.

Unless administration Democrat SABATH holds up the 21-day resolution until after Monday, unless administration Democrat LESINSKI seeks recognition on Monday, unless administration Democrat RAYBURN recognizes LESINSKI, the FEPC bill is doomed. And only one man will be to blame.

The country will know who that one man is.

The Upset Down Under—No. 3

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Morley Cassidy, from the Washington Evening Star for January 18, 1950:

WOMEN OF AUSTRALIA CREDITED WITH BIG PART IN LABOR DEFEAT

(The Upset Down Under—No. 3)

(By Morley Cassidy)

SYDNEY, AUSTRALIA, January 18.—"These women!" The Labor Party organizer in a South Sydney suburb shook his head gloomily as he doodled on his green desk blotter.

"I just can't figure them out," he complained. "Look what we've done for them in the last 8 years:

"We've doubled the child endowment, from 5 shillings to 10 for every child after the first one.

"We've given them a basic wage of six pounds four shillings a week. We've given them child care centers, pharmaceutical benefits, old-age and widow's pensions. We've given their husbands full employment, more leisure, and better wages than they ever got before.

"And are these women grateful? Haw! They see a chance to get an extra five shillings a week, and they go running to the other side like sheep.

"Women," he concluded sadly, "just don't think straight."

Australia's Labor Party, from top to bottom, is pondering the strange and fickle ways of women these days, as it prepares for a party executive meeting at which it will conduct a rueful post mortem into the recent election which threw it out of office.

VOTED CONTRARY TO HUSBANDS

The winners—men of the combined Liberal and Country parties—don't go quite so far in assigning credit for their sweeping victory.

But their best political brains, too, say that Australia's women did more than their share in casting the votes that reversed the tide of socialism in this part of the world.

Tens of thousands of women whose husbands voted Labor, ward workers say, marched to the polls to cast their own votes for the other side—to throw out the party that could point to an excellent war record, 4 postwar years of booming prosperity, full employment, high wages, short hours, a free health plan and an elaborate program of social benefits.

In New Zealand, the story was the same. Women, the politicians agree, outdid the men in overturning a Labor government which, in 14 years, had created the most advanced social services in the world.

Why?

Labor still wonders. In the winners' minds the explanation is simple.

"Women are realists," says Mrs. Thelma Kirkby, a dainty little housewife of Bellata, N. S. W., who did more damage than 50 wildcats to Australia's Socialists.

"The workingman's wife may not know economic terms, but she sees the difference between money wages and real wages when she does her shopping at the green grocers or the drapers."

HAD TASTE OF SOCIALISM

"She knows, as buyer for the household, that the family is worse off, not better, if wages rise 40 percent and meat and clothes and shoes rise 50 or 60 or 80.

"And when she sees her husband and the other men, working a 4-day week, or limiting their day's production, she sees a connection between this crippled production and the fact that she can't get a new stove, or new plumbing, or a home of her own.

"Australian women have had their taste of socialism, and want no more of it."

Labor's leaders don't agree with this interpretation of the women's vote. Most of the women who normally voted for Labor, and switched their vote this year, were lured, they think, by the promise of an extra five shillings a week through "child endowment."

The present law (passed, incidentally, by the Menzies Liberal Government in 1941) gives parents an allowance of 10 shillings (about $1.10) a week for each child after the first, on the theory that the basic wage is computed to provide for a husband, wife, and 1 child.

The non-Labor parties, in this election, promised to give 5 shillings for the first child as well. The Labor Government refused to match this promise, contending that it would require a revision of the basic wage rate.

But Labor may be deluding itself in thinking that this "5-shilling bribe" swung the women's vote.

POLLS SCORES OF HOUSEWIVES

I have talked since the election with scores of housewives in Australia's cities and small towns who formerly voted for Labor,

but switched this time to the Liberal or Country Parties. I asked them why.

Five out of six have the same answer, and in ringing, indignant tones.

"Why, on account of this socialization," they say. "Chifley and his bunch were out to nationalize everything. Look what they tried to do with the banks. If the high court hadn't stopped them, we wouldn't have a private bank left."

It seems strange, hearing this concern for banks from a tired-looking woman in a workingman's cottage in Sydney's Haymarket section, where the soot from Central Station begrimes the walls. She'd be one of the last, it seems, to worry about private banks.

"But this was just one step in their plans," she says belligerently. "Look what they did to the air lines.

"My husband's a taxi driver. Supposing they decide next to socialize transport? My husband would be working for the Government, for whatever they chose to pay. Oh, no! Not for me!"

Hundreds of thousands of Australian women, obviously, felt as strongly on this subject. Their bitter objections to socialization or nationalization, frequently coupled with references to communism, are only matched by their expressions of relief that the danger has been scotched.

WOMAN LED CRUSADE

It was Mrs. Kirkby and a half-dozen like-minded housewives who turned dislike into a crusade.

Mrs. Kirkby, slim, blue-eyed, and pretty, still in her 30's, the wife of a sheep rancher in New South Wales, is a bit of an amateur politician.

Australians first heard of her a few years ago when she locked words with a cabinet minister, one Mr. Tulley, in a public meeting, and in a whispery little-girl voice proved that he didn't know as much about his own department as she did.

She was immediately tagged as "Mr. Tulley's problem child."

Eighteen months ago, when the Labor government was still pressing its efforts to nationalize all banks, Mrs. Kirkby became the problem child of the whole Labor government.

She and Mrs. Crawford Vaughan, of Sydney, a leading Liberal, and four or five others decided that it was time to mobilize women's opposition to Socialist doctrines.

Firmly eschewing financial aid from any party, they organized their own Australian Women's Movement Against Socialization.

CAMPAIGNED WITH EDUCATION

"We decided first of all," says Mrs. Kirkby, in a deceptively shy whisper, "that our best weapon was simply a program of education, to show Australian women where socialism was taking them.

"We started out by educating ourselves. Then we gathered a group of about a dozen women—not politicians, but women whom other women would want to listen to.

"One was Marion Doughtery, who won her title in the Royal Red Cross for her work in charge of the sick at Belsen prison camp.

"Another was Helina Kozuvowska, whose brother was head of the Polish resistance movement. She rescued two Australian aviators during the war, taught them Polish, and found places for them in the Polish underground. After the war they helped bring her here.

"Another was Jennie Broad, a famous English ferry pilot. Another, Nancy Bird, an Australian flier famous for piloting bush nurses through our far West.

"All of them, like us, started learning about socialism from its beginning. We studied Karl Marx and Engels, the works of the Fabian Socialists, and all the rest.

"At our first public meeting, in Sydney, we had 2,400 people. But from then on we concentrated on little meetings in private homes."

NEW BRANCHES ORGANIZED

"We promised to supply a speaker for anyone who would open her home and get together a group of 20 or 30 women. Invariably, each meeting resulted in the organization of a new branch.

"We managed to send a speaker to every meeting.

"Our speakers proved, out of Labor's own words, where it planned to take us. We showed the connection between socialistic planning and the shortage of bricks, and housing crisis.

"Our meetings got bigger, and we had to use public halls. Then the Communists began to take notice. They'd crowd in first, get seats near the microphones, and break up our meetings with their heckling or chants of 'We Want Peace.'

"We learned to deal with them. We kept the doors closed until our own people had all the seats near the microphones.

"We were determined not to get 'tagged' as a political organization, for we had many labor women among our workers—women who could see that their gains had been illusory.

"So we wouldn't take a sixpence from any party. Our branches supported themselves with bazaars and cake sales and what we call 'American teas'—only you probably never heard of them—where everyone brings a gift and buys a gift."

AMAZED AT SUPPORT

"We were amazed at the support we found. "I remember one instance well. It was a dreadfully poor little house in a workingman's quarter, and I thought it seemed almost useless to stop and try to point out the danger of nationalizing banks.

"The woman who came to the door was middle-aged, weary, with a baby in her arms and another tugging at her skirts. I began explaining my purpose, when she interrupted me.

"She said, 'Too right, luv, I've 'ad this mob.' In American, that would be, 'You bet, dearie, I've had my fill of this bunch.'"

Labor's chieftains, of course, can't believe that so many women could be so indignant over such a heavy subject as bank nationalization. They prefer to think it was that five-shilling bonus.

They may be right, or they may be wrong. But they're out.

Letter Addressed to Son of Veteran Killed in Battle of the Bulge

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein copy of letter addressed to Master Laurence Goldstein, of Lynn, Mass., by Oscar J. Toye, Massachusetts Department commander of the Jewish War Veterans of the United States of America. Master Goldstein's father made the supreme sacrifice during the Battle of the Bulge in 1945.

The letter follows:

DEPARTMENT OF MASSACHUSETTS,
JEWISH WAR VETERANS OF THE
UNITED STATES OF AMERICA,
Boston, Mass., November 17, 1949.

Master LAURENCE GOLDSTEIN,
Lynn, Mass.

MY DEAR SON: You have received an undeserved beating at the hands of ill-bred and misinformed youngsters who were brought up in an unwholesome atmosphere, perhaps by un-American parents. This, my boy, has made you think like a man three or four times your age. You have asked a very basic and troublesome question. You asked it like a mature man and you deserve being answered like a grown man.

I know, my son, that you did not complain for your physical injury as much as you did for the injury to your dignity as a child of God, as an American, and as a son of a war hero.

Your question, "Why did my daddy have to die?" cannot be answered in words, but it is being answered every day by good and decent people of this country in every nook and corner; it is being answered by Americans of every color, age, and religious conviction. Your question is being answered every day of the year by organizations such as the Jewish War Veterans of the United States, the American Legion, the VFW, the AMVETS, the Marine Corps League, and others, of whom your father is an honorary member. Your question is being answered, not in words, not in speeches, but with small and big deeds; deeds that preserve and perpetuate the good things and institutions for which your father, as one of the 300,000 Americans, died.

Last Friday, as you know, people all over the country observed Armistice Day. Thousands of former servicemen and women marched in parades. Millions of Americans watched the parades. These same people and millions more filled the synagogues and churches throughout the country. Jews, Christians, whites, yellows, and blacks all mingled together just like during the wars. We prayed and we paid tribute to your father and to thousands of other American heroes. The President of the United States, on that day, delivered a great historic address, explaining, in part, why your father had to die.

But more important than that, every one of us on that day once more rededicated himself to do something in memory of the war heroes. On that day all of us good Americans resolved to do something good so that we may deserve to enjoy the freedoms which your father defended heroically and for which he died.

It so happened that last Friday, my boy, I was talking to several hundred people who filled a synagogue in Dorchester and just like yourself, I too, a man four times your age, asked that question. I asked it somewhat different. I asked the people who were there, what right one group of human beings in this country has to ask another group to go to war and to die. There is but one answer to it, my boy. The answer is that all of us fought to protect something that was going to be taken away from us and then life would become worthless. It wasn't only your father who was asked to fight but 18,000,000 other Americans went to fight and if 18,000,000 more had been asked, they too would have gone to fight. But all of us, including your dad, went to fight for one thing and one thing only, and that is the American way of life.

Under the American way of life, people make no distinction between Jew, Christian, white, colored, born American or immigrant. Under the American way of life, we have a right to pray to God as we wish and we have a right to express our minds as freely as we want. Under the American way of life, we strive for self-discipline and for greater

freedoms. Had your father not gone to war, had he and the others not died, those freedoms would have been taken away from us as they were taken away from the people of Europe and you and I would surely have been dead today or at best, we would have been slaves.

Your father didn't want that; he wanted his sons and all American sons, regardless of race or creed to live and grow as free men. Your life and the life of future generations of Americans was to your father dearer than his own life. That is why your father died and that is what makes him a hero to all Americans.

You have a right to say to yourself that every time you see an American do a good deed, he is doing it in tribute to and in memory of your father. Every time someone does like what the kids did to you, they are desecrating the memory of American heroes and you have a right to stop them. But in stopping them, you must live up to the tradition and heritage of your father. You must try to do it with persuasion, with love and kindness, with teaching and arguing, but with force only when forced to do so. You are a descendant of the Maccabeans. You will never run away from bullies.

Now there is one more thing I should like to say to you. I am very much afraid that because of these boys who beat you and called you "Jew," you might be led to believe that you were assaulted by Christians. I want you to say to yourself that these boys were not Christians. Christians do not hate others or beat them. The Christian religion, like our own religion, teaches love for one another. I do not care of what parentage these boys are or to what church they go. When they did what they did to you, they took themselves out of the Christian faith and out of any other religion, and they have no further right to call themselves Christians. I venture to say to you, my boy, that these fellows are not even of Christian parentage. Had their parents been Christians, they would have attended to their business of bringing up their children in the spirit of love and respect for other human beings, regardless of faith.

Do not, as you might be tempted, pass judgment on these kids or on other Christian kids. Christians do not hate Jews. It isn't Christians, it is nonreligious people that hate. Christianity like Judiasm teaches to love, to help, and to share.

Another thing, it is very natural for you, as it would be for me, a man four times your age, to want to see those kids punished. You would want to hear a judge say so. Ask yourself what good would it do and would it be a tribute to your father. You may not know it but your mature sense and courage of conviction has already set in motion the greatest judging machinery in this country. It is even higher than the Supreme Court of the United States. You have aroused the indignation of the people of the United States. Your question has made them think hard and whenever the American people think hard and act much good comes out. A hundred bias laws passed by legislatures and a thousand judgments pronounced by courts will not accomplish as much good for this country as you have through your action. A million dollars could not have built a greater monument for the 300,000 men and women heroes of our country, of which your father is one, than your courageous action.

I am herewith sending you a book entitled "Jews in American Wars"; also one for your younger brother. This book was written in a hurry and does not contain all the stories of all the heroic men and women of our faith in their fight for this country. But somewhere in that book you will find a story which is just like your father's. When you are through reading this book, I am sure that sensible a boy as you are you will gain an added sense of faith in our great country and in the good people that inhabit it.

Your job and mine is to see to it that the few people who don't understand America don't get hold of it and spoil it.

Be humble, brave, and courageous.

Sincerely yours,

OSCAR J. TOYE,
Department Commander.

Hunting for a Coal Crisis

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Business Week for January 14, 1950:

HUNTING FOR A COAL CRISIS

Need to find a weapon against John L. Lewis, more than any real coal shortage, accounts for Government moves in situation created by 3-day week in the mines.

It's easy to be bewildered over coal this week.

On the one hand you find such signs of serious trouble as these: An Interstate Commerce Commission order directing most of the country's railroad lines to cut service on coal-burning passenger runs by 25 percent; and preparations in Washington for a court injunction against John L. Lewis' United Mine Workers.

PARADOX

All that has the sound of crisis. But against it you can set these facts: Nowhere in the country is anyone actually out of coal. A year ago, in another warm January, most of the mines were working 2- and 3-day weeks for strictly market reasons. And today—on the statistics—coal production matches consumption.

FIGURES

Weekly production on the 3-day week ranges from 8,500,000 tons to a little over 9,000,000 tons as compared with a normal 12,000,000 on a 5-day week. In November, the most recent figures, consumption totaled 34,600,000 tons.

Consumption may have been a little higher in December, but stocks were in good shape. On December 1, industrial stocks averaged 51 days, ranging from 24 days for the railroads to 87 for electric utilities. Retail dealers had 5 days' supply, normal for the season. Over-all, the country had 39 days' supply above ground.

WHY CUT SERVICE?

The railroads had the lowest industrial stocks but plenty of coal. Weeks ago they were empowered to seize coal cars at the mines. The limitation on service was a conservation measure. ICC Chairman Johnson told Business Week, "I am not worried about anything until February. After that, in some of the northern and northwestern areas there may be a shortage."

Elsewhere, the coal situation is a nuisance. Some industrial users, unable to get coal from regular suppliers, are paying 50 cents a ton premium, taking inferior grades. In St. Louis, hit simultaneously by a quickie strike and a cold snap, dealers warned of empty yards. Dealers everywhere see customers turning to other fuels.

And in Washington, NLRB Counsel Denham's lawyers, doubtful that they can make a case for a health-and-welfare emergency, are shaping up their case for a court order enjoining the 3-day week as an unfair labor practice. Whether that will prove to be a weapon to defeat Lewis' subtle strategy—(Business Week, January 7, 1950, p. 61) will be up to the court—probably next week.

The Upset Down Under—No. 2

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Morley Cassidy, from the Washington Evening Star of January 17, 1950:

THE UPSET DOWN UNDER—NO. 2—ATTEMPT TO NATIONALIZE BANKS AROUSED VOTERS IN AUSTRALIA—LABOR REGIME OUSTED WHEN PUBLIC FEARED INDUSTRIES WOULD SUFFER SIMILAR FATE

(By Morley Cassidy)

MELBOURNE, AUSTRALIA, January 17.—Most of America's practical politicians, I feel reasonably sure, would laugh themselves right out of their suspenders if anyone suggested they run for office on a slogan of Vote for Whoozis and Dear Old First National Bank.

Pure suicide, they'd say. But their eyes might pop if they talked to some of the voters who have just thrown Australia's Socialist-minded Labor government out of office.

They'd find Australians still boiling with indignation over what Labor tried to do to our banks.

The tone is almost as though they were speaking of an outrage against our Nell. It makes a stranger blink.

A WAITER EXPLAINS

The brisk little waiter in a Collins Street restaurant, here in Melbourne, a good union man, says he voted Labor in 1949, naturally. This time he switched.

"I couldn't go for this bank nationalization," he says earnestly. "You know, that's just one step from dictatorship."

"Personally," he explains, "I don't have any dealings with banks, outside of my savings account. But suppose I decided to start a restaurant.

"If I needed a loan, there's a half dozen banks I could go to. If one turned me down, I could go to another.

"But under this nationalization scheme, there'd be just one bank—the Commonwealth Bank. If I went to them for a loan and they turned me down, I'd be out of luck. That's dictatorship."

He is no rare specimen. Three out of four people, among the hundreds I have talked to in Australia, have cited the Labor government's attempt to nationalize the banks, and the prospect that it quickly would take over other industries, as a major reason for their vote to oust the Labor government that had held office since 1941.

I know as well as any ward politician that this is incredible. But there you are. And Labor is out.

OUTPROMISING FAILED

It is the more astounding, according to one of the master-minds who mapped out the victorious Liberals' campaign, when compared with what happened 3 years ago.

"In 1946 we tried to outpromise Labor," says this man, too modest to let his name be used.

"We promised to extend child endowment, to raise old-age and invalid pensions, and a list of other benefits. We cut Labor's vote by about 2 percent. But we lost.

"This time we promised nothing in the way of easy vote-catchers, so-called. We did promise, as before, to extend the child endowment to cover the first child, but only because we believe it should be done."

DIDN'T MINCE WORDS

"We didn't renew our promises to eliminate the means test, or raise the pensions. On national insurance we simply said we would examine the possibilities with a view to submitting a plan in 1952.

"We didn't mince words about a lot of things that seemed like dynamite. We said the nation's defense called for selective training—call it conscription. We said we'd be tough with illegal strikes.

"Our whole campaign was simply this:

"Here's the socialist state. Here's what it has done to you so far. Here, from its own statements, is what it plans to do in the future. How do you like it?

"The result was a landslide. How do I account for it?"

MAKING THE ISSUE CLEAR

He doodled for a minute or so on his desk blotter.

"I'd put it this way: There's no use trying to out-promise the socialists.

"They'll always get the people who want promises of easy benefits, no matter what the other side offers. So you can save your breath—and the taxpayers' pocketbook.

"Socialism, fortunately, seems to answer itself with its works. Let people have a good taste of it, with all its mistakes. Then put the issue squarely, as an issue that touches every aspect of people's daily life, the issue of government monopoly, controls and a planned state, or individual freedom and free competition.

"We fought the campaign on that issue."

BANKS ARE A SYMBOL

The socialists' effort to seize the banks was held in the spotlight, as a sort of visible symbol that the Labor party wasn't just mouthing words when it talked of creating a socialist state.

Many Australians, it seemed, had taken it for granted that Labor's socialization plank was an empty political slogan. Now, suddenly, it was brought home to them that the socialist state meant business.

And from that time on, it is clear today, every man's and woman's grievance became, miraculously, the work of "these ruddy socialists."

A sheep rancher in New South Wales' outback country, near Gunnedah, waves his hand at a field full of rabbits, the great pest of Australia.

"That's what a coal strike does," he says bitterly. "No coal, no steel. No steel, no wire netting.

"This country needs 300,000 miles—miles, mind you—of netting to protect its grazing lands. A lot of us have to fence our fields. So it rusts in the grange. How can you fence in a field on two sides?

"There are your socialists and their planning."

FARMER WANTS A TRACTOR

A farmer has been waiting 2 years for an American tractor.

"My dealer got two last year," he says. "At that rate I'll get mine in 1960. Why? Because the dealers can't get permission to pay dollars.

"There's socialist prosperity for you."

Every man with a car or truck has a grievance against the stingy ration of gasoline, or petrol as it's called here.

"Who won this war, anyway?" growls a Newcastle truck driver. "Four years after it's over I'm getting 5 gallons a day for this truck, and I need 10."

STRIKES STIR ANGER

A Sydney businessman speaks grimly of his shipping costs. Much of the increase is due to trouble on the docks.

"Out on Glebe Island," he says, "we've got mechanical loaders. In 1939 we were loading 37.6 tons an hour. Today, with the same equipment, we're loading 21.3—and today the men are on strike again."

The complaints are endless. The most frequent involve the Labor government's refusal to deal firmly with Communists in trades-unions; with its acceptance of "drags," the unions' restrictive practice limiting output, its handling of strikes, most of all its tardy action in dealing with last summer's great coal strike.

And, to top it all, there is the rise in prices. "We've got a 12-shilling pound," say the housewives. It takes 20 shillings now, that is, to buy what 12 shillings bought at the end of the war.

One gathers, in talking to ex-Prime Minister Joseph B. Chilfey and men of his staff, that they are still hurt and a little bewildered at the fury of the public's reaction to the assault upon "our banks."

They speak glumly of the fear complex created by their enemies. Actually, they point out, they had taken only the bare first steps toward a truly Socialist state.

This is true. By comparison with Britain, for instance, Australia is a land of riotously free enterprise.

SOCIAL SERVICES MODERATE

Its social services—old age, invalids' and widows' pensions, unemployment and sickness benefits, and the like—are well advanced, but no one calls them excessive, or the mark of a welfare state. They have been created by all parties, all parties promised to maintain them, and they were never an issue.

The railroads have always been state-owned, as have the telephone and telegraph systems. City tramways and transport have been publicly owned for many years.

There has been no seizure of whole industries, as Britain took over its coal mines and railroads. But that, Labor's enemies quickly point out, is not the fault of Labor. It tried.

STARTED AFTER THE WAR

Australians have known, in a vague way, that every Labor candidate since 1921 has signed a party pledge to work for the socialization of the means of production, distribution, and exchange.

Most people, no doubt, had regarded it as a pious expression and little more. But when the Labor government of John Curtin faced a wartime election in 1943, the public had misgivings. To allay them, Mr. Curtin and his cabinet pledged that there would be no effort to nationalize industry during hostilities.

Mr. Chilfey, who succeeded Mr. Curtin on the latter's death in 1945, was quickly freed of this pledge. Almost immediately, Australians were jolted by the establishment of Trans-Australian Airlines, under a commission empowered to take over all Australian air lines.

ELECTIONS OF 1946

The high court, Australia's Supreme Court, declared this seizure illegal, but approved the state's operation of its own line. The state-owned line now operates in competition with private lines.

This dispute still was sputtering when the elections of 1946 were held. Nationalization was not an issue; but Labor ministers, soon afterward, were asserting that the party's platform pledge was well known, and that the election, therefore, had approved a program of full socialization.

Fairly soon thereafter, startled Australians found themselves with a state-owned shipping line, a state-owned broadcasting corporation, a government monopoly in television and frequency-modulation broadcasting.

Finally, in 1947, socialization hit full force, with the measure authorizing the commonwealth to take over all trading or commercial banks, making them a part of the government-owned commonwealth bank.

It is doubtful that any Labor Party official guessed what a storm would follow. Protest committees sprang up like magic. The bill was carried to the high court and declared unconstitutional. The Labor Government—in defiance of its own pledges to abolish appeal to the Privy Council in London—carried the case to that council and lost again.

It lost more than it knew. For now Australia was rallied behind "our banks," and opposition brochures were telling people that no one, from now on, could say that "he didn't know it was loaded" if he voted for Labor.

Loan Guaranty Program

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a letter from Mr. T. B. King, Director of the Loan Guaranty Service, Veterans' Administration, concerning the work of his department. I believe the Members of the House will be interested in the information concerning the veterans' loans for homes, farms, and business.

VETERANS' ADMINISTRATION,
Washington, D. C., January 11, 1950.

Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR MRS. ROGERS: In accordance with your telephone request I am pleased to advise you with respect to the salient factors in the loan-guaranty program. Attached is a statistical summary of the loan-guaranty operation compiled as of November 25, 1949.

You will note that approximately 41,000 applications were received during the month of November of which over 39,000 were for home loans and the balance were applications for farm or business loans. This figure is double that of the all-time low in applications which occurred in March 1949 during which approximately 20,500 applications were received. The increase in volume is due primarily to (1) the 100-percent secondary market for section 501 loans which has been made available through the facilities of the Federal National Mortgage Association and (2) the decrease in the yield on long-term Government bonds and the lack of other sound investments makes the 4 percent guaranteed mortgage attractive.

We are extremely gratified with our default and claim experience to date. There have been 108,000 defaults reported on home loans of which more than 72,000, or 66.9 percent, have been cured. We have paid an aggregate of 5,200 claims which is approximately one-third of 1 percent of the number of home loans closed. Of the 53,000 farm

loans closed, we have had defaults reported in approximately 5,700 cases of which 62.1 percent, or 3,500, have been cured and 861 farm-loan claims have been paid. We have received 19,700 default notices on the 112,000 business loans that were closed. Nine thousand of the defaults, or 45.7 percent, have been cured and we have paid claims in 6,950 cases. There have been 141,266 paid-in-full loans of which 87,157 were home loans, 12,407 farm loans, and 41,702 business loans. It will thus be noted that 8 percent of all loans closed to date have been paid in full and less than 1 percent (0.8) have resulted in claim payments. There have been no marked increases in the number of defaults reported or claims filed during the past year. We have been confronted with certain local situations involving unemployment due to industry shut-downs and strikes. However, the mortgagees have been extremely cooperative during such periods and have extended indulgence to the veterans. It is my sincere hope, as I am sure it is yours, that this fine record of our former GI's will be maintained.

If I can be of any further service, please do not hesitate to call upon me.

Very truly yours,

T. B. KING,
Director, Loan Guaranty Service.

Repeal of Wartime Excise Taxes

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

NATIONAL COMMITTEE FOR
REPEAL OF WARTIME EXCISE TAXES,
New York, N. Y., January 16, 1950.

Hon. A. F. TAURIELLO,
House of Representatives,
Washington, D. C.

DEAR SIR: Your bill H. R. 5735, concerning the reduction of the rates to eliminate war increases, indicates your interest in the repeal of the wartime excise taxes.

Mr. Frank M. Mayfield, chairman of the National Committee for Repeal of Wartime Excise Taxes, as well as the members of his committee, have requested me to forward to you the attached copy of the resolution adopted unanimously by the committee, at its meeting on January 12, at the Waldorf Astoria Hotel in New York.

Respectfully,

H. LEIGH WHITELAW,
Secretary.

Whereas the undersigned have associated themselves together as a committee of principals under the name National Committee for Repeal of Wartime Excise Taxes for the purpose of undertaking to secure the repeal of the discriminatory wartime excise taxes so as to leave in effect only the pre-1941 excises, and have included in their objective all such excises except those on alcohol, tobacco, and gasoline; and

Whereas this committee of principals believes that these unfair and discriminatory taxes should be repealed for the following reasons, among others:

1. The strongest reason for their enactment was that they were admittedly repressive and would put a brake on the businesses affected. They were intentionally diversionary and punitive in order to meet wartime necessities. Since they continue to repress and to divert in peacetime, they are discriminatory and unfair.

2. They are rationing by taxation—the last of the wartime controls.

3. They dictate to the consumer how he shall spend his dollar; a severe limitation on his freedom of choice.

4. Since they strike deeply into whole communities and particular businesses, their unfairness causes bitterness when unemployment results to the individual worker.

5. The Congress has a moral commitment to the American people to end the high wartime excise taxes. This pledge is woven through the laws, their legislative history, and the very logic of their original enactment.

6. Since they increase prices to the consumer, they produce a maximum of mass irritation at a minimum of return, with their greatest impact on the low-income group, least able to pay.

7. Because they are arbitrarily selective by peacetime standards, they have injured particular industries.

8. More people and more businesses are subjected to the repeated bite of these taxes than any other, without exception.

9. Consumer-spending (which we must increase in order to sustain high-level employment) is decreased by these taxes.

10. The term "luxury taxes" is misleading, confusing, and in fact false, since the wartime excise taxes were not imposed on "luxuries." They were imposed on goods and services that interfered with wartime necessities.

11. Only complete repeal (restoration of the pre-1941 status) can be effective; mere reduction in rates would be a serious mistake—the irritant would remain; the moral commitment would be unfulfilled; the discrimination and unfairness would continue.

12. These are bad taxes; they are placed on gross revenues, not on net profits.

13. If it is wrong to keep the discriminatory wartime rates, and right to repeal them, America cannot afford not to do the right.

14. Tax repeal action rather than public works is the only way to reach the skills unemployed by consumer resistance to wartime excise taxes.

15. If these taxes are now repealed, the Government will have exerted itself positively in the direction of continued high-level employment and increasing national income throughout 1950.

16. When taxes enacted for an emergency purpose are permitted to remain after the emergency has passed, the faith of the people in their government is shaken.

17. Because of the general belief that these taxes will be repealed, quick action to this end is necessary, as the public is curtailing its purchases of many products and services in the affected industries.

Now, therefore, be it

Resolved by the National Committee for the Repeal of Wartime Excise Taxes, That the aforesaid unfair and discriminatory excises should be repealed, and the pre-1941 status restored at the earliest possible date.

This 12th day of January 1950.

National Committee for Repeal of Wartime Excise Taxes: Frank M. Mayfield, Chairman, President, Scruggs-Vandervoort-Barney; Arde Bulova, Vice Chairman, Chairman, Bulova Watch Co., Eric Johnston, Vice Chairman, President, Motion Picture Producers & Distributors of America; Louis Ruthenburg, Vice Chairman, Chairman, Servel Inc.; James J. Newman, Treasurer, Vice President, B. F. Goodrich Co.; J. Carlton Bagnall, Sr., Executive Vice President, Swank Incorporated; Lester Baker, Treasurer, Dayton Rubber Co.; Robert F. Bensinger, President, Brunswick-Balke-Collender Co.; John M. Biggins, Vice President and Treasurer, Elgin National Watch Co.; Harold Bozell, President, General Telephone Co.; Henry P. Bristol, President, Bristol-Myers Co.; Thomas A. Buckley, President, The Buxton Co.; J. H. Carmichael, President, Capital Airlines, Inc.; John S. Coleman, President, Burroughs Adding Machine Co.; John Collyer, President, B. F. Goodrich Co.; Robert Driscoll, Vice President, Greyhound Corp.; Samuel B. Edison, Vice President, Edison Bros. Christmas Festivities

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks, I include a radio speech I recently made:

My fellow citizens, I am grateful to radio station WREC for this generous extension of my time. Never in all my life have I enjoyed anything quite as much as this opportunity to visit informally with so many of my friends on each Sabbath Day evening at 10 minutes after 10 o'clock. To all of you who have written me notes and who have spoken to me personally in acknowledgement of these humble efforts, I express my very deep gratitude.

On next Sunday night I plan to outline some of the subjects which must have attention in the early days of the second session of the Eighty-first Congress. As you know we return to our duties in Washington on January 3. Because of the many complex domestic issues to be considered, I expect this

session to be rather a difficult one and certainly filled with highly controversial questions. As I go along through life, I recognize that all of us cannot be in entire agreement on all things. But if we have an honest purpose and a studious mind and an open heart, we can find a way to reconcile minor differences and adjust our understandings.

Tonight as time is reckoned in our part of the world, this holy day has just about been concluded. I do hope that you and your families have found happiness during the all too-swift passing moments of this Christmas.

The great event of 1,950 years ago made mankind reckon with B. C. and A. D. Our risen Lord is still the dividing factor but our only hope. There is no argument anywhere about the real disciple of the Master. It is that spirit, that character, and that kind of life which conveys the answer to human problems and echoes the song of Bethlehem and the music of the angels. To all such He becomes the unifying factor above party, race, or creed.

"For unto us a child is born, unto us a son is given: and the government shall be upon his shoulder; and his name shall be called Wonderful, Counselor, The Mighty God, The Everlasting Father, The Prince of Peace.

"Of the increase of his government and peace there shall be no end, upon the throne of David, and upon his kingdom, to order it, and to establish it with judgment and with justice from henceforth even for ever. The zeal of the Lord of Hosts will perform this."

It may interest you to know that the first certain mention of December 25 is in the calendar of Philocalus. This records that Christ the Lord Jesus was born on December 25, a Friday, the fifteenth day of the new moon in year 1. However, December 25 A. D. 1, was a Sunday. So to me the Christmas Day of 1949, falling on the first day of the week bears more than ordinary significance.

Christmas was not among the earliest festivals of the church. Before the fifth century there was no general concensus of opinion as to when it should come in the calendar, whether on January 6, March 25, or December 25. The earliest identification of December 25 with the birthday of Christ is in a passage, otherwise unknown and probably spurious, of Theophilus of Antioch, preserved in Latin by the Magdeburg centuriators, to the effect that the Gauls contended that as they celebrated the birth of the Lord on December 25, so ought they to celebrate the ressurrection on March 25. As late as A. D. 245, Origen repudiated the idea of keeping the birthday of Christ, as if he were a king Pharaoh.

Certain Latins as early as 354 set the birthday at December 25, which was then a Mithraic feast day. The Syrians and Armenians clung to January 6. We are certain that the date originated in the West, but spread quickly eastwards. In A. D. 350, it was observed at the Court of Constantius; Basil of Caesarea adopted it in 379. Honorius, emperor in the West, told his mother and brother Arcadius how the feast was kept at Rome. The patriarchs Theophilus of Alexandria, John of Jerusalem, and Flavian of Antioch were won over to the date in A. D. 398. As early as 400, an imperial rescript includes Christmas among the three feasts on which theaters must be closed. Then as late as 1644, Christmas, as a day of observance, was forbidden by an act of Parliament. Charles II revived the feast, but the Scots adhered to the Puritan view. But so much for that part of sacred history.

I have never seen Memphis quite as beautifully decorated as during this holiday season. Perhaps there are some in my audience who have never paid particular attention to the origin of Christmas customs, the singing of carols, the beginning of the big Christmas Day dinner, the use of the term "St. Nicholas," and the giving of gifts.

The Mesopotamian god, Marduk and his court of gods have long disappeared, but their winter festivals survive in our Christmas celebration. In the Balkans and in central Europe, on the 12 days of Christmas, troupes of masqueraders go about, headed by a "fool" or a "wild man"; also troupes of carol singers, not unlike those we know from merrie England. There are still bonfires, and a special log which a young man fells and brings home; and over this log a ritual is performed (with praise, now, to the Christian God); and on Christmas Eve it is burned in the fireplace.

The Roman festival of Saturnalia began around the middle of December and continued until January 1. In its midst was December 25, the day as the Romans calculated, when the sun was at its lowest ebb, ready to increase again and impart its strength to the growing things of the earth. Hard upon this day came the Calendae of January—January 1. The word itself has become the name which the Slavic and Baltic peoples use for the days of the Christmas festivities: Koleda, Kolyada, Koledos, etc. The Roman Saturnalia and the holidays which followed were boisterous indeed. The citizenry masqueraded through the streets, ate big dinners, feasted their friends, wished them good luck at this time of tender fortune, and gave each other good-luck gifts called Strenae. The halls of the Romans were decked with boughs of laurel and green trees, with lighted candles and with lamps—for the hovering spirits of darkness were afraid of light.

To the pagans, the Saturnalia were fun. To the Christians, the Saturnalia were an abomination. As there were more and more immigrants into the ranks of the Christians the church fathers discovered to their alarm that they were facing an invasion of pagan customs. The church leaders tried strenuously to keep Christmas strictly a churchly celebration. But though pagan Rome became Christian, the Saturnalia remained and became adapted to Christian purpose. The church finally took the merriment, the greenery, the lights, and the gifts from Saturn and gave them to the Babe of Bethlehem.

To the old pagan Germanics, December was the time to slaughter the extra animals and preserve the meat, a good time to invite friends in for a bit of feasting. The god who cared for the fertile herd was Frey, after whom Friday is named; his animal symbol was the boar. The boar sacrifice was too enjoyable to be forgotten, so it survives in the feast of merrie old England in which the boar is treated as if it were some royal personage—first the trumpets blow, the door swings open, in marches a platter bearing a steaming boar's head, an apple in its mouth; behind it troops a procession of lusting puddings. This, too, is Christmas.

Woden (Wednesday: Woden's Day), the chief among the Northland gods, came originally from the Near East and became, by amalgamation with the real St. Nicholas, the St. Nicholas or Santa Claus of Christmas. In Europe St. Nicholas wears Woton's broad-brimmed hat and rides his faithful old white horse. In Europe he does not come on Christmas Eve but on the eve of December 6; St. Nicholas, archbishop of Myra, a seaport town in Asia Minor, died on December 6, in the year 326.

St. Nicholas must have been a remarkable person, judging by the varied and numerous legends which have gathered about his life on earth and his life as a saint after his death. From England to Greece and Orthodox Russia, he rides the storm at sea, saving the lives of sailormen for whom he is the last and only help.

St. Nicholas overleaped the frontiers of Christianity itself to become the helper of the pagan Samoyed and Laplanders—the men of the reindeer, the fishermen of the Arctic Ocean. So, in America, we tend to believe that the Arctic is his one and only residence.

By saving ships at sea, St. Nicholas saves the landlubber merchants who are their passengers; surely he protects them on land as well. By this reasoning, he becomes the patron saint of travelers everywhere, protecting their goods, and insuring them safe passage. His three bags of gold became the symbol, as three golden balls, of the pawnbroker: a man's goods, that is, are safe under the sign of St. Nicholas. He is the protector of all humble and small folk and he is special guardian of unmarried girls. He had the habit of slipping gifts into the homes of worthy folk, for he had inherited a fortune which he gave away without letting anyone know from whence it came.

So when the children of the lower Rhineland, on both sides of Dutch-German border, set out their clogs for "Santeklas" (there are many versions of the name St. Nicholas) to fill on the eve, not of December twenty-fifth, but of December sixth, they put hay in them for the white horse, and their parents set out a sheaf of grain. Sometimes, instead of clogs, they set out little wooden ships. But, clogs or ships, they always place them by the chimney, for the saint still prefers to deliver his presents secretly in the night.

The exact origin of the Christmas tree is unknown. Limbs of evergreens were used in the Saturnalia and, in northern Europe, box, bay, ivy, holly, yew, larch, juniper, pine, spruce, fir—the plants that remain green when all else turns brown and dead—were the enemies of winter's white death and shields against the witches and demons of the long winter nights. Also the veneration of some particular tree as being the property or dwelling place of a spirit was so widespread and so varied among the pagan Europeans, that the customs which grew up around it have provided a wide range for those who like to make guesses.

Throughout history trees have been set up and decorated in almost every important holiday. The May-pole itself was a tree, and it even bore the same ornaments which were used on the Christmas tree; but garnished trees stood also on Shrovetide, Palm Sunday, Easter, Ascension Day, Harvest Home, St. Martin's, St. Nicholas', New Year's, and others. If the tree of Christianity in particular belongs to this family, then somehow, and unaccountably, it is a lone survivor.

There are many accounts of Christmas festivities going back into the Middle Ages; but they never mention the Christmas tree. A forest ordinance from Ammerschweier in Alsace, dated 1561, says that no burgher "shall have for Christmas more than one bush of more than eight shoes' length. This seems to be the first mention of anything that can be recognized as the tree. In a travel book dated 1605, there is this passage: At Christmastime in Strassburg they set up fir trees in the rooms, and they hang on them roses cut of many colored paper, apples, wafers, gilt, sugar, and so on. So it appears that the Alsatians were the first people to pass from hanging greens to a standing tree.

To the collection of false ideas we may assign the widespread notion that Martin Luther was out walking one night, and the stars suggested to him lights, which he then placed upon a fir tree to brighten the Christmas of his son. Nor can a good case be made for the Yule log as the ancestor of the Christmas tree. One favorite notion has been that it is the symbol of the Tree of

Life which stood in the Garden of Eden. Indeed, in the eighteenth and nineteenth centuries, in northern Germany, that is precisely the way people regarded it; in Hamburg, for instance, you could buy little figurines of Adam and Eve and the serpent, to place under the tree. In the treasure chest of folklore the church keeps the story that on the first Noel, in defiance of the snow and the night's darkness, trees put forth blossoms and fruits; so the Christmas tree bears flowers and fruits. Some southern Germans cut cherry and hawthorn boughs on St. Andrew's Day (November 30) and place them in a pot of water in a warm room. By Christmas they spread and put forth full bloom.

The devotion of the southern colonies in America, with their predominantly English population, to the old customs of the mother country indicate that Christmas there was a day, not simply of religious celebrations and worship, but of family reunions, social gatherings, feastings, and frolic.

In New York, New Jersey, Pennsylvania, and Delaware the observance of Christmas was naturally affected by continental European Christmas customs derived from Holland, Sweden, and Germany. Practice varied among these peoples. Some of the more radical religious sects minimized the day. Among the Moravian Germans, Christmas appears to have been purely religious. Dutch, Swedes, and Germans of the Reformed or Lutheran churches, however, added new features to the traditional English way of celebration. St. Nicholas, or Santa Claus, was a feature of the Dutch, Swedish, and German Christmas. The Germans in colonial days introduced the Christmas tree, with toys, trinkets, figures of angels, and numerous little lighted tapers, into America.

In Philadelphia, Christmas was not, so we are told, generally observed. The Quakers, whether English or German, did not incline to the commemoration of holidays. Nor was Christmas popular among the Scotch-Irish Presbyterians.

Throughout the colonial period Christmas was frowned upon in New England. The Puritans were opposed to Christmas. From the earliest settlement at Plymouth, constant effort was made to prevent its observance. Massachusetts, in 1659, passed a law which reads as follows: "Whosoever shall be found observing any such day as Christmas or the like, either by forbearing of labor, feasting, or in any other way, as a festival, shall be fined 5 shillings." By 1800, Puritanism had lost much of its force even in New England, but Christmas Day was not made a legal holiday in Massachusetts until late in the first half of the nineteenth century.

The research to review the establishment of December 25, with the customs which followed has been stimulating. We may find ourselves wholly accepting, or denying, this historical background but far more stimulating to me is my simple faith that the Christ Child did come into the world, that he grew to young manhood, died, rose again, and that those of us who believe that he did live and died and rose will have everlasting life.

I am thoroughly convinced that our own country is thinking more about religion today. Men in every walk of life are turning to deep and more spiritual thinking. We are still just as frail as ever—we make just as many mistakes or more, but we do know that real peace will never come to the world until we live by the Golden Rule and we can more faithfully keep the 10 and, yea, the 2 great commandments.

It was He whose birthday we honor today who taught us to pray—

"Our Father who art in heaven, hallowed be Thy name. Thy kingdom come. Thy will be done, on earth as it is in heaven. Give us this day our daily bread. And forgive us our debts, as we forgive our debtors. And lead us not into temptation, but deliver us from evil. For Thine is the kingdom and the power and the glory forever." Amen.

Judge Albert Conway, Guardian of Liberty

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1950

Mr. MULTER. Mr. Speaker, Brooklyn is very proud of its senior jurist, Albert Conway, associate judge of the court of appeals. He is one of the great jurists of our State and country.

On Thursday, January 19, Judge Conway will be guest of honor at the golden jubilee dinner of the Cathedral Club in Brooklyn. It is a deserving tribute to a scholar, a teacher, a lawyer, a judge, but above all to a man—a good man.

The Brooklyn Eagle of January 8, 1950, designated him as Brooklyn's man of the week. The article, written by Wendell Hanmer, reads as follows:

BROOKLYN'S MAN OF THE WEEK—CONWAY'S CREED: A JUDGE IS A GUARDIAN OF LIBERTY

(By Wendell Hanmer)

Brooklyn's senior judge, who also is senior judge of the entire City of New York and third ranking jurist of the State, will be the guest of honor at the Cathedral Club's golden jubilee dinner in the Hotel St. George on January 19. He is Associate Judge Albert Conway of the court of appeals.

A member of the club 38 years, he resisted previous attempts by the club to honor him and again protested this year that the distinction should be accorded a younger man, that he is "getting old—not going anywhere."

If he is not going anywhere, any member of the legal profession will tell you, it is because he has arrived. And Judge Conway's philosophy of life would bear them out.

Judge Conway is well-satisfied with his life to date. Could he start it over, it would be the same. Again he would become a lawyer or, he added a moment later, a doctor.

"Well, eh—doctors serve the people," he said when asked to explain.

"Do lawyers?" he was asked.

"Lawyers and judges," he replied instantly, "stand between the State and the people. They're the guardians of the liberty of the common man."

DEMOCRACY

"Would you be thinking of democracy?" he was asked. "And, if so, what is your interpretation of democracy?"

"I was," he said, "and of democracy as it should be. What it should be to the man in the street."

Judge Conway abruptly leaned back in his chair in his chambers in the Appellate Division Court House on Monroe Place. From an inner pocket he took a billfold, removed a printed card and thrust it forward.

"Here," he said, "is the best definition of democracy I know."

The card bore this:

"On my honor I will do my best to do my duty to God and my country and to obey the Scout Law—to help other people at all times—to keep myself physically strong, mentally awake and morally strong."—The Scout Oath.

"A Scout is trustworthy, loyal, helpful, friendly, courteous, kind, obedient, cheerful, thrifty, brave, clean, reverent."—The Scout Law.

ACTIVE IN SCOUTING

The Scout movement is his chief, almost his sole, nonprofessional interest. He has no hobbies. For relaxation he reads detective stories.

Judge Conway's interest in scouting was born of his admiration for James C. Cropsey, who was active in the movement throughout his lifetime. When Cropsey, then a Supreme Court justice, died in 1936, Judge Conway succeeded him as president of Brooklyn Council, Boy Scouts of America. Thereafter he was chairman of the council's board of directors and is now its vice chairman. He also is a member of the executive committee of region 2, which embraces the scout organizations of New York and New Jersey.

Judge Conway first met Cropsey in 1913, when the latter, a Republican and district attorney of Kings County, gave him a 3-month summer appointment as a deputy assistant district attorney. The temporary appointment was on recommendation of the Republican lawyer Cropsey had just engaged to head the appeals bureau of the district attorney's office. That lawyer had been Conway's employer.

STEPPING STONES

Like his lawyer father, the late Joseph P. Conway, Judge Conway always has been a Democrat. With a promotion to assistant district attorney, his temporary appointment continued until April 1, 1920, when he resigned to enter private practice.

In 1928 Gov. Franklin D. Roosevelt appointed him superintendent of insurance. Eighteen months later he was appointed a county judge, and eighteen months after that elected a justice of the Supreme Court on a joint Republican-Democratic nomination.

Designated a member of the appellate division in 1937, he was detached and assigned by Governor Lehman to preside throughout 1939 over an extraordinary term of the supreme court in Buffalo concerned with charges of municipal corruption.

On January 1, 1940, Governor LEHMAN appointed him to the court of appeals in Albany, the State's highest tribunal. He was elected to a full 14-year term on that bench in November of that year.

WHAT HE LIKED BEST

Asked which phase of his long and varied legal career he had enjoyed most, he grinned boyishly and said:

"My 17 months on homicide in the district attorney's office. It was a day and night job, on duty 24 hours of each day, including Sunday. I'd go back tomorrow for my present pay ($23,000 a year), except that at my age I couldn't take it. I have to read detective stories now."

While nothing in his physical appearance indicates that time has treated him other than kindly, Judge Conway concedes at least one major sacrifice to the passing years.

"I used to smoke all the time," he said, "cigarettes, cigars, and pipe. I really enjoyed it. But it began to slow me down. Six years ago I quit."

Born in Brooklyn on April 3, 1889, Judge Conway is a graduate of Boys' High School, where he was a classmate of the school's present principal, Alfred Tausk. He attended St. John's University briefly, then, when 16, obtained a job in a law office and began attending evening classes at Fordham. He graduated cum laude from Fordham with an LL. B. in 1911. Since then he has received honorary degrees of LL. D. from both Fordham and St. John's, and also from Syracuse University.

In 1917 he married Irene M. Hewitt, and they had four children. She died in 1929.

In 1933 he married the former Irene M. O'Neil, with whom he lives at 845 Carroll Street.

"I Speak for Democracy"—Prize Winning Essay by Miss Gloria Chomiak

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18 (legislative day of Wednesday, January 4), 1950

Mr. WILLIAMS. Mr. President, in a recent contest sponsored by the National Association of Broadcasters, the Radio Manufacturers Association, and the United States Junior Chamber of Commerce, which sought the best radio script among 1,000,000 high school students in the Nation on the subject I Speak for Democracy, Miss Gloria Chomiak, of 510 South Heald Street, Wilmington, Del., a student of the Wilmington High School, was designated as one of the four winners. This Delaware girl is the daughter of a former immigrant from the Ukraine and spent most of her childhood in Fort Vermillion, Canada, and in recent years came to live in Delaware.

In winning this contest on democracy, Miss Chomiak, a senior in Wilmington High School, has brought great honor not only to herself and to the State of Delaware but also to the students of our Nation. This essay should be read not only by every student but more important, it should be read by every adult in this country. Far too often we who have always enjoyed the advantages of a democracy have failed to appreciate the real benefits of self-government.

When we stop to consider that during the recent elections in our country nearly one-half of our citizens failed to exercise their privilege to vote, it is high time that we who claim to be citizens of this great Republic, the last stronghold of democracy, awaken to the warning cited in this essay.

Before asking unanimous consent to have this entire essay incorporated in the RECORD, I want to call the attention of the Senate to the first paragraph, in which Miss Chomiak said, "I speak for democracy, because two generations back my ancestors could not; because if I do not speak of it—if many more do not speak of it, there may come a time when we too, will not have the right to do so. For today more than at any other time governing powers are pitted one against another. It seems a crisis has been reached, and must be broken. We who believe in democracy cannot trust to our living it alone. We must stand up, and speak and be heard in its cause."

Mr. President, I now ask unanimous consent to have this entire essay embodied in the RECORD as a part of my remarks.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

I speak for Democracy, because two generations back my ancestors could not; because if I do not speak of it—if many more do not speak of it, there may come a time when we too, will not have the right to do so. For today more than at any other time governing powers are pitted one against another. It seems a crisis has been reached, and must be broken. We who believe in democracy cannot trust to our living it alone. We must stand up, and speak and be heard in its cause.

And what is this thing called democracy? It is a thought discovered in ancient Greece; a thing a Slavic serf dreamed of too much and paid for with his life; an ideal, started in its practice by a model Parliament of England; and bitterly struggled for in Louis' France. It is a leavening of revolutions, a stepchild of utopia; a system, first defined as a government for and by the people in our own country, where it has grown to what we know and love today.

It is a government that has been developing for hundreds of years, and shall develop for hundreds more; a government that has outgrown an initial stage wherein it served the citizens of Greece—citizens who did not include the underprivileged and the captive and who constituted but a fraction of the population. It is a government that has weathered the time when a land-laden Polish baron frowned upon it, thinking of his foreign serfs, tilling their foreign fields for his benefit alone. He worried little for he could dispose of them at his pleasure if he found one who thought in their number.

DEMOCRACY GROWN GREAT

It is a government that has grown great since that medieval year when England's people first had representatives before their king—the first representatives before authority a people ever had.

It won a place for itself during the bitter civil war of France, when people were hungry and angered with the extravagant caprices of those who ruled through heritage, and it found a home in the New World when honest colonists learned to demand a rule by their own choice.

It has grown from a privilege of the few to a right of the common, risen from a persecuted idea to a mighty ideal upheld in safety by millions. It has developed into a system whose imperfections can be remedied, and whose virtues are a God-given right.

For this democracy is a natural system. Men were created equal in their rights and their responsibilities. And is not intelligent participation in governing among them? Men were given individual minds and desires. Ought not they have a right to voice them?

Democracy is a system with flaws, because through the ages men have erred and do err, and a democracy is only as right as its people. Democracy is able to abolish its principles by its own excess.

A cynic spoke the truth about it when he said that democracy can make each man his own oppressor. Yet, I believe that greater men have said a truer thing about democracy: that the people's government cannot—shall not perish from the earth.

Mr. WILLIAMS. Mr. President, I also ask unanimous consent to have inserted in the RECORD immediately following the essay itself an editorial which appeared in the Wilmington Morning News under date of January 17, 1950, extending their congratulations and the congratulations of every citizen of Delaware to Gloria Chomiak.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRATULATIONS TO GLORIA

A very recent newcomer to this community has brought honor to Wilmington and the State of Delaware. Gloria Chomiak, 17-year-old Wilmington high school student who came here only 2 years ago from Canada, is one of the four winners of the fourth annual Voice of Democracy contest.

That is, the address she wrote and later delivered over a radio station here has been adjudged one of the four best among approximately a million produced by boys and girls in the 48 States, the District of Columbia, Alaska, and Puerto Rico. So she will go to Washington to receive a $500 college scholarship, meet the President, attend sessions of Congress, and broadcast over the radio networks and the Voice of America.

These are substantial rewards. Gloria, whose parents were born in the Ukraine and who spent most of her childhood in Fort Vermillion, Alberta—so far from the centers of population that she went to school by correspondence under the supervision of an adult—might be in a quandary to say which she likes best. But they will all contribute to her knowledge of the democratic way.

We congratulate her. And we also congratulate the National Association of Broadcasters and the United States Junior Chamber of Commerce for sponsoring this worthwhile competition. It is good to know that young Americans, and young immigrants, can speak for democracy with force and conviction.

Ship Operations

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank Reil, director of information for the American Merchant Marine Institute, which appeared in the current issue of Railway Progress:

SHIP OPERATIONS
(By Frank Reil)

"Nobody likes subsidies or likes to admit getting them," said the November Railway Progress in its Behind the Washington Ticker column. And to this perhaps should be added: "Don't talk about my subsidy; pick on the other fellow's."

However, the same November issue did same talking about subsidies for the merchant marine but it didn't tell the whole story. It was chiefly concerned with Federal aid for new ship construction, which in the final analysis is a subsidy for shipbuilders. But another type of assistance for operating the merchant marine was hardly mentioned and it deserves much better notice.

Can you imagine a subsidy in which Uncle Sam gets his money back? Or one that has been so small over the years that it ranks last on the long list of Government aid?

This oddity is the ship operating differential subsidy and is the only one of all the Federal grants that is subject to recapture by the United States Treasury.

The price-support programs for a wide variety of agricultural production, mining, and other industries are strictly a one-way proposition. The air lines have their mail payments—the merchant marine said good riddance to this type of assistance in 1933—but there are no recapture provisions.

Other forms of indirect Government aid, such as protective tariffs, land grants for some railroads, and the second-class mailing privileges for newspapers and periodicals,

are of such a type that recapture or refunds to the Government are not feasible. [Not only feasible but actual when it comes to those land grants. The railroads got land worth $489,000,000 from the Government, and over the years gave the Government preferential rate treatment worth $1,649,000,000. Net profit to the Government on that deal: $1,160,000,000.—EDITOR.]

EXAGGERATED SCOPE

Having taken care of the "other fellow's subsidy," let us now examine this unique one for American shipping. At the outset it can be said that its scope and amount has been greatly exaggerated. Actually, it is relatively picayune when compared to others paid, and, as will be seen later, Cheddar cheese has received greater financial assistance than the operation of the American merchant marine.

Operating subsidies are restricted to American ships engaged in the foreign commerce of the United States. Our ships in the coastwise and intercoastal services are not eligible for them. Out of 60 companies only 13 are subsidized—a fact which will surprise many who think that all steamship companies are subsidized. In September 1939, before world shipping became affected by the war, there were 141 American subsidized ships, or 55 percent of our dry-cargo tonnage, in foreign trade. Today, with an expanded merchant marine, there are less than 250 ships receiving subsidy, or 38 percent. Incidentally, no payments were made after Pearl Harbor, and they were not resumed until 1947.

The sole purpose of the operating differential is to place an American company at approximately the same cost level as that of his foreign competitors. The payments do not give an American operator full parity with his foreign competitors, as they cover only the difference in wages, subsistence, stores and supplies, repairs and maintenance, and marine insurance. Students of business accounting will note that such higher fixed charges as management, depreciation, and other items are not considered.

VOYAGE BASIS

The Maritime Commission carefully determines this differential between United States and foreign costs for the five items mentioned and payments are made to a company on a voyage basis. Roughly, the vessel expenses on these five items are approximately 45 percent lower under a foreign flag.

A company that accepts an operating subsidy must agree to many regulations imposed upon it by the Maritime Commission under the Merchant Marine Act of 1936. The company must operate a certain number of ships over specified routes on approved schedules and may not operate them on other routes. The size of the crew and wages must not be less than Government requirements. Even the limit of salaries to be paid company executives is set by law. The company is also obliged to set aside reserve funds for new construction. These are only a few of the restrictions placed on a subsidized company and many shipowners find them so confining that they prefer to operate without Government assistance.

Moreover, these payments do not assure a profit or guarantee against a loss. The American company must still solicit cargo and compete for the available cargo. If there is to be a profit, he must operate efficiently. If there are profits of more than 10 percent, they must be held in reserve for a 10-year period. At the end of that time, one-half of this reserve must be returned to the Government, up to the total amount of subsidy paid.

How has this recapture worked out in actual practice? For 10 of the subsidized companies, the first 10-year recapture period has recently expired. Five of the companies have paid back in full every dollar received from Uncle Sam. Another company's earnings were such that the Government recovered 90 percent of its payments. On an over-all basis, 72.5 percent of the subsidy paid the 10 companies has been returned to the Treasury. Of the $40,400,000 paid these companies during the 10 years, some $29,300,000 has been given back. In other words, the subsidy has been at the rate of only $1,100,000 a year.

As to how this compares with other Federal aid let us turn to Senate Document 13, Eightieth Congress, first session, prepared by the Bureau of the Budget, containing a listing of Federal subsidy payment to business and farmers for the fiscal years 1934 through 1946. Topped off by more than $4,000,000,000 in land-conservation payments, it reaches the staggering total of $13,000,000,000.

The figure for ship operating subsidy, covering all companies, is $48,700,000, which places it behind the Commodity Credit Corporation subsidy for cheddar cheese at $67,700,000 and of the Reconstruction Finance Corporation payments for coffee at $51,800,000.

But the Budget Bureau's figures do not include recapture for ship operation and according to the Maritime Commission, the recapture position for all lines in 1947 indicated this subsidy total could be reduced to $21,200,000.

At this figure ship operation slips to the very bottom of the list, dropping below the subsidies for coffee, sheep and lamb, beef production, milk fluid, and wheat for alcohol.

In view of the importance of the American merchant marine as an instrument of national defense and a servant of our overseas commerce, the American taxpayer should have little reason for concern about the modest Government expenses for operating on the oceans of the world the finest merchant marine in our history.

Happenings in Washington

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two broadcasts by me, on December 19, 1949, and January 2, 1950, under the headline "Happenings in Washington." They cover programs Nos. 14 and 15.

There being no objection, the broadcasts were ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 14, December 19, 1949)

This is ED MARTIN, speaking to you from the Nation's Capital, and extending sincere and whole-hearted Christmas greetings to my fellow citizens of Pennsylvania.

This is a great season of the year for all mankind—for all men and women of good will, regardless of color or creed, who worship one God.

It is, as all know, the most important religious holiday for Christians the world over—the most solemn and, at the same time, the most joyous. This is a monumental season in history and in religion.

It is also a most important time for American citizens of the Jewish faith, as well as for Jews the world over. In this season, falling each year just before Christmas week, is the ancient Jewish holiday of Chanukah, the feast of the candles. One of the important religious celebrations of the Jewish religion, it tends further to emphasize the importance of the season.

This is a time of brotherhood, of kindness and of homage to the spiritual things of life.

It is a time also to count our blessings. We can rejoice that America has been blessed in greater measure than any other nation in history.

As Pennsylvanians we rejoice doubly because so much has been given to our State. I refer not alone to material blessings, although Pennsylvania's portion is so large—with its 171,000 flourishing farms, its 17,000 diversified industrial plants, its annual pay roll of $5,000,000,000.

I speak rather of spiritual blessings.

William Penn, the founder, was a religious, understanding man. Love of God and faith in his fellow men were his inspiration when he launched his holy experiment in the New World. He was a man of peace. The great State's foundations were of social, political, and religious freedom. The brotherhood of man was engraved on its cornerstone. Work, tolerance, and thrift were the principles which guided and built Pennsylvania.

From its beginnings our State has continued in its tradition of Christian tolerance.

Although it has grown great economically, it has never outgrown the spiritual touch which it received at the beginning.

That is why, today, we have more places of worship—cathedrals and churches, meetinghouses, synagogues and temples—than any other State. That is why we have a greater active church membership than other States.

These are good things for Pennsylvanians to keep in mind in the Christmas season.

This fundamentally spiritual side is doubly important.

It has been a priceless end in itself. Americans are better for having it.

But it has also helped our people to build our strong structure of liberty and independence.

In our land the seed of human dignity and freedom was planted in the good soil of love of God, tolerance, work, and thrift. From this seed has grown the tree of America. It is sturdy and strong. Its branches are widespreading enough today to provide shelter, security, and opportunity for 150,000,000 men, women, and children.

So long as we water and cultivate this tree, it will continue to flourish and to serve us as it has served our forefathers.

But we must water it; we must cultivate it. This tree cannot grow in the future as it has in the past if we fail to do our parts.

It is here today because our fathers, our grandfathers, and those who came before them had the will to work, to save, to build, to plan ahead, and to live at peace with the world and with each other. They were courageous. They were self-reliant. They were tolerant.

They did not assume that what had been handed down to them was theirs alone to profit from without effort on their part. They did not assume that no effort on their part was necessary to provide themselves and their families with security.

Today, unfortunately, a substantial number of people in this country accept false assumptions. They think that men no longer have to work for security—that they can simply conjure it up at the ballot box.

They think that a vote for this man or that, for this political party or that, is all that is necessary to assure themselves prosperity, security, peace, and independence.

My fellow Pennsylvanians, the history of the world teaches us that we cannot have these things by substituting legislation for perspiration. We cannot have them by substituting wishful thinking for toil and effort.

The really precious things of life—security, peace, freedom, and human dignity, must be earned the hard way. And, once they are earned in any nation, each succeeding generation must earn them again—or they shall be lost.

History is full of examples that prove this. Ancient Rome built the greatest empire and the finest civilization until comparatively modern times. But, what happened?

The people of Rome, the hard core of this vast empire, grew soft. They refused to work and fight. They said they had done their share of toiling. They said they had reached the pinnacle, and that others should now do the working and fighting for them.

They enlisted legions of mercenaries to fight for them. They brought in slaves to do the work.

The average Roman—the little fellow—what we call "the man in the street"—wound up as the beneficiary, and eventually, as the victim, of bread and circuses.

He demanded hand-outs from his Government—free food and free entertainment. He was a citizen, so his legislators gave him what he wanted.

That was security by legislation substituted for security earned by work.

From that point on the Roman was a goner. The fate of the Roman Empire was sealed.

Hard-muscled barbarians who did not fear work and who did their own fighting closed in. They broke up the greatest empire the world had seen up to that point.

As a footnote, this should be pointed out. These were mostly the same tribes of barbarians whose ancestors had been beaten in war again and again by the fighting, hard-working Romans of the earlier days.

In Great Britain today people are seeking security through legislation. They have turned their country into a socialistic state. The Government is moving in to take over industry after industry. The most recent is steel. In exchange for social services, they are sacrificing freedom. The right to strike has been going out the window. The right to work at a job of one's choice is being restricted. The right of a man to start up a little business of his own is being narrowed sharply.

Taxes are far higher than anything we know in this country. Long after such countries as Belgium, Holland, France, Italy—all very hard hit by the war—have removed nearly all, if not all, of the wartime restrictions—socialistic England continues under rigid ration controls of what a man may buy with his money. He continues to use ration coupons.

Britain, thank heaven, still permits a man to stand up and publicly criticize his Government. It permits him to go to the ballot box to change the party and the system in power.

But how long can these freedoms remain if the spread of socialism—which means leaning on the Government for more and more services and benefits—continues?

My fellow Pennsylvanians, these are matters for us to consider in this holiday season and in all seasons. We must not sacrifice the basic things which gave our Nation such a solid foundation and which fostered its growth until today it has become the world's richest and strongest nation.

We must not assume that because we are in this exalted position today, it is permanent.

We must not assume that toiling and fighting and striving are ended for Americans.

We must not assume that we can permit others to do our work for us and to fight our battles for us.

We must not assume that we no longer need to earn security—that we only have to vote for it.

We must not assume that if we trade individual initiative, individual freedom, the right to do our own thinking and our own acting—for hand-outs from Washington—we can regain these precious rights any time we want to.

Our forefathers in America knew better. They knew the price was eternal vigilance, hard work, and an abiding trust in God.

Earlier, I said this was a time to count our blessings.

Today there is no greater blessing for any man than to be able to say, "I am an American."

To be an American means one may choose his rulers and discard them. It means he may stand in a public place and voice his opinions and views without fear of secret police. It means he may have his day in court if his rights are challenged or threatened, and be protected from arrest at the whim of a dictator.

It means protection by the world's greatest nation.

It means the right to worship openly at the shrine of his choice.

It means greater economic prosperity and greater economic opportunity for all the people, than have ever been offered or enjoyed anywhere else.

Yes, my fellow Pennsylvanians, there is no greater blessing than to be able to say, "I am an American."

In all the rest of the world there is nothing comparable to what we have in our country.

Consider the other nations.

There are dictatorships. There are police states. There are vast areas where religious freedom has been abolished and where such religion as remains is being bent to the will of political dictators.

There are great areas of poverty and hunger. There are large portions of the globe where fear for their lives prevents men from speaking their views of their rulers. There are areas of revolution and turmoil and weakness.

Yes, it is great to be able to say, "I am an American."

You and I can say it today with pride and dignity because our forefathers worked hard, trusted God, and were ever vigilant against encroachments of their freedom.

To keep what we have, I urge that we follow in their footsteps.

Let us work hard.

Let us trust God.

Let us be on guard against encroachments of our rights, no matter what the source.

Then we shall have earned the right to the blessing of being an American.

I think back a few years ago to a wartime Christmas season in 1944. As Governor of Pennsylvania, I spoke at the Christmas tree lighting in the rotunda of the State Capitol Building in Harrisburg.

I spoke of our State's great patriotic service, with approximately 900,000 men in uniform with 4,000,000 other Pennsylvanians producing food and munitions for the United States and our allies.

I reminded that, throughout our history, Pennsylvanians had always responded in the hour of their Nation's need.

Today the shooting war is over. But, today there is still need—as there will always be the need—for men and women to be vigiliantly on guard to protect our heritage. We must protect them so that we can hand on to our posterity the kind of free, independent, God-fearing land which was given into our keeping.

And now, I should like to quote the final sentences of that 1944 Christmas message in the rotunda of the State capitol. They are equally true today:

"All our hopes and aspirations are embraced in the spirit of Christmas. We rejoice that the Christmas spirit lives forever to gladden the hearts of men and to lift them above the cares and strife of a darkened world.

"We rejoice that Christmas manifests itself in love and kindness and brings hope to those who live in the shadow of tyranny and oppression.

"We are thankful that Christmas brings assurance of brighter, happier times to come, when justice and brotherhood will rule, under God, in a world of universal freedom and peace."

This is ED MARTIN, speaking to you from the Nation's Capital. The season's greetings and God bless you all.

HAPPENINGS IN WASHINGTON

(Program No. 15, January 2, 1950)

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

As we go into a new year, the Eighty-first Congress is about to open its second session. Congress must handle many critical issues in the months ahead.

It will be called upon to determine whether we shall protect our national solvency by returning to sound fiscal policies.

On the international front it must face vital new problems due to the Communist conquest of all China.

In a time like this, you have a right to know where your Senator stands on the big issues ahead. It gives you an opportunity to tell him how you—the people—feel on these matters. As your Senator, and before that, as your Governor, I have sought and welcomed the views and opinions of the people of our State.

In this broadcast I propose to discuss where I stand on the big issues which will reach Congress.

But first I would like to point out some encouraging signs that I have encountered among the people back home. I have found that more and more Pennsylvanians have developed a deeper interest in the kind of government they have been getting from Washington.

They are showing greater concern over socialized proposals, deficit financing, increased taxes, foreign policy, and Government inefficiency.

More and more they are asking these questions:

"How can we continue as a free government if we spend more than we take in?"

"How can we have all of these so-called social-welfare benefits without paying for them in higher taxes?"

And the question that stands out above the others is this:

"How can we have security from the cradle to the grave without surrendering our liberty and freedom to an all-powerful central government?"

I am happy to report that the people have made it clear to me that they prefer liberty and opportunity under the American system of individual freedom rather than the false hope of security under a socialized state. I shall be guided by that fundamental principle.

On the subject of Federal taxing and spending I stand just where I stood when I came to Washington 3 years ago.

I believe government costs too much and reaches too deeply into the pockets of our people. Government has grown too big and too complex. I favor, and shall vote for, lower taxes and less expensive government. That means I shall work for a balanced budget, economy, efficiency, and the elimination of waste and extravagance.

I favor removal of nearly all of the wartime excise taxes. These taxes, in peacetime, are an unfair burden on the individual consumer. They are a drag on business. Elimination of these taxes will stimulate buying. It will increase the number of

productive jobs. It will create new income for workers. And in the end the increase in income-tax payments will offset any revenue loss caused by the removal of these nuisance taxes.

The matter of civil-rights legislation will be coming up early in this session and may become involved in filibustering tactics.

Never in my life have I tried, by filibuster, to prevent a vote on any issue. I believe that, after reasonable debate, every important bill should come to a vote for an honest decision. Last year I voted for a change in the Senate rules to curb unlimited debate and to give bills a chance. I shall continue my efforts to bring the civil-rights bill to a final vote and shall support a sound civil-rights program.

Let me remind my fellow Pennsylvanians of this—the filibuster has never been used by Republicans to block a vote on civil rights. I regret this fact is sometimes forgotten.

Early in the session legislation to liberalize the Displaced Persons Act will come before the Senate. The present law, for which I voted in the Eightieth Congress, is being carefully studied by the Senate Judiciary Committee. That committee is required to report its findings not later than January 25. I shall give this report careful consideration and will vote for amendments to remove any injustices or inequalities in the existing law.

We Pennsylvanians live in a State which is a true melting pot. Our people are of all creeds and races. Our people come from many different nationality stocks.

Pennsylvania is proof that diverse races and nationality groups can live together and work together in harmony. Pennsylvania's greatness has been built upon this blending.

In the field of labor, I shall continue to support the principles of the Taft-Hartley Act. Like many others, I do not believe that the law today is perfect. I think it can be improved in several respects. A few months ago Republicans and Democrats joined in an effort to improve it. We brought forth a score of amendments to remove inequities. What happened?

Why, the administration pigeonholed our bill. It did not want the Taft-Hartley Act improved. It would accept nothing short of outright repeal.

The Taft-Hartley law was not improved in 1949 solely because the administration leaders in the House blocked the proposed amendments after they had passed the Senate.

They called it a slave-labor law. Well, look around. After 3 years, nobody has been enslaved—not even a little bit. The individual worker is better off than ever. The only thing that has happened is this. His union leaders now have a greater responsibility to him and to the public.

Our State Department is close to recognition of Communist China. I am flatly opposed to such recognition. I believe the President and the State Department are guilty of a terrible blunder in China. In coming years, this might prove to be the worst blunder in our entire international history.

The administration in power and the State Department betrayed China at Yalta and Potsdam. Later they refused to aid the Nationalist Chinese Government—our wartime ally. Instead, they permitted the Nationalist Government to go down to defeat, crushed by Communist forces, armed and advised by Soviet Russia. Thus, our administration surrendered 500,000,000 Chinese to communism. The way was opened for the expansion of communism all over east Asia.

Now the administration proposes to compound its colossal blunder. It would give its recognition and its blessing to the Chinese Communist Government. I have opposed our Chinese policy and I shall continue to oppose it.

If our kind of government is to survive, we must not compromise with communism anywhere.

I have supported the Hoover program for the reorganization and consolidation of the sprawling and conflicting agencies which clutter up Washington. The Hoover Commission recommendations would eliminate waste, overlapping, and duplication. They would save from three to four billion dollars a year for the taxpayers. I shall continue to vote for sound reorganization proposals in the interest of economy and efficiency.

Another bill, slated for Senate action early this year, would legalize the basing point method of freight charges on commodities, except where such basing points are in restraint of trade. This bill is important for the protection of jobs in our Pennsylvania factories. I have had many communications from Pennsylvania businessmen and labor organizations approving it. I shall vote for the passage of this measure.

Shortly before the close of the last session of Congress, the House passed a measure to extend social security. I am in favor of broadening the base of our social-security system to provide protection for more people. For example, I shall vote to permit coverage for the self-employed. At present the self-employed have no protection under the law, although they are taxed for its upkeep.

There are some measures expected to reach the Senate this year which I shall continue to oppose as I have opposed them in the past. I refer particularly to the Brannan plan of farm subsidies, socialized medicine and Federal aid to education.

If you study these three measures you will discover that they share the same objectionable feature—they open the door to strong, centralized Federal control over large segments of American life.

They promise something for nothing. Actually, they must result in extra taxes on our workers to pay the bill.

The Brannan plan was beaten in Congress in 1949. But it is expected to be revived in 1950. Under the Brannan plan, the Federal Government would have the American farmer by the throat. The Government would be able to dictate to the farmer, to an extent far greater than ever before, what he could and could not grow and how he must use his land.

Once that principle is established, there is no telling how far future administrations might carry it. The national farm organizations have been fighting this scheme bitterly. They know it means the end of free enterprise on the farm.

Under socialized medicine, the Government would move in on the Nation's physicians and dentists. They would be controlled just as the farmer would be controlled. The average citizen would suffer under assembly line, mass production treatment. He is being told this would be free. Actually, he would be taxed heavily to pay for inadequate service plus the cost of Government red tape, just as in England.

I voted against Federal aid to education in 1949, when it was before the Senate. The measure is now in the House of Representatives. If the bill should be amended by the House, the Senate would be asked to vote again on the new version.

I shall continue to vote "no." This bill shatters a fundamental cornerstone of the American school system.

It opens the door to very strong central control over education from Washington. It breaks down our traditional State and local controls. It threatens to destroy the free educational system of America.

As Pennsylvanians, there is another thing we must keep in mind on all these proposed new services from Washington—the high price we must pay.

Invariably such new experiments are costly for Pennsylvanians. They involve new spending, with Washington collecting the money and reallocating it among the States.

Under this system Pennsylvania always gets back—as its share—a small percentage of what it contributes. It is always taxed for the benefit of other States.

As a Member of the United States Senate, I must naturally consider legislation from the viewpoint of what is good for the Nation. But as a Senator from Pennsylvania, I must also consider legislation as it affects the interest of our State and all its people.

And when I find— as I find in these cases— that what is best for the State in the long run, and what is best for the Nation in the long run—is exactly the same, then I know that I am right.

I have discussed the outstanding problems that will come before Congress early in the session.

But to my mind the greatest issue, involving the stability of our Republic and the preservation of American freedom, is the threat of national bankruptcy.

We cannot continue deficit financing. We must balance the budget. The administration argues that a balanced budget can be achieved only by increasing taxes.

I challenge that philosophy.

The traditional American way is to cut spending to fit our income.

Let us save America by returning to that sound, time-tested plan as an established policy of government.

This is ED MARTIN, speaking to you from the Nation's Capital, and extending to all my fellow Pennsylvanians my sincere wishes for a happy and prosperous new year.

A Suggestion for Reducing Federal Spending

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Wednesday, January 4), 1950

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a very interesting editorial written by John A. Kennedy, editor and publisher of the San Diego Journal. The suggestions made deserve full consideration and public discussion.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FROM THE EDITOR'S DESK

As I sat in the press gallery on Capitol Hill this week listening to congressional debate over the budget deficit, it occurred to me one more or less painless way to cut Federal spending would be to put Government services on a cafeteria-style or pay-for-what-you-get basis.

What I propose is simply to fix a charge on some of the many important and special functions Uncle Sam now renders free to his citizens. They are worth hard cash to groups and individuals now receiving them gratuitously.

For example, Joe Doe thinks nothing of paying the county $2 for a marriage license

or the State a similar amount for a driver's permit. If the city lays a new road and sidewalk in front of his home, he expects to pay a pro rata share of the cost. His gasoline taxes generally build and maintain highways.

But almost without exception, the Federal Government makes no charge, or a nominal one, for licensing and inspection which directly benefit special interests and individuals.

Why, for example, should Uncle Sam not exact a payment for the valuable export licenses the Department of Commerce issues to businessmen? Or for the certificates of operation, charters and inspection services given gratis to interstate motor and freight carriers by the Interstate Commerce Commission? Why shouldn't the Civil Aeronautics Administration or the Maritime Commission be reimbursed at least for the paper work involved in issuing charters to aviation and shipping companies?

Is there any reason why the Federal Communications Commission should not charge for the valuable franchises it dispenses in the form of licenses every 3 years to the more than 2,000 broadcasting stations on the air? These broadcasters are in business not only as a public service but obviously because radio appeals to them as a pleasant way of earning their bread and butter.

Many hundreds of free services performed by the Agriculture and Interior Departments for farm and other interests are even more to the point.

Take the case of the proposed purchase of American Overseas Airlines by Pan American for $17,500,000. An examiner and Federal staffs have been working on the case for many months. Why shouldn't the buyer and seller reimburse the Government for its costs in handling the sought-after approval.

Drew Pearson, Bob Allen, and a Baltimore group are seeking the frequency of WBAL, Baltimore, after the FCC set the station's license renewal for hearing over alleged rules' infractions. This Pearson et al. request probably has cost the Government more than $50,000 already. The Pearson group probably would be glad to pay their way.

I am also in the radio and television business. Why shouldn't I pay the Government for servicing my various requests which have helped make my radio businesses profitable?

The railroads want about $100,000,000 more a year for handling mail. Let them pay the cost of their hearing before the Interstate Commerce Commission.

When the telephone company wants a rate increase or something of value from the FCC let it pay for the cost of the hearings.

Power companies seek grants from the Federal Power Commission—corporations want Securities and Exchange Commission approval for issuing stocks and bonds. You can multiply the examples a thousandfold. Let them pay for what they get and not cause a tax boost from the rest of the public.

To take other examples more directly affecting the man in the street rather than the entrepreneur, over 500,000 pilots and technicians hold CAA licenses for which they pay absolutely nothing. Another 80,000 amateur radio "hams" and 60,000 commercial radio operators get their 5-year licenses at no cost from the FCC. Could payment of a token $2 to $5 for the paper work involved in preparation of these valuable pieces of paper be considered discriminating by these licensees?

Then there is the mammoth Government Printing Office, which distributes the bulk of its output without cost. It is true that a nominal charge, reflecting only actual printing, not preparation, costs is placed on these documents prepared at the request of individual Government agencies. But those folk enterprising and knowing enough to ask for the publications at their congressional offices or at the originating Government agency usually get them "for free." Why?

In 1947, the Public Printer sold 36,000,000 pamphlets for $3,238,000. But over twice that number—86,000,000—were distributed free through offices on Capitol Hill and elsewhere.

Despite the hue and cry against pyramiding high taxes, we have long since accepted at least the principle of taxation according to ability to pay. Why should we object, therefore, to paying directly cash-on-the-line for specific services rendered particular groups by Government agencies?

I imagine that some skeptics will look down their noses at this suggestion as providing too little in additional Government moneys to offset the added headaches of bureaucratic bookkeeping.

But this is to ignore the basic fact that multiplied throughout the whole fabric of Government, such fees could be fixed on the cost of services performed and could add up to a lot of money for the Treasury.

We are headed for an estimated $5,000,000,000 deficit this year.

About 80 cents of every budget dollar is earmarked for defense purposes or in payment of past wars, leaving only 20 cents for peacetime expenditures. This 20 cents must be shaved to bring us within sight of a balanced economy.

Proposals of the Hoover Commission for streamlining the clumsy superstructure of Government—most of which have already been endorsed by this paper—will help.

But I respectfully suggest that putting Uncle Sam more on a cash-on-the-line basis in his dealings with John Q. Public—in the best tradition of American business—might help to take some of the red out of our national bookkeeping.

JOHN A. KENNEDY,
Editor and Publisher.

Nonagricultural Employment in North Dakota

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by William R. Waind, cooperating representative of the North Dakota State Employment Service and North Dakota Unemployment Compensation Division, dated December 19, 1949, and the analysis and table dealing with the nonagricultural-employment situation in North Dakota enclosed with his letter.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[North Dakota State Employment Service and North Dakota Unemployment Compensation Division, Bismarck, N. Dak., in cooperation with U. S. Bureau of Labor Statistics]

DECEMBER 19, 1949.
